MELTING SCRAP LEAD from discarded telephone cable. It is smelted and refined at a Western Electric plant. The lead ingots will return to service as new cable sheathing.

He's cooking up telephone service

The salvaging of worn-out equipment has always been important in the telephone business. It's more important than ever right now.

For it isn't just so many pounds or tons of lead and copper and zinc and steel that come out of it. It's telephone service.

Every bit of recovered material helps to relieve shortages and enables us to build more of the

telephone equipment that is so urgently needed.

That means better, quicker service for everyone. It also brings telephone service nearer to those who may have been waiting for a long time.

So salvaging is more than salvaging these days.

It's the voice of a friend. A hurry-call to the doctor. A visit with someone in a distant city. Somebody's link with everything and everybody, everywhere.

IN TECHNICOLOR

ESTHER WILLIAMS

AKIM TAMIROFF • CYD CHARISSE
JOHN CARROLL • MARY ASTOR
FORTUNIO BONANOVA

and introducing

RICARDO MONTALBAN

Original screenplay by

GEORGE BRUCE and LESTER COLE

Directed by RICHARD THORPE

Produced by JACK CUMMINGS

We've always admired Esther Williams — and we'll bet a jingling handful of bright silver pesos that you've always shared our sentiment. She's so lovely to look at even standing still. And when that lissome, athletic body begins to move — well, that's poetry in motion. And when she dances a gay Latin flamenco — that's breath-taking. And when she goes through the brilliant and tense drama of bull-fighting, swirling the matador's cape, dodging the massive and murderous plunges of an angry bull, that's — "Fiesta", M-G-M's south-of-the-Rio-rainbow of Technicolor romance!

To heighten the excitement of this color-splashed musical romance M-G-M introduces a talented and versatile new star: suave, handsome Ricardo Montalban, beloved idol of many of Mexico's greatest films. Ricardo epitomizes the word "smooth". Whether he's dancing with lovely Cyd Charisse, or serenading to the sultry twang of a guitar or startling the arena with his powerful grace as a bull-fighter, Ricardo maintains the same confident, likable ease. We predict America will hail him as the very best of Good Neighbors and a brilliant new star in the Hollywood firmament.

"Fiesta" is in every sense a glorious, unforgettable adventure. There's all the glamour of Mexico itself, photographed in fabulous Technicolor. There's sparkling music, magnificent dancing and a romantic story that sweeps to new heights of dramatic excitement. M-G-M has given "Fiesta" a supporting cast of the first magnitude: Akim Tamiroff, dashing John Carroll, Cyd Charisse, Mary Astor, Fortunio Bonanova.

"Fiesta" is a triumph of spectacular entertainment. Therefore, this column shouts "Viva!" for Director Richard Thorpe and Producer Jack Cummings and for that gifted writing twosome, George Bruce and Lester Cole, who did the original screenplay.

We recommend "Fiesta". "Fiesta" is the most-a of the best-a. And so is Esth-a!

THE WEEK'S MAIL

FICTIONAL THERAPY

DEAR EDITOR: The story, Hearn, Spearno, Seeno (Mar. 29th), came when I was in the midst of spring cleaning. The paper hangers had just gone and left the usual mess behind them, which I alone had to clean up. I had lumbago besides and a headache and my feet hurt but I was hurrying to get done before my in-laws came. I took time out for a cup of tea and picked up a Collier's magazine and before I knew it I was shaking with glee.

I felt better both in mind and body. I think the whole world needs stories like that. DOROTHY HATFIELD, Everett, Wash.

VERSE AND VERSE

DEAR EDITOR: The succinct quatrain by Dorothy Farrell, of Honolulu, T. H. (The Week's Mail, May 24th), evoked a discussion:

If Dorothy's diet
Had had less religion
She would be, I am sure,
Much less callipygian.
If Dorothy's diet
Had been more religious
She would be, I am sure,
Less steatopygous.

NILES S. COLMAN, San Francisco, Cal.

DOCTOR! DOCTOR!

DEAR SIR: So you can't get a doctor! (May 17th). Hey? Why don't more doctors settle in the small communities?

I might tell Albert Maisel that I traveled out to South Dakota last fall, a matter of some 1,500 miles to see a location for an M.D. It was a nice town and they did want a doctor. But they did not have a house in town to live in, they offered no stipend to help one to move there. I could have practiced there, but was warned that the winters were cold and I knew that bringing up five children in a tent in a South Dakota winter was somewhat harsh. I wrote to several other places—Ohio, North Dakota and other states mentioned in the article. Most of the towns wanted me to come out and look them over. No mention of traveling expense, no housing mentioned and no subsidy mentioned in case the doctor could not make a living.

P. J. LAWRENCE, M.D., Brandon, Vt.

... Here's how we got one of the best doctors in the country for our little island—an hour and a half from the mainland by boat—with about 400 people.

We subscribed money by door-to-door canvass, had a big celebration, auction, suppers, etc.—got a subsidy from town—had paint days, clearance days, etc., and now we have a fine doctor's home and

KEEP UP WITH THE WORLD

BY FRELING FOSTER

A new fad in California is to own a "personalized" automobile—one which has been so changed in appearance that it resembles no other car. To disguise an automobile thus may cost as much as \$1,000. Specialists usually lower the body several inches, remove chrome strips, reshape fenders, install new bumpers and a special radiator grill and repaint the car in a peculiar color.

A mysterious fact came to light some years ago in a study of the effect of electricity on different species of fish as the current flowed through an oblong aquarium. Each fish would place itself parallel with the flow of direct current, but would take a position at a right angle to the flow of alternating current.

On April 1, 1947, near Fairbanks, Alaska, the life of a U.S. Army paratrooper was saved after his chute collapsed in mid-air. The instant it folded, a brother paratrooper who was descending a little below and to one side was swept, by a sudden gust of wind, so close to the disabled chute that he was able to grab its shroud lines, which he held while his own chute carried him and his friend safely to the ground.

The source of light in a new unit, to illuminate airport approaches in fogs and storms, is a four-inch tube filled with krypton gas. The unit's special optical equipment, however, increases its intensity to 3,300,000,000 candle power, which is 600 times as bright as the most powerful light-house beam in the United States.

Nobel prizes have been awarded to nine women in five countries, one in Austria, one in Chile, two in Sweden, two in France and three in the United States—Jane Addams, Pearl S. Buck and Emily Greene Balch.

During the 1920s Pierre Lutece, French vaudeville star whose act consisted of answering any question on any subject, was thought to have a phenomenal brain, the study of which would be of scientific value. When he died twelve years ago, it was found that he had made secret contracts for the exclusive possession of his brain after death with fifty-three different institutions from which he had swindled \$50,000.

Among the Eskimos of northern Canada, a man going on a long journey usually arranges to exchange wives temporarily with a friend whose own wife is encumbered with children and cannot accompany him.

Since 1930, crematories in Great Britain have increased from 21 to 5 and some 200 others are under consideration. Of the present number, are owned and operated by municipalities, one of which, in Hull, makes no charge for its service.

In a recent survey, Chicago's commercial television station, WBK, found that two thirds of the people who constitute its audience watch the shows on receivers in barrooms which now own 1,025 of the 3,100 sets in that area.

At an auction of antiques in London in 1932, a certain armchair put on aroused much speculation as to its purpose. While it was ornately carved and made apparently, around 1500, for use in the home, it contained a seat-operated mechanism that caused two curved iron bars, concealed in the arms, to come down, lock over the thighs and thus trap a person within a second after he had sat down.

Ten dollars will be paid for each fact accepted for this column. Contributions must be accompanied by their source of information. Address Keep Up With the World, Collier's, 250 Park Ave., New York (17), N. Y. This column is copyrighted and no items may be reproduced without permission.

Hot Weather Tips

on the

CARE OF YOUR BATTERY

SURE, your car starts easily in hot weather. But that doesn't mean you can forget about your battery. In fact, *it's more harmful to neglect a battery during the summer months than at any other time of year!*

What service is needed? Most important, keep your battery properly filled with approved water. Once a week isn't too often to have it checked, because water evaporates a lot faster under excessive external heat and motor heat. Another good idea is to make sure the generator and voltage regulator are functioning properly: a battery that's being overcharged continually is "not long for this world." Also, battery terminals should be kept clean, and frayed cables replaced.

There's no better place to have your battery checked . . . no better place for automotive service of *all kinds* . . . than your nearby United Motors Service station. Look for the United Motors sign in your neighborhood and wherever you drive.

THE WEEK'S WORK

WHILE it is more natural to go into a trance *after* buying Collier's, hypnotist Howard Klein first put Miss Mildred Greenstein in a trance, then sent her out on the rainy streets of Philadelphia to hawk America's biggest dime's worth. Mr. Klein was proving a point in posthypnotic suggestion. For this and further Kleinian tomfoolery see the entrancing article *Do As You're Told* on p. 24.

Actually Miss Greenstein, as illustrated, is not in a state of complete hypnosis. She has awakened. But while "asleep," Mr. Klein made the suggestion that it was vital she dash out and sell our fine magazine. Eerily, the first thing Miss Greenstein did during her posthypnotic state was to obey Mr. Klein. "All hypnotized subjects who have received a posthypnotic suggestion will never admit they are hypnotized," Mr. Klein informed us. "They attempt to think up reasons for their conduct." Miss Greenstein insists she did not have to think up any reasons for selling Collier's.

IN DECEMBER, 1944, Mr. and Mrs. Dana Burnet daringly sold their charming home in Coldwater Canyon, Beverly Hills, to Miss Ella Raines, the charming movie actress. "For a year and a half thereafter, we lived in a miniscule house in the San Fernando Valley," says Mr. Burnet, "which, regardless of the song, I never intend to make my home. The valley is cold in winter and hot in summer, and the sound of motor crashes on Ventura Boulevard is not conducive to the contemplative life."

Deciding in the fall of '46 to move back East, preferably near salt water, the Burnets searched the Atlantic Coast from Maine to Florida fruitlessly, subleasing an apartment in Bronxville, New York, for a spell, finally winding up in a stanch home of their own at Stonington, Connecticut.

Ordinarily such experiences would not have inspired Mr. Burnet to such a serious effort as *The Grand March of the United States of America*, p. 18. But Mr. Burnet sees home-hunting today as a longing, shared by millions, for mental and spiritual security.

Mr. Burnet hopes his search for the answer to the question where man can find something solid on which to base his life may be found in *The Grand March of the United States of America*.

"I happen to believe that the only security which modern man can hope to achieve lies in faith," he confesses. "I chose a Negro for the protagonist of this faith because it seemed to me stronger and more poignant to project it from the mind and spirit of one

whose people are still denied the fulfillment of the vision of freedom of the founders of our republic."

Mr. Burnet, who is from Cincinnati and has been reporter, editor, screen and stage playwright, and poet, was born on July 3, 1888. His grandfather Jacob Burnet rode horseback from Newark, New Jersey, to settle along the Ohio in 1795—at a spot which is now Cincinnati.

NINA WILCOX PUTNAM is down Miami way doing an article on the Payground as a Summer Resort, when she naturally wondered, "What do the mosquitoes do during the off season? Do they live off the languishing resort keepers?"

Mme. Putnam looked up Mr. Leo Stutz, director of the Dade & Broward Antimosquito Districts of Florida. Next thing she knew, she had forgotten the summer-resort story, and was off chasing mosquitoes. Unmasking the Mosquito, p. 38, is the result.

Mrs. Putnam went calling on leading mosquito families, poked in neighbors' garbage cans, met the darning balls she describes in her article, and a lot of Mr. Stutz's pamphlets, and watched the spotters at work far in the well-oiled Everglades, ruining a pair of \$18 white shoes doing so.

Thus came the facts of Mme. Putnam's excellent article. "I suppose the facts of today are the errors of tomorrow," she adds with true scientific humility. "But that's the way I look at them. Anyway I feel I know a lot about mosquitoes. I've even seen a lay an egg—but then I've laid quite a few myself."

SPORTS writers notoriously bristled, spavined, bald, and muscle-boned, we proudly point to the fact that Davidson, who wrote *Olympic Fire*, p. 20, was an athlete once himself. Back in the '30s he hurdled for New York University, bowling over opposition and winning several titles. A streamlined 160 pounds, he was then known as Galloping Bill the Violent Violet.

Today Davidson weighs in at 190. When he dropped in at his old gymnasium (a little fatter herself) to see an old coach on the story, Emil von Elting turned to his assistants and said, "Well, well—another shot-putter coming out for the team!"

This week's cover: Independence Day Parade. Painted by Ronald Leod, who has contributed to Collier's for 19 years, the cover coincides appropriately with Dana Burnet's magnificent story, *The Grand March of the United States of America*. . .

TED SHAFFER

Collier's for July 5, 1947

More OF EVERYTHING YOU WANT WITH Mercury

One day in the life of your Mercury Station Wagon shows you why it's just about the most useful car you ever owned!

You pick up week-end guests at the station. Here's a whole lot more luggage than you

More fashionable — wherever you go

expected, but it all fits easily—and your friends do, too! Eight people ride comfortably—with plenty of leg room and elbow

room for everyone. And the clear, full vision in all directions is a treat for the passengers as well as the driver.

More room — whenever you need it

You take your guests to the beach—and its room again comes in mighty handy. Nice part of it is—your Mercury Station Wagon is the smartest car wherever you go—at the beach,

the club, the local playhouse or even in town. The body is made of beautifully grained hard woods fashioned with the finest of craftsmanship—built to last!

More practical — for every purpose

What's more, this handsome spacious station wagon has all the famous pickup and liveliness that makes Mercury more fun to drive—plus gas and oil economy unusual in such a big, powerful car.

For more of everything you want—get to know the Mercury Station Wagon.

MERCURY—DIVISION OF FORD MOTOR COMPANY

White sidewall tires at extra cost, when available.

The bad news that didn't spoil a vacation

THE LETTER was from a lawyer.

I snapped the camp mailbox shut as I read the last sentence.

"My client holds you personally responsible for the loss of her ability to carry on her usual occupation, resulting from the accident which occurred on your premises."

I remembered the accident all right. My wife had just told the woman selling children's books that we didn't want any. The woman had turned to make a last-minute sales argument as she was going down the steps. She stepped on one of the children's toys and took a spill.

That was just as we were leaving on vacation. But I did snatch a minute to give my Travelers man the bare details of the mishap over the telephone.

Now, this letter from her lawyer, claiming a bad back injury, was the first I'd learned how serious her accident apparently was.

I'm pretty much of a worrier. After reading

that letter, I was sure of one thing. I would have sweated out the rest of my vacation instead of enjoying it if last winter I hadn't done something that my Travelers man had been suggesting for a long time. I had taken out Comprehensive Personal Liability Insurance.

So I walked over to the village store and put in a call for my Travelers man. I had him on the line in five minutes. He said for me not to worry a bit about it. He told me he'd been following up the tip-off I'd given him before I left and that he had everything under control.

So instead of worrying about a lawsuit hanging over my head, I pushed off in a canoe for Diamond Island ledge. I was only ten minutes late for a date I had with a big bass.

I really got a bargain when I took out Comprehensive Personal Liability Insurance. It gave me a lot of protection for so little money.

I know, for instance, I won't have to dig deep into the bank account to pay for damage our dog

might do to someone's Sunday clothes or to someone's only right hand. If a friend or a delivery boy should happen to be hurt on our place, we know medical expenses will be paid.

And having this kind of insurance, I know that I'm safe from a lawsuit that might put a permanent crimp in my lifetime savings, and probably leave a debt I'd be years in paying.

Don't you agree that I get a lot for the 36 cents a day I invest in Comprehensive Personal Liability Insurance?

MERCHANT OF VALOR

BY CLARENCE BUDINGTON KELLAND

As I held the little man at arm's length I felt small fists beat upon my back. "Let him down, thou great ox," a voice said

Through the pageantry and intrigue of historic Italy move two great heroes, fighting shoulder to shoulder. Here begins a thrilling novel of love and high adventure

WHEN I, Peter Carew, was a young man, bursting with great knowledge that had been flogged into my head at the high school in Exeter and at Oxford University, I believed the business of our King to be the making of war on other kings, hunting the stag in the forests, and begetting heirs to the throne; but not to meddle in the affairs of common people, of which, quite naturally, he would have no understanding. Now that I have come to great age and less wisdom I am

not sure but what my youthful judgment of the matter did not pick the kernel out of the nut.

It did not mislike me that the King required that every man between the ages of fifteen years and sixty should be required to keep war harness in his house according to his worldly goods—every man at least a yew bow and arrows. This was sensible because the Scots on the northern border were always vexatious and needed to be kept in order. And, across the Channel, King Francis and Em-

peror Charles were always scratching their heads to find what harm they could do us.

Now I have a great dislike for sheep as very stupid and ill-smelling creatures, which is a thing to wonder at because it is their fleeces which, for some generations, have brought to our family a very satisfying prosperity. My father was no inconsiderable member of the Mercers' Company in London town, carrying on a profitable trade with the Low Countries and with Florence, in Italy, though not so much in the latter city as before Lorenzo de' Medici quit tending to his business as a banker and merchant and was bitten by the maggot of politics. But we Carews stuck to our muttons, or at least to their wool, meddling neither with war nor politics until it came to myself who was thrust into both, but much against my will.

We have a farm which came to us through my mother, and twice each year it becomes my duty to repair thither to examine into the accounts, and count the sheep, and examine into the management of Wat Tayloe, who has a good knowledge of farming and the raising of sheep and is trustworthy. There was a walk for two hundred sheep, and we tilled enough land to employ a dozen laborers at the excellent wage of fourpence a day.

It was Fair Day on the morrow after I came to the farm, and as I ever enjoy these merrymakings and take great pleasure especially in the archery at which our King hath enjoined us to practice without ceasing, as well as the dancing and the wonders to be seen in the booths scattered about the green, I was nothing loath to trudge with Wat to the village, he carrying upon his back his heavy bow and the four arrows he was obliged by law to own.

It was a clear morning. Wat stretched his short, sturdy legs to keep pace with my longer stride—for at that time I had accomplished my growth and filled my weight. There were few men in the shire who could balance the beam against me.

Wat, a silent man, spoke up after a time. "It is said the King hunts in the Duke's forest," he said.

"It would pleasure me to see His Majesty. It is said he is of a figure to rejoice the eye."

WE TRUDGED on, and as we neared the village, and the sound of music came sprightly through the trees, and the cries of those who would woo farthings from the pockets of the people for useless trifles rose above the voices of the countryside on pleasure bent, my mood passed and I was ready to take my part as befitted an Englishman, sound in limb, to whose youth misfortune was only an evil that happened to other people.

I was then but only out of my boyhood, for I was in my twenty-fifth year, and gullible as all boys properly should be, and happy to be cheated by any chapman or cheap-John, knowing well I was being diddled but taking pleasure in it. Yet half believing in the power of a charm to make your love love you, or to remove warts from the fingers, or to hold you safe from wounds in battle. So I went my way merrily, seeing all that was to be seen. And so I came to a small pavilion before which strutted a man in the attire of a Turk, but whose tongue was the tongue of London. He waved his arms mightily and shouted in a voice that was a marvel for stridency that within, one might have disclosed to him the secrets of the future, to-

gether with sage advice as to what pains a man should take to avoid the pitfalls of life. This mountebank fixed his glittering, humorous eyes upon me, and he motioned to me confidentially, and his face assumed an expression of secret gravity.

"You are awaited, young Hercules," he said. "The stars have foretold your coming. Your presence has been seen in the crystal ball. The Wise One waits to give you her message. From the East she comes, from the land of Mahound and Ashtoreth and Beelzebub, from the land of spirits the size of pine trees. She sits within awaiting your coming, young man-mountain, for she has secret and weighty things

for your ears. Come in. Tarry not. Only a penny to learn the message of the Ancient Ones. Haste ye in."

Now I am no uneducated and superstition-ridden villen to put faith in such prophets as sell their wares for a penny, but on the other hand who knows but what they may hit upon some word of truth, or, indeed, be possessed of a gift of vision contrary to the laws of nature? So I thrust a penny into his hand, stooped my head and entered the opening.

There upon a low dais sat a woman with veiled face, and on her head was a silver serpent with hood spread; over the top of her veil were two eyes that were wells of mystery. And her

outsprent hands, whose fingers were slender and tapering, hovered over a globe which was shining and clear and undefiled, and she peered at me in a manner to make my bones turn to water. If she were young or an ancient crone I could not say, for her hair was covered and nothing was visible of her but her hands, which seemed young, but may have remained so by some magic, and her eyes, into which it was uncomfortable to look.

"Sit you upon the stool quietly," she said, "and hold forth the hand nearest your heart."

Her voice, also, was not aged, but most musical and liquid and disturbing because it was low in her throat.

The carnival to honor the ambassadors of the French king was a wondrous sight to behold. Troops of imps and demons and grotesques jostled through the crowd making merry with pranks, and none offered to halt them from their mischief

shall rise again a message comes to you to prepare for the journey."

I arose to go but her hand restrained me. "First," she said, "you gaze into the crystal. Then shall be no more that you laugh at me or doubt. Bend you the head. Stare into thees ball."

And so she commenced to whisper softly so that her voice was but a rustle as of the wind in the leaves, and I obeyed her and peered with all my strength into the clear crystal ball. And then it seemed as if a cloud passed over it and it became murky and overcast. But then it cleared again except in its heart, and the darkness there spread throughout and diffused and became a picture, but not a picture that was without movement, for it was a scene of men fighting, and part of the warriors wore black armor and waved black pennons. And then from the flank came other men on foot most unexpectedly. And they threw themselves upon the enemies of the black warriors who threw down their arms and fled or stayed to perish. Then the leader of the black army threw up the visor of his helmet and I saw his face clearly. And he called out until through the smoke there strode to him a man of great stature. The general bent from his horse and kissed the cheek of this man, this giant, who lifted up his face to the light, and I saw that it was myself.

I was breathless and my bones were water, for here was a miraculous thing past all human understanding. I sat spellbound considering what I had seen in the ball, and as I thought of the scene I had witnessed and of the black armor and the black banners I wondered if what I guessed were veritably the truth.

"Was that general," I asked, "Giovanni delle Bande Nere?"

"John of the Black Bands," she said in English. "Giovanni de' Medici. The greatest soldier of the age."

"His fame," said I, "hath reached our England." For some reason I said this in the Italian language.

"You speak the tongue of Italy?" she asked.

"It has been the custom of my family to master it," said I, "we being merchants with important dealings with the Calimala—the wool guild."

"It is well," she said. "And now I give you the charm of mighty magic weethout which all comes to ruin. So awful ees the power of thees charm that, if you open the box that contains it, the eyes of you weel be blasted weeth blindness. Thees you mus' protect weeth your life, for if you lose it you are lost and destroyed. You shall bear it in your breast until a day shall come when one shall come close to you and say these words in the Italian language, *sarebbe gran cosa a un reame*. Then shall you deliver it to him, and the charm shall have done its task and the power and danger shall depart from it."

"A magnificent income for a kingdom," I translated.

"Do not forget the words. Likewise, if you weesh to keep the sight of your eyes, let no man see this charm nor know that you possess it."

I smiled at her and humored her, and wondered what she would look like were all her covering peeled off.

"You give me much for a penny," I said.

"Go with God," she answered. . . .

I searched about in the throng for Wat, but my attention being distracted by tumblers and clowns and a troop of men who were marvelously dexterous at tossing divers objects into the air and catching them again before they fell to the ground, it was mid-morning before I found him lounging with his gossips in the vicinity of the archery butts. His Majesty frowned upon other games which withdrew the attention of men from the sport of archery, so that shooting at the butts had become the national pastime.

NOW, I, in my age, have seen a decline in this art. In my youth no mature man might shoot with the light bow over a course shorter than two hundred and twenty yards; and the bows were three fingers thick and seven feet in length—which required a man of parts to manage. But to our shame be it said that in these latter days French soldiers, standing at that distance, turn their backs and pat their buttocks derisively toward our archers. "In my day they would have had their britches nailed to their backsides."

Now I, being no yeoman but a city man engaged in trade, was not entered in the contests, but Wat was to shoot, and a right good archer he was.

Then there came a great shouting and tumult and running of people bellowing, "The King! The King!" and I looked where all pointed to a company that rode out upon the green. At the head came riding a young man upon a splendid horse. He was broad of shoulder with a good leg to him, and a broad, friendly face whose eyebrows pointed upward at the outer corners. I liked the look of him as much as I disliked the weasel face of His Eminence, Cardinal Wolsey, who rode beside him, his red hat tipped a little over one eye.

The goodfolk cheered most noisily, more because of the spectacle than for love of their King, which is the way of all goodfolk, and His Majesty lifted his little hat high most friendly and bellowed joyously as any free peasant upon a holiday, "Bend me a bow, lads. For the honor of the shire, bend me a bow and loose me an arrow. There be Frenchmen here to see." He clapped a tall, gorgeous man who rode next him upon the back so that he all but fell from the saddle. "Here rides the ambassador of my beloved brother, Francis. Show him a sight, my lads. Tell him a tale with bow and arrow that he may repeat across yon channel which will speak with louder voice than the cackling of all the ministers in my council."

At this boisterous and undiplomatic saying I saw the shoulders of His Eminence twitch and his lips compress. Nonetheless he contrived to smile at the King and the French ambassador most sleekly, and to say some word in a low voice which caused them all to laugh.

"Fall to," the King bellowed again. "A handful of silver pennies to him who doth outshoot his fellows."

The contestants, somewhat overawed by the presence of their King, clustered about the line, and one after the other they gauged the wind and fitted their arrows to the string and loosed at the white prick on the butt,

(Continued on page 45)

with a curious timbre to it that made the goose flesh to arise. With slender finger she touched my hand light as thistledown, and moved the finger along the lines of my palm: she uttered a little cry as if something had both surprised and frightened her. When she spoke, it was with a tongue not born to our English language, but which was pleasing to the ear.

"You go on the long journey," she said, "from which you come not back so soon as you theenk. You go on the vessel from thees town w're many horses wait for fish." Now that was a saying, indeed. For whoever heard of a horse waiting for a fish? "And you sail far in safety to thees land

w're everyw're is war. And there await you dangers of the mos' fear-some, yet they shall not hurt you if you are wise. As I shall teach you to be wise. Men of the mos' evil shall follow you, but you shall come to a man, and that man you will love mos' greatly. You shall know heem because his name in thees language is John, and upon his breast and his arms and his legs there will be armor black as night."

All this was moonshine but the woman spoke so gravely that I could not laugh at it nor quite disbelieve it.

Her eyes held mine. "You have doubt," she said. Her shoulders moved as if in a shrug. "Before thees sun

Placed under police surveillance, Mitty escapes into dress character of Walter O'Mitty, constable-defying Irish rebel who sings "Molly Malone," one of Kaye's non-git-gat-gittle songs.

THE PUBLIC LIFE OF WALTER MITTY

BY TED SHANE

Mitty as Wing Commander Mitty, frightfully British and who downed Nazis, pooh-poohs broken arm, says, "Just a scratch—set it myself!" and meets Virginia Mayo, dancing

"I'll ride this twister out and be in Bombay for breakfast!" shouts Captain Mitty, comforting his dream girl Virginia Mayo, during Hollywood's most violent studio storm in years. Danny Kaye also daydreams he is Dr. Mitty, a surgeon, who performs emergency operation with scalpel, sock stretcher, sprinkling can, cheese grater

Mitty is transformed into Couturier Anatole Mitty of Rue du Blanc Mange, Paree, and gives Goldwyn Girls chance to show off finery and screwy hats

THE announcement that Samuel Goldwyn was starring Danny Kaye in a movie hash-up of James Thurber's delicate tale about a little man with big dreams, *The Secret Life of Walter Mitty*, generated quite a storm in Thurberdom.

Mr. Thurber himself, when he heard the movies coveted his fragile, 2,200-word vignette of a hen-pecked, daydreaming escapist, said, "I will pay any producer \$10,000 not to touch it—but not a cent more!"

The Thurber idolaters, when advised that the lavish Mr. Goldwyn intended to bedeck the mousy Walter Mitty in Technicolor, throw in a melodrama and the Goldwyn Girls, and add three new dreams to Mr. Thurber's ostensibly sufficient four—all to cost some \$4,000,000—howled. Humorist Frank Sullivan cried, "Watch your step, Goldwyn, old boy, you're playing with dynamite!"

Mr. Goldwyn went ahead anyway with the script and threatened to change the title to *I Wake Up*

Dreaming. Whereupon some South Pacific Navy pilots, charter members of the Walter Mitty Association, radioed: "Touch one hair of Mitty's head—and we'll bomb the studio."

Mr. Goldwyn, the coward, restored the original title, and issued a communiqué assuring Thurber fans that Mitty would emerge in the new film as wistful, frustrated and Milquetoasty as ever. With his courage in one hand, and the other poised over the cash register, Mr. Goldwyn proceeded to make the picture.

The humdrum Walter Mitty, as portrayed by the chameleon-faced Danny Kaye, comes out a somewhat more dazzling character than Thurber intended. Unlike the overmarried, overharried Mr. Mitty, Kaye, playing the part of a proofreader in a pulp magazine house, becomes the hero of a standard Hollywood plot in which he foils villains, saves a patrimony in old Dutch masters (paintings, that is!) and gets the girl—in this case, Virginia Mayo.

The resemblance to the original Mitty lies in the dream sequences, to which have been added three new ones enabling Kaye to display the full scope of his talents.

All of which has moved Mr. Thurber to say, "I think the picture which I tampered with will be an interesting one."

"The daily life of Walter Mitty is, or should be," Mr. Thurber summed up in what surely must be a new high in resignation, "humdrum. However, it would be as difficult to present a humdrum Mitty in Technicolor as it would be to do the witch scene from *Macbeth* on the center court at Wimbledon on a summer's day at high noon."

Thurberites will not be too seriously displeased at what has happened to Mitty in Hollywood, although we seriously question whether Mr. Sullivan and the drastic Mittymen will be placated. Kaye fans, who number in the hundred millions, will be made very happy. ★★★

slips from dull family bridge game and compensates as Gaylord Mitty, swashbuckling river-boat gambler, wins money, plantations and the honor of recurrent Virginia Mayo from Cunnel Tubby Wadsworth. Cunnel Tubby pulls aces out of his sleeve and in nondream sequences plays the unheroic Mitty's bullying archrival

"Thar's a bounty fer killin' rattlesnakes!" drawls Slim Mitty, the Perth Amboy (N. J.) Kid to "Toledo Tubby." Despite Thurber, movie has happy ending

THE BIG BUILD-UP

WHY I BROKE WITH ROOSEVELT III

I think this is a foul case.

Memo from the President to Jim Farley. Congressman Darden was re-elected, later became governor of Virginia, is now president of University of Virginia

BY JAMES A. FARLEY

From 1938 to 1940, third-term speculation grew. John Garner puffed his long cigar and said: "Jim, the two of us can pull together to stop Roosevelt." In his third article, the party national chairman tells of a confidential statement from F.D.R. himself

INTERNATIONAL

The friendship between Roosevelt and Cardinal Mundelein led to a curious conversation between the Cardinal and Mr. Farley on religion and the third term

ACME

When Roosevelt entertained King George and Queen Elizabeth at Hyde Park in 1939

I HAVE only one regret about my public service and that is that I was not permitted to participate in the war effort. At the outbreak of the war I offered to forgo politics and devote myself to organizing the nation's productive capacity. I was confident I could do a good job, but my offer was ignored. Again, after Pearl Harbor, I volunteered to serve in any capacity where I might be of value. The President, however, turned thumbs down on me. This evidently was because I had opposed the third term and it is the story of that opposition that I want to tell in this article.

The third-term issue began simmering almost before the second was assured in the 1936 landslide election. A Presidential denial of third-term ambitions did little to discourage the political hot-stove league which runs the year round. In July, 1938, the question was dramatically thrust before the nation at a White House press conference when Fred W. Perkins of the Pittsburgh Press asked: "Mr. President, would you care to comment on Governor Earle's suggestion that you run for a third term?"

"The weather is very hot," the President said laughingly.

"Mr. President, will you tell us now if you would accept a third term?" spoke up the late Robert Post of the New York Times.

"Bob Post should put on a dunce's cap and stand in the corner," was the

Presidential answer, which was to become celebrated in stories and cartoons.

"Mr. President, did your statement last winter fully cover the third-term situation?" came from the undaunted Perkins.

"Fred Perkins should don a dunce's cap likewise," the President retorted.

This incident provoked more third-term speculation than it quieted.

Roosevelt had been concerned with his succession ever since the election of 1936. After the Democratic reverses in 1938, he became increasingly interested in the 1940 Democratic National Convention and the Presidential campaign to follow. He saw his successor in every man to achieve stature in the country and found each one wanting in White House qualifications. He became more critical as the campaign approached until, at length, he let himself be persuaded there was only one man possessing both the qualifications and the experience necessary to administer the nation.

Men are not, as a rule, nominated for the Presidency because they are the outstanding men in the party from the standpoint of ability and experience. Many fine men, who would have made great Presidents, could never be nominated. National conventions of both parties usually pick a man who is considered the most available from a vote-getting point of view, with a secondary

were not invited. The President's mother is seated between the King and Queen

emphasis upon his competency as President if elected.

At the end of 1938, the three names most discussed in the newspapers were Garner, Hull and Farley. Of the three, I had reason to believe that Roosevelt would have preferred to see me nominated. This does not mean I was his choice, except among those three. I don't think he would have taken Garner under any circumstances. He objected to Garner's conservatism. I think he would have preferred Hull to Garner, although he felt that Hull would have made a poor Chief Executive because he pondered long and moved slowly. As for myself, I am sure he felt my religion and my background would be a handicap if I were the nominee.

I can perhaps best give the picture of that period as it looked to me, by quoting from a memorandum I dictated at the beginning of 1939:

"I am satisfied in my own mind that the President will not be a voluntary candidate for re-election, but might be willing to listen to argument. I don't know if he has anyone in mind, definitely, to succeed him. If he had to make a selection at the moment, I believe he would select Harry Hopkins, Robert Jackson or Frank Murphy, in the order named.

"But a situation can develop in 1940 whereby the nominee will be either Garner, Hull or Farley, in the order named. There isn't any doubt in my

mind that if I assist in bringing about Garner's or Hull's nomination, I can have second place with either man, if I want it. I think the President, if he doesn't take the nomination and run himself, is going to be placed in the position of choosing among those named. But Roosevelt is a very strong character, and he might insist on naming his successor."

I did not see the President alone after the 1938 elections until November 15th. At the White House I found him preoccupied and somewhat distant. I waited for his mood to pass, but when it did not, I carried the conversational ball.

"Boss, if you wouldn't mind, I'd like to offer a little advice," I began.

"Shoot, Jim," he invited curtly.

"Well, I think the thing for you to do when you come back from Warm Springs is to get together with members of Congress. I'm speaking particularly of the senators and congressmen who were opposed to you on the Supreme Court, wages and hours, reorganization and the like—"

"I'd like to see them all—" he broke in.

"Now, just a minute; let me finish," I continued. "I think the thing to do is to sit down and talk things over with them. After all, you have to live with them and a lot of them are back for six years."

He was silent.

"I have one thing more on my mind

in connection with Congress and that is the Vice-President," I said. "I think Jack Garner would be most helpful to you. He's looked up to by everyone in Congress and he could do you a lot of good. I'd see him as soon as he gets back and have a long talk, if I were you."

"Yes," he said vaguely. I knew from his tone that he did not have too much confidence in Jack and that he felt that Garner was opposed to his legislation. While he did not say so, I was fully aware that he still blamed Garner for the final defeat of the Court bill, when the facts were that there was nothing Garner could do but throw in the Presidential towel.

As War Clouds Gathered

I did not see the President again for more than a month, except at Cabinet meetings. During this period the situation was growing more critical in Europe. Renewed persecution of Jews in Germany by Adolf Hitler brought Ambassador Hugh Wilson home for a consultation which proved to be a recall. William Phillips was summoned home at the same time from Rome. Cabinet meetings were solemn considerations of the Rome-Berlin Axis, larded with gloomy predictions of what the Tokyo partner might do. I did not keep notes of these fateful meetings, feeling that what was said concerned the country so deeply that it should not be carried from the room.

On December 19th, Frank C. Walker, who succeeded me as Postmaster General, came to see me in New York City. His visit was prompted by a conversation with the President. "Jim, I hope that you won't let anything happen to cause a break in your friendship with the Boss," he said.

"I appreciate your attitude, Frank," I said. "I can say that if there is any ground for your fears, it is not because I have given it. In so far as I am concerned, there is nothing wrong. The President knows and you know I have been dissatisfied with some of the things that are going on and the way things have been handled. But I have no intention of drifting away."

"You should see him more often," he suggested.

"I can't see him any more often than he wants to see me," I said. "I ask to see him as often as I think I should. But I must be frank and say that I feel I am being pushed out of the picture."

Two days later I found the President extremely cordial and pleasant in a luncheon conference at his desk. Evidently Walker had reported his conversation with me, because the President went out of his way to ask my advice on several matters.

"I saw Jack Garner as you suggested, Jim," he began, "but I'm afraid we didn't get anywhere. Jack is very much opposed to the spending program; he's against the tax program, and he's against the relief program. He seems to be pretty much against everything, and he hasn't got a single concrete idea to offer on any of these programs. It's one thing to criticize but something else again to offer solutions."

We discussed a number of appointments. When I brought up the name of Franklin B. Lane, son of the Secretary of the Interior in Wilson's Cabinet, he waved his hand in dismissal and said, "Nothing doing." He gave no explanation, but I assumed it dated back to some real or fancied slight he had received at the father's hands dur-

ing the Wilson Administration. The President was a nurser of grudges. Those about him felt that his coolness toward Bernard Baruch was due to the fact that Baruch, as head of the powerful War Industries Board in the first World War, had been rather casual with Assistant Secretary of the Navy Franklin D. Roosevelt.

I brought up the name of a prominent lawyer for the Court of Appeals for the District of Columbia. To my surprise the President waved dismissal.

"I cannot appoint a Jew in the District Court of Appeals," he said. "There is a strong feeling against the Jews throughout the country."

A week later I went to the White House for dinner. After discussing the results of the election, we switched to a consideration of appointments. I had a long list of judges, marshals, collectors of internal revenue, collectors of customs and other posts.

"I want to take up each case individually as it comes up," he said. "Now about the collector of customs in Savannah, who worked for Senator George: I don't want him reappointed."

"I think that's just foolish," I said. "That's all water over the dam."

"I won't appoint him again," he said firmly.

"What about the judgeship in Virginia?" I asked. "Glass won't confirm just anyone you might appoint."

"Then I'll appoint my selection's law partner, and if he is not confirmed, I'll appoint the cousin of the man originally selected or the cousin of the second choice and so on," he declared. "I am not going to let Glass or Byrd make any appointments in Virginia. And that goes for a lot of other senators."

I saw his chin was all the way out, so I decided not to pursue the subject. I shifted the conversation by asking, "What about the Supreme Court?"

"I'm having a difficult time there," he said. "Felix Frankfurter wants to get on in the worst way. Some months ago I had to tell him that I just couldn't appoint him, for many reasons. In the first place, the appointment has to go West. In the second place, I told Felix that I could not appoint him in view of the anti-Semitic feeling. I couldn't appoint another Jew, but if Brandeis should resign or die, I told Frankfurter I would appoint him that same day without hesitation."

"You could give some consideration to Joe O'Mahoney of Wyoming," I suggested.

"Black has dissented many times since I put him on the bench, but his dissents would be a drop in the bucket to what O'Mahoney would do if he were on the Court." He smiled.

Between the opening of Congress and the Jackson Day dinner, January 7, 1939, the President named Felix Frankfurter to the high court. At the Jackson Day dinner, seated between the President and Garner, I questioned the Boss about his selection, asking if it was made because the fellows out West did not measure up to his qualifications. He said that was so, but did not elaborate and I did not want to press him because I thought he might not want to speak freely in front of the Vice-President. There was a lot of good-natured kidding during the dinner. In the course of this, Garner, at one point, shook his finger at the President.

"If it were not for your damned Dutch stubbornness," he laughed, "we could all do more with Congress. We

(Continued on page 35)

THE GRAND MARCH OF THE UNITED

Of this story Victor P. Hass, Literary Editor of the Omaha World-Herald, writes:

"Dana Burnet has said more about the meaning of America in a single story than thousands of others have said in volumes. I wish I could hand it to the racemongers of America and make them not merely read it, but read it until they understand it. As sheer story it is first-rate. As a lesson for our times it is superb."

For other critical comments on this story see page 71

H E HAD come at evening because it seemed the best time to find them at home, but the blackness of the stairs was a physical shock. It was as if he had been plunged back once more into the gloom of Europe's rubble heaps. There was no light above the entrance hall, and as he groped his way upward, Captain Hammond had an uncomfortable feeling that he was lost.

He reached out and grasped the stair rail. It was loose and shaky under his hand, but at least it served to remind him that he was mounting the steps of a tenement on 113th Street near Lenox Avenue in Harlem, in the City of New York, in the United States of America.

David Hammond knew that he had come on a doubtful pilgrimage. But long months ago he had promised himself to make this call, and while that promise had grown vague with the passage of time, it had reasserted itself sharply since his return to the States. He'd been home a week, and this was the

first chance he'd had to carry out his self-imposed mission.

He climbed steadily to the fourth floor. A scrawled card on the mailbox in the entry had informed him that the Taylor family lived in Apartment 4-A. He took out his cigarette lighter and by its meager light found the right door. Behind it he heard radio music. He snapped shut the lighter, and instantly, as its small flame died, the darkness overwhelmed him like a wave.

He stood helpless, incapable of movement, afraid not of this actual dark but of its likeness flooding his own mind. Captain Hammond wore on his left breast, among other decorations, the ribbon of the Silver Star for gallantry in action; and yet he was afraid, and knew it—and knew that his fear was the shadow he had seen in men's eyes, on their faces wherever his duty on the Continent had taken him.

It was the shadow of an all-pervading doubt, an uncertainty that clouded everything, from the

"There must have been hundreds of us kids marching. I don't know why we were there, except it was election year and some big man was going to make a speech"

STATES OF AMERICA

BY DANA BURNET

course of his own life to the future of that postwar world which he had observed, for almost a year and a half, at its clinical worst.

He had seen too much uncertainty. Too many people who weren't sure of their next meal, or their next breath. Too many faces lifted to the sky, not in hope but in grim wonder whether the sun would rise tomorrow.

Thinking of tomorrow reminded him of the ordeal he would have to face in the morning. It was nothing more than a routine physical examination, but Captain Hammond dreaded it. The medical men would find him organically sound . . . but those damned psychiatrists! They'd prod and pry into the state of his mind, the state of his spirit, till they found that doubt which had partially paralyzed his will.

For some time past, it had cost him an effort to make even the least decision, or issue the slightest order. If the psycho boys (Continued on page 69)

OLYMPIC FEVER

BY BILL DAVIDSON

The free-for-all battle of Olympic candidates is on in all its fury as the nation's fleetest athletes assemble for the National A.A.U. track meet. Here's a preview of our 1948 chances as seen by the veteran track-and-field coach, Emil von Elling

The disputed stick pass in the mile relay at the Penn Relays, showing (left to right) Pearman and Mo Callender of NYU and McKenley and Rehberg of Illinois, all Olympic prospects. This photo indicates no foul such as Illinois claimed. Below, Columbia's Olympic hope in the high jump, Bill Vessie

20

EVERY four years (barring wars and other distractions) the world of track and field athletics joins the world of politics in going stark, raving mad. Athletes and coaches who have been the mildest of competitors develop permanent James Mason snarls, and mayhem runs riot in such centers of culture as the Los Angeles Coliseum and Harvard Stadium.

Hurdlers slug their best friends as they run down a flight of barriers; sprinters attempt to disable competitors by planting a footful of spikes in exposed thighs; flying discuses and javelins develop an affinity for the noggins of rival discus and javelin throwers; and a quarter-mile race becomes a free-for-all in which the herd gleefully runs over, instead of around, any competitor unfortunate enough to get knocked down. Also, track coaches forget their usual role of Example of Sportsmanship for the Youth of America, and when they lose a race they scream imprecations at other coaches, as Leo Johnson of the University of Illinois did at the last Penn Relays.

All this is attributable, of course, to an occupational disease known as Olympic Fever.

In each of these fourth years, two high-ranking American officials are selected—the President of the United States, and the coach of the Olympic track and field team. Generally, the political campaign that precedes the election of the President is sissy stuff compared with what goes on in choosing the Olympic coach. The choice is made by an Olympic Track and Field Committee consisting of 13 college and Amateur Athletic Union officials representing all sections of the country. These 13 gentlemen are currently being bombarded by letters and personal visits from prominent alumni of every college whose coach is in the running for the Big Job.

Since the 1948 Olympic year began with the start of the current 1947 outdoor track season, the list of candidates already has been well pared down. The top possibilities today are Emil von Elling, the perennially successful coach at New York University; Dean Cromwell, the famous veteran of the University of Southern California; Leo Johnson, coach of the spectacular University of Illinois team; and Clyde Littlefield, one of the rapidly ascending Texas coaches.

Of these, Cromwell and Johnson seem to be the smartest politicians, and they might spring an upset; but according to the topmost stratum of the nation's track authorities, Von Elling has the inside track. "It may even be," remarked one of these officials wistfully, "that this time the best coach will really win."

The 64-year-old Von Elling has been called the outstanding college track coach in America by sources ranging from Glenn Cunningham to the track expert of the New York Herald Tribune and the promoter of the Millrose Games. Sports writers fondly refer to him as "The Gray Fox," and in 1943, they bestowed on him a Merit Award for "outstanding service to track and field over a period of years." He is loved by the top officials of the A.A.U. and he gets the grudging admiration of his Ivy League colleagues in the IC4A. No coach, aside from his immediate rivals for the Olympic job, has ever gone on record as saying a cross word against him.

His teams have won a record total of nine Intercollegiate championships,

and in 1943 and 1947 he became the only college coach ever to cop a National A.A.U. championship. In 1932, no less than five of his men made the Olympic team. This year, his athletes swept the indoor IC4A championships, the indoor National A.A.U. championships and practically every other loose title in sight.

In the Penn Relays, he uncovered one of the sensations of the year in Freshman Reginald Pearman, whose 1:51.5 was the fastest American half mile since before the war and surprisingly close to the world's record. He has at least four sure-fire Olympic prospects himself in Pearman, Irving Mondschein, the national decathlon champion, and shot-putters Bernie Mayer and Irv Kintisch, both national and intercollegiate champions.

Last year, Von Elling was the only American coach chosen by the A.A.U. to escort U.S. teams competing abroad. As such, he has seen some of the world's greatest track and field men in action, and he already has gone into huddles with Dan Ferris, the omniscient secretary of the A.A.U. over such phenomena as the Russian Zambrimborts in the hop, step and jump, the Finnish Hyytäinen in the javelin throw and Sweden's Lennart Strand in the 1,500-meter run.

According to Von Elling (with statistical backing from Dan Ferris), the United States again will have too much strength in too many events to be upset by any other nation in next year's Olympic track and field competition at London. With the British, French and Italian teams badly crippled by the war, and with Russia still a doubtful Olympic participant, our principal competition will come from the Swedes—who should place second behind us—and from the Finns—who would have been a formidable threat if they had not left so many of their prize athletes on the battlefields.

Sweden's Face-Saving Move

The rise of Sweden in the Olympic picture is an interesting one. In 1912 when the Olympics were held in Stockholm, the Swedish government imported an American coach, Erni Hjertberg, to help prevent the Swedish team from making too miserable showing. Today, the runners who were coached by Hjertberg have become the outstanding coaches of Sweden and they still teach according to Hjertberg's methods. Hjertberg always has been a fine coach of long distance runners. As a result, Sweden's distance runners are expected to dominate most of the events from the half mile up—with an assist from other European countries.

In Lennart Strand, according to Von Elling, the Swedes have the finest miler in the world, with a 3:48 for the 1,500 meters, and several miles in 4:00 and under. Within two seconds of these spectacular times are six (count them) other Swedish milers—Erikson, Gustafsson, Ringvall, Ahlde, Persson and Albertsson.

On comparative times, the one American capable of nosing into the company is Gilbert Dodds, and even then he would have further competition from a Netherlander named Slijkhuis, who has run the 1,500 meters in 3:50.4 and Marcel Hansen of France, who has done even better outdoors with a 3:48.5. The one American to run into this European juggernaut in recent years was Jim Rafferty, a good distance man, who found himself in Czechoslovakia last summer. Rafferty got slaughtered

practically every time he ran against any of the above-mentioned Europeans, and discovered, just for good measure, that the Czechs, too, have a terrific distance runner in a veteran of the resistance named Zatopek.

Von Elling's figures indicate that in the 800-meter run, the Americans also will run into trouble. The United States has two half-milers—Johnny Fulton of the San Francisco Olympic Club, and Reginald Pearman of NYU—who can get down around 1:51 or a little less in the 800 meters.

Bad News for Our Half-Milers

In last year's European championships, however, no less than five men ran a blanket finish at 1:50 to 1:50.3 in the same race. These galloping gentlemen were Gustafsson of Sweden, Ljunggren of Sweden, Holst-Sörensen of Denmark, Hansenne of France and Storskrubb of Finland. Not only that, but Johnny Fulton was badly beaten, in a 1:49.5 half mile by a New Zealander named Harris last summer, and a Jamaican named A. S. Wint, who runs for the British Empire, recently knocked off 1:50.6 against the above tough Swedes, while he was stationed with the British army in Europe.

The Von Elling-Ferris forecast continues on the gloomy side all the way up through the marathon. In the 5,000-meter picture, there are three Swedes plus Sidney Wooderson of England, the great Viljo Heino of Finland, Slijkhuis of the Netherlands and Zatopek of Czechoslovakia, with nary an American poking his nose into the best ten performances.

The same holds true in the 10,000-meter run, which is dominated by the world-record-holding Heino of Finland and five of the omnipresent Swedes. In the marathon, the Americans appear to have no chance against another fistful of Swedes, plus Hietanen of Finland, whose 2:24.55 is five minutes better than the Olympic record, and Yun Bok Suh of Korea, who gave the United States a foretaste of things to come by running away with the recent Boston Marathon in a record 2:25.39.

It is only when you get to the sprints and the skill events that American superiority begins to show. Von Elling flatly predicts (with a concurrence by Ferris) that the United States will have a near sweep in the 100-meter dash, the 200-meter dash, the high hurdles, the high jump, the shot-put, the pole vault and the broad jump. He expects that the points amassed in these events alone will be more than enough to bring the championship trophy back from London to its perennial American resting place.

In the sprints, Von Elling says, we have five or six human comets who are consistently better than the rest of the world. The fastest of these so far is Mel Patton of the University of Southern California, who gets down to a world-record 9.4 seconds for the 100-yard dash, and a near world record 20.4 for the 220.

For a while it looked as if Herbert McKenley, a University of Illinois runner, who competes as a Jamaican for the British Empire, was the top man at 220 yards, but he was resoundingly defeated by Patton in 20.4 at the recent University of Southern California-University of Illinois dual meet in the Los Angeles Coliseum. Lewis and Bailey of Trinidad might conceivably break into the scoring, but any one of several former American comets, including Hal Davis, the 1942

California comet, might come out of retirement, and that would more than offset any foreign threat.

The same holds true for the high hurdles, where Harrison Dillard of Baldwin-Wallace College, and Bill Cummins and August Erfurth of Rice Institute more or less have the field to themselves with performances at or about 14 seconds flat. The closest foreigner so far is Lidman of Sweden with 14.5 and he saw enough of Dillard's back in last winter's meets in Madison Square Garden to discourage him.

The pole vault looks like an American show to Von Elling, with Dick (Boo) Morcom of the University of New Hampshire and Guinn Smith and Irving Moore of the San Francisco Olympic Club all clearing 14 feet 6 inches or thereabouts—nearly a foot higher than the 13 feet 9½ inches of Kaas of Norway. The high jump looks just as easy. If Les Steers of California comes out of retirement, he is capable of clearing 6 feet 11 inches. Otherwise, we have Irving Mond-schein of NYU with 6 feet 7½ inches and Wiesner of Marquette, Vessie of Columbia, Eddleman of Illinois, Vis-locky of the New York A.C., Sheffield of Utah and Scofield of Kansas, all hitting around the same height or slightly better.

The only foreigners with any chance of cracking into this Yankee monopoly are Lindecrantz of Sweden with 6 feet 7½ inches and Paterson of Great Britain, at a half inch lower. We also have the world's best broad jumpers in Billy Steele of San Diego State College, Tex Robertson of the University of Texas and Al Lawrence of the University of Southern California, all of whom are capable of 25 feet or better. Laessker of Sweden and Kusnetsov of Russia might break in for a few points here—if they can develop wings or otherwise add about six inches to their best distances.

Except for an extremely oversized and formidable personage from Russia named Lipp, Von Elling thinks we should have a romp in the shot-put. His own Bernie Mayer of NYU is capable of approaching 55 feet with the 16-pound ball, and so are Billy Bangert of Purdue, Moose Thompson of the Los Angeles A.C., Charlie Fonville of Michigan and Milton Wasser and Irving Kintisch, another pair of ex-NYU hardware tossers.

Where Russia Has an Edge

The shoe is on the other foot, however, in the archaic hop, step and jump event, where Zambrimborts of Russia has done 50 feet 2 inches, and a bevy of Swedes and Finns are all more than a foot better than the nearest American.

Moreover, Von Elling has yet to see an American capable of taking Herbert McKenley in the 400-meter dash (the Jamaican holds the unofficial world's record for the quarter mile at 46.2 seconds), or Storskrubb of Finland and Sweden's Larsson brothers in the 400-meter hurdles—although some of our better quarter milers might convert successfully to this event before the Olympics.

We are hopelessly outclassed so far in the decathlon, where Irving Mond-schein's 1946 total of 6,466 points is far below the level of European competition; and we don't even show in the javelin, where Hyttäinen's heave of 244 feet 7 15/16 inches for Finland heads nine other Swedes, Finns and Russians, all of whom are at least

(Continued on page 37)

The pole vault looks like an American show in the 1948 Olympics, with Boo Morcom of New Hampshire soaring above other nations' pole vaulters. Below, Emil von Elling, veteran track coach of NYU. Von Elling, the "Rockne of Track," is an outstanding contender for the post of U.S. Olympic coach

"Are you sick?" Lissie asked. Mike felt a sudden fierce irritation at her concern. "No, I'm not sick," he mimicked

LITTLE HICKORY NUT

BY VIRGINIA HANSON

ILLUSTRATED BY EARL BLOSSOM

The way Mike saw it, this girl was bad medicine. Nevertheless, she was just what any doctor would have ordered

MIKE was still sleeping better outdoors. Nights in his aunt's pretty guest room were one nightmare after another; but daytimes, in a deck chair under the old elm he had climbed every summer as a boy, he could sleep. The mild September sun creeping around through the branches touched him once in a while, and he slept—when he was left alone.

But just down the slope, at the coral-shuttered cottage, lived sundry cackling chickens; three fool turkeys whose gonking and gobbling gave warning of every passing shadow and sound; and Lissie Blake, the girl in the scarlet shirt—that hard-shelled little hickory nut that was always dropping out of a clear sky onto Mike's unprotected head.

The screen door slammed all day after Lissie; and when she wasn't galloping madly behind a small power mower that sounded worse than enemy bombardment, she was running around the yard beating on a tin pan to scare away hawks. And always behind her the turkeys lumbered, gonking and gobbling. It got so Mike had to hang onto his deck chair to keep from diving under it.

The day she came charging up the slope clutching Mike's spaniel like a black muff against her red shirt and reported belligerently that Frisky had been chasing her turkeys, a technique which had served Mike well with an older sister came automatically to mind.

"What do you mean?" he asked with a show of indignation. "I saw the whole thing—they were chasing him."

It had been a scene out of a Walt Disney film: around and around the big tree that dwarfed the cottage, Frisky leaped and flew on short, fleet legs, his feathery ears streaming backward like smoke, while behind him and in front of him the three young turkeys lumbered and thundered and floundered, their powerful wings stroking, their red necks stretched.

The girl stared. "Are you kidding?"

"I've raised those turkeys by hand—they're as gentle as doves!"

"The breed that carried peace to Tokyo?"

"And very delicate. They get sick if you just look at them."

"Who wants to look?" Mike asked coldly. "You might put my dog down. He's delicate, too."

"How do I know he won't go back and chase my turkeys?"

"After they've scared him half to death? Here, Frisky, poor old fellow."

Frisky took a flying leap onto Mike's lap, settled down with a wriggle and eyed the girl in smug defiance. It was the first time Mike had seen her close. A small, brown, freckle-spattered face, dominated by eyes of intense blue and intense feeling—the feeling of the moment, indignation. Looking at her caused no pain, but Mike liked his women soft—*had* liked, he amended grimly. That was all finished now, along with his ambition to be an All-America back—and the incidental college education that went with it. When a man was washed up, all he asked was to be let alone.

She stood her ground, looking frustrated and confused. "Are you sick?" she asked more gently, and Mike felt a sudden fierce irritation at her concern.

"No, I'm not sick," he mimicked peevishly. "I'm *resting* in the quiet countryside."

The irony was lost on her. She said, "I suppose you know that dog's feet are getting your nice uniform all dirty?"

For no reason, Mike blew his top. "What of it?" he demanded hotly. "I've got a nice new tweed suit coming, all tailored to fit my nice new leg!"

No use wishing it unsaid. Suddenly he would rather have died out there on Okinawa than have to endure her pity. He closed his eyes and clenched his jaw; but what she said, after a breath of silence, sprung all three open again.

"Oh, have you got a wooden leg?"

As Lissie whirled around she scattered whitewash from her brush onto Mike's new suit. "A damp cloth will take it off," she said belligerently

she asked with polite interest. "My grandfather had a peg leg he said was handier than his own. Once a mule kicked him and he kicked back. The mule had nine stitches, but all Grandfather needed was a new peg. I suppose you haven't learned to use it yet?"

"No, but remind me to look for a mule."

The heck of it was, he didn't think she was trying to be funny. Her freckles looked like coarse-ground pepper and her eyes were the color of the ocean in a storm. Her chin was up as if she had just taken something on the point of it.

"Is that all that's the matter with you? I mean: You can whistle, can't you?"

"And keep my courage up?" Mike asked sardonically.

"No, and call your dog. Next time you're *resting* and I can't make him go home."

IT WAS only because there was so little to look at in the country that he watched her day after day. She was forever going about the place at a dead run, grass spray or garden soil churned up in the wake of her flying heels. Mike would lie there sleepless listening to little sounds about the suburban farm—jingle of harness, thudding hoofs as his uncle plowed a field for winter cover—and remembering other summers when he had toiled cheerfully in the fields, toughening his muscles for the football season. When his thoughts took a turn like this he would open his eyes and there would be Lissie.

Mike sometimes admitted to himself that he had been pretty rough with her, but he didn't want to know her any better, so why give it a thought? That was why he wasn't going to take back her rubbers that Frisky had carried off.

His aunt was certain they were Lissie's. "They're boys' rubbers, but that's the best kind for gardening. And they're small."

"Then let her come after them. How would we know?"

"She's a busy girl, Mike, running that place practically singlehanded."

Her mother has been sick, losing her husband like that."

"Like what?" Mike asked bluntly.

"He was an officer on a submarine that was lost late in the war." . . .

An unreasonable feeling of guilt dogged him as he watched Lissie digging behind the chicken house, jabbing ineptly at the packed, muddy earth. By midafternoon she had achieved a shallow hole about a yard square; now she was lugging some cement blocks and trying to set them level. Mike couldn't figure what she was about; he squirmed and uttered exasperated sighs.

Toward evening a truck backed up to the excavation and two men unloaded a narrow building, of strictly functional design, with only a tasteful crescent cut into its door for ornamentation. Mike sat up and stared, while Frisky called rude attention to the truck and its contents. What did she want with *that* thing?

A man couldn't rest with curiosity biting him like fleas. He shut Frisky in the tool shed and limped painfully down the slope. So he walked like a crab—so what? It was a neighborhood of freaks.

He found her with a bucket in one hand and a large brush in the other, covering herself, the immediate landscape and the outside of the narrow building with runnels of whitewash mixed too thin. The turkeys announced him with a frenzied, gargling fanfare, and Lissie whirled, scattering drops from her loaded brush onto Mike's new suit.

"A damp cloth will take it off," she said with a certain belligerence.

She accepted the rubbers and Mike's apologies and went back to work. She seemed neither friendly nor unfriendly, just busy. Mike combed his brains for something to say. *What's that for—as if I didn't know?* Better not. She might get mad again. And then she called attention to it herself.

Feathering a dainty swipe at the crescent, she stepped back to admire her work. "How do you like my new turkey house?" she asked with a fond glance at the whited sepulcher.

(Continued on page 40)

Mike's shoulder thudded into the flabby body. Everything under control, he exulted. He'd teach this guy to steal from helpless women . . .

DO AS YOU'RE TOLD

BY DANIEL P. MANNIX

Under hypnosis you can hear a pin drop at 100 feet or stop your own blood from flowing. In a new team-up with science, hypnotism is performing medical wonders

IN THE spring of 1943, the U.S. Navy suddenly needed a hypnotist. A destroyer had sunk a German submarine near the coast of Delaware and, by a miracle, managed to get the captain off alive. High Navy brass vitally needed information that only a German submarine commander could give. The question was, how to make him give it. There was a slim chance that the man might talk under hypnosis.

The hypnotist chosen for this delicate job was Howard Klein. Before joining up with the Army Medical Corps, Klein had been one of the most successful professional hypnotists in America. For years he had worked in theaters and clubs, averaging less than three minutes to hypnotize the majority of his subjects. In the CBS Studios in New York City, he caused a near panic when he hypnotized a studio audience over the radio. He had collaborated with dentists, oculists and obstetricians. Psychologists had used him to help them treat nervous afflictions. But none of this background kept him from being scared stiff when two plain-clothes men tapped him on the shoulder in Camp Butner, North Carolina, and ordered him aboard a special plane.

At Norfolk, Virginia, the plain-clothes men conducted Klein to a secluded room in the naval base. High-ranking naval officers were awaiting him, openly skeptical that the German captain could be hypnotized against his will. They took Klein into

a room where the German officer was slowly recovering from drugs which had been given him. Klein sat down beside the semiconscious man and began to talk quietly.

"I didn't want the man to realize I was hypnotizing him," Klein explained. "He would have tried to fight me mentally. I never mentioned 'trance' or 'hypnotize.' I simply said, 'You must be very tired. Try to sleep. Breathe deeply and you'll begin to doze off.'"

In less than three minutes, the German was deep in hypnosis. Then the questioning began. German agents, hidden along the coast, were signaling our ship movements to waiting submarines. The naval officers wanted to know where these sending stations were located. When the German began to talk, Klein was rushed out of the room. Then the Nazi started to come out of the trance. Klein had to be hurried back again. After the session, one officer remarked grimly, "With this new type of hypnosis, there are no more secrets."

Klein never did find out how much the brass hats learned. But shortly afterward, the rate of submarine sinkings took a sharp decline.

There has been a great revival of interest in hypnosis. Medical use of hypnosis is generally unknown and unrecognized by most of the judicious men of the profession at present. But in coming years your dentist may suggest it so that you won't feel pain while he is working on a cavity. If you

want to give up smoking or drinking, a posthypnotic suggestion may do it without inconveniencing you. If your wife wants to reduce, a hypnotist may take away her desire for starchy foods.

Children suffering from such diversified ailments as cross-eyes and stammering have been cured quickly by hypnosis. In some cases, hypnosis has cut down the time needed for psychoanalysis from years to weeks. Many obstetricians think it is one solution to painless childbirth. Insomnia sufferers have been helped by it when drugs failed.

But every psychiatrist I questioned about it began by saying, "Don't describe hypnosis as a cure-all. It is seldom or never used by itself in psychiatric treatment. Occasionally it is extremely successful. Often, it is not."

Not a Consistent Remedy

Take the case of the cross-eyed boy who was tremendously helped by hypnosis. Klein, working under the oculist, hypnotized fourteen other children. Two were greatly benefited. The others were not helped in the slightest. We still know very little about hypnosis and how to use it. In a few years it may be a standard part of medical practice. Today, it is just emerging from its thousand-year curse.

This curse is largely the reason why more doctors aren't using it. No other science has been so kicked around. Hypnotism is very ancient and always

it has been regarded as a mystical, terrible force. Witch doctors have used it to kill their victims. Pagan priests have used it to perform miraculous cures. Stage hypnotists in county fairs have forced hypnotized subjects to make fools of themselves. Naturally enough, the public is suspicious of it. But men like Howard Klein represent a new type of professional hypnotist. Klein has studied his subject as a science and has worked side by side with doctors on it. He sincerely believes that when psychologists learn how to handle hypnosis, they will have a powerful new tool to aid them.

Already Klein has given a startling example of this force. On October 4, 1941, Klein caused an international sensation by demonstrating that listeners can be hypnotized by radio. Klein had always contended that our present commercials are sissy stuff. A good hypnotist could send the listeners running down the street, yelling frantically for soap chips. He asked Dave Elman, of the famous Hobby Lobby Show, to let him demonstrate his theory. The sponsors were afraid to turn Klein loose over a nation-wide hookup. But they allowed him to test his method on a group of subjects chosen at random from the studio audience. The subjects were put in a glass booth and Klein broadcasted to them from another room. Dave Elman stood outside the booth and described the subjects' reaction over the network.

"Seeing those men and women go

In an unposed sequence, May Merritt of Philadelphia, has just been hypnotized by Mr. Klein, and Dr. M. Murray LeVine is extracting her tooth. The hypnosis took fifteen seconds, and no other anesthetic was used to alleviate the pain

When she comes out of her trance Miss Merritt can't believe the tooth has been drawn and gasps with astonishment when the dentist shows it to her. Under hypnosis she was told the empty socket wouldn't hurt her, which proved correct

By radio from another room Mr. Klein tells his hypnotized subjects the rope has risen to the ceiling and a boy is climbing it. Obviously the audience believes him

The 98-pound girl has been ordered to make herself rigid. Placed like a board across two chairs her body easily supports the hypnotist who weighs 168 pounds. This is a favorite trick with the stage hypnotists

The hypnotist announces that a mouse (nonexistent) is running toward these three girls. The girl at left, who kept white mice as pets when a child, reaches down to pat it. The girl at right registers horror, while the other girl seems shy but amused

Above, told that the room has become very cold these subjects' teeth start chattering and "goose-pimples" actually appear on their bodies. One girl developed a cough and sore throat. Below, the hypnotist made this girl drink a glass of water and told her it was whisky. The result was a laughing jag

into a trance from the sound of Klein's voice was one of the most startling experiences I've ever had," said Elman afterward. "He could make them laugh, cry, or see visions. They believed implicitly everything he told them. If we had ever allowed Howard to go over the air waves, there's no doubt that he could have put a large part of the nation to sleep. Since then, an English hypnotist has been presented over the B.B.C. television network. The results were so startling that the British passed a law forbidding any hypnotist to broadcast again."

Klein believes there are two forms of hypnosis: "informal" and "formal." Informal hypnosis is tried on us every day of our lives. The radio commercial that monotonously repeats the same idea, the mother who croons the same lullaby over and over until her baby falls asleep, the dictator who constantly screams the same lie, the officer who drills troops until they obey his commands instinctively . . . all are using informal hypnosis. It is simply the power of suggestion. It may be used for good purposes or for bad.

The hysteria of a lynching mob is due to informal hypnosis. But so is the courage of "green" troops bravely attacking an objective.

The difference between "informal" and "formal" hypnosis is the difference between a gentle push and a knockout blow. Formal hypnosis depends for its power on the trance state. No one has ever been able to explain what happens to the mind during the "hypnotic sleep." This sleep is induced by a combination of eyestrain and suggestion from the hypnotist.

The old-time hypnotists used to induce eyestrain in the subject by telling him to stare into their eyes. Actually, the eyes themselves have no hypnotic power. Modern hypnotists usually have their subjects stare at a bright coin or at a spot in the ceiling. To facilitate relaxation, the subject is told to breathe deeply and at a definite rhythm. This is why "breathing exercises" are such an important part of yogism, which is based on self-induced hypnosis. These physical conditions, coupled with suggestion, cause the "hypnotic sleep." Why, no one knows.

A Theory of the Subconscious

The deeply hypnotized subject can open his eyes, talk, laugh and even walk about while still fast asleep. He will obey almost any command the hypnotist gives him and usually believes anything he is told. Psychologists do not fully understand why this is. Some doctors think that hypnosis dulls our ordinary conscious mind. Then our subconscious mind takes over. This mind is so used to taking orders from our conscious mind that it automatically obeys any command it hears. This seems to be as good an explanation as any.

The hypnotist not only controls the subject's thoughts. Through the subject's brain he controls the entire nervous system, especially the five senses. If a subject is told he cannot feel pain, he will allow a major surgical operation to be performed on him. He will even help the surgeon by controlling certain involuntary muscles he would not be able to control ordinarily. If the hypnotist tells him a glass of water is ammonia, the subject begins to gasp, water at the eyes, and will even become sick unless the hypnotist removes the suggestion. On the other hand, the subject will smell a glass of

powerful laboratory ammonia and show no effects at all.

At the hypnotist's command, he will cheerfully eat a lemon. But when the suggestion is removed, his mouth puckers up and he may become nauseated. His hearing can be made so acute that he can hear a pin drop a hundred feet away.

"To show how the sense of smell can be increased, I sometimes blindfold a subject and collect some handkerchiefs from the audience," Klein explains. "Then I remove the blindfold and tell the subject to return the handkerchiefs by sense of smell. He will walk down the aisle of the theater sniffing at the handkerchiefs, until he locates their owners."

Human Body's Latent Powers

No one knows how much our mind can influence our bodies. But there is no doubt we all have many powers that we do not use. Hypnotism enables us to use these powers. A hypnotized subject may be able to contract his veins and arteries so as to stop blood flowing from a wound. Klein occasionally gives exhibitions of this curious power. He makes two small incisions in a subject's hand. While they are bleeding, he instructs the subject to stop one of the cuts. The blood instantly ceases. He then tells the subject to allow that cut to bleed and stop the other one. The flow of blood is promptly reversed.

Doctors are beginning to use hypnosis to help patients control the involuntary muscular systems. A prominent Philadelphia oculist, who has requested that his name be not used because of the popular prejudice against hypnosis, has used Klein to help him treat children.

"Recently, we were able to help a 17-year-old boy by a curious system," said the doctor. "The boy had such a bad squint that he was able to read only the big, four-inch letter on the reading chart. Klein hypnotized him. Apparently it did no good. The doctor told him that the chart was coming nearer. As the chart supposed to approach him, the boy was able to read one line after another until he had gone down five lines. Even more surprising, he retained this power after coming out of the trance."

The doctor thinks that the hypnosis helped the boy by relaxing his eye muscles.

The boy was able to retain the benefits of the hypnosis because of an amazing phenomenon called "posthypnotic suggestion." A trained hypnotist can do a great deal of good with it. But because the hypnotist is playing around with deep, basic forces in the human mind, he can also use the power unwisely.

Klein frequently uses a harmless form of posthypnotic suggestion in his act. He tells a hypnotized subject "When you awake, you will have an uncontrollable desire to sell new papers. You will grab up a bundle of papers and try to make everyone in the audience buy one. This desire will pass when I shout 'Zero!'"

When the subject awakes, he has no memory of this suggestion. But after a few minutes he becomes restless. Finally, he says anxiously to his friends, "There is some big news in the papers. Everyone should know about it." Then he snatches up a bundle of papers Klein has left on the stage and runs through the audience shouting "Extra!" At Klein's order, he stops looking sheepish, and sits down.

You don't stay first *unless* you're best

You sit on the floor in the rear of your car, oof! There wouldn't be any seat cushions to soften the bumps. If your tires didn't give you a smooth, comfortable ride, you'd know it *fast!*

It isn't necessary for anyone to put this strain on his anatomy in the name of science.

For Goodyear has developed a test that makes certain that Goodyear give you the smoothest, most comfortable ride of any tire made. Here's how it's done . . .

The Ride Meter, shown here, is a sensitive instrument—developed by Goodyear to measure the smoothness of a tire's ride. Attached to the body of a car, it registers the many jolts a car gets on the road.

The Ride Meter shows, scientifically and accurately, exactly how smooth a ride Goodyear tires give you.

The results *prove* that Goodyears are as far out in front in riding comfort as they are in mileage and dependability. Still another of the many reasons why Goodyear has been America's first-choice tire for 32 consecutive years.

MORE MILEAGE FOR YOUR MONEY

New tires deserve new tubes. Get both from your Goodyear dealer—your Tire Service Headquarters.

First—every year for 32 years

GOODYEAR

More people ride on Goodyear tires than on any other kind

A HOUSE ABSOLUTELY FREE

BY HENRIETTA FORT HOLLAND

"Be sure to keep the burglar lock on all the time," the voice said brightly

I DON'T know how she does it," Mrs. Vedder said, turning from the telephone after a long, ecstatic conversation. "If only it could happen to us!" she sighed, looking over at the fake fireplace with its electrically lighted logs.

"Who does *what*? If what could happen to us?" Mr. Vedder said absently, from behind his newspaper.

"Why, George," Mrs. Vedder said, "didn't you *hear* me talking to her?"

Mr. Vedder remarked that he certainly had. "Sounded as though somebody had been given a house," he said. "But, of course, that's impossible, so I just stopped listening."

"But Claire Merrill *has* been given a house," said Mrs. Vedder. "Not just one, but two. And absolutely for free. The first one for two months here in New York—"

"Yeah," said Mr. Vedder. "Go on—"

"The other house is in Boston. For six months. Until the fall, when she always goes to the White Mountains to paint, anyway." She sighed again, glancing at the yellow screen that hid her electric grill and pots and pans. "If only we could get a break like that!"

Mr. Vedder put down his paper and began to tap out his pipe.

"George!" Mrs. Vedder said. "How can you be so impervious to news like this in a year like this? It scares me; it's as if you were resigned to being cooped up yourself, forever!"

"Claire hasn't accepted the houses yet, has she?" Mr. Vedder said.

"Of course she has," Mrs. Vedder said. "She's moving into the New York one tomorrow."

"Isn't that rather hasty of her?" Mr. Vedder said mildly.

Mrs. Vedder strode, in an icy rage, toward the bookcase, from which a few books, an ivy pot and two Dresden figures had to be removed each night when the bookcase was brought down out of the wall to become a bed.

"I suppose *you* would rather stay in a ridiculous place like this," she said bitterly. "Even if a house were offered you, *you* wouldn't want it."

"Not until I found out what the joker was," Mr. Vedder said.

"Joker," said Mrs. Vedder, clutching one of the Dresden figures and controlling a wild desire to throw it. "There's no joker in this. Horatia James is going to the West Indies. And since she's one of Claire's best friends—"

"Yeah?" Mr. Vedder remarked again.

"I think," Mrs. Vedder said, "that you are out of your mind." She went to the foyer that also did duty as a dining room and took her coat from the closet. "I'm going down to Claire's," she said. "She may need help."

"Already?" said Mr. Vedder.

"With her packing," said Mrs. Vedder icily. "And you needn't wait up." She closed the door, without slamming it, and started down the street.

SHE looked up at the remodeled brownstones that she passed on the way, behind whose lamplighted windows people were attempting a wretched compromise at living, like herself and George. Yet he does seem so *resigned* to it, she thought. If just for eight months, *we* had a little space to move around in—

"Jeannette!" It was Claire Merrill, coming out of the door of the hotel. "Darling, how lucky! If you could, if you would, do me a favor?"

Mrs. Vedder said that was what she was there for. It occurred to her that her friend looked a little distraught, her blond hair, usually so tidy, hanging in wisps around her face.

"You see," Claire said, "Horatia's secretary is going to call me tonight at the house about last-minute instructions. So if you'd be a lamb and go up and take the call for me, I can finish my packing here."

Mrs. Vedder was somewhat taken aback but she decided it would be fun to see the house—a Victorian jewel, Claire said, pressing the key into Mrs. Vedder's hand. It was on East Seventy-second Street, one of many small houses but, inside, when Mrs. Vedder had found the light switch and pressed it, she stood enchanted.

"Oh!" she said breathlessly. "It's the kind of house you read about in— in Balzac!"

The living-room walls were done in a pale violet silk, ornamented with

tiny yellow flowers. The Aubusson carpet repeated the same delicate colors. Reverently, Mrs. Vedder tiptoed around the room, touching the chair whose frail gold woodwork was carved with cupids and roses, the yellow and violet brocade upholstery.

She was thinking: If I could live here, even for a week—when from behind her somewhere a bell rang insistently. She started violently, then she found the telephone in the little hall.

"Mrs. Merrill?" a crisp voice said.

She started to say, "This isn't Mrs. Merrill," but thinking of lengthy explanations she merely said, "Yes."

"There are just a few things I want to tell you," the voice said. "About the dogs' food. It's on the third shelf in the pantry."

"The dog?"

"Two," said the voice. "They're at the vet's tonight but they'll be back in the morning. I'm sure you'll have no trouble with them, if you just take them out separately."

"Oh," Mrs. Vedder said. "I see."

"They are called Izzod and Issop," the voice went on. "And sometimes they quarrel violently, but that is because the—ah— person with them does not display tact. Never feed one when the other is near by. Izzod is the more jealous of the two. Keep your eye on him. He is also the one," the voice added, "that likes white of egg on everything. Beaten stiff."

"Was there anything else?" Mrs. Vedder said, faintly.

"Oh, yes," the voice said brightly. "This is even more important. Be sure to keep the burglar lock on all the time. The minute you get to the door, rush in and slam it. Especially if a man follows you up the steps."

"A man?" Mrs. Vedder quavered.

"Yes, a mysterious man has been hanging around for a month. Mrs. James has had some threatening letters. Of course, the police know about it; then, too, the fiercest of the dogs could presumably drive any prowler away."

"Izzod?" suggested Mrs. Vedder.

"Issop," said the voice. "Well, goodbye. I'm sure you'll get along all right."

"Goodbye," Mrs. Vedder said. She replaced the receiver on the hook, turned, then gave a little scream. The front door was opening. . . .

"Darling, did I scare you?" Claire came in, with two suitcases. "I finished my packing sooner than I thought, so I came on up. Have two sets of keys, you know. Isn't it a dream house?"

"Yes," Mrs. Vedder said hesitantly. "Only—"

"Only what?"

Mrs. Vedder handed her the list she had jotted down. *Front door, close quickly, safety lock, Izzod, Issop watch for fights, beat white of egg prowlers.*

Claire glanced through it. "Is that all?" she said. "Look what comes with my Boston house." She handed Mrs. Vedder a letter. "Go on, read it," she said, grimly.

WELL," yawned Mr. Vedder an hour later, from the depths of the in-a-door bed when his wife came in, "what's the joker?"

"Suppose, next year, we had electric coals in the fireplace instead of logs?" his wife replied. "It might be cozy."

To Mr. Vedder, this reply was no ambiguous. "Swell," he said, with a contented sigh, turning over and going back to sleep.

A SHORT SHORT STORY COMPLETE ON THIS PAGE

SET FOR A TASTE TREAT...

Now for a Milky Way to make the fun complete! The moment you take your first bite, you will enjoy that thick milk chocolate coating . . . the golden layer of smooth, creamy caramel . . . and the soft, chocolate nougat center, richly flavored with real malted milk.

All together, a thrilling treat—right down to the last delightful flavor that lingers in your mouth.

When you crave good candy, eat a

Milky Way

PROVED!

Smoother, More Comfortable Shaves for 3 Men out of Every 4

No matter how tough your beard,
how tender your skin—
no matter how you shave—here's
actual proof of better shaves the
new, different Palmolive
Brushless Shave Cream Way!

only **PALMOLIVE
BRUSHLESS
SHAVE CREAM**

**Offers You This
Proof!**

Yes, it's a proved fact! 1297 men
tried the new, different Palmolive
Brushless Shave Cream Way to
shave—and reported amazing re-
sults! Actually, 3 men out of every
4 tested reported smoother, more
comfortable shaves!

HERE'S ALL YOU DO: Wash your face
with soap and water! Rinse! Soap face
again. Do not rinse! Apply Palmolive
Brushless Shave Cream immediately,
smoothing it upward into your beard.
In this way, you will get the full benefit
of Palmolive Brushless Shave Cream's
beard-conditioning effect! Then, shave
—and discover real shaving comfort!

DO AS YOU'RE TOLD

Continued from page 26

A posthypnotic suggestion can extend over a long period of time. A hypnotist can tell a subject: "One year from today, you must return to this room and make a pencil mark on the stage." The subject will live the entire year without remembering the suggestion. But even though he may have moved to another city, on the prescribed day he will feel nervous. Finally he will have an uncontrollable urge to travel back to the room and make the mark. Curiously, the subject will always invent some logical reason for his decision. He may tell his family, "This mark is to guide engineers in setting up a new building." Once having invented this idea, he will believe it devoutly. Apparently no one likes to believe he is being influenced against his will.

Posthypnotic suggestions are often used to cure patients of nervous habits, such as nail biting. They can also be used to cure some character defects. A juvenile delinquent can be given a suggestion that he no longer wants to hang out with his gang. The boy will obey. But the sudden, unnatural break with his old life may do him more harm than good. Psychologists who used posthypnotic suggestion try to cure the patient by other means. Then they use the suggestion to give the subject confidence in his own powers of self-control.

Because hypnosis depends on the personalities of the hypnotist and the subject, no two cases are ever exactly alike. But here are the general rules:

Variations in Susceptibility

Everyone has a susceptibility to hypnosis. But some people unconsciously refuse to "let themselves go." Often a patient who cannot be influenced by one hypnotist can be instantly hypnotized by another. Some patients have gone to eight hypnotists before finding one who can hypnotize them. You also vary from hour to hour in your susceptibility. Worried people are very susceptible to hypnosis. This is why "spellbinding" demagogues are likely to appear during times of national anxiety. Men and women are equally susceptible, but children are more so than adults. It is almost impossible to hypnotize feeble-minded people, because their minds are too dull to respond. Klein can usually hypnotize about 70 per cent of his subjects.

Generally speaking, you cannot be hypnotized against your will. There are exceptions. John Calvert, a well-known stage hypnotist, once hypnotized a man who was walking up the aisle by shouting,

"Stop! You can't move!" The man was frightened, and so was very susceptible to suggestion. He stood literally root to the spot, begging Calvert to release him. A New York psychologist hypnotized a defiant patient who told him, "I bet a hundred dollars you can't hypnotize me!" The doctor told him, "Fine! Just keep on fighting me!" After a few minutes the man was so worn out mentally that the doctor was able to hypnotize him easily. But these are unusual cases.

A hypnotized subject will not do anything he is told. The subject's subconscious mind is always functioning and will do nothing against his moral code. Neither will he do anything that would endanger himself. A girl cannot be seduced under hypnosis. A man can be made to jump out of a window. I have seen this demonstrated. A girl told me to commit an immodest act instantly came out of the trance with a vague feeling of anger. A businessman told to sign a blank check fought the suggestion as long as he could and finally scribbled an intelligible scrawl. In some strange way the subject always knows what is going on, even though he is apparently completely controlled by the hypnotist.

Subjects react differently to suggestions, depending on their ethical codes. While giving a demonstration in prison, Klein told a group of hypnotized convicts that a crate of potatoes weighed gold nuggets. The next second, the crate was smashed. The convicts fought another for the potatoes. Klein stopped one burly con whose coat was bulging with potatoes.

"Seen any gold, bud?" asked Klein.

"None around here, mister," said the convict, innocently ducking away.

If you are hypnotized once, you can necessarily be hypnotized again until you want to. But the hypnotist can give you a posthypnotic suggestion that you will always go to sleep when he orders. This is often done if the subject is to be hypnotized a second time. A certain stage hypnotist hypnotizes his subjects beforehand and gives them this suggestion. Then when they come up on stage they pass out instantly when he speaks to them. But if the subjects are told that they should not be hypnotized again, they can throw off the posthypnotic suggestion just as they can any hypnotic suggestion they feel is wrong.

It is not true that sometimes a hypnotist can't bring his subjects out of a trance. Even if the hypnotist drops dead, the subjects would wake up after a short nap.

COLLIER'S

"Come in and let me take your wraps"

IRWIN CAPLAN

"Hello. I live next door and I'm available as a baby sitter"

COLLIER'S

DICK ERICSON

Sometimes you can be hypnotized without knowing it. A doctor told me he found it necessary to hypnotize a man patient who refused to cooperate. The doctor asked her to watch while he hypnotized another woman. The patient became so interested that unconsciously she was hypnotized at the same time. While Klein was in the Army, he was giving a USO show with two MPs on stage to keep order. While he was hypnotizing the volunteer subjects, he heard the audience howling with delight. The two MPs had accidentally become hypnotized while watching. Klein promptly woke them up. "You sure missed the chance of a lifetime," all the MPs sadly assured him.

There probably is such a thing as mass hypnotism. Crowds usually are controlled only by informal hypnosis. But during Klein's shows people in the audience frequently go into a trance while he is hypnotizing the subjects on the stage. During one of his Army shows, Klein had any members of the audience who said that they had been hypnotized to stand up. Three hundred and fifty men stood up. Klein had to make them march past in single file in order to wake them individually. "These men were tired from a long day's drill," explained Klein. They were highly susceptible. That was the closest I ever came to hypnotizing a whole audience."

Trying to find a doctor or psychiatrist who will endorse hypnosis is, to say the least, difficult. Although Klein is working with five doctors, only one of them would allow his name to be used in this article. Dr. M. M. LeVine, dentist, of Philadelphia, Pennsylvania, uses Klein to hypnotize patients who dislike taking gas and have a dread of injections. "Also, some people cannot form a normal blood clot after an injection," Dr. LeVine explains. "As a result, healing is very slow. A subject is susceptible to hypnosis, it is the perfect anesthetic."

Not many medical men are as frank as Dr. LeVine. Recently Klein, working under the direction of physicians, cured a patient of stammering in two treatments. This patient had been unsuccessfully treated by a specialist in speech deficiencies. The specialist admitted the failure, but added, "I personally will have nothing to do with hypnosis." The identical physician of a well-known psychiatric clinic told me, "We never use hypnosis." Yet I had read statements that doctors recommending hypnotic treatments in certain cases.

At a medical library, the librarian told me that a certain doctor came in daily to look at books on hypnosis and discussed the subject with her. When I went to the clinic where the doctor was working, I was told, "This is for publication, say that we never used hypnosis in any form."

Doctors who use hypnotism like to call it "psychopeutic therapy" or anything except hypnotism. In the last few years, a new technique of using hypnosis in psychoanalysis has been developed. Usually psychoanalysis takes so long and is so expensive that few people can afford it. The process can be greatly shortened by hypnotizing the patient and suggesting that he talk or dream of the problems bothering him. These dreams frequently reveal the basis of his conflict and point the way to the cure.

A leading exponent of this "hypnoanalysis" is Dr. Lewis R. Wolberg of New York City. Dr. Wolberg also uses hypnosis to help a patient recall forgotten childhood memories. The subconscious mind never forgets. Under hypnosis a subject can vividly recall any incident in his life. A man told to relive his fourth birthday will toddle around the floor, laugh with delight at an imaginary cake and speak to people long dead.

Haunted by an Egyptian Mummy

In his book, *Hypnoanalysis*, Dr. Wolberg cites the case of a girl who was unable to keep food on her stomach. She had gone to doctors, who could find nothing wrong with her. She seemed happy and well-adjusted, but under hypnosis, the girl recalled that as a child her father had once forced her to touch an Egyptian mummy he kept as a curio. Ever since, she had been tortured by nightmares of the mummy chasing her. The dreams were so hideous that her waking mind refused to allow her to remember them in the morning. She was suffering from nervous indigestion.

A Baltimore psychiatrist told me that he used hypnosis but refused to advertise it. "Patients would drop in on me and say casually, 'I'm having trouble sleeping. Give me a posthypnotic suggestion to sleep.' They seemed to think they were stopping at the corner drugstore for a couple of aspirins. Of course, I could give them a suggestion that would make them sleep. But I wanted to know why they were having trouble sleeping. Otherwise, it would be like giving a man chloroform for a broken leg."

There is probably only one hypnotist in the country more successful than Howard Klein. That's the famous Benny Finkle, who, for a consideration, will put the hypnotic eye on any boxer, wrestler, or race horse you want to have lose. Benny claims he can't make them win, but he has a hypnotic-hex that is sure to knock them out. Klein shakes his head sadly when he hears that someone has paid the little hex-maker \$500 to make a horse fall down. "Benny's certainly got somebody hypnotized," says Klein regretfully. "But it's not the horses."

THE END

Of America's leading cigarettes, PALL MALL—and only PALL MALL—is "Outstanding"!... For PALL MALL's distinguished length is the outward sign of a basic superiority. "Distance lends enchantment"—and the greater distance PALL MALL travels the smoke... filters it through PALL MALL's traditionally fine, mellow tobaccos... gives you outstanding smoothness... mellowness... mildness.

OUTSTANDING
-and they are
mild!

The girl had taken care to hang a lantern high up in the door of the cabin to guide him back. As he approached she ran out and helped him the last few yards.

THE GOLDEN MESH

BY KENNETH PERKINS

The swamp was a natural mantrap—and so was the girl from New Orleans

WITH the exception of one Kentuckian they all gave up the man hunt and started for New Orleans. The Kentuckian, Ethan Trigg, was a born tracker and having fought under Old Hickory in the Creek campaign, he knew how to get along in the woods and on water. But the marsh is a strange mixture of both; it is neither sea nor land.

There were no hyacinths choking the bayous in those days, but there were mangroves and floating turf and marshfire. And worst of all, if he were lost there was no one to show the way out, except an occasional Cajun trapper—Frenchmen, who couldn't understand a word of Kentucky English. He ran into one who was paddling a hollowed-out cypress log.

"I've got to have your pirogue," Trigg said. "I'm chasing somebody. Maybe you've seen him—an Englishman in trapper's clothes?"

The answer was a respectful smile. "Can't you understand? This Englishman dressed like a trapper—he killed one of our party with a musket—bang, bang!" Trigg pointed to his chest.

The Cajun seemed impressed with the chest and with Trigg's rifle gun, powder horn and tomahawk. And he may have been impressed with the Kentuckian's rawboned face and the mane of hair to his shoulders. The trapper got out of his canoe.

But it did Trigg little good; he could paddle only a short distance. The stretch of water he crossed might be called a prairie—as good a name as any, considering the upside-down country. The island where he landed would be called a bay.

Here he caught a glimpse of the fugitive fleeing on foot through the moss-hung oaks. Trigg followed, wading now in the ooze, floundering

on quaking ground, crossing a mud shoal. In the swamp grass on the other side, there was no sign nor track nor hair nor hide of the fugitive. There were only the muskrats nesting in the roots, mallard whistling by like bullets—and then darkness.

The darkness was peculiar, with more light reflected in the east off some body of water than in the west over New Orleans. Trigg was completely lost; he decided to make Indian camp. He caught a catfish and a gaspergou, which astonished him, for these are fresh-water fish. If he had caught a goggle-eye or croaker he might not have been so sure that he was heading inland instead of to Lake Borgne and Mississippi Sound. But in the swamp country when fresh bayous turn salt it does not always mean the sea marshes are nearer.

The clouds had come down low; mists turned every blade of grass and

rotting root and scrub palmetto soggy. Unable to start a fire, he had seen cherries for supper and then the cold got through his wet homespun shirt and pantaloons and into his bones. He felt a good case of chills and fever coming on. That was why he kept walking. He had no direction in mind except for a glimmer of light far away through some moss-hung oaks. . . .

It was not the glow of decaying vegetation, he found out when he shouldered his way through sea cane and waded across another prairie. The light came from the unshuttered window of a cabin of cypress, mud and moss. A canoe lay half in the water, half in the cane like a sleeping alligator. The man who opened the door to his knock was of that incorriguous breed called a webfoot.

There was no point in just commencing the canoe, for it was useless.

\$10,000⁰⁰ PROTECTION FOR \$10⁰⁰

Q Suppose my dog bites somebody?

A It is covered, on or away from premises.

Q I ride a horse. Suppose I injure someone—am I covered?

A Yes, your legal liability is covered up to \$10,000.

Q Are medical payments included?

A Yes, \$250 medical payments are provided for others than those insured, irrespective of your legal liability.

Q Suppose my son injures a playmate?

A All members of your immediate family are covered.

Q If tradespeople and other visitors to my property are hurt—am I covered?

A Yes. Protection applies to any of "the Public" injured on your premises.

Q Am I covered, if someone is injured while making repairs to my home?

A Yes, construction, alteration and repairs on premises are covered.

Q If I hit someone while playing golf—am I covered?

A Yes, participation in any sport or game is covered.

Is it worth \$10.00 to be covered up to \$10,000* if you, or any of your family residing with you, are sued for bodily injuries caused others? (Except claims arising from business pursuits or the use of automobiles or aircraft.)

Is it worth \$10.00 to have the experienced and competent claims personnel of one of the biggest insurance groups in the world at your service to handle claims and pay court costs and legal fees?

Is it worth \$10.00 to be protected against a judgment which might wipe out your lifetime savings?

Is peace of mind worth \$10.00? If you think so, fill in the coupon and we will put you in touch with our nearest agent or broker.

*Higher limits obtainable.

WHY I BROKE WITH ROOSEVELT

Continued from page 17

could handle the senators and the congressmen. We could get bills passed. Then we could all go home and go fishing."

We had to laugh at that.

In February I made several long trips, during which I sounded out sentiment on the Administration and on 1940. I can best sum up my political observations on these trips by quoting from a memorandum dictated at that time:

"My own opinion is that the leaders of the party, with few exceptions, do not want Roosevelt to run for a third term. All these stories which are coming out of Washington about the group around the President—Wallace, Corcoran, Hopkins and the rest—have alarmed party workers. They feel that the real leaders of our party are not being given proper consideration and credit for their part in the party's achievements. They feel that someone else should have an opportunity at the White House.

"They are all grateful for what Roosevelt has tried to do for the country and the things he has accomplished, but they do not want to go through a bitter campaign trying to defend a third-term candidacy. That is the attitude of nearly every responsible leader I came into contact with, except Governor Olson of California and Mayor Kelly of Chicago."

At this time Roosevelt was beset by foreign and domestic troubles. I did not see him for a chat alone from January until March. On March 29th, the President called me over to the White House, where we talked about stamps and patronage and finally about 1940 politics.

Dewey Criticized as Arrogant

He asked me about the Legislative Correspondents' dinner at Albany, particularly after the speeches made by Lehman, Mayor La Guardia, Al Smith and District Attorney Dewey. I told him that Lehman, La Guardia and Smith did all right in short speeches, but that Dewey talked for 17 minutes and took some pot shots at Republican Leader Simpson, which I considered unwise from Dewey's point of view. I added that I couldn't be fair with Dewey because his arrogant attitude irked me.

"That's exactly how I feel about him," the President said. "He's arrogant and ambitious. He wants to be President or thinks he can be. By the way, what do you think of your friend Paul McNutt's campaign?"

"McNutt is your friend," I reminded him. "While I have no feeling against him, I can't forget that he and McHale (Frank McHale, National Committeeman from Indiana) kept over twenty delegates from supporting us in 1932."

"Not that I take him seriously," the President confided, "but I consider it bad taste on his part to let his name be announced when he is still a member of my Administration."

"Boss, I am constantly being interviewed by newspapermen about 1940," I said, "and I have told them consistently that anyone who made an announcement until you have spoken ought to have his head examined."

"That's right, Jim," he observed. "Incidentally, what do you think of Garner's candidacy?"

"To be wholly frank, I don't think Jack is a serious candidate at this time," I answered. "I talked to him recently and he brought up, entirely of his own accord, the Presidency. With tears in his eyes he told me he hoped that nothing would happen to you, so that he would not have to take over the reins of the government. I know that he was absolutely sincere. He has a very deep affection for you, Boss."

"I'm glad to hear it," he said. "I'm sure Garner is speaking from his heart when

he says he doesn't want to succeed me."

On June 7, 1939, I was called by the President as I was having dinner in my Mayflower Hotel apartment in Washington. He was in the friendliest of moods.

"Jim," he began. "I'd like to have you and Bess join me over the week end on the Potomac for a cruise."

This was the first invitation Mrs. Farley and I had received for a cruise aboard the Presidential yacht, although I had been in Washington for more than six years. But I had to refuse.

"I'm sorry, Boss, but I agreed a few weeks ago to present a watch to Joe McCarthy, manager of the Yankees, in a ceremony at the home plate in Yankee Stadium Sunday. I appreciate the invitation a lot, but I don't feel I can change my plans at this late date, much as I'd like to."

"What about the next week end?" he pressed.

"I have a lot of work cut out for me that week end," I said. "I'm going to attend a postal convention in Maine a week from Sunday. Maybe I can pull the state into the right column in 1940 and leave Vermont all alone."

"Always proselyting, Jim," he laughed. On June 23, 1939, I was called to the White House for a conference. As usual we began by discussing stamps. I reported receiving a letter from a Mrs. Casper Whitney suggesting a Cape Cod postage stamp.

"Jim, there's no Democratic vote at Cape Cod," he laughed. "I think the next stamp we issue should be for Farley and Roosevelt."

"Just a minute," I cut in with a laugh. "I'd just as soon that stamp won't be issued for a long, long time. Unless you could have the law amended to permit living persons to be portrayed on stamps."

"Objection sustained," he chuckled.

A few days later, when he was entertaining King George and Queen Elizabeth, he was cold and distant. Along with other Cabinet members and their wives, Mrs. Farley and I went down to Mt. Vernon aboard the Potomac. The day was hot, but there was ice in the President's manner toward me, a haughtiness, perhaps, which may have been the result of his hobnobbing with royalty. Anyway, I felt a good and faithful servant should have deserved friendlier treatment.

I enjoyed the visit of the King and Queen and thought they handled themselves extremely well under trying circumstances. I nearly died laughing at the famous British Embassy garden party, when Jack Garner slapped the King on the back in telling him a story—not so

much at the gesture or the story as at the faces of the astounded Britishers. Mrs. Farley and I were not invited when Roosevelt entertained the royal couple on his family estate.

In July, as I was preparing for a European tour, I went up to Capitol Hill for a lunch with the Vice-President. After dessert, he pulled out one of his long cigars, lighted it carefully. Through the swirling smoke and out from under his bushy eyebrows, he studied me and then plunged into the heart of his subject.

"Jim, I will lay all my cards on the table," Garner began. "I want to let you know just where I stand and exactly how I feel. I mean on this third-term business. Jim, I can't support a third term and will fight any third-term bid for the good of the party. First off I want you to believe me when I say I don't want to be President. God knows how true that is."

There were tears in his eyes and his voice was charged with conviction.

"Jack, if you tell me you don't want to be President, then I do believe you," I said. "Your word is good enough for me."

"Thanks," he said. "But-I have been

"I find that hard to believe," I said.

"Well, just think it over," he said. "He's jealous of Hull for his standing before the public. And he's jealous of me for my popularity in Congress. He ought to be glad to see men in the party coming along and he fancies that he is, but actually he doesn't like it."

A few days later I was in Columbus, Ohio, for a postmasters' convention. When I put in my daily call to the Post Office Department, I was told that Cardinal Mundelein of Chicago was having lunch with the President and had asked to see me. My call was switched to the White House, and the Cardinal asked if I could call on him when he visited New York. I said I would be glad to do so.

A Visit to the Cardinal

I found the Cardinal reading his breviary in the spacious living room of his hotel suite. He laid it aside, tucking in a ribbon to mark his place. We were left alone after I was ushered in.

"I had a most enjoyable visit with the President," he said. "He is truly a great man. I think it is most fortunate that he is where he is and I hope he remains. It is my belief that he will run for a third term."

"Did he say so?" I asked eagerly.

"No," he said slowly. "No, but I hope that you will support him if he does. The President was extremely generous—I feel that I can tell you this—in his reference to you and spoke of you in very flattering terms."

"I am glad to hear it," I said. "I wouldn't mind hearing it from him."

"James," he studied me earnestly, "you have always been most frank and open with me so that I feel entirely free in broaching a most confidential matter to you. It is my sincere feeling that a Roman Catholic could not be elected President of the United States at this time or for many years to come. I hope, therefore, that you will do nothing to involve the Catholics of this country in another debacle such as we experienced in 1928."

I made up my mind that I was not going to be persuaded into taking a course contrary to my better judgment. I was aware that the Cardinal had just come from the White House, where he acknowledged he had fallen under the charm of the Boss.

"Your Eminence, I have my own views, definite views, on the third term; but I do not think this is the proper time to air them or that you are the proper person to hear them. I do not feel at liberty to discuss my views until the President has told me what he will do."

"Last winter he indicated he would not be a candidate again. But he maintained that if a losing ticket were nominated in 1940, he did not feel obligated to support it. I find such an attitude difficult to understand. I cannot imagine him upsetting American and party tradition to be a candidate for a third term."

"I am satisfied he is going to run," he said.

"I can't believe it and my belief is based on his own intimations and hints. It may be that he is willing to let it develop and see if it is possible and then announce what he will do. Until he speaks, as I think he will speak and should speak, I must rely on his intimations."

"Now for myself, I frankly do not care what happens to me politically. A place on the national ticket does not concern me too much. My wife and children would be far happier and without a doubt better off, if I forgot all about public life. I hope you will believe me."

"I do."

"Now I want to be as free as though I

were in the confessional. It is not a matter of great concern to me that Roosevelt does not regard me as qualified for the office of President. It would be difficult for him to find anyone qualified but himself. I do not say that unkindly, because it has been so with every President, Democrat and Republican and Federalist and Whig. There are many other people of intelligence, wisdom and ability, whose judgment is above question, who believe I am qualified. I do not think the President should take the position that I am not."

"Why don't you tell the President how you feel?" he suggested.

"I would if he ever raised the question."

"James, I do not believe a Catholic could win," he stated.

Reasons for Al Smith's Defeat

"A great many people, among them the Vice-President, senators, representatives and party leaders, feel differently. Men who know something about politics. Conditions are not the same as they were ten or twelve years ago. When Al Smith ran, the Democratic party was not in power; Smith was leading the fight for repeal of the prohibition law; the country was prosperous; Smith's choice of Raskob, a Republican, for National Chairman was an affront to the old-time Democrats; Smith's conduct of the campaign was anything but skillful and diplomatic. It was doubtful that any Democrat could have been elected in that year, and the religious issue alone could not be blamed for Smith's defeat.

"On the other side of the picture, there is no reason to believe that the Democratic party will not win in 1940; the party is now in power; there are hundreds of thousands of Democrats on government pay rolls and, whether or not they like the name Farley, they could not vote themselves out of office just because the candidate was a Roman Catholic. There are thousands and thousands of persons, with no set political affiliations, who work for the government and who would vote for me feeling reasonably certain they would keep their jobs if the Democratic party remains in control.

"Regardless of what anyone may think, I am known, respected and trusted, and I have no hesitancy in saying, without egotism, that no other Democrat has any better chance than I have. Actually I am not planning to secure the nomination for myself. Nonetheless I will not let myself be kicked around by Roosevelt or anyone else.

"Loyalty is not all on one side," I continued. "It's time for the President to be loyal to me. For the last year and a half he has not consulted me on appointments. Within six months two appointments have been made in New York, my own state, which have been most displeasing to me. I have been made some very attractive offers 'if I would forget Roosevelt,' and a huge fund could be mine if I would get out and fight Roosevelt, which I do not for a minute propose to do. I am still being loyal and loyalty should work two ways."

The Cardinal repeated that I should talk to the President. He said he hoped that I would support the third term he was certain the President would attempt.

"If I talk to the President, Your Eminence, should I tell him that you talked to me?"

"I hope you will not do so," he urged.

I had the feeling that the President had asked him to speak to me—that he had flattered this Prince of the Church into doing his bidding.

"Before I go," I said, looking him full in the face, "I want to be as free and open as I know how, Your Eminence. Perhaps you will not like this, but it is in my mind and you should know it. You are the first person in the Church who has ever attempted to influence me on a po-

litical matter, and I have been in politics for thirty years."

"It is only because I am interested in you," he said. "I have something which I hope you will not object to my mentioning. I understand there has been some criticism of Mrs. Farley—some things she is supposed to have said about the President."

"That's all right," I said, wondering if he was carrying this complaint from the White House itself. "I'm glad you brought it up. Mrs. Farley is a loyal wife and feels strongly resentful of what has been done to me. She has never forgiven the President for the way he acted when Huey Long attempted to bring about an investigation of me. Long was not aiming at me, but was trying to get at the President. Long was aware he would injure Roosevelt if he could tear me down."

"Mrs. Farley could never condone the President's silence in the face of Long's accusations. Even after the Senate vindicated me Roosevelt said nothing in my defense. She felt that in view of my services he should have rallied to my support, even if he were not moved by loyalty and friendship. Then Bess feels that we have been treated like poor relations. We are never invited to the White House except for purely official functions; we have never spent a night in the White House; we are never invited to birthday parties

fight against O'Connor." He cocked his head and measured the effect of this shaft out of the corners of his eyes.

"To be entirely frank, I didn't," I acknowledged. "I explained my position at the time of the purge and you approved my determination to keep my hands off. There is no reason why Corcoran should expect the party chairman, whose first consideration is to maintain party harmony, to do his dirty work."

"Between you and me I'm getting a bit fed up with Corcoran and his crowd. I know they haven't got the influence with you which is attributed to them, but I don't think it healthy that the impression of their influence prevail. They're merely peanuts in a sugar barrel."

Roosevelt was slow in getting to the point which I knew must come—the 1940 campaign. He began by considering the candidates.

"To begin with, there's Garner," Roosevelt said, as though he were counting on his fingers. "He's just impossible."

"Just a minute," I cut in. "I am sure that Jack is not interested in being a candidate. He is willing to let his name be used, if necessary, by those opposed to a third term."

"Maybe so," he acknowledged. "Then there's Wallace. What do you think of Henry? I don't think he has it."

"I have a personal liking for Henry," I

"Mr. President, you have my word of honor on that," I said as solemnly as I could.

"Thanks, Jim," he acknowledged. "But you must understand one thing. I do not want to campaign for a losing ticket."

"Boss, as the party's leader you'll have to campaign for whatever ticket is selected," I argued. "We cannot compromise on the platform; it must be a wholehearted endorsement of your Administration. In turn you will just have to go along with the party."

He made no answer. I then asked bluntly what kind of candidate he wanted. His answer was: "All I have to say is that I hope they don't nominate just a 'yes man,' but pick someone who is sympathetic to my Administration and who will continue my policies."

At this point he switched to a consideration of the picture in the Republican camp. He named Dewey as the most important figure. I disagreed, feeling that the Republicans would choose Senator Vandenberg.

"Dewey might get second place," I said, "but I can't see him in first place, because he is such a middle-of-the-roader—a liberal when among liberals and a conservative when among conservatives."

"You've got him figured just about right, but I still think it will be Dewey, and he will make a formidable opponent," the President said. "That will make it all the more necessary for you and me to work together in 1940."

I made no answer to this. It was my turn to change the subject.

Mr. Ickes Raises a Laugh

"Boss, before we get off politics, I want to show you something which may give you a laugh," I said, reaching into my brief case for some correspondence I had had with Oliver Quayle, treasurer of the Democratic National Committee. "Here's a letter from Quayle to Ickes asking for a \$100 donation to the party and here's Ickes' answer saying he could not afford such a large donation and asking that all further correspondence should be addressed to him at his office."

"Don't you just love it!" he laughed. "And isn't that just like Harold? You know he is serving his purpose as far as the Administration is concerned because he makes the kind of speeches no one else can make, but sometimes I think they may be more detrimental than helpful. And the same goes for him."

The next morning I joined Mrs. Roosevelt at the breakfast table.

"I have a very direct question to ask you and I want a direct answer," she challenged. "Someone has told me that in some way or other I snubbed Bess."

"Now, Mrs. Roosevelt, you know you would not do a thing like that to anyone," I protested.

"I'm sure I wouldn't do it intentionally but if I ever have hurt Mrs. Farley in any way, I would do anything I possibly could to straighten it out," she said earnestly.

"Please forget it; the report just isn't true," I said.

After breakfast I went to say goodbye to the President and found him about to hold a press conference. I remained for the show. He was in high spirits. When he was asked if I was going to resign, he tossed his head back and snapped, "He is not!" as if the suggestion of any friction between himself and me was the most ridiculous idea in the world. I could not help but consider how the reporter would love to have sat in on the conference of the night before and how the country would have relished the story.

Next week Mr. Farley takes you behind the scenes at the famous "show down" conference with F.D.R., reveals the President's stand on the third-term issue and declares his own intentions.

and similar social functions. In short, I am a bottle of tonic to be taken when needed and then shelved until needed again. Now I have come to the point where I don't care to be shaken well before or after using. The President has never written me a word of appreciation or thanks for what I have done since 1930, and I have given freely of my strength, my time and my ability."

I left, fully convinced that the President was disturbed as to what my attitude would be and that he had held a heart-to-heart talk with the Cardinal, looking for light, if not actually enlisting the prelate to work on me.

In the days that followed, the newspapers and magazines were full of stories of a rift between myself and the President. As evidence of a rift, my infrequent appearances at the White House were cited. When the speculation showed every sign of increasing rather than abating, the President summoned me to his home at Hyde Park. It was the summer of 1939.

After dinner Roosevelt and I headed for the small study in the north wing. He hopscotched over the political situation. He talked about the purge, explaining that he started it because conservatives were hamstringing his program and he felt the Democratic party must be liberal to be successful. He spoke particularly of his fight against John O'Connor, the New York congressman who had opposed his wage-and-hour legislation. "You know, Jim," he said, "Tommy Corcoran feels you did not go along all the way in the

said, "but I frankly don't know where he stands from day to day. I must confess I share the feeling around the country that he's a dreamer."

He then brought up the name of Paul McNutt and turned down the thumb of his right hand. He did not mention Hull, Jesse Jones, Robert Jackson, Frank Murphy, Harry Hopkins or myself as candidates. Finally, we reached the third-term issue, when he talked of the necessity of saving democracy.

"We must save democracy," he said in ringing tones as though he were on the platform. "It's the only way to save the country."

"I think the Democratic party has to be successful in order to save the country," I put in. "And I am more concerned with the country than with the party, because success will come to the party if the country is secure and prosperous."

"Jim," he said, dropping his voice and speaking slowly for emphasis, "you and I have got to work together in 1940 for the good of the country and the party, just as we have in the past."

I said nothing, waiting for what was to follow. He fixed his eyes on me most intently and set down his cigarette.

"Jim, I am going to tell you something I have never told another living soul," Roosevelt dropped his voice to an impressive whisper: "Of course I will not run for a third term. Now I don't want you to pass this on to anyone, because it would make my role difficult if the decision were known prematurely."

OLYMPIC FEVER

Continued from page 21

several feet better than the nearest American.

If Bob Fitch of South Dakota competes in the discus, we should win that event, since this large surprise-package calmly broke the world's record twice last year with tosses of 180 feet 2½ inches and 179 feet. If Fitch doesn't compete, we have a good chance of being shut out of the big points. Consolini of Italy is a 178-foot platter-beaver. Tosi of Italy is just a foot or so behind him, and Liakov of Russia has a 166 foot 5¼ inch mark, which is more than two feet better than the best heaves of Billy Bangert last year.

Finally, says Von Elling, we appear to have no chance whatever in the hammer throw, unless a boy named Seymour Cohen of Philadelphia comes along. Two years ago, when Cohen was in the Army, he wandered into the Balkan Games at Constantinople, and won the hammer throw with an almost-unbelievable heave of 185 feet 3 inches. This puts him third in performance behind a 187-foot 15 16-inch toss by Johansson of Sweden, and a 185-foot 7 3 16-inch mark by Ericsson of Sweden. No one knows if Cohen can duplicate his prodigious throw, and if he can't there is a solid block of Hungarians, Swedes, Finns and Russians before you get to the next American, Bob Bennett of Brown.

This completes the picture, except for that minor matter of who is going to be the Olympic coach. The leading candidate for the job is sometimes referred to as "The Rockne of Track," but the resemblance to the great Notre Dame football coach is not marked. Von Elling is a short, gray-haired, undramatic man, who chews cigars and wears thick spectacles, heavy flannel shirts and a 30-year-old gray felt hat.

His First and Only Pep Talk

Von Elling never gave a pep talk in his life, except for a mild discourse with his two-mile relay team in the last indoor Intercollegiate championships when everything seemed to be going wrong for NYU. No one knows what he told the four discouraged youngsters on that occasion, but the talk lasted only nine seconds, and the relay team went out to score a smashing surprise victory against Fordham and turn the tide in NYU's favor.

Von Elling continually astounds people by this total inability to act like the classic coach of Hollywood legend. "I do not care," he says, "to be a nursemaid for grown, mature men."

Von Elling himself enjoyed none of the advantages of enlightened coaching methods in his day. He was born on New York's lower East Side on March 30, 1883. When young Emil was eleven, the family moved to the country—which is now the Harlem district of New York. As Harlem got more populated, the Von Ellings moved farther out into the country—to the Bronx, which was the center of athletic activity for the whole of New York City.

At that time—in the 1890s—every athlete competed for a club. At fourteen Von Elling already was a club athlete. He spent one year at the College of the City of New York but had to leave college to go to work. For athletic diversion, he joined the Mohawk A.C.

The 135-pound Von Elling got buffeted about on the football field by a six-foot three-inch giant named Pete Waters, later the track coach at Manhattan College; and he ran into a constant nemesis on the track and the baseball field in the person of Lawson Robertson, the big star of the Irish-American A.C., who is now track coach at the University of Pennsylvania. Legend has it that

Robertson dumped Von Elling no less than five hundred times during the fifteen years or so that they competed against each other. The truth of the matter is that Von Elling never was a very good athlete, but he always was smart enough to be the quarterback or the coxswain. Soon he emerged as the coach of the Mohawks and of several other clubs.

Von Elling became assistant track coach at NYU in 1915 and head coach and football trainer in 1918. He finally was able to shake his football duties when Coach Chuck Meehan arrived at NYU in 1926. Three years later, Von Elling's team of unknowns had won NYU's first Intercollegiate championship.

For 32 years now Von Elling has consistently developed great track stars out of unknown kids. No less than ten of Von Elling's former runners are New York City high-school coaches now, and they operate a sort of farm system for the old man. Not only did NYU dominate the recent Penn Relays, but most of the important high-school titles, too, were captured by a pair of NYU "farms"—Boys High School and Morris High School.

Putting Men in the Right Spots

Von Elling has an uncanny knack of channeling talent into the correct event. Many of his finest stars competed in something entirely different in high school. In 1930, for instance, Von Elling spotted a boy named Jim Maloney shagging flies in NYU's outfield. He persuaded him to come out for track. In 1932, Maloney was one of the mainstays of NYU's championship two-mile relay team.

About the same time, Von Elling saw a mediocre high-school swimmer named Milton Sandler. Sandler developed into one of the best middle-distance runners of the 1930s. Joe Healy came to Von Elling as a quarter miler. Von Elling made him run the hurdles, which Healy hated. Healy failed miserably to make the 1932 Olympic team in the quarter mile. He made it easily in the hurdles.

Curtis Giddings, a fine half-miler, came to Von Elling as a javelin thrower. Mort Reznick, once the country's best 35-pound weight thrower, showed up as a shot-putter. Von Elling's greatest mile relay team—the 1943 combination—consisted of Arthur Herrforth, an ex-pole vaulter, Charley Grobberger, an ex-sprinter, Walter Welch, an ex-swimmer, and Frank Cotter, who never was an athlete of any kind before.

This reminder of the unpredictability of track leads Von Elling to one final word of caution concerning his Olympic predictions—and all other Olympic predictions. "Olympic competitors," he says, "are chosen on the basis of what they do in a single Olympic tryout meet. Thus, a man can break world's records all year, but if he happens to be off the day the Olympic tryouts are held, he simply doesn't make the team."

"Another thing," Von Elling continues, "is that no matter how carefully you work out form charts in advance, some unknown kid from some unexpected country always comes along to upset the dope. No one ever heard of a skinny Canadian youngster named Percy Williams before the 1932 Olympics, and precious few people have heard of him since. Yet he smashed through to win both Olympic sprints in 1932, against one of the strongest fields that had ever been assembled."

"Olympic fever," says Von Elling, "it is almost as bad as trying to speculate on who is going to be the next Olympic coach."

THE END

JOCKEY MIDWAY

... is back !

• Yes, popular Jockey Midway is back again... in the fine, unexcelled pre-war quality that has made Jockey famous the world over. Remember, Midway is the trim mid-length model with all your favorite Jockey comfort and support features plus the smooth, snug-fitting thigh protection.

If you've had to accept substitutes, you will realize old friends are best and warmly welcome the return of Midways to your friendly dealer's counter. So call on him today and ask for Jockey Midways.

THERE'S ONLY
ONE JOCKEY

It's a Brand... It's a Trade Mark... It's Made By

Coopers
KENOSHA WISCONSIN

Underwear • Sportswear • Hosiery

Licenses for Canada, Mexico, for British Isles, U.S. & South Am. Australia, Sweden, Finland, N. Zealand, Japan, Holland, Norway, Denmark, Germany, France, Italy, Spain, Portugal, Greece, Turkey, etc.

MIDWAYS ARE BACK AGAIN

In fine combined knit cotton at only...\$1.00
Heavy weight cotton...\$1.25
De luxe mercerized cotton...\$1.50
with all these famous Jockey features:
• K-Fit... for scientific masculine support.
• Friendly Fork... cradled for gentle, breezy, buoyant uplift.
• Convenient No-Gap Opening
• All-around Elastic Waistband
Jockey Midway now joins the popular Jockey Short, which has been available in limited quantities throughout the war.
Jockey Short...\$1.55

Here are the lurid details of the private life of the gallinipper. It's up to you to stop harboring this unprincipled villain in your own back yard

MOSQUITOES are very beautiful. This reluctant admission must be made after glancing at the scientific drawings which are the only close-ups of mosquitoes in existence, as no live mosquito has ever been properly photographed.

It seems you can't just step up to a mosquito, say, "Look pleasant, please!" and get any results. Last year (1946) \$50,000 was spent in vain efforts to get a good close-up of a live mosquito. This failure is regrettable because though a dead mosquito does look good to most people, a live one is full of delicate grace and subtle color and wears a large feathery head-dress strongly reminiscent of those sported by Ziegfeld Follies girls in the early glorifying productions.

There are almost as many races of mosquitoes as there are of humans, and most of them are no more likely to be encountered than an Eskimo on Main Street, even though they may be living right in your neighborhood. Among these are, for example, the playful *Mansonia titilans* which tickle but never bite; the fat, clown-like *Cancer*, so named because it lives in the holes dug by land crabs; and the swishy mosquitoes so dainty that they breed only in the chalices of wild orchids.

Let us begin with the most widely advertised though least harmful of the condemned species, the *Aedes taeniorhynchus*—salt-marsh mosquito to you.

He is not, as most people suppose, Public Enemy Number One of the mosquito world, but merely the most offensively aggressive: the guy who takes the joy out of joy rides, makes fishing, hunting, picnicking, necking on the beach and other outdoor sports more scratched than any horse race entry. Though a crashing bore, his bite is harmless unless it becomes infected. But the breed so greatly outnumbers other mosquitoes that getting rid of it is a chief concern of most communities. Yet scientists know comparatively little about marsh mosquitoes, since they refuse to breed or survive in cages.

Their love life begins much like that of the *Homo sapiens*, with the male reaching maturity and deciding he wants to find out about the facts of life.

In common with some men, he is a romantic coward and prefers to do his preliminary dame-hunting in groups. In short, he hangs around with a gang and whistles. If a skirt heeds the wolf call, he becomes detached from his pals, goes off with her for a while and then returns to the gang. If no ladies appear, however, he turns homosexual. Mr. Marsh Mosquito is definitely not a nice person.

To be slightly more technical, the marsh males gather together in a large, compact group about the size and shape of a medicine ball, to dance and sing in order to attract the ladies. If you have ever, at twilight, seen a "ball" of mosquitoes whirling at about head height, over some lonely spot, then you have seen a mating group of male swamp mosquitoes.

The ladies fly alone. Maybe, being

females, they don't trust one another. At any rate, a marriageable girl, aged approximately five whole days, will zoom into sight, dart into the chorus of singing boys, grab one in a lightning decision and fly off with him.

Although the male is a lusty fellow, he is strictly a vegetarian. After his marriage he hies himself to the nearest bar (sand), finds an aquatic plant, takes a few straight shots of nectar, and goes back to rejoin the boys and whistle at the next flighty dame. He never bites people or other animals and never travels more than a few yards from his equivalent of the drug-store corner.

Mrs. Salt Marsh, on the other hand, is faithful to her spouse. So far as we know she does not marry a second time mainly because she is full of business, including eggs, so she starts on her honeymoon alone, traveling great distances and never coming home.

Matrimony gives Ma Mosquito a taste for blood, a trait which has also been noted in the human race. Anyway, she promptly turns carnivorous, and she will go to any lengths to get meat. Lady mosquitoes have been proven to head straight from a desolate breeding place to a ship 30 miles out at sea and there pick up the sailors.

A blood meal is necessary for the

production of her eggs, and once she has had a bite of baby or a snack of sunkissed farmer, she proceeds to her ultimate destination: a nice dry marsh which she considers as good a place as any to lay an egg. In point of fact she lays 50 to 200 or so, and some really husky girls lay several such batches, sometimes singly, sometimes at a sitting.

The eggs lie on the dry surface and wait for water. Ma goes away. After all, she has her own life to live and there isn't much of it. In five weeks mosquitoes become senile; in six, die of old age. But usually a dragonfly has eaten them long before that.

How Baby Skeeters Are Born

The eggs just lie there safely for days, weeks, even months. Then it rains, or there is an extra high tide, and within a few moments the eggs hatch. The emerging larvae, or "wigglers," know what to do. They take a swim, scurrying about in the water like frightened babies.

Then right away they start eating a balanced diet of greens, animals, and organic matter; all of which Mother Nature, who apparently does not know any better than to take care of infant mosquitoes, has reduced to a well-prepared baby food which the

young mosquito strains through its own personal strainer, installed in its individual mouth.

Food strainers are not the only mechanical devices with which infant mosquitoes come equipped. They also possess a sort of periscope for obtaining air. They are born free-swimmers but like the rest of us must come up for air once in a while, and when they can't by reason of scum on the water they use this handy gadget. They also do their own changing. They outgrow their suits faster than a boy scout can wear out shoes, and during their childhood, which lasts four to ten days they change their outer skin four times.

The next, or Bobby-Sox-Hoodlun stage is the pupa, which period lasts about two days. At the end of the time they emerge from the water full-fledged drips of mosquitoes, dry their wings, rub down their legs and fly away to start the whole darn' business over again!

This same routine is followed by all familiar types of mosquitoes.

One of the meanest species is the *Aedes aegypti*, which hailed originally from Africa. It is the real gangster of the mosquito world, the killer, the sneaky-upper, a potential poisoner of our national life and happiness.

Like many another dangerous

UNMASKING THE MOSQUITO

BY NINA WILCOX PUTNAM

gugee, the *Aedes aegypti*, or yellow fever mosquito (which is one of the familiar house mosquitoes), has a humorous appearance. It possesses the bejeweled beauty of an E. Phillips Oppenheim lady spy. But as with any another undercover group, nobody pays much attention to them until their filthy work becomes evident to everybody, that is, except those F.B.I. men of the insect world, the public health directors and entomologists whose business it is to see that the creatures are kept in control.

Fortunately the *aegypti* are one breed of mosquitoes at which scientists can get a really good gander, as they (mosquitoes, not scientists) can be mated and raised in cages. For the good of all, their private life is now no secret.

Beware of This Beauty!

To get an idea of how pretty this suave-looking insect is, one has only to glance at its black, satiny skin, the silver bracelets worn on every joint, and the graceful silver lyre embossed upon its back. To get an idea of how dangerous it is, one has only to look at its record.

Yellow fever mosquitoes made the building of the Panama Canal all but impossible and the City of Havana practically uninhabitable, until they were brought under control. These facts seem slightly remote to us now. But the fact that the creature breeds every day in your own back yard and that you are probably helping it to do so is not at all remote.

Not too long ago, the Egyptian varmint took yellow fever into New York State, reaching as far up the river as Albany. Although it breeds most commonly in the South, the yellow fever mosquito has a traveling mind and while its wings can take it only a short distance from its breeding place, the *aegypti* likes to take trains and planes; it has always taken boats and has been touring America since at least 1793 when it killed off 10 per cent of the people in Philadelphia with yellow fever—a total of 4,000 persons. Since then epidemics of yellow fever have occurred in Florida, Alabama, Georgia, North and South Carolina, Arkansas, southern Texas, Louisiana, Virginia, Pennsylvania, Indiana, New York, Massachusetts, Vermont, Ohio and Missouri.

The *aegypti* also carry dengue or breakbone fever, which is exactly what its name implies.

The *aegypti*'s partner in crime is the *Anopheles quadrimaculatus*, which is the hard way to say malarial mosquito. It is an inhabitant of swamps and pools formed along highways and railroad tracks. Malaria is really a rural disease not acquired in big cities. A lot of us think of malaria as just something which gives people a yellow complexion and an excuse to drink whisky. But malaria is actually a very terrible disease.

In India alone, right now, it kills more than a million people a year. And prior to the beginning of mosquito control in America there were 5,000 to 6,000 deaths from malaria annually in this country.

The *Culex quinquefasciatus*, another house mosquito, brings us filariasis, a tropical disease which, if unchecked, develops into human elephantiasis. What else this *Culex* spreads, we don't yet quite know.

As recently as May, 1946, San Antonio, Texas, its population swollen by military personnel, suffered a minor epidemic called encephalitis,

attributed to another species, *Culex tarsalis*. At the time of the epidemic, little was learned about it, for the victims died so quickly as to make a study of the symptoms difficult.

However, this disease is not characteristically a human disease, as it occurs mostly in domestic animals such as horses and chickens. Only occasionally do people get infected, and then only if a mosquito has first bitten an infected animal.

But unless we are to look forward to a series of epidemic diseases with which our doctors are not yet prepared to cope, we must take prompt action against the insects most likely to spread trouble.

Bomb craters in England and Europe are still, at this writing, breeding disease-carrying types of mosquitoes by the billion.

Literally hundreds of planes from countries where yellow fever is epidemic come into New Orleans and Miami every week in the year. Mosquitoes can and do travel both inside and on the outside of planes. For once a mosquito decides to cling to something, nothing, not even a hurricane, can blow him off. Thorough spraying of all outgoing planes from mosquito-infested countries would definitely discourage this sort of stow-away.

The control of these pests is our obligation. Salt-marsh mosquitoes may properly be left to the public health department. But when it comes to battling the deadly germ-carrying mosquito, we must cease treating it like a household pet, and take a personal part in its extermination.

We can make the mosquito as extinct as the dodo, and with comparatively little effort. The first step is to clean up. House mosquitoes of all types breed in every tin can we throw into the vacant lot next door; in each container on our own rubbish pile; in anything which will retain a little water, such as a neglected depression on the back porch, a sag in an awning, a garbage can.

Not Choosy Where They Breed

Fantastic objects often prove fertile breeding places. A pair of old shoes lying in a back yard was shown to contain thousands of *aegypti* wigglers; an abandoned baby carriage, larvae sufficient to poison an entire county. One used-automobile-tire dealer was found to have a pile of 50,000 old casings, every one of which was a breeding place.

Only the private individual, acting voluntarily, can properly police his own premises thoroughly. He must also back his state and county in their mechanized efforts. This means voting the financing of adequate forces of fieldworkers, inspectors and pilots. These must be backed by modern machinery, such as dredges, high-capacity sprayers both for field and city work, planes, tractors and motorcycle oilers.

These armaments are now available. The necessary public funds are not. They should be made so immediately as a matter of common decency to the earnest health officials who have thanklessly enough paved the way to this important work, to the scientists who conceived it, and as a matter of common sense, for the rest of us.

If you have no mosquito control movement in your community, you can always get one.

Even if you have to—excuse me!—start from scratch! ★★★

no best!

LITTLE HICKORY NUT

Continued from page 23

"That?" bleated Mike, trying to remain a gentleman. "That—"

"It is not! The man where I bought it remodeled it for me. Look!"

She flung the door wide. The remodeling had consisted of nailing a solid board across the seat and erecting a clothes pole two feet above it.

"It was my own idea," she said proudly. "There's the perch, with the dropping board underneath, and room on the floor for their feed and water."

It was the dropping board that finished Mike. A chuckle creaked in his throat. He sat right down on the ground, awkwardly, and bent his head to his knee as the laughter gained on him. Around him the turkeys gargled madly; above him Lissie stood and gestured with the bucket of whitewash.

"Have you *tried* buying lumber and getting things built?" she demanded loudly. "Have you *tried* raising turkeys in orange crates and wire coops a foot high? *That*, if you want to know," she said, pointing with a measure of pride, "is a darn' clever idea, and one I'll bet you'd never have thought of, Mr. Smart!"

"No, I never would," Mike agreed, weeping and making whimpering sounds. "I'm s-sorry," he hiccuped, an eye on the waving whitewash pail. "I haven't laughed like this for months. Would you m-mind helping me up?"

HER blue eyes crackled, her cheeks flamed. "I wouldn't care if you stayed there all winter and froze!" she snapped, and strode stiffly back to her house.

But early next morning she charged up the slope to report tragically that her turkeys were gone. The red shirt was heaving, and her lips were squared like a kid about to cry. It was no time, Mike felt, to point out that even a turkey might leave home rather than live in a—

"You mean they're not in their new house?" he inquired with suitable gravity.

The whitewash wasn't dry, so she had let them roost in the big tree they had picked for themselves when their coop grew too small. This morning they were gone. Stolen, Mike thought, but limped off to look around the barns.

Frisky had been observing the conference with suspicion. Now he raced eagerly after Mike, flushing a rabbit to which he gave futile but noisy chase. Indignant gobbling answered him. Frisky braked, tore back to the garage and danced in front of it, uttering frenzied protests at the top of his lungs.

Mike's prewar car, splendid in a new cream-color paint job, was as far inside as it would go—its huge chromium bumper protruded a yard past the open doors. The turkeys, tails spread, wings scraping cruelly on the new paint, were advancing along its shining top, their necks stretched and fire in their eyes.

The smallest, a hen, launched suddenly forth in a winging arc that finished on the spot only just vacated by Frisky. The spaniel, cut off in mid-bark, cowered for an instant, then set his short legs pumping. The hen turkey took after him; the toms followed with the clumsy speed of ostriches. Frisky disappeared around the barn, yelping.

Mike tried to run and almost took a header. "Do something!" he yelled at Lissie.

They came around the barn with Frisky still ahead. Mike whistled and braced himself. Frisky, the whites of his eyes showing, swerved and leaped, a small black whirlwind, into his master's arms. Mike sat heavily upon the ground. The turkeys thundered past, braked and stood gobbling like maniacs.

Mike looked balefully around for Lissie. She was leaning against a garage

door, her face averted. "Will you take your infernal birds home?" he yelled.

The red shirt was shaking with what he took to be sobs. Scared, he scrambled to his feet.

"You *would* let your dog chase my turkeys," she said. "You *would* make fun of my turkey house!"

But Mike's attention was elsewhere. "Look, will you!" he shouted. "Look *what they've done to my car!*"

"I know." She sagged weakly against the door, her mouth stretched out of shape and hardly any sound coming out of it. That was when he realized she wasn't crying. She was laughing her fool head off.

"Nothing sacred," Mike muttered. He shut Frisky in the tool shed, then limped back to survey the sacrilege. "Nothing sacred," he repeated with a despairing glare at his desecrated car.

Lissie sobered briskly. "Okay. Run it out and I'll wash it for you."

"Maybe you think I won't let you," Mike said grimly.

She slapped the wet chamois impatiently against a fender. "Everybody has combat fatigue," she said scornfully. "Your uncle and aunt; and your father, probably. My mother's sick abed of it—it's hard on older people."

"You don't know what you're talking about."

"Don't I? I've watched them doing more and more while every day they were getting older and felt like doing less and less—waiting for you men to come home and take over."

Mike looked out toward the fields at his uncle and aunt among the tomato rows. Baskets brimming with the late harvest dotted their path. His face burned.

"Why don't they quit?" he asked roughly. "The war's over."

Lissie gave a last wet swipe at the car, tossed the chamois on the grass and turned off the hose. "There, it's pure again. You can wipe it dry. Goodby."

"Hey—you don't expect *me* to climb that stepladder?"

"If something isn't done about swim suits, they'll be forced into the water!"

COLLIER'S

JEFFERSON MACHAMER

He was too mad to tell her he couldn't run it out. His father had driven it down from the city, and Mike hadn't touched it since. The car was his prized possession, but of course he would never drive it again.

He got in now behind the wheel. It was possible to work the clutch with his right foot and operate the hand brake at the same time. The car moved out jerkily. Elated by the small triumph, Mike reclined on the turf and told her of his vanished youth when the car was new. He had been star of the freshman squad and a cinch to make the team his sophomore year. And then—Pearl Harbor.

IN THE ensuing silence Lissie moved the hose and the stepladder and began to decontaminate another part of the car. Her dungarees were rolled well up above satisfactory knees. "What were you studying?" she asked.

"Chemistry." He told her about his father's laboratories, where they were manufacturing sulfa drugs, and the administrative job he was preparing for.

"That's important," she said. "When are you going back?"

"I'm not going back."

"You're nuts," she said dispassionately.

"It's politer to call it combat fatigue."

She shrugged. "When somebody quits, someone else has to do their job whether they can or not. Come, *turk, turk, turk.*"

Silenced, he watched her swing off down the slope, her confounded turkeys strutting and preening behind her. He told himself she had a crust. He wished he had told her.

"You've got a crust," he said experimentally under his breath.

Crust belonged to Lissie like shell to the hickory nut. Throughout October, with unshaken nerve, she sat in the front seat beside Mike while he learned to drive all over again. She had only a bicycle and it was simply common decency to take her places. She nagged him into doing odd jobs, too, around her place—sharpening tools and fixing the power mower. He even put a window in the turkey house; but the three birds, to Lissie's vast annoyance and Mike's secret delight, refused to inhabit the place of their own free will. Evening after evening he would watch her chasing them in and out of the shrubbery and around and around the tree before she could get them housed for the night.

Then, by some means he could never explain, he found himself elected to the task. The thing was, Lissie was taking a business course and as the days shortened she could not get home before dark.

"Why don't you let them roost in the tree?" he asked sensibly.

"In November? They'd freeze. At their house is too small to keep them all day and they can fly over any fence."

"You could clip their wings," he suggested.

"And spoil their beauty? Mike, wouldn't ask you if there was anyone else. My mother can get around a little now, but she can't chase turkeys—"

"How about me?" Mike asked in violent indignation. "How about *me*?"

"All right," she said. "I'll have to see them."

For a startled moment he thought he saw tears in her eyes. "I should think you'd want to—the noisy pests."

"They're not! They're as affectionate as Frisky. Maggie pulls my hair, and the big gobbler likes his neck scratched—he wouldn't give you any trouble, he so of squats when I go to catch him. At Maggie just runs a little to tease."

"But what are you going to *do* with them?"

Lissie sounded goaded. "I suppose you never heard of turkey dinner or Thanksgiving and Christmas?"

Mike admitted that it was a pleasant custom, and softened. "All right, you run along to your school. I'll guarantee to see that they don't freeze."

He experienced a not unpleasant shock, for Lissie's gamin face turned beautiful. Suddenly he felt ashamed certain loopholes in the wording of his promise.

Well, he *would* see that they didn't freeze, if he had to light a smudge pot under their tree every night.

The first evening Mike made a determined effort. Sure enough, the big gobbler spread his tail and wings and went into a dignified crouch at Mike's approach. Breath whooshed out of him when Mike lifted him, grunting. Twenty-five pounds, at least. And Maggie galloped up after a brief, spirited chase. But the second tom—the one Lissie had failed to mention—cast Mike a wild, terrifying glance and ran.

They went around the tree, with Mike swearing under his breath. The turkey broke for the back yard and went under a bush. Mike poked him out; he raced for the tree and circled it again. *Paw Walt Disney*, Mike thought sourly. He launched a flying tackle, misjudged its mark and fell sprawling. The gobbler, with a wild, frightened cry, fled and hid. Mike could not find him.

TOWARD dusk he went down again. The lone gobbler was aloft in the tree. Lissie would be furious. He felt his aching frame and thought about a ladder and twenty-odd pounds of unwilling turkey.

"Nuts!" he said, his breath a white cloud, and went home.

For almost the first time he slept that night; a desperate gonking woke him at dawn. Mike went to the window. The gobbler had left the tree and was on the roof, calling aloud that he was lost and deserted by his kind. Lissie, in a red bathrobe, ran out into the frost-rimmed yard, spun around until she located the sound, then beamed a look toward Mike that backed him precipitately away from the window.

The tom took no harm from his night out, as Mike did not fail to bring to Lissie's attention when they were speaking again; but to be outwitted by a turkey was a matter which touched his pride. He found himself giving the matter thought: he learned to combine strategy with increasing speed, and did not rest content until he could, at will, bear the frantically struggling, twenty-five-pound bird to its hated domicile and uncer-

moniously dump it in. After that, the whole thing got to be a bore.

Toward Thanksgiving, with the end in sight, Frisky woke him late one night with urgent barks. Mike thought of the unlocked garage and of his uncle laid up with rheumatism; he tumbled out of bed and dressed in record time. He was on his way downstairs, flashlight in hand, when his aunt looked out of her room.

"Be careful, dear, there's sneak thieves around the countryside."

"I'll just see if the car is all right."

But Frisky streaked off toward Lissie's turkey house. Dimly visible in the starlight, a figure ducked from cover to cover, heading for the highway. Mike felt a helpless fury. They had purposely mislaid his guns; he had only the flashlight—even his body no longer responded to his commands. But he had to try—

H E PLUNGED down the slope with an ease which surprised him until he remembered his daily contests with the second gobbler. A drag seemed to lift from his body and his heart, he felt power in his smooth strides. Exultance rose in his throat and he gave a muted war whoop, forgetting the sneak thief, forgetting everything but this new glory of motion.

A sobering bullet sang past his cheek. Mike dropped behind a bush, then raised to a crouch and surveyed the situation. The shadowy figure was poised, hesitating to pass him, scarcely ten yards away; a good distance for a spot pass. Mike lifted the flashlight, clicked it on and hurled it, with the cool precision of one of his bullet passes, straight into a blinded face. Then he dived. His shoulder thudded with beautiful impact into a flabby belly.

Everything under control, he exulted. He'd teach the slob to steal from helpless women—

Something descended on Mike with shattering force. Lesson over, he thought dreamily. Teacher passing out. . . .

Lissie was talking near by. "It was only this light poker," she was saying defensively. "You can see how soft it was—see how it bent."

Mike tried to drag his eyes open, but the light hurt them and, anyhow, the way he felt, he didn't care to see how it bent. His lips moved. "Helpless women," he muttered under his breath.

She went on talking. "So the state troopers sent for an ambulance, but I told them to carry Mike here, because I'm sure he'll be all right, aren't you?"

"Well-I, he hasn't come to," Mike's aunt said. Mike thought she was trying not to sound too anxious. "I think I'll just telephone our doctor."

She went out of the room and Lissie sat down and began to cry. The sound was balm to Mike's confused resentment. He felt well enough to open his eyes.

"Don't cry," he said in a forgiving voice.

Frisky landed with a thud on his chest and scraped his chin with a warm tongue. Lissie looked satisfactorily woebegone.

"Oh, Mike!" she wailed. "I've nearly committed murder, but all I got back was a sack of chickens. They're gone—my beautiful turkeys are gone!"

For a minute Mike couldn't believe it. She wasn't crying about him at all. His head throbbed painfully, a hundred grievances simmering there were coming to a boil. He would teach her a lesson if it was the last thing he ever did—

He fixed her with a glazed stare. "What turkeys?" he asked. "Who are you?"

She stared back. "Mike, don't you know me?" she quavered. "I'm Lissie."

"Lissie who?"

She got up and ran out into the hall. "Tell them to send an ambulance!" she said in a breathless voice. "And oh, tell them to hurry!" . . .

A pink dawn was breaking when Mike walked down the hospital steps to where

Lissie was waiting, anxious-eyed, at the wheel of his car.

"Don't tell me," he said as he got in beside her. "It's all coming back. You're Lissie, the girl who cried over some turkeys but couldn't spare a tear for a one-legged man when she'd just bent a poker over his head."

She looked shocked. "Oh no, Mike! Not over your head. I just hit you a little tap by mistake. It didn't really bend until I hit the other man."

"Still, you never have had any sympathy for me—you and your crazy birds."

He shouldn't have mentioned the turkeys; she began to cry again. "Of course I sympathized with you, you lug! Not showing it was the hardest thing I ever did!"

Mike didn't get it. "I don't get it," he said. There was something important he was trying to remember. He wished she would stop that crying.

She stopped it. He seemed to have made her mad. "Do you think I wanted to spend my life taking care of an interesting invalid? I wanted someone to take care of me."

Mike looked at her in shocked disbelief; you simply didn't hit a man over the head with a poker and then practically propose. Even with a crust like Lissie's. She could blush, though, he was relieved to discover.

With utter inconsequence, it came to him—the thing he was trying to remember, and with it an irresistible impulse to tease. He still owed her something both for last night and for now. He might be only part of a man, but he was still man enough to do his own proposing if and when he felt like it.

"Lissie, I'm in a position to make you very happy," he said in a tender voice. He dropped an arm gently across her shoulders. "Come here, I've got something to tell you. No, look at me."

She looked at him and for a long minute Mike forgot to continue.

"You've got a crust," he murmured fondly. "I mean—it's all coming back. Yesterday I dug stumps in the north field. I took a nap before dinner and overslept. If you'll go home and look in that tree—"

S HE flushed and pulled away from him. "Mike, you hound! You left them out last night!" She reached for the starter and an expression of glowing happiness overspread her face. "My beautiful turkeys," she crooned, "that I almost lost. Now I can raise baby turkeys next year!"

"Thanks to me," Mike said virtuously, then checked. "You can what?"

"I suppose you wanted to eat one for Thanksgiving, you brute!"

"Surely they won't need three parents—what about that second gobbler?"

"That poor scared thing that made a new man of you? I'd as soon roast Frisky."

Mike glowered at her. "So help me, I believe you planned the whole thing."

"I intend to keep him forever," Lissie stated fervently.

Mike sighed and gave up. She was taking curves on two wheels just to get back to those confounded turkeys. And he hadn't even known she could drive!

"Oh, well," he said. "No doubt, like the character who carried the calf, I'll gain strength from day to day. Or I can go back to college and escape it all." He gave her a sidelong glance and finished in an inspired falsetto: "Grandma, tell us again how you and the turkeys put the finger on Grandpa!"

Lissie's lips curved, she smiled at the road ahead. She looked soft, but Mike knew better. Soft like a hickory nut. He used to like his women soft, but that was all over. Hickory nuts were the sweetest, and worth working to get.

A cork popped in Mike's chest and seltzer ran tickling through his veins.

THE END

Keep regular
without harsh
LAXATIVES

Try Lemon and Water
— it's good for you!

 JUICE OF ONE FRESH LEMON IN A GLASS OF WATER FIRST THING ON ARISING

Lemon and water, when taken first thing on arising, makes harsh laxatives entirely unnecessary for most people.

This natural fruit drink—simply the juice of a lemon in a glass of water—is all that most people need to insure prompt, gentle, normal elimination. And unlike harsh laxatives, which irritate the system and impair nutrition, lemon and water is good for you!

Millions Take Lemons for Health. Lemons are among the richest sources

of vitamin C, which helps to restore energy and to resist colds and infection. They supply valuable amounts of B₁ and P. They alkalize. They aid appetite and digestion. National surveys show 12,000,000 Americans now take lemon and water as a regulator or health builder.

Not sharp or sour, lemon and water has only enough tang to be refreshing: clears the mouth, wakes you up. Try it 10 days and see if you don't benefit.

Keep regular the healthful way!

LEMON and WATER
—first thing on arising

Johannes Bernhardt, boss of Spanish economy

THE MAN WHO MADE FRANCO

BY TED ALLAN

Using aid to Franco during the Spanish Civil War as an entering wedge, Johannes Bernhardt organized all Spain to support the Nazis in World War II. Now he's collaborating with us

WHEN I was in Spain last fall, word was brought to me by elaborately indirect means that one of the leaders of the Spanish resistance movement had a story which he wanted Americans to read. I agreed to meet the man and after taking all sorts of precautions to insure that I was not followed, I met him in the home of a Madrid businessman. If Franco's secret policemen discover the identity of the businessman he will go to jail for thirty years.

The underground leader told me that the resistance had information about a German businessman in Spain by the name of Johannes Bernhardt. He showed me some reports which Bernhardt had sent to Germany during the war and told me a great deal about Bernhardt's career. During the war, he said, Bernhardt was the secret power behind General Franco, the virtual economic dictator of Spain and the man who organized Spain's resources to support Germany's war machine.

He became one of the richest men in Europe through the operation of an economic empire which controlled 75 per cent of Spain's exports—all of which went to Germany. His operations in Spain and Portugal amounted to hundreds of millions of dollars and he employed a private army of spies and armed guards. No deal was made between Germany and Spain without him. Because of him a handful of Spaniards, including Franco's daughter Carmen and his brother Nicolas, became millionaires. Through him German capital made vast camouflaged investments in Spanish, Portuguese and Argentine industry.

Because of him Franco became dictator of Spain.

I took notes on what the resistance leader said, then set out to check his story through other sources. I talked with a German who had worked for "Sofindus," the corporation which Bernhardt had set up to handle his huge operations.

The German was frightened. "If Bernhardt discovers I have talked to you I will be dead. His private Gestapo is still working. He wants everyone to believe he was just a simple businessman. He works now for only one thing—the rebirth of Nazi Germany."

Next day I was contacted by my Spanish underground friend. "You don't have to go anywhere else for details," he said and shoved a thick pile of papers in front of me.

I started to read. The papers were in three languages, Spanish, English and German, and detailed almost the complete history of Johannes Bernhardt. When I had finished with the papers I decided to see Bernhardt himself.

A few days later I called on Mr. Bernhardt and he welcomed me into his modestly furnished office. He has a strong face, a disarming, pleasant manner. Only his eyes give him away. They are cold and hard, no matter how soft his voice or how friendly his attitude. We talked for two hours. He tried to assure me that he had nothing to hide, that his past life was an open book and his future life at the disposal of the British and American governments. He

was so anxious to prove he is "our" friend he willingly agreed to give me his photograph (which I got two days later).

By the time the interview was over I had my story. By telling what he considered innocent facts he helped me put the pieces together. He did not deny helping Franco, or seeing Hitler, or organizing Sofindus. "Everything I did was done from a legitimate business point of view," he repeated again and again.

Here are the facts about his career:

On February 20, 1936, three days after the electoral victory of the Spanish Popular Front parties, a group of Spain's top generals met in Madrid with representatives of the Falange party and the landowners. Among those present were Generals Goded, Mola, Saliquet and Franco. At this meeting, plans were laid for the revolt of the army against the republic. It was decided that General Sanjuro, living in exile in Lisbon, would fly in to take command. General Mola was to lead the African army, and Generals Goded and Franco were to lead the armies concentrated in Navarre and Castile. The date was set for sometime in April and later changed to July 18th, 19th or 20th, depending on developments.

Conspiracy to Camouflage German Aid

On March 26, 1936, Johannes Bernhardt met secretly with Adolf Langenheim, SS chief for Spanish Morocco, in Bernhardt's house in Tetuán. Bernhardt reported on the steps he had taken in preparation for the "coming events." He and General Franco, he said, had discussed the entire problem of German aid. Since both men recognized the international complications inherent in open help from Germany, a private company was decided upon to be a clearinghouse for German munitions once the revolt had begun.

Bernhardt reported that he had already left the firm of the Wilmer Brothers, munitions agents, to set up the new company, called "Hisma." On Franco's suggestion he established the company in partnership with Franco's close friend and confidant, Colonel Fernando Carranza. Bernhardt also reported to Langenheim that Franco would need a plane to bring him to Morocco from the Canary Islands. Langenheim told Bernhardt he would cable Berlin to arrange for the plane.

On July 18, 1936, the Spanish army rose in revolt and proclaimed itself the government of Spain. A few days before, a Deutsche-Lufthansa plane had brought Franco from the Canary Islands to Morocco. On July 18th, Franco made a broadcast from Tetuán in which he said, "Spain has saved herself." Franco and his fellow generals seemed convinced that all of Spain would be under their control within thirty days.

But Spain's people had other ideas about being saved and rose in defense of their republic. Within two days it was obvious that the revolt was in danger.

On his way from Lisbon to take over command of

the rebellion, General Sanjuro was killed in a mysterious plane accident. General Mola was chosen by the army junta to replace him. A short while later Mola met his death in the same way. General Franco then became leader of the revolt. (Spanish Resistance Intelligence sources are convinced that Nazi agents caused the deaths of Sanjuro and Mola, but there is no proof of this.)

On July 20, 1936, Bernhardt, the Wilmer Brothers, SS Chief Langenheim, General Franco and a group of Franco's top officers met in Tetuán. Reports were coming in from all parts of the mainland that the revolt was dying for lack of popular support. Drastic action was necessary. Franco had 30,000 troops in Morocco which were desperately needed on the mainland. But Franco had no ships or transport planes to move them.

It was at this moment that Bernhardt's value to Franco was proved. He suggested that the Wilmer Brothers cable their head office in Berlin, the Junkers Aircraft Company, to ask for thirty transport planes immediately. The cable was sent that day. The following morning a reply stated that the Junkers Company could not send the transport planes "without proper authorization."

The situation was now desperate. On the morning of July 21st, Bernhardt held another meeting with SS Chief Langenheim. Bernhardt asked Langenheim to cable Nazi Foreign Party Leader Ernst Wilhelm Bohle in Berlin to arrange for Bernhardt to see Goering immediately. Langenheim agreed, and at noon Bernhardt left for Berlin in the same plane that had brought Franco from the Canary Islands. The pilot of the plane was a close friend of Franco's, named Captain Arranz.

Bernhardt was met at the Berlin airport by Bohle, who took him to Goering. That evening Goering and Bernhardt drove to Berchtesgaden to see Hitler.

When Bernhardt left his Fuehrer late that night, he had accomplished the following: Hitler promised to send thirty transport planes to Franco within two weeks. He further agreed on a long-term policy of aid to Franco. A private company was to be established in Germany which would parallel Bernhardt's company in Spain. The German company would ostensibly be a private one selling arms and machinery on a free market. But Bernhardt's Hisma would clear the supplies through to Franco.

Bernhardt had also suggested that a token volunteer force be sent to Franco's aid as a "symbol of solidarity." Goering was particularly enthusiastic about this proposal, since it could serve as a training ground for German aviators. The plan was agreed on and the famous Condor Legion was born.

Hitler gave Bernhardt carte blanche to organize the company in Germany which would deal with his company in Spain. And to show what he personally felt, Hitler appointed him to the rank of Brigadier-Fuehrer in his Elite Guard, the SS.

Thus from every angle Bernhardt's trip to Berlin was a huge success. He remained in Berlin for several days, during which time he (Continued on page 4)

MERCHANT OF VALOR

Continued from page 13

each man resolving to do his best for the honor of God and his shire. Right well they do that day, to the delight of His Majesty, first at the prick and then at the more distant target, the clout; but of all them Wat Tayloe had the best of it. The King was upon the very point of giving him a purse as his prize when the royal eyes chanced to light upon my bulk. I stood proudly rejoicing in the honor which Wat had brought to our armstead.

"Great lout," called His Majesty, "why dost thou loosed no shaft? Thou hast eyes and sinews for it. Why so sluggardly this day?"

I doffed my headpiece and louted humbly. "God save Your Majesty," I made bold to say, "I be no yeoman but a merchant's son from London town."

"Does that excuse thee, thou great lout?" he said fearsomely. "Because thou art chaffer for farthings in thy shop does that forgive thee from the penalties of our Act of Westminster? I trow not." "Please, Your Majesty," I answered, "I obey the laws of the realm in all things, nor do I neglect to exercise with bow and arrow, or with sword and harness. But I cannot shoot against the men of this shire without invitation."

"Then I bid thee, thou stiff-necked ox, and if thou dost not uphold the merit of our London town against these yokels, I will have thy bow broken across thy hulking shoulders."

NOW, though I be somewhat dull of brain and more inclined to ignore jury rather than fight over it, I felt my anger hot within me at such a bidding, and my slow tongue spoke with more speed than regard for the safety of my skin. "That condition," I said hotly, "be it un-English—that I equal or surpass the best archers of the shire or have a bow splintered over my back. Nonetheless I will do my best, and if I win or fail, leave Your Majesty to ponder upon the justice of it."

For a moment the royal face blackened

and I thought upon the gibbet or the dungeon cell, but then he leaned forward in the saddle and there was a glint in his small eyes and a twist to his lips that might have been a smile. "Thy tongue is not like to gain thee preferment," he said dryly. "But, by Saint George, thou lackest not bowels. Shoot, then, shopkeeper, and we will see what to do about thine impudence."

"An some man will give me the loan of bow and arrows," I answered.

Half a dozen weapons were pressed upon me and I selected from among them. I was hot and cold, but most determined not to make a botch of it.

"Name the mark, Your Majesty," I said with dry throat, "and with the help of God I will have at it."

Thanking the saints for long hours laboriously spent at the butts, I awaited his command. But before he spoke again I glanced into the sky, and there above my head but within range of a well-spiced arrow soared slowly a great, black bird. And because my heart was still hot within me, and because I owned more youth than common sense I put all to the hazard and drawing the string to my ear I let fly. The arrow glinted through the warming sunlight. A sigh went up from the throng at my foolhardiness, but fortune was with me, for my shaft transfigured the great bird and it plummeted toward the earth. Yet, because of my resentment, I was not content, and snatching a second arrow from the spot where I had stuck its point into the earth, I let go again, and by the grace of God transfigured the great bird a second time before it plumped at the King's feet.

And then, either because of relief, or because my anger would no longer restrain itself, I strode to His Majesty, first unstringing my yew. And I held it out to him and said with more boldness than was sensible, "Here be my bow, Your Majesty, and here my back. Have your will with them."

He snatched the bow as if he would belabor me, and then, as he stared at me

"Very Good Number One Ties for Number One Men!"

If our Far East talk is out of character, blame it on our Far West enthusiasm for these extra-special Summer Ties.

They are tailored from "Rajah Shantung"—a royal rayon fabric that knots up to a potentate's taste, drapes superbly, and wears till the water buffaloes come home!

These Arrows are made up in light-but-crisp new shades, and they'll point up That New Summer Suit in a way to make your Number One Girl gasp with delight.

To look upon "Rajah Shantung" ties is to love them. To own them is to pay a mere \$1.50 each.

19,293 DENTISTS ADVISE

Smoke VICEROYS!

The Nicotine
and Tars Trapped*
by The **VICEROY** Filter

CAN NEVER STAIN YOUR TEETH!

"YES!" advise 19,293 dentists, "Smoke Viceroys!" The nicotine and tars trapped by the Viceroy Filter can never stain your teeth. No unsightly bits of tobacco can lodge between your teeth, cause more stain. Smoke Viceroys! No other cigarette gives you such a blend of rich, mild, luxurious tobaccos. No other gives you this exclusive Viceroy Filter.

Only Viceroy...
no other
cigarette...has
this exclusive
Viceroy Filter!

*No filter can remove all nicotine and tars, nor does Viceroy make this claim.

I liked his face more than I had ever done. It was grave and even friendly, and he touched me lightly upon the shoulder with the tip of the bow.

"Thou art a too-bold fellow," he said gravely. "Yet I like me bold, honest tongues rather than canting and whining and deceptions. I think I could trust thee. Wilt enter my service?"

"Nay, Your Majesty," I replied. "I be a wool merchant and am content."

"Thy name."

"Peter Carew," I answered.

Cardinal Wolsey leaned and whispered in his ear. "Art kin to Malachi Carew, the London merchant?"

"He is my father," I said.

"Thy father," said the King, "has an honest son, but one so thick of head he will not climb in the world. Thou hast declined a bidding to service that many a man would covet. I ask no man twice."

"That," I answered sturdily, "is as God wills it. May He preserve Your Majesty and make you to prosper in all endeavors."

He frowned down at me and then he drew a ring from his finger and extended it toward me. "An thou wilt not be my man," he said, "thy pride cannot refuse this token. If an evil hour comes to thee, remind me of this day with this ring. Mayhap thou wilt find the justice of Henry of England is other than thou didst guess it to be this day."

With that he tossed a purse to Wat Tayloe, put heels to his horse and clattered away at the head of his fine company. It runs in my mind that there have been worse kings than the Eighth Henry of England.

There was a small tumult at the pavilion of the crone who had foretold my future and I halted to enquire into the matter. An ill-visaged lout who had upon him the mark of London bailiff demanded of me what concern it was of mine. I was of a mind to instruct him in that matter with a right hearty buffet and he blenched and cringed saying, "Softly, softly! Lay hand on me, great yokel, and it be the worse for you. My Lord Cardinal liketh not to have his eyes and ears mishandled."

"If," said I, "you are the eye of His Eminence it is like to be a black one. What hurly-burly is this?"

"We but want a word with this teller of fortunes," said the man. "She hath flitted."

"Does His Eminence, being himself so close to Heaven, crave to have his future unfolded before him?"

"Be on your way," answered the tipstaff, "and meddle not in high matters."

I TURNED toward home, puzzled as to why the Cardinal concerned himself with a fortuneteller, but right pleased with myself that I had stood cheek by jowl with a king and not come off the worse for it; and then, the mind being an uneasy thing, it veered off to think upon the hands of the old crone who had foretold my future. And it seemed a more marvelous thing, almost, that she had such hands, than that she could make me see pictures in a crystal ball. Because, now that I thought on it, they were very dainty hands and white and soft with long and slender fingers. Not like the broad fingers with blunt ends and withered skin such as you might expect of an old fortuneteller. There was magic in it and I liked it not.

So I strode along musing in this scatter-brained way as a young man will do till one came riding upon a sorry nag, and he shouted at me as he passed, wanting to be told if I had seen a foreign woman lurking in the forest. To which I answered no.

I may have gone another hundred paces when a sidewise, careless glance showed me a face in a bush, and without meaning to do so I made the sign of the cross, for it was no human face but some unnatural creature doubtless smelling of

sulphur from the Pit, though my nose did not scent the reek of it. There were ears the size of a man's palm, and a mouth was slashed across almost from one ear to the other, and a nose like a great dumpling, but eyes so tiny that they seemed but dots.

Eye met eye, and seeing that he was seen, this gnome or pixie or whatever evil thing it was turned suddenly and ran into the forest, and I after it. For it is but natural than any human creature shall chase whatever turns from it in fear and flees. It seemed to me that if this imp or devil feared me I had no need to fear it, and besides I was young and bold.

He ran in such a comical, waddling manner that, in spite of my fear of his master, I was near to laughter and thought that the Devil might not be so bad as old wives' clatter made him. Because he had a sense of humor that could create so funny a familiar.

MY LONG legs overtook him and my hand descended on the collar of his leather jerkin, by the feel of which I knew he was no spirit but solid meat and bone. Which somewhat reassured me. I hoisted him squirming into the air, at which he snatched out a great knife and made slash at me with it; he could not reach, so I cuffed his ear gladly whilst he made treble bleatings and squirmed the more mightily. No flames or smoke came from his mouth so I felt better about it and gave him a hearty shake to teach him manners.

Then little fists beat upon my back between my shoulder blades and I craned my neck and saw a serving maid, who said with right savage voice, "Let him down, thou great ox. Harm him not or I will scratch out thine eyes," and she continued with right good will to pummel the back of me.

Now she had not so much as a kerchief about her head, so that her hair tumbled and it was the color of minted gold and her eyes which were either green or blue—I could not determine which—were making little flames. She was most brave and determined and I laughed at her which made her the more angry.

She was neither tiny nor large, but slender in her kitchen wench's gown, and it ran in my mind that she was comelier than was good for a maid of her station in life, nor did she speak the pleasant, rude words by which you may know the people of our shire.

"Put him down, Peter Carew," she said. I was not, strangely enough, surprised that she spoke my name. So many marvels had befallen that day that I was past astonishment.

"Is he thy homunculus?" I asked. "Then bid him drop his knife."

She snapped a word at him and the knife fell into the high grass, so I set him on his feet and he scowled at me most grotesquely.

"What make ye in our forest?" I asked. "Art masterless maid and vagabond?"

"Aye," she said and cast down her eyes.

"There is hue and cry," I told her. "Aye," she said for the third time, "but not for such as I."

"For an ancient hag, a witch, a dabbler in black magic who maketh pictures to come in a crystal ball," I said.

Now I am no fool, though often have I been deemed so because I think before I speak, and sometimes take overlong about it, so I wondered if kitchen wenches in other parts of the kingdom spoke in this fashion and with so brisk and clear a voice such as made one tingle at the sound of it.

"Thy name," I said severely.

"Betty or Molly, or Mary or Maude. Take thy choice, only go thy way and leave me to go mine."

"To sleep in the forest?"

"There be worse places than forests and worse company than the red deer." She brought her hands from behind her back and shielded her face with them, and

FIRST IN OUTBOARDS • 38th YEAR

Collier's for July 5,

seemed to me she was weeping quietly, but then I saw that she was peering at me between her fingers and I knew not what to think. So I stared at her fingers and waited to see what would happen next.

Now it is truth that hands have features, faces have them, and no two hands are alike as no two faces are the same. I have noted that you may recognize a man by his thumb as well as by his nose. And I found myself staring at her hands at an old acquaintance and was mightily upset by it. A man likes to know where his duty lies, and I was not at all clear about it.

"Who," I made query, "was the warrior in black armor that you made me to see the crystal ball?" I spoke Italian. Her brows drew together and her lips pressed upon one another, but she was not frightened.

"How did you know?" she asked. "By your hands," I said, and she quickly hid them in her skirt.

"I made you see nothing in the globe," she said. "It was you who made yourself see. I but made it easier for your sight. The man was John of the Black Bands." "But he is in Italy and I am in England."

"Men have traveled." "Why," I asked, "does the Cardinal have to hang you?"

"Mayhap," she said, "he hath other intentions. A red hat doth not make a man less a man—or so I have been told."

"What art thou?" I asked shortly. "A kitchen wench," she answered.

"Witch-hag this morn," I said. "Kitchen wench before sunset. What next?"

"What will serve my need," she said, "and thank the Father all eyes are not so sharp as thine!"

"I cannot abandon thee in the forest," said grumpily. "Thou wilt die of a sickness or starve for want of food, or be caught and hanged by the Cardinal. So, silly-nilly, home we go. And kitchen maid thou shalt be to our Old Nonnie for my personal safety, and she will cuff mine ears and care for thee. And thy familiar here shall shear the sheep. What is his name?"

"Giovannipietro," she answered.

"John-Peter. One apostle is not enough for him. I know the woodland paths. Follow me and we shall reach the farm." So, because there was nothing else for her to do, she followed me, and John-Peter waddled at our heels. And nothing pleased us. I took her into the kitchen of Old Nonnie. . . .

We sat at table, the laborers and kitchen wenches and John-Peter and the maid whose name I did not know, but who instructed Nonnie to call her Betsy, when there came a pounding upon our door.

I went to see, and it was Hob Davis, hungry and weary from London town. Hob sets down rows of figures in my father's counting room; he brought me a thick letter from my father and a great heavy purse.

I read the letter once and then read it again to make certain I had missed none of its instructions, and then I stared at the maid who allowed us to call her Betsy and who showed dainty manners in eating her food. Because the letter made truth of her prophecy that I was to adventure upon a journey.

First, for two long pages, my father spoke of politics, and how the world was all upset because three jealous young men of warring natures quarreled to see who should be master of it. He discoursed upon long-nosed Francis of France who longed to be a hero, and of cold, thin-lipped Charles of Spain, who was Emperor, and of our own King Hal, whom I had encountered this day. Having so settled the point that all Europe was in turmoil and wars were raging and business unsettled, he came to the point. Which was that I should forthwith set out for Italy and especially Florence, there to collect certain large sums owed to our house, and to make wholesome arrangements with the Calimala, the wool guild, about shipments of woolen cloth to be refined. And to be sure to see to it that we took no unnecessary risk and got the money that was due us in spite of kings and the Pope, who was a Medici, and the plottings of Naples and Milan and Venice.

He instructed me forthwith to take horse to Rye, where a ship of ours was loading, and to proceed to Livorno, and thence to Florence.

IN THE morning Old Nonnie and the house wenches were all in a bustle getting me ready to go; I was pleased with the prospect of it, and of seeing the world and the strange places and customs in it. In the midst of it all I bethought me of the prophecy made by the old woman in the pavilion—who had turned out not to be old at all—that I was going on a journey. So I took the girl aside into a corner of the kitchen near the three brass pots and the five hams hung from a beam, and demanded of her in a whisper how she had come to prophesy about my going to Italy, but she only smiled at me impertinently and told me that I must not enquire into matters that were above my understanding. And I, gullible as any youth of my age, was content to be amazed by a mystery, and never to suspect that I was being made a cat's-paw in affairs of state by a girl who cared not a whit what happened to me so long as she had her way of it.

So I got on my horse with all my gear,

DISTILLED DRY

When available, our time-honored
"ancient" bottle will replace the
present "victory" bottle.

not until I had told the girl who called herself Betsy to demean herself modestly, to obey Old Nonnie, and to stay where she was until I came back.

To all of which she replied demurely and obediently, and kept her eyes on the floor as a kitchen wench should, until I was not sure she was not making fun of me behind her eyes. For she was a kitchen wench of a sort we never before had seen in the shire, and her hands were white, and her face was above her station.

She traveled with me, and we arrived in Rye; there I had disclosed to a part of the prophecy that had puzzled me, wherein it had been said that I should go on a ship in a port where fishes waited for fish. And I discovered my further amazement that in Rye we constantly waited three hundred fishes for the fishermen to come in with their catch. With which the three hundred fishes made off quickly for London town that people might be fed on Fridays. I said goodbye to Wat on the wharf, and my ship being loaded and only awaiting a tide, I was soon at sea and wishing I was ashore again. For the motion of the waves so meddled with the processes of digestion that it would have been better had I refrained from eating at all. I lay down among my gear and thought about nothing in life except getting ashore again—not even caring whether I followed my admonitions about industry and diligence and staying safe at home until I returned to make up my mind what should be done with her.

WE MADE harbor at Livorno late in the afternoon, and never was so glad to set foot on firm ground again. There was much to-do with petty officials where I could search out an inn, which I did where I went to the house of my father's friend there, one Jacopo Peruzzi, who received me with deference.

From the instant we passed the ancient towers of the *fortezza*, I, a young man ignorant of all lands but my native land, found myself in a state of excitement and delight, so strange and exciting were the sights and sounds. Low and close behind the city itself, and the newly built Torre del Marzocco lifted it above the other visible structures, close to an eye accustomed only to our fish way of building. But it was the sole jostling in the narrow streets that made me that indeed I was in a strange land, for there were Spaniards, Portuguese, Greeks, Germans, Hebrews, Armenians, Persians, all in their own dress. All these drawn here from the most remote and heathen quarters of the earth by a common loadstone, which was trade—the desire to buy and to sell. My father's letter admonished me that I should course for a stranger to pursue in a strange land and in troubled times was to watch with his eyes and listen with his ears, to mind his own business most carefully. "These Italians," said my father, "are the custom of quarreling one with another. If you shall see several attacking one in the darkness, do not as an Englishman would do at home and come to the aid of the weaker party, but go away and become not embroiled." I saw no such sight in Livorno, though coming back to my inn after walking through the streets in the evening, I did saw the example of others and walk and the body of a lean man in a purple robe who lay dead upon the street, his staring eyes staring upward. Each nation to its own uses, say I, but this was that turned my stomach.

I entered the main room of the inn, a stone-paved apartment with a fireplace in the middle of the room, not against a wall as our fireplaces are in England. I passed through the room and reached the stairs to my bed. My door ajar, and I heard a rustling within, I approached softly and thrust the door wide. A candle burned and I saw

bending over my bundles a brown-robed figure, busily searching them.

I stood in the door and regarded him in some confusion, for it was a noteworthy thing to see a friar thus conducting himself as a thief.

"Brother," I asked, "is thievery a tenet of your order?"

He straightened to his full stature and turned so that the candlelight fell upon his face which was round and hairless under his tonsured dome, and he blinked at me, grinning right merrily.

"Did none halt you at the foot of the stairs?" he asked.

"None," said I.

"I am most scurvily served," he said. "It is the times. Men are not what they were and no reliance can be placed in them. Or I had been warned of your approach in time. Well, Ser Englishman, the church hath been caught with its hands in the sweetmeats. Martin Luther could preach a sermon upon it."

He walked across the room and sat upon my bed and grinned broadly at me, not in the least embarrassed.

"I will instruct you, Ser Englishman. I will add to your knowledge, for you have a simple look. This is not a matter of thievery but of politics. I am frank with you. I act upon high precedent. Aye, English precedent, for did not your own Cardinal Wolsey send most skilled thieves to rummage the baggage of the ambassador of Venice before he took ship from Dover and steal letters and documents of high importance?"

"But I have no letters nor documents!" He beamed upon me jovially. "Look you," he said, "a Pope must walk warily among kings. More especially a newly elected Pope. And a Medici Pope. He must know in which direction many cats will jump. He must know if your English king will send armies to aid Bourbon against French Francis. He must know who is secretly with the Emperor Charles and who against, who bribes whom."

"These matters," said I, "are far above me. Woolen cloth is my trade."

"A wool merchant or a barber or a goldsmith may be a secret messenger," said the friar. "Therefore, and for some particular reason, His Holiness hath an itching interest in all who arrive from England—and in what they carry."

"Wherefore," I said, "you be no thief but a servant of His Holiness charged with searching the belongings of Englishmen. Well, you have searched mine—and found nothing. When next you see His Holiness, assure him of my veneration and inform him that I am errand boy for none but my father."

"I have rummaged your property," he

said, "and found nothing of interest to king, emperor, duke or pope. But a letter is small. I have not searched your person."

"Nor are you like so to do," I told him.

"It might be well for the wholeness of your skin," he said, "if you implored me to do that thing. Then I could make sure report and there would be an end of the matter."

I WAS half of a mind to do it and so rid myself of suspicion, but my gorge rose against the thought of his fat fingers touching me and slipping in and out of my pockets like overfed mice. Besides which there is some kind of pride in a man which causes him to resent that sort of indignity, so I told him straitly that if the Medici Pope came in person and asked to slip his hands into my pockets I would not permit it.

He sighed merrily, if that be possible, and said that in his opinion it was more likely some woman would be entrusted with the errand than a man, and that his advice as a member of a celibate order was that I have no traffic with women, especially beautiful ones. Then he looked at me compassionately. "Thou art a huge simpleton," he said, "that should not be abroad without his mother. But I do not dislike thee. Thou wouldst trust the asp that bit the Queen Cleopatra." He gave off a great bellow of laughter. "Even me thou wouldst trust if I chose to talk thee into it, me but freshly caught rifling thy baggage."

"I have trusted more evil men than thou," I said.

He kneaded his paunch and looked at me thoughtfully. "Mayhap thy simplicity will serve thee for wisdom," he said. "I have a great liking for thee, great simpleton. Yet, if it served a purpose I would use thee; I would cheat thee; I would cozen thee and gull thee artfully. Therefore trust me not." He shook his head ruefully. "I might this day be a bishop, but for a weakness that is in me, and that weakness is a liking for my fellow man. Aye, and the pleasure I find in laughing at them. So, Ser Englishman, my advice to thee is to clothe thyself in a garment of suspicion. Put confidence in none. Follow this warning and thou mayst yet return intact to thy own land."

He spoke as if he believed what he said, and he was of greater experience than I—yet I could not agree with him. It would be an ill world indeed if there were none in it to whom a man might give his love and his trust. I told him so. "Even in this Italy of yours, with its Medicis and its Sforzas, there must be good men and true," I said.

"I know them well," he said, "popes and princes and cardinals and princelings—and of the lot there is but one. One only of all the multitude that is without guile. Only one who is too trustful, refusing to lift himself to power and the rule of a state."

"Tell me then," said I, "the name of this one true man who doth shine so brightly in a murk of knaves."

"It is My Lord Giovanni," he said in a voice of grave respect. "It is our great general, our young, great general. My Lord Giovanni delle Bande Nere."

"John of the Black Bands!" I said. "His fame has journeyed even to England."

"His name," said the friar, "will travel higher and farther than your bleak island if he shall remain alive amidst the pestilence of malice and fear of him, and jealousy of him that doth surround him like an evil fog." He paused. "Has the ill news reached thee, Ser Englishman, that Bayard is dead?"

"The Chevalier Bayard!" It was grievous news indeed that this perfect knight was no more.

"Aye," said the friar. "Bayard is dead. In an obscure skirmish. Now only my Lord Giovanni remains to uphold the waning torch of chivalry."

He got up from my pallet and moved

It matter too deep for me to fathom. A op or a cardinal might explain it but ubt if I should understand what they e talking about.

went back into my hot room and n I had removed my clothing I on the overshort bed and slept. . .

of the zealot Savanarola had ended in flames at the stake.

I found the house of Bratti, a small, dingy structure without, but clean within; and Bartolomeo was only the moment returned from the shop of his master. He was a tall and fleshless man, but with bright eyes and a friendly way about him. And glad indeed to have the extra soldi that I would pay him for lodgment. There was a goodwife and four children, but room was made for me and welcome given for my father's sake, who had lodged here some five years before.

His goodwife refreshed me with wine and food, and the older son, a lad of fifteen, led away my horse for stabling. The talk was of the wool trade with France and Flanders and of the interruption of it by wars that moved southward and might spill themselves over into Italy.

"We have no Magnifico," said Bratti regretfully, "to tread softly among dangers and to balance our enemies one against another, so that Florence may be kept safe. We have only the Pope, who hath sent the Cardinal Passerini to be guardian, to young Ippolito and hold the

I fastened on my belt and dagger, and as I gathered up my castoff garments from the bed I felt, in an inside pocket of my leather jerkin, a small package which had passed from my mind. It was the charm given me by Betsy in the fortuneteller's booth at the fair. Now I be not one to sneer at proper charms and talismans, because any man who has read books as I have knows well that such matters are best treated with respect. I have read it in both Latin and Greek. So it may be that this charm had aided me well to a thus-far prosperous journey. At least it had brought me no harm. Therefore I bestowed it tenderly in a pocket inside my finery and felt the better for it. I then went to the kitchen where the goodman sat whilst his wife and older children washed the dishes.

"Go you out at this time of night, Ser Pietro?" asked Bratti.

"To see your city by the light of the moon," I told him. "I have heard the moon doth enhance its wonders."

"Moon or no moon," said his goodwife, "our nights be not wholesome. But youth rides thy shoulders and I waste no words in telling thee to get to thy bed and lie in safety."

Bratti shrugged and got up from his seat. He went to a corner and returned with a stout cudgel, well-balanced and heavy where weight should be. "Then carry this for company," he said. "And where the shadows fall thick betake thee to the middle of the street."

So I unbarred the door, which Bratti barred after me, and made my way along the narrow street until I found myself in the great open space of the Piazza della Signoria, before the black, great frowning mass of the palace. I walked this way and that, pausing now and then as the moon touched with silver some sculpture from the hand of a master or some towering church or noble palace of huge, hewn stones more like to citadel than to city residence. I knew not where I was, nor cared, because of the glamor of it.

FEW were in the streets as I strode along, but suddenly there was turmoil, and I saw not less than eight men attacking two who placed their backs against the wall and defended themselves right manfully. The attackers wore black cloaks, and I saw that their faces were concealed by masks. So I knew they were in the wrong of it, because honesty does not mask its face. One of the two who were attacked already sank to the pavement, leaving the other to defend himself alone. About his left arm he had wrapped his cloak to serve in some measure as a shield while he held the ruffians at bay with a dagger. I cried him encouragement, for no Englishman can look upon so unequal a fight and lend no hand to the weaker party. And forthwith I fell upon the rear of the ruffians, swinging my cudgel with the strength which God hath given me. It was to their surprise and consternation, and their skulls cracked as sweetly. Whereupon five of them took to their heels, but three remained groaning.

The man who had been the victim of the onslaught bent over his fallen companion and made examination. Then he straightened and turned his face to me. It was a young face and noble, with the eyes of a commander of men, and the bearing of one who is no common man. His dress was rich, and a mustache covered his upper lip.

"He is sped," said this nobleman. "As thou wert like to be," I answered. "Who art thou," he asked, "that comes with so ready a cudgel to the aid of a stranger?"

"I am a merchant's son, of England." "Thou hast mistaken thy calling," he said dryly. "By Saint Francis and Saint Barnabas and all the rest whose names escape me, thou art as out of place in a shop measuring ells of cloth as a lion would be in a cage of doves. Thy name."

"Peter Carew," I answered, and added

BETTER THINGS FOR BETTER LIVING
... THROUGH CHEMISTRY

LFRED

by FOSTER HUMFREVILLE

"Yes, Alfred, I'm quite sure it was a genuine blowout and not just an excuse to park"

n the second day thereafter, having ided myself with a serviceable horse, out upon the journey to Florence, ng across the hot, humid plains of any in company with a train of pack als bearing my father's woolens and wares and merchandise of other mer- ats. We were a considerable company glad of it, for the times were vexed, armies gathered and the roads were of the safest. Yet after days of jour- ing we accomplished the sixty miles of roads and saw against the evening the walls and towers and domes and ces of the ancient city of Florence.

e entered the city by the Porta alla e, having fulfilled the requirements ne law, and with the descending sun ur backs, we clumped along, using dome of the great *duomo* as our e. My father's letter had instructed o find lodgings with one Bartolomeo ti, a worker in the employ of a mer- t of the Calimala with whom our e carried on considerable business. house was in the Borgo del Greci, h was behind the Palazzo Vecchio, h houses the government of Flor- , and before whose entrance the life

city for the Medici until the boy comes to manhood. Thy father is wise, Messer Pietro, to look to the safety of his mon- eys."

"If the good God," exclaimed Bratti's wife, "had but given us, instead of Pas- serini and the Pope and the boy Ippolito, the Lord Giovanni, I would sleep sounder in my bed."

"Mind thy tongue, woman," Bratti said fearfully. "Wouldst have me stretched on the rack?"

"For all that," she said boldly, "if we little people of Florence had our way, Giovanni de' Medici would be our lord. It is rumored he is in the city secretly."

"It is no secret," Bratti said. "He is with his sweet wife in the palace of Jacopo Salviati, his father-in-law. His business, wife, is not to plot against Ippolito but only to raise money for the pay of the Black Bands, a troublesome task, and one to which he is not suited." So saying, he rose, and I followed.

I went to my small room under the tiles and removed my travel-stained clothing, and, because the evening was still young, changed into others of finer cloth, including a cap with a feather.

Niagara attracts more than brides

1859 Beautiful Niagara has been a magnet to dare-devils, as well as honeymooners, since Monsieur Blondin skipped across the Falls on a 3-inch rope. The name Corby's came to Canada a year before this French expert drew crowds to watch his chilling antics.

1899 A little boat, aptly called *Fool Killer*, successfully shot the Rapids. A few months earlier, when the name Corby's had 41 years' standing in Canada, a performer made the same trip in a barrel. He met death several years later by accidentally slipping on a banana peel.

1928 Over the Falls with no damage other than minor bruises! Hard to believe, but it was done in an 11-foot rubber ball in the 70th year of Canadian fame for the name Corby's. Others already dared breath-taking parachute jumps the suspension bridge.

1947 Niagara Falls still attracts publicity-hungry eccentrics. At least one man thinks it would be fun to take the drop in a new rubber ball—even though the law says, "No!" For a much more reasonable kind of fun, share your good times with Corby's, the whiskey with a grand old Canadian name. Whenever and wherever it's suggested, light, sociable Corby's rates an immediate "YES!"

ectfully, "My Lord." For it was easy
e that he was far above me in station.
t comes not easily from the tongue,"
id. "I am in thy debt, Ser Merchant.
ere an ill thing had I come to my
n in an alley at the hands of robbers."
Jay, My Lord," I said. "Not robbers.
e was one who stood somewhat aside
golden spurs were on his heels. Rob-
wear not such gear. It was an assas-
sion."

Eyes that see," he said, "and an arm
strikes—that saves my life. By Hec-
und Achilles, thou shalt repent from
g a merchant. I will make it my con-
to find better work for thee."

Nay," said I, "I am content, and I
not forsake nor neglect the business
which my father sent me."

He looked at me with displeasure, but
from around his neck a chain, and
moon glinted upon jewels. "Take
this, then," he said, "as a token of
hanks."

ow I looked him in the eye, for it
e me angry that he should offer me
rd for coming to his aid. It is not a
ce for which one may take payment
out loss of respect for self.

My Lord," said I, "that was not well
." His eyes were fierce at the rebuke, but
moment he smiled crookedly.
t was not well done," he said. "I
ght I understood men. But all men
ifferent and worth studying. A com-
der who doth not know men is not
hold leadership. I would study thee,
use something might be learned.
n England, say you?"

ye, My Lord." Come then, and tell me about the
n of England. Doth thy pride revolt
inking a glass of wine with me whilst
ossip?"

pointed at the man who lay still at
et. "Your servant," I said, "is dead."
No servant of mine," he said, with
a glance downward, "but the clerk
usurer. The watch will find him."

I saw a certain hardness in this
ng man that did not please me, for I
not know the whole truth of the mat-
I shrugged but was not content, for
all, men are men, and when they die
are not carrion like beasts, but enti-
to burial and the rites of the church.
have given you my name, My Lord.
not our English habit to drink," I
"with men who do not make fair
ange."

ow he smiled, and broadly.
he name," he said, "is Giovanni de'
ici. Some prefer to call me Giovanni
Bande Nere."

"John of the Black Bands!" I said in
English, and I was confused and abashed
that I had spoken with such freedom to so
great a lord and so famous a warrior, but
he slapped me on the shoulder. "Come
along, Ser Merchant, while I essay to
make a soldier of you."

As we walked through the night toward
the Salviati Palace, I busied myself with
recalling what I knew of this young no-
bleman who had come to be acclaimed
the first soldier of the age. In his veins
ran the merchant-banker blood of the
Medicis—the younger branch of that
family who had so long ruled Florence
without holding public office. But it was
from his great mother that he derived
those high qualities and warlike skills
which had enabled him to revolutionize
the art of war. His mother, daughter of
the Duke of Milan, was a Sforza, a tragic,
tremendous woman, who had wedded
for her second husband Giovanni de'
Medici, a bright, handsome man so dear
to Florence that he was known as Il
Popolano. And now her son, who walked
at my side, had taken to wife Maria Salvi-
ati, granddaughter of Lorenzo the Mag-
nificent. So, in their son Cosimo was
united the strain of the older and the
younger Medici branches. And that, in
the complex politics of Tuscany, was a
dangerous thing.

MY LORD took me to a room richer
than any I ever had seen before, its
walls embellished with marvelous paint-
ings and tapestries, and there he seated
me as if I were his equal, and called for
wine. Though he was brusque in speech,
nevertheless there was a quality in this
young man which gave you ease in his
presence and compelled your liking. It
was this quality, I was to learn, that
caused every soldier in the Black Bands
to hold him as companion rather than as
commander. Yet he could be terrible in
his anger and merciless.

"Tell me of your English soldiery," he
said abruptly. "I have never fought
against them to test their mettle. What
arms do they handle best? Accounts of
your archers have reached my ears."

As best I could I described such mat-
ters, how our archers were required by
law to shoot at the butts from childhood,
and how all men were required to own
arms and gear. He asked sharp, knowing
questions and was impatient if my an-
swers did not go deeply into every matter.

"And you," he asked, "have been so
trained in the use of weapons?"

"As was my duty, My Lord."
"I suppose there must be merchants
and bankers and churchmen," he said,

"Oh, just take it easy, get married, raise some children,
get a different job, move to the country, and travel a bit"

OLLIER'S JOHN MILLIGAN

How to be crazy LIKE A SQUIRREL!

Smart motorists know that it's far
from crazy to buy a South Wind Car
Heater this summer. For, like the
foresighted squirrel, you'll be ready
for cold weather rather than disap-
pointed like the 400,000 motorists
who couldn't get South Winds last
winter. This coming winter it looks
like demand will again far exceed
supply. So, be smart! Get your South
Wind, now! Here's why:

- Right now, South Winds are available
with or without defroster. Mechanics are
also available to install them.
- You need not wait until you get your
new car. Install a South Wind in your pres-
ent car. It's easy to transfer later.
- A South Wind is ideal to take the chill
off nippy summer and fall night drives. It's
always connected—ready for use!

Hot Heat in 90 Seconds makes South Wind the World's Largest Selling Car Heater!

**CREATES ITS OWN HEAT...
NO WAIT FOR ENGINE WARM-UP
... FITS ANY CAR**

ONLY \$29⁷⁵

Plus small installation charge

2 MILLION USERS SAY... "90-Second Heat! That's up to 7 times as fast
as ordinary heaters! It means quick comfort even on shortest trips—to
work, to store, school, movies!"

NO OTHER CAR HEATER can use the exclusive South Wind "sealed flame"
principle. Burns fuel from the carburetor in a patented, sealed metal
chamber. Fumes go out the exhaust. Its safety has won the seal of
Underwriters' Laboratories. Easy to install...no hose to cut...no
extra thermostats to buy. Get your South Wind now! On sale at auto
supply stores, car dealers, garages and
service stations coast to coast. **SOUTH
WIND DIVISION, STEWART-WARNER CORP.,
INDIANAPOLIS 7, INDIANA.**

Its safety has won for it
the seal of the Under-
writers' Laboratories.
Proved on millions of
cars and trucks!

South Wind 90-SECOND CAR HEATER

COMING! The New South Wind "Custombuilt"—a Luxury Heating and Ven-
tilating System for Motor Cars and Motor Transports—\$99.50 Plus Installation.

Never before has there with so many

Today's newest trucks—trucks you'll want to see, with **ADVANCE DESIGN**. They're new from roof to road, from headlight to tail light, with performance that will give you better and more profitable results on any delivery or hauling job.

New **INCREASED LOAD SPACE** in panels and pick-ups to carry the larger loads and shorten the longer jobs! More efficient loading in stake and high rack bodies!

Longer-than-ever **WHEELBASES** for more room in the cab . . . better load distribution!

Chevrolet's stronger, sturdier **FRAMES** with new sup cargo capacity are designed to carry *greater loads gre* distances for a *longer* time. . . Chevrolet's famous **FU** **FLOATING HYPOID REAR AXLES** are geared for y load on any road.

Introducing a new line of trucks with features to talk about!

Drivers will find new comfort and new safety in the cab that "breathes"—that "inhales" fresh air and "exhales" used air—keeps glass clear and free from fogging . . . plus a host of other new features that make these trucks a "must" for you to see—at your Chevrolet dealer's now!

Chevrolet's new **FOUR-POINT DRIVER COMFORT** gives a "break" to the man in the driver's seat: 1. The new cab that "breathes" almost literally "inhales" fresh air—"exhales" used air. A constant stream of fresh air is *drawn in* from the outside—heated in cold weather—and used air, smoke and fumes are *forced out*.* 2. Driver's compartment is wider and deeper—more leg room. 3. New, fully adjustable, bigger and more comfortable seats. 4. Wider, deeper windshield and larger windows increase road visibility from the cab by 22%, for safer, easier operation.

★ ★ ★

Chevrolet's revolutionary **FLEXI-MOUNTED CAB** is rubber-mounted, cushioned against road bumps, torsion and vibration; designed for longer cab life.

Fresh-air heating and ventilating system optional at extra cost.

World's most economical for their size, Chevrolet's **VALVE-IN-HEAD TRUCK ENGINES** give extra power for extra profits!

Chevrolet's **HYDRAULIC TRUCK BRAKES**—with *exclusive* design for greater brake-lining contact—are brakes at their best—quick, safe and dependable!

New Advance-Design

CHEVROLET TRUCKS

FOR TRANSPORTATION UNLIMITED

CHEVROLET MOTOR DIVISION, General Motors Corporation, DETROIT 2, MICHIGAN

See your Chevrolet dealer. He can supply Chevrolet trucks, standard or with special equipment, to meet your hauling needs.

do you know...

that the beautiful modern air-conditioned ice refrigerator gives foods the *three essentials* of complete, scientific food protection—constant cold, proper moisture and clean-washed air? No breakdowns, no noise, no defrosting—and you always have pure, crystal-clear ice on hand for every cooling need. Inexpensive to buy . . . and economical to use!

Before you buy any refrigerator be sure to see the beautiful new post-war Ice Refrigerator. Just get in touch with your local Ice Company.

NATIONAL ASSOCIATION OF ICE INDUSTRIES
1706 L Street, N.W., Washington 6, D. C.

"but they should be chosen from men of less stature and breadth of shoulder than you, Messer Englishman. God formed you for war, not for peace. It is a sorry waste of muscle."

As he spoke, there came into the room a woman, scarce more than a girl, with sweet, sad face and brooding eyes.

"My Lord," she said softly, "thou art safely returned!"

"Aye," he answered, "thanks to the cudgel of this young man whose name I ill pronounce. But for him it had gone badly for me."

She fixed sad eyes upon me and studied me as if she would read my inmost thoughts, and then she smiled and was beautiful. "I am bound to thee in gratitude," she said, "for my husband is most dear to me." Then as if were necessary that she understand the ins and the outs of it, she asked, "What moved thee to come to the aid of My Lord?"

"He was one, set upon by many."

"A strange reason," she answered musically, "and one not easily understood." She turned away from me to her husband. "It is your nature to trust," she said gently. "Hast bethought thyself that this could be an artful manner of opening thy friendship to an enemy?"

"Thou shouldst have heard the skulls crack under his cudgel," he said gaily. "Therein was no sham. In all other things I may be simple, my Maria, but not in the reading of men's eyes."

She came closer to me and looked up at me as I stood, and she nodded thrice. "Indeed," she said, "it is a plain, simple face, without guile. It moves me to put my trust in him. When didst arrive in Florence?" she asked.

"This day at sundown," I answered.

"Thou had best leave it before sunup," she said gravely, "for thou hast thwarted some dangerous man and earned his enmity. No small man would dare attempt my husband's life. A rat doth not assail a lion."

"Among them was one with golden spurs," I said.

"My sweet Lord," she said to her husband, "thou art safer in the van of battle than in this evil city. Let us begone from it. I say to thee again: the Pope seeks thy death. Thy shadow is across the path of his ambition. This thing was done by creatures of the Cardinal."

HE SMILED disdainfully, "Passerini would not dare," he said. "The Pope knows I have no desire for the rule of this city, but only that in return for services rendered he shall grant me the lordship of some small state whose revenues will keep us from poverty." He glanced at me and smiled. "I have no skill with money. It doth trickle through my fingers."

"Why, My sweet Lord, doth Clement employ thee so constantly on perilous enterprises? For this one reason," she answered herself, "that he doth hope for thy death in battle and so save his hands from the guilt of murder."

"The business of a soldier is fighting," he said sententiously. "If I keep not my bands employed, who shall pay and feed them?"

"I know. I know. It were waste of breath to warn thee." The Madonna Maria passed sadly from the room, and I could see that she was not happy in her love for Giovanni, living ever in fear.

"Women! Women!" said My Lord ruefully. "But in one matter she has the right of it. Florence is not safe for thee." He came to me and clapped me on the back. "I like thee, Ser Englishman. Come then and take service with me, and I will advance thee, for thou hast the look of a captain in thine eyes."

"Nay, I may not," I answered. "I am charged with business matters."

"I have a feeling within me," he said, "that we shall see each other again, and that there is a bond between us. Shall I send escort with thee to thy lodgings?"

"There is no need," I responded. "Good night, My Lord."

He clapped my shoulder again. "Should the need come for sanctuary," he said, "thou wilt find it—and a welcome—with the Black Bands. Good night, Pietro."

Thus I parted from him and was shown to the street, and I passed along the Corso and toward the quarter of the city where I lodged. As I made turning after turning I was aware of a black shadow that followed at a distance, but it was only one, so I had no fear of it.

I AWOKE refreshed but bemused that I, a stranger and a merchant's son, could, by merest hap, have played a part in the things that befell last night; and that I should have sat in friendly talk with so high a person as My Lord Giovanni. I dressed and had my morning meal with the Bratti family and found the younger members thereof arrayed in fanciful garments and each with a little mask.

"The city," said Bratti, "makes carnival today to honor the orators of the French king."

By orators I understood him to mean what we in England call ambassadors, and wondered what business was forward between long-nosed Francis and the state of Tuscany.

"'Twill be a joyous sight," said Bratti's wife, "and wondrous. With procession and booths in the piazza and all in high humor playing pranks. Find you an early station, Messer Pietro, that you may miss none of the spectacle."

"I fear," said I, "that I must give this day to my father's business."

"Florence will see scant business transacted this day," said Bratti. "The heart and center of it will be the piazza before the *duomo* whither the orators go."

Nevertheless, determined to forward my father's affairs, I went to the place where the Calimala carried on its transactions, and there, to my good fortune, I found certain important members of the guild and was able to discuss with them the moneys owed to our house as well as the shipment of woolen cloths to this city in the future. It was a beginning, and I was content. Wherefore it was with clear confidence that I gave the rest of the day to enjoyment and the marvels of the fiesta. The great piazza was a place to wonder at, for it was covered by a roof of blue fabric upon which was sewn a multitude of red lilies—the insigne of the city—and with numerous coats of arms. And everywhere were flaming banners in sheaves, and the faces of the buildings were hidden under draperies of all the colors of the rainbow. Troops of imps and demons and grotesques jostled through the crowd making merry with rough pranks, and none offered to halt them from their mischief. Also there were booths for the sale of trinkets and others for sweetmeats, and conjurers, and animals that performed with the intelligence of humans.

As I stood and gawped I saw a comic figure jostling and bunting and shouldering its way through the throng, and it was not easy to make out if it were human or ape. But for the high turban atop its pate it would not have reached to my waist, and its little legs were like two bows and its ears were so large they seemed to flap. The face turned toward me and the eyes, to my thinking, recognized me. Whereupon the dwarf butted an innocent citizen in the stomach and darted away as if in sudden alarm. As he fled I followed, for I be no Christian and Englishman if it was not the pygmy John-Peter, whom I had caught in our forest and who should at this moment be tending sheep on our farm at home.

At last I caught up with him and reached down for his collar to grasp it. Whereupon he turned and made to bite me on the knee, but I fended him off and clung to him as he squirmed.

Collier's for July!

"How come you in Florence, John-Peter?" I demanded.

He looked up at me insolently and thrust out his great pink tongue at me and squeaked at me, "Unhand me, great imal. I know thee not."

But my fingers held him. "Where is thy, thou imp of Satan?" I demanded. "I wot of no Betsy," he squawled. "Let me go or I put a spell upon thee that will use thy hair to fall and thy flesh to rot, and donkey's ears to grow from thine head."

This was no pleasant hearing, for he is unnatural, and who knows what evil he has as he may possess? But I persisted nevertheless, protecting myself from black magic with the sign of the cross. "Is she safe at our farm?" I asked.

But suddenly there was a great surge of people, shoving and jostling, and I was left to it to keep my feet. John-Peter gave a mighty squirm and escaped from my fingers, and before I could grasp him again he dropped to all fours and crawled away between the legs of the mob.

Now here, I thought, is a mystery, and could put my mind to nothing else in the wake of the coming of the procession. I scarce saw the troop of men twenty feet ahead who strutted on stilts, or the company of red demons with tails. I did take note of the fine riders who followed, and of the actors dressed in the French manner and very foppish, and of the boy who rode between them upon a white steed with his arrogant, sulky face and small eyes, and garments flashing with jewels. Could be none other than the lad Ippolito who the Pope meant should rule Florence when he gained sufficient years. He gave scarce a glance to the narrow, fishy face of the Cardinal Passerini, sent by Pope Clement to govern the city while the boy studied his books.

I did not then guess that this Cardinal and I would have more business with each other than either would get pleasure from.

Now here was a puzzle! Not that the Betsy and her manikin had been clear in a forest stream from the beginning, though I had been too occupied with her matters to think much about it. As the way of youth. I had snatched her out of the woods much as I would have done with a stray kitten in distress. I am not shrewd nor quick, and am like to be deceived by smarter folk in the beginning. But now I began to think on the matter. I saw that it had been a large expense to have a pavilion at a fair and that

no mere teller of fortunes would abandon such property out of hand. Also it became evident that the law would not trouble itself about a seller of charms unless there were grave reason for it, and I felt through my clothing for the charm which she had given me, and began to doubt if there were more politics than magic mixed up with it, and to ask myself ruefully if I had not been made a cat's-paw, and why my baggage had been searched by the friar, and what trouble I had let myself be drawn into.

In those days, with wars and scheming between nations, it was not so easy to travel from country to country. But here was the dwarf come from our farm to Italy almost as quickly as I had done, which meant he must have had powerful assistance and money in hand. And I much doubted if he would come alone. I bethought me that if John-Peter were here in this great throng, his mistress would not be far away. Whereupon I resolved to look into every stall, because if she had pretended to be a teller of fortunes once, she might be doing the like again. Because I wanted to rid me of the charm she had foisted upon me, deeming it an unsafe thing to carry, and to speak my mind to her forthright about taking advantage of my gullibility.

I THRUST my nose into every stall and tent and pavilion, and though there were many sellers of nuts and sweetmeats, and of sands from the River Jordan and pebbles from the foot of the True Cross and knuckle joints of martyred saints, and all manner of folk, none of them all resembled Betsy. Nor caught I another glimpse of her manikin.

The spectacle being over, the citizens of higher degree betook themselves to their homes leaving only the mob to make riotous use of the license common to a carnival. I stayed my hunger with milk and sausages and, vexed at my failure to find the girl, I turned my face toward Bratti's house sulkily. I walked southward, passing the house where the supreme Dante had lived, traversed the Piazza della Signoria and was halfway along the towering walls of the palace when I saw a long-legged apprentice boy leaning against the stones of the wall. His hood was over his head, hiding the most part of his face. As I came abreast of him he spoke in his soft, Italian voice. "Englishman!" he said.

I halted and faced him. "What will you?" I asked.

FIMMY

by HOWARD SPARBER

"Daddy, here comes that rude lady who never turns around when you whistle to her"

COLLIER'S

Collier's for July 5, 1947

You're going to like your Spunray* sport shirt. It's the kind of shirt that makes a man feel *good*. Cool, comfortable, neat yet casual. Absolutely colorfast, Sanforized not to shrink over 1%. Spunray is one of many he-man fabrics made by Dan River Mills, Inc., Danville, Va.

*Reg. U. S. Pat. Off.

"Go not, none, Englishman," he said. "The street about Bratti's house is crawling with armed men."

"What is that to me?"

"Whether they be sent by the Eight," said the boy, "or the Cardinal, I know not. In the end it would be the same." He drew his finger across his throat.

"I have no quarrel with either Cardinal or Eight," I said. "These armed men, if armed men there be, have no business with me."

"Art a great fool," said the boy sharply. "One was found dead and three with cracked pates last night."

"How know you this?" I asked.

"What matter? It is sufficient pretext."

"Who art thou that warns me?"

"What matter?" he repeated. "So long as thou art warned. Take to thy heels and pass the city gate before sundown. Buy thyself a horse, if thy purse be full enough, and ride swiftly."

"I have no guilt. And there is important business for me in Florence."

"There will be important business for thee in heaven," he answered. "Thou hast meddled in things above thine head." He waved impatiently with his hand in the direction from which I had come. "Hast thou moneys?" he asked.

Now a hand, as I have said, bears features distinctive as a face if you but take the trouble to observe them. The hand of this apprentice lad was not stained with dyes nor calloused by the use of tools. It was slender, with fingers that tapered, and nails the shape of almonds. It was a hand I had seen and studied and remembered. I reached forth my own hand and pushed back the hood from his face.

"Well, Betsy," I said triumphantly, "it appears that I have found thee."

HER hair tumbled and her face flushed prettily. "A curse on thy sharp English eyes," she said shortly.

"In what guise wilt thou next appear?" I asked. And then, "Is it my skin that troubles thee, or the charm thou didst cozen me into smuggling out of England and into Italy?"

"It is safe? Thou hast it upon thee?"

"Aye," I said. I frowned. "What manner of lass art thou, first a witch, then a serving maid, now a 'prentice boy? I like maids that be simple and honest and modest."

"I am none of the three," she said.

"Thou art one," I said severely, "that would let the throat be cut of one who hath shown thee kindness."

"There be necessities in life," she said, "and one must use what tools come to hand. Give me the charm."

"Nay. If you speak truth indeed, and armed men await me, it may purchase my life."

"It would bring torture on the rack before death," she said.

"Let your eye meet mine so I may read if there be truth in thee," I said, and she looked with level gaze into my eyes. "Are there armed men? Is my life in danger?"

"In sharp peril," she answered.

"Which thou hast brought upon me."

"That is as may be," she answered.

"If I flee," I said, "whither shall I go?"

"To Trebbio," she said.

"Wherefore?"

"It is the castle of Giovanni de' Medici," she said. "Methinks thou hast made friend of him. His Black Bands will give thee sanctuary, even against King or Pope."

"Art not thyself in danger?" I asked.

"I am ever in danger," she said impatiently. "Haste thee." Then her eyes widened. "Quick! Give me the charm. Thou hast babbled till it is too late."

I was aware of liveried men wearing swords approaching from both ends of the street and saw there was nothing to do about it. Speedily I snatched forth the charm and put it in her hand.

"What can be done for thee shall be done," she said, and slipped away, and because she was but an apprentice boy

and of no moment to anyone, the men did not stay her as she passed but came down upon me fiercely.

"Thou art the Englishman Pietro Carew," said their leader. "I'm bidden to invite thee," he said, "to dine with His Eminence, the Cardinal."

It went against me to show appearance of fear to any foreigner, so I smiled and gave answer, "Thanks to His Eminence for his hospitality."

Whereupon they placed me in their midst and led me away.

MY CAPTORS hustled me across the piazza to the Medici Palace. I was taken up broad stairs and into a splendid apartment, rich with tapestries and frescoes and the pictures of the great masters of the age which had been painted under the patronage of the Magnificent Lorenzo. In a chair before a wondrous desk inlaid with ivory sat His Eminence, Cardinal Passerini, and sitting sulkily, with silken knees crossed, was the boy Ippolito. I liked not his face, though it was not unhandsome. Arrogance and selfishness and self-indulgence were mirrored upon it, and I was sorry for

father, and to arrange for further shipments of woolen cloths," I informed him.

"It does well for a pretext," he said silkily.

"I be but a London merchant's son and have no business nor dealings not concerned with cloth."

"You were a convenient messenger," he charged.

"I be no messenger, nor otherwise than I have told Your Eminence."

He smiled upon me as if he would impress me with his kindness—as one who understands and condones the frailty of mankind, and especially the rashness of youth.

"Thou dost stand in great peril of thy life," he said. "I would see thee come to no harm. Aye, my child, I would see thee emerge from this matter with some fair reward. His Holiness hath a generous hand toward those who serve him and I myself am not powerless to grant favors."

"All I ask, Your Eminence, is to be set free to go about my urgent business."

"For instance," he said sleekly, "if thou wouldst but tell me who placed in thy hands some letter or document, and to whom thou didst deliver it." He bent for-

"I repeat, Your Eminence," I said politely, "that I am but a merchant woolen cloths and ignorant of matters State."

Young Ippolito spoke for the first time. "Thou'lt get nought from him with words," he said sulkily. "A few turns the wheel will loosen his tongue." His own pink tongue licked his lips as if would take pleasure in my stretching upon the rack.

The Cardinal disregarded him. His eyes were glinting slits, and fury swelled his neck. "Didst deliver that letter Giovanni de' Medici last night?" he demanded harshly.

"I delivered nought to him," I said stoutly.

"You went to him without delay upon your arrival in Florence."

"I went not to him," I said. "Our meeting was by chance. Your Eminence said, 'will have many eyes and ears in this city. They will have reported to you the manner of my meeting with him.'"

He drew a great jewel off his finger and held it so the light played upon it to make it sparkle. "This stone," he said, "would purchase a shipload of your woolen cloths. It is thine," he said sleekly, "together with enough of its relations to make thee rich beyond thy dreams, for the slender service of spreading the truth—which is the duty of every Christian man."

"I have spoken the truth at no expense to thee whatsoever," I answered.

"Stubborn courage and loyalty to master," he said, "are qualities of value. They are worth a price. What fee hast thou already received? I will double it."

"I tire of so much talk," young Ippolito said sulkily.

PASSERINI turned to him indifferently. "It is the business of one destined to rule," he said, "to learn the art of words. They are sharper than arrows, stronger than ramparts. It is more probable to win a negotiation than a battle."

"Here is neither negotiation nor battle," said Ippolito, "but a clown who has inside him information that we would get out. If you want the meat from you must crack the shell." He turned upon me and his insolent, cruel eyes were hungry. "Didst ever hear screams of agony come from the throat of one stretched upon the rack?"

"Nay, Your Lordship," I said.

"It is a sweet sound," he said, and again he licked his lips.

"Youth is impatient," Passerini said casually, "but sometimes, in the end, must have its way. For the last time asking, wilt enter my service and be richly rewarded, or remain obdurate and have thy bones unjointed? Or choose middle ground and but name the name of him in England who gave thee the letter to deliver." Then, speaking more to himself in a musing sort of way than either to me or to young Ippolito, he said: "There is one who burrows underground and stirs up the people and thwarts our made plans. Someone who doth secrets. Aid me to find that one and will give thee a lordship."

"I know not such a man," I said. "I know him not."

"I fear," he said catlike, "that My Lord Ippolito must have his will with thee."

"Not rack nor thumbscrew." I said earnestly, "can make me disclose what I do not know."

He made the gesture of washing his hands of it, and Ippolito grinned like a young wolf.

"To the Bargello?" he asked.

"Nay, My Lord, we must act within law. It is for you, as it was for your ancestors, to observe the forms, and not by force but by love. He shall go the Eight, lawfully chosen by the people to dispense justice."

"A day will come," said Ippolito sullenly, "when I toss away such sharp Passerini sighed and rang a golden

Florence when he should come to rule it. The Cardinal peered at me through slitted eyes; it occurred to me that he seemed the result of the mismating of wolf with jackal.

Ippolito glanced at me with no great interest and ate sweetmeats. The Cardinal beckoned with white, jeweled hand for us to approach.

"The Englishman," he said in a soft, almost feminine voice.

"It is he, Your Eminence," said the captain of my guard.

He dismissed his ruffians with a gesture and his thick-lipped mouth twisted into the shadow of a smile.

"Is it thus you repay our hospitality, Englishman?" he purred. "By murdering our citizens within an hour of your coming?"

"Nay," I answered, not forwardly as would ill-befit my station, for one should ever show respect to those set so far above him. "I did no murder, Your Eminence. I stopped a murder from being done."

"It was not so reported to me. Reputable men inform me that you, being madened by overindulgence in wine, did set upon peaceful citizens with murderous intent."

I remained silent, knowing it to be futile to deny his lie.

"Why art thou in our city, Englishman?" he asked.

"To collect certain moneys for my

ward and his face was stern and awesome. "I say to thee, young Englishman, that a letter of prime importance from a great personage in Italy to a great personage in England hath been filched. It doth contain perilous words. There is in it that which is powerful to do harm to Church and State did it fall into certain unfriendly hands."

It was made clear to me now why the girl Betsy had been hunted and harried from her pavilion at our fair, and more. I remembered how, in foretelling the future for me, she had prophesied a journey to a far country. She must have known of my father's intention to send me upon this mission and, knowing it, had come to cozen me into being her unwitting messenger. Also it had been Wolsey's men who attempted her capture, so without doubt the letter had been stolen from him. My anger flamed against her for thus treacherously misusing me and bringing me to this pass. Yet, little as I liked her, I could not bring myself to betray her, for she was young and fair and very exciting to think upon. Also I was commencing to hate this man who toyed with me like a cat with a mouse, and stubbornly I resolved to thwart him if I could.

"Thou hast had time to think it over, balancing the evil consequence of obduracy and the benefits of openness and honesty," he purred. "Come. I would stand thy friend."

Introducing

Tek De Luxe

TOOTH BRUSH

To help you win, here's why Tek de Luxe is 4-ways better. 1. Beautiful! Handle sculptured in Storzite.* 2. Waterproof Keton* bristles, won't get soggy. 3. Scientific shape cleans every curve. 4. Unbreakable, plastic container makes a perfect travel case. At all drug counters, 50¢. *Exclusive with Tek de Luxe

GIANT PRIZE CONTEST

536 AWARDS
WORTH \$21,145

Easy! It's fun! What a thrill to win one of the eleven, big Television-Radio Sets! Imagine it in your home—big league baseball games, the fights, drama, movies! And this spectacular contest, introducing Tek de Luxe—America's *best tooth brush*, offers you hundreds of valuable prizes!

Get an entry blank (for full information and) at your favorite drug counter. Or, cut out the trick from this ad, and use it as your entry blank. You do is fill in the last line of the Limerick. Then it, with the blue and red label from inside a Tek de Luxe Tooth Brush container, to Tek Corp., Box 209, Park 1, N. J. Send as many entries as you please, adding a Tek de Luxe label with each. Contest ends midnight July 31, 1947.

WHAT'S YOUR "LAST LINE"?

Here's the Limerick:

Tek de Luxe," raved an actress named Jean,
It's the best-looking tooth brush I've seen.
In its smart travel kit,
It's a sure 4-star hit.

(fill in this line)

536 PRIZE WINNERS. BE ONE OF THEM!

Grand Prize—\$1,795 DuMont Television-Radio-Phonograph Combination (illustrated, top right). Television is sweeping the country. Here's everything you want now and for the future. Think of it! The set in Television plus FM, Standard and Short Wave Radio plus Automatic Phonograph. 39 tubes! direct-view television pictures 12 1/4 in. wide! rich mahogany cabinet almost 4 feet wide.

Second Prizes—Each a \$795 DuMont Television-Set (illustrated, right). Bright, clear television pictures 10 in. wide. Plus—FM and Standard Wave Reception. 29 tubes! Natural mahogany cabinet.

Third Prizes—Each a \$150 Benrus Embraceable watch. Exquisitely styled, ladies' bracelet-watch combination. 14 karat gold, 17 jewels.

Fourth Prizes—Each a Hughes All-a-round Hair brush, worth \$7.50. The famous "deep-action" brush for beautiful hair. Nylon bristles, Lucite handle.

Fifth Prizes—1 pair each, Airmaid Nylon Hosiery. Worth \$1.95 a pair. Full-fashioned, super-soft, all nylon—top to toe.

DUPONT CORPORATION, NEWARK, N. J.

WIN THIS DU MONT TELEVISION-RADIO-PHONOGRAPH COMBINATION

10 more Du Mont Television Sets

Exquisite BENRUS Embraceable WATCHES

All-a-round Hair Brushes

Nylon Hosiery by Airmaid

The dependable, automatic Evans has a specially hardened, cross-cut steel sparking wheel to strike an instant light on the spun glass wick that always lights but doesn't burn down. It is precision built, with roller-bearing, cantilever action for smooth, easy operation. At jewelry, department and men's furnishing stores. Please do not order from the factory.

EVANS CASE COMPANY
North Attleboro, Massachusetts
Makers of fitted handbags, compacts, cigarette cases and automatic lighters.

and the men who had fetched me came again into the room. He motioned toward me. "Take him to the Eight," he said. "I will advise with them how to deal with him." Then to me, "Thou hast brought it upon thine own head," he said with mock sorrow.

I was conducted from the room and down the stairway and through the courtyard to the street. The sun was lowering into the west and I wondered if I were seeing it for the last time, and was hopeless and most forlorn, and fear of torture and of death rode uncomfortably upon my shoulders. It did not seem that I could have saved myself even by telling the Cardinal what little I knew. It was not a tale that demanded belief: that a fortunetelling hag, who was none other than the girl Betsy, had given me a charm to protect me on my travels, and that it had been returned to her in the guise of an apprentice boy.

My thoughts were bitter toward the girl Betsy, whoever she might be and whatever devious game she played with me as a pawn. I thought most despitely of her and her treachery to me that had brought me to such dire straits. Yet, despising her and hating her, I could not stop from thinking about her.

The ruffians, there were six of them, placed me in their midst and jostled me along, shouldering their way through the streets still seething with merrymakers.

AS WE reached the corner the crowd pressed in upon us until my captors bellowed oaths at them and ordered them to keep their distance. And then there was a sudden surge as of a great sea wave, so that we were thrust into a little knot, unable to move hand or foot, and the men unable to lift weapon against the mob, which began to belabor them with cudgels. I saw one great man with bloody butcher's apron striking with the flat of his ax. Then hands grasped me roughly and dragged me away, so that I was no longer a prisoner of the guard but engulfed in the mob itself. It was the huge butcher who pulled me after him; bewildered at the suddenness of it, I held back and resisted him.

"Halt not till we be well away," he said in his coarse, rough voice. "I take thee to her. She commanded thy rescue."

"To her!" I exclaimed. "Who is she?"

"How should I know?" he growled. "Except that she commanded and I obeyed." He laughed a great bellow. "Not that I held back. Nay. We of the little people love a tumult. We Florentines are a most tumultuous people. What is so joyous as a riot? They think they rule us, these princes and cardinals and popes, but it is only so long as it amuses us. Here we turn to the left. Lengthen thy pace."

We passed through the Mercato, which is the great market place of the city and then, after many turnings, and with evening descending, we came upon an open space surrounded by a wall, which was the Boboli gardens on the Via Romana, and opposite the gate of the gardens was some edifice obviously erected for the purposes of religion and we crossed to its entrance.

"What place is this?" I asked of my guide.

"This be the Annalena Convent where dwell the little Dominican nuns," he said.

"Friend," said he, digging a huge thumb into his ribs, "these pagan Turks have customs we who are destined for the Kingdom of Heaven might most profitably imitate."

With that he drummed impiously upon the big door, which opened slowly to disclose a nun in the habit of her order.

"Fare thee well, prisoner," said my butcher guide. "My duty is performed."

I would have thanked him for his service to me, but he was gone.

The nun made me a sort of curtsy. "Follow me, sir," she said softly, and I

passed down long corridors flagged with stone until the nun paused before a bronze-studded door upon which she rapped gently; she was bidden to enter. She opened for me the door and stood aside while I went in.

It was a vast, square room with towering fireplace, and upon the floor a deep Eastern rug; upon the walls hung tapestries and in niches stood statues of holy saints. There was a long table with tapers to light the apartment, and chairs of embroidered velvet and handsome candlesticks of the height of a tall man. But my eyes passed over these with but a glance to rest upon the woman who stood in the center with her slender hand resting upon the back of a chair. There was a tight cap of crimson upon her head, covering her ears, and where each ear should have been were three large pearls. The bodice of her dress was low so that a neck of rare whiteness and slenderness was exposed above her rounded bosom. The dress, of rich stuff, was broadly striped, the stripes traveling from floor to shoulder. She was lovely and stately, her oval face with eyes upturned at the corners, and wondrous high cheekbones. It was not the face of a fortunetelling hag, nor scullery maid, nor apprentice boy. It was not an English face, nor did it seem Italian, but of some strange and foreign people who dealt in magic and hidden things, and understood the matter of love to rob away a man's brains. I stared at her and she stared back at me without smiling or welcome.

"Is it indeed Betsy?" I asked.

"That name or another," she said gravely. "Didst fear I had abandoned thee, great yokel?"

"I knew not what to think," I said, "save that I hated thee for what thou hast done to me."

"When did you ever know what to think?" she said scornfully. "You were not born for it. Leave it to thy betters."

"By what means do you command the mob of Florence?" I asked.

"Because they are simpletons like thyself," she said.

"Yet I did stand thy friend in time of need, and with evil did you requite me."

"Evil or good," she said, "here thou art without scathe."

"But my father's business!" I exclaimed.

"A fig for thy father's business," she said. "Dost think I saved thee to traffic in woolens, or because thy skin was precious to me?"

"Once more," I said straitly, "I do not know what to think, except that thou art of a most bewildering wicked beauty."

"Good or evil," she said, "there is no beauty like to it. Beauty is a most useful quality. It serves me. I rescued thee because I have use for thee."

"I will not serve thee more," I said stubbornly.

SHE took three steps toward me and lifted up her face to mine, and smiled. It was magic but I did not bethink me to make the sign of the cross. My blood turned to water and my bones were soft within me. I thought, but to no purpose, of the witch Circe who lured men to destruction. She smiled more tenderly and stretched out her hand toward me.

"Wilt not serve me?" she asked softly. "Wilt not serve me, indeed?"

From head to heels I was shaking as though with the Roman fever, and my mouth was dry and my head was spinning. I answered, and the answer was drawn from me by some power I might not withstand.

"Serve thee?" I said. "I know not what spell thou hast cast upon me, but it is stronger than I. Let me but be thy servant and I care little what comes of it."

"Good may come of it," she said. "Evil may come of it. But whichever it be, before thou comest to thine end, thou shalt have drunk deep of the cup of life."

Mellow Beer

THE MAN WHO MADE FRANCO

Continued from page 42

the groundwork for the establishment of the German corporation known Rowak." Its chief in Germany was Berick Bethke. Its representative in Spain and Portugal, the man who was to deal directly with Bernhardt, was Anton Lehmann. Both Bethke and Wahle were in the Nazi party and had known Bernhardt many years before, in 1924, when all three had been machinery salesmen in Argentina.

Rowak was to sell Hisma war material. Some of the material would be sold openly. Some would be sent in disguised as "machinery."

Captain Arranz flew Bernhardt back to Spain on July 27th. Bernhardt had heard the good news to Franco a few days before. When the two friends met, they embraced warmly. On July 30th, Junkers transport planes arrived in Morocco, piloted by crack Nazi aviators.

In one week they shuttled Franco's 300 troops to the mainland. The march on Madrid began—it turned out to be one of the longest marches in history, taking over three years!

The first contingents of the Condor Legion arrived in Cádiz in mid-August, led by General Hugo Sperrle and General Wolfram von Richthofen. In a few months there were over 10,000 officers and technicians in Spain.

Gaining Power and Prestige

As the war dragged on and German military shipments increased, Bernhardt's power grew. Franco began relying on him not only for supplies, but for advice on how to run the economy of his country. Slowly and efficiently Bernhardt established a tremendous organizational building into it German technicians businessmen.

He established a group of factories which dealt in raw materials that Germany needed—hides, minerals, wool, mercury and iron. Germans were placed in charge of some plants, Spaniards of others. Bernhardt was always careful not to hurt the national feelings of the Spaniards. Although every factory he established was owned by German capital, Bernhardt always recognized the fact of nominal Spanish ownership.

Two examples of how he did this will suffice. When he established the Shipping Company he placed Captain Arranz, the pilot, at its head. When Bernhardt set up the Mauretania Com-

pany to exploit the iron ore of Morocco, he placed Colonel Fernando Carranza at its head.

By 1939, Rowak had shipped Hisma over 400,000,000 reichsmarks' worth of munitions, and Hisma had sent back to Germany some 200,000,000 reichsmarks' worth of Spanish raw materials. Thus Franco owed Germany 200,000,000 reichsmarks, plus another 100,000,000 reichsmarks for the cost of the Condor Legion. In addition he owed Italy about 150,000,000 pesetas.

Bernhardt and his fellow Nazis wanted Franco to win, but at no time did they let their enthusiasm cut into their profits. When Rowak sent shipments to Hisma, the German government, which owned Rowak outright, nevertheless charged it a fee for export licenses. Bernhardt didn't forget his own pocket either. He made a commission on every transaction handled by Hisma, in addition to his salary and his share of the profits as the principal stockholder.

It was not until Franco had won control of all Spain that Bernhardt was able to organize the whole of Spain's resources, the most important of which had been in Republican territory. One of the first things he did was to dissolve Hisma. In its stead he organized a new corporation and named it "Sofindus."

Sofindus and its affiliates controlled over 75 per cent of Spain's exports. In 1940 and 1941, Bernhardt established new mining companies, took over a well-established wine business in Málaga, and set up a fruit-juice factory in Valencia. To handle this vast empire, Bernhardt organized a complete transportation system. He took over established trucking and rail companies and brought in more trucks from France, Germany and Portugal. His fleet of trucks carried cotton, iron, wolfram, mercury, olive oil, leather, coal—every raw material Spain had. Sofindus functioned the same way in Portugal, establishing raw-material plants and shipping the material via Bernhardt trucks to Germany.

Bernhardt had the German transportation system at his beck and call. He ordered railroad cars to the Spanish frontier after France was overrun and shipped his material to the waiting cars by truck. His transportation companies had their own armed guards to fight off roving bands of Spanish guerrillas whose activities at the time were concentrated on blowing up the routes over which

war materials were carried to Germany.

By 1942, Bernhardt had over 10,000 Spaniards on his pay roll, not counting the workers in the factories he owned. He opened a series of private bank accounts to pay off these Spaniards who were situated in various government administrative posts, the civil guards, the secret service and the army.

Thus Bernhardt found himself at the head of an organization which, in alliance with the Spanish Fascists and other Nazi organizations, ruled Spain. To cement this alliance, Bernhardt made sure that influential Spanish Fascists shared the wealth with him.

Among them was Dometrio Carceller, Minister of Industry and Commerce; José Antonio Giron, Minister of Labor; Carmen Franco, daughter of the generalissimo; Nicolás Franco, brother of the generalissimo; José Luis Arrese, general secretary of the Falange party; and General Saliquet, member of Franco's general staff and one of the group of generals who had first plotted the overthrow of the republic. This list of names is by no means complete.

Devious Ways of Making Tycoons

The manner in which Bernhardt helped make these Spaniards millionaires was not always direct. His factories, in one instance, controlled the output of cement. José Antonio Giron did not become a director of a cement factory; instead he became the owner of a construction company. This construction company was able to get a monopoly of the raw materials which were controlled by Bernhardt. Within two years Giron was a millionaire.

Dometrio Carceller was close to Serrano Suner, then the Minister of Foreign Affairs. Carceller had begun life as the son of a porter and had been a school-teacher in his middle thirties. As Minister of Industry and Commerce he worked closely with Bernhardt. His ministry controlled the import and export licenses issued to all Sofindus affiliates. By 1942, Carceller entered the ranks of Spain's millionaires. Today he is one of Spain's richest men, and is a partner with the Socony-Vacuum Company in the Spanish oil company, Ciepsa. (Ciepsa, according to Socony-Vacuum officials, is a government monopoly in which the firm has a 50 per cent interest.)

Carmen Franco had her money invested in real estate. Nicolás Franco became a director in about twelve Spanish companies. The Franco family had been poor, but under Bernhardt's "guidance," Franco's daughter and his brother made "clever" investments and they too joined the ranks of Spain's new rich.

General Saliquet took over the factories which sold shoes to the Spanish army. Bernhardt's factories supplied Saliquet's factories with leather at good prices, and Saliquet became wealthy.

When the tide of battle began turning against the Nazis in Europe, Bernhardt prepared himself for the coming German defeat. He went to Lisbon where he changed pesetas into Swiss francs and hid large sums of money in Portugal, which the Allied powers know about, but have never found. He bought three huge haciendas in Spain under different names. Most of the factories which were openly controlled by Sofindus were given over in trust to Spaniards. He prepared as efficiently for defeat as he had for victory. He knew that Germany had made a comeback once before and he was convinced that she would do it again.

During the second week of April, 1945, while Red Army troops were racing through the streets of Berlin, a secret meeting was held in Bernhardt's offices at No. 1 Castellana, in Madrid. Present were Bernhardt, the Wilmer Brothers, Anton Wahle, and other top Nazi figures in Spain. A high Nazi official had flown in from Berlin to be present. I do not

know his name. All I know is what I picked up at the meeting. No notes were taken but one of those who attended some unscheduled talking.

The decisions arrived at were that the assets which were openly owned by either German capital or the German state would obviously be taken over by the Allied powers. Bernhardt would undertake to work with the Allied officials giving them "full co-operation." He would tell them what was obvious, and they would operate what remained of Sofindus and await developments. The Nazis were convinced that the difference between Russia and the Western powers would break into the open soon later. When that happened Bernhardt and the other Germans in Spain would know what to do.

There were approximately 50,000 Spaniards then in Spain. Some were businessmen, some scientists and technicians, some were Gestapo agents, SS officers, members of the German Embassy. Allied powers undoubtedly would take some of these men, and the matter was agreed that some would have to be handed over. Some others were in hiding and still others would be protected by Franco. In any event, the important thing was to hold on to what they had as long as possible—until war took place between Russia and the Western powers.

About a week after this meeting, British and American officials in Madrid contacted Johannes Bernhardt. He asked many's unconditional surrender was expected any day and the Allied Powers would soon be governing the country. Bernhardt was asked to turn over Sofindus and all its books. He agreed. According to these books, Sofindus controlled only 22 companies. The Allied officials formally took these over, with the exception of three mining companies. The Spanish government refused to take over the mining companies, claiming they were owned outright by Spanish capital.

After Germany's surrender, British and American officials moved in on Farben, A.E.G., and other well-known German firms in Spain. By placing more directors on the boards than the lies established "informal intervention" in these companies.

Spain Protected German Assets

In a few cases the Allied government had actual proof that shares of German companies were being held by Spaniards in trust for the Germans. With this proof they were able to move in and take over the factories. But where we did not have documentary evidence, the Spanish government refused to give up a German-owned or German-controlled factory. If we recall the close relationship between Spain's leading factories and German capital we will understand how difficult it will be to take over German assets. Allied officials in Spain are still trying to unravel the vast work of Bernhardt's secret empire. It is doubtful that this will be accomplished so long as Spanish Fascists remain in control of Spain.

About one hundred Spanish factories which we know to be directly or indirectly controlled by German capital are still the subject of negotiations with Franco. Probably an equal number of camouflaged companies exist whose connections we cannot trace and will not be able to until a democratic government replaces Franco's.

At this writing all the German technicians and technicians who work in Bernhardt's factories or in I. G. Farben and A.E.G. plants remain in Spain, are continuing their work at their full salaries. The apparatus which Bernhardt organized remains working nearly as efficiently as ever.

At present Franco is offering 1

American businessmen great concerns in Spanish industry. American al has moved in on the shipbuilding, aircraft and communications industries. British capital has always had huge investments in the north of Spain, in iron and copper mines, in hydroelectric power, and it is increasing its investments.

It poses a choice for British and American businessmen. Shall they stop doing business with Franco's Spain and lose profits, or shall they continue to do so and make profits, and also, incidentally, strengthen Spanish and German Fascism?

Johannes Bernhardt believes that British and American businessmen should, in other words, continue to do business with Franco. He told me so during our interview in Madrid last fall. Bernhardt is convinced "it is of the utmost importance that Britain and the United States come to an immediate understanding with Spain."

Why is it of such importance? Bernhardt answered Bernhardt, of the comparison between Russia and the Western world. "I am sure there will be a war between Russia and the United States. The quicker it comes the better, because it is on the side of Russia and Communism."

Therefore an understanding with Fascist Spain is important if we want allies in war against Russia, Bernhardt pointed out. He organized the economy during the war and placed it at the disposal of the German war machine. He tacitly assures us, he can do the

same thing for Britain and the United States.

Bernhardt gave me a statement for the United States and Britain. The statement is as follows:

"I was loyal to the German government, and now I am loyal to the Allied Control Council, which is now the legal government of Germany. I would like to be considered a friend. There is much we Germans can do. We are anti-Communists. We are people of culture. And we wait for the time we can work together for the common good. You must remember that Germany didn't want the war. All we wanted was to go as far as the Volga and stop there. We never wanted to fight England and the United States. We always wished an accord with Russia, but not an accord as equal to equal, but an accord that would recognize German moral and economic superiority. The Russians are Asiatics. We wanted to bring Russia under European influence. Perhaps it is not too late to do it."

Readers of this article may ask how this German, who played such a historic and decisive role in Spanish and German affairs, managed to keep his activities such a secret. One answer is that he was able to cloak his activities cleverly and he was always content to remain in the background.

The other answer must come from the British and American governments. The whole story of Johannes Bernhardt is locked in the files of the British Foreign Office and the U.S. State Department.

THE END

SPORTING ODDS

Ken Hicks, just out of the Army, was pitching a close one for Los Angeles. With a runner on first, he was all set to pitch to the next batter when the loud-speaker boomed out:

"Attention! The next..."

The Army had done a good job on Hicks. Instinctively, he froze into rigid military posture.

And the umpire had to call it a balk, moving the runner to second.

The New York Giants were playing Pittsburgh in the early days of Billy Terry's managership. With two on and Paul Waner, then hitting a cool .386, coming to bat, Terry and the entire infield huddled around relief pitcher Hy Bell.

"Pitch him outside," said Terry, who didn't want to get drilled by a line drive down the first-base line.

"No, I think it would be better to pitch him inside," said Johnny Vergez, who was thinking of what one of Waner's shots down toward third would do to his shins.

There was silence for a few seconds, and then Terry asked, "What do you want to do, Hy?"

"I think we'd all better scatter," said Bell gravely.

HERE COME THE BRITISH!

The Avro Tudor is about the size of our DC-6

BRITISH COMBINE

IN JANUARY, 1943, the war in Europe was beginning to look a little better for us and people over here began to dream about postwar international air-line possibilities, but in bomb-wrecked London, His Majesty's government decided it was time to do something *then* if Britannia eventually was to rule the world's commercial airways as it had ruled the waves.

America stood between her and this goal. War-planning had prevented Britain's aircraft industry from building transport planes capable of development into postwar air liners like our DC-4 and Constellation, but we had the materials and workers to produce many such planes in addition to fighters and bombers.

Further, our growing Army Air Transport Command and Naval Air Transport Service at that time were opening up airways over most of the globe, many of which would have a high commercial value after peace. Our two- and four-engined landplane transports were amazing everyone by hopping oceans as easily as they hopped continents and the British reasoned that air lines of all nations would find it economical and advantageous to use this bountiful supply for a while after the war. So in January, 1943, was born the British plan and policy to take from America its leadership not only of globe-circling air liners but planes for shorter hauls on the Continent and in other parts of the world.

While the British were working on this, they concluded they'd have to buy American planes for their North Atlantic and European services and this they subsequently did by acquiring Lockheed Constellations for the New York-London route and war-surplus Douglas DC-3s (renamed Dakotas) for their European service.

Then they called in their foremost aviation standard bearer, an estimable gentleman named Lord Brabazon of Tara, the first Englishman to acquire a pilot's license, nearly 40 years ago. He flew with the Royal Flying Corps (predecessor to the RAF) in the first World War; subsequently served as Minister of Transport and is now president of the Royal Aero Club.

Lord Brabazon was directed to head a committee to draw up a program of types of civil air liners to be produced after the war for use by the government-controlled British air lines. However, the long, painful and expensive development work had to begin at once—provided it did not interfere with the war effort—and in short order His Lordship reported back a slate that embraced this startling objective:

One-hundred passenger, New York-London non-stop air liners, one each of landplane and flying-boat types, and weighing nearly 300,000 pounds or nearly three times as large as the Constellation. (Airplane people use gross weight poundage as the index to aircraft size.) The committee also determined upon an assortment of smaller air liners for the British Empire routes, Continental business and service within the British Isles.

When details of the Brabazon program filtered back to America, the initial step—to build the first planes with piston engines and propellers—was all but overlooked as excitement centered around a later and more audacious plan to equip these new air liners with pure jet-propulsion engines or prop-jets—jet engines whose hot-air exhaust spins a turbine attached to a shaft which turns the propeller. (The advantage of prop-jets over the standard piston engines is in greater power for less weight; smaller number of moving parts; compactness for streamlining and installation.)

The British are thoroughly qualified to attempt such a job for they developed and flew the first Allied jet-propulsion engine in May, 1941. As the

war ended, they cut themselves another big slice of international prestige in jet-propulsion progress by shooting their Gloster Meteor twin-jet fighter to the world's absolute speed record of 606 miles an hour which they later raised to 616.

Then, just a year after V-J Day, they revealed the world's first air liner to fly on pure jet-propulsion power. It is a converted Lancaster night bomber, named the Lancastrian. Two of its four Rolls Royce Merlin piston engines were replaced by two Rolls Royce Nene (named for a river) jets. For take-off, all four were used, then the Merlins were shut down and the Lancastrian flew on the Nenes with an increased speed of nearly 100 miles an hour. Weighing only 1,630 pounds the Nene develops a thrust horsepower of 4,000, flying 300 mph at 10,000 feet.

Last December, the British prop-jet engine called the Theseus, after the Greek mythology hero, passed its government endurance test with a faultless run of 127 hours and is the first such engine in the world to achieve this high record of reliability. It holds Number One certificate of approval from the British government and already has flown extensively in a heavy bomber. It is the foundation at the moment upon which Britain's future air liners will be built.

Nothing that good has yet been done over here.

Our prop-jet engine was developed by General Electric and first flown in an Army Convair experimental fighter plane, the XP-81, in January, 1946. One year later it was flown in an experimental Navy fighter plane, the Ryan XF2R-1, but the remaining few planes

and engines on order for both types were canceled because of limited experimental funds.

The Brabazon Committee's program was no smoke screen. It is an almost terrifying threat to American aeronautical ingenuity and if we don't begin to move now, our older and more stable aviation people see a fleet of Queen Elizabeths of the Air in operation in five to ten years.

America's aircraft industry, however, cannot privately undertake as ambitious a program as its British competitor. The millions of dollars involved in experimental and development work on just one new type are not in the treasuries of our plane builders. Their only hope is to adapt jet or prop-jet engines to existing models—no overnight job—and for engines they may have to turn to the British until our jet-engine industry catches up the lag, variously estimated as being from 18 months to five years.

Just as Britain had to pocket her pride and, even worse, spend scarce American dollars for Constellations, so are we going to build the successful Rolls Royce Nene straight jet engines over here under British license. Rolls Royce has selected Pratt & Whitney Aircraft of East Hartford, Connecticut, and has given it all manufacturing and sales rights for the Nene in this country.

Neither Pratt & Whitney nor Wright Aeronautical Corporation, our biggest builders of piston engines for air liners and combat planes, was permitted by the government to indulge in major research on jet engines while the war was on because of their heavy production work. This assignment instead was tossed to General Electric and Westinghouse, famous for their work in turbines, the heart of the jet engine. The latter will continue with their program of development while both Pratt & Whitney and Wright Aero move into the jet field with designs of their own.

The only way our aircraft industry, under present policy, can build new and radical jet and prop-jet air liners is through bigger and better Army and Navy contracts for jet combat aircraft, notably bombers and military transports. From these they can "extract" commercial versions for sale to air lines at reasonable prices, since the government pays

the initial heavy development costs for the military model. That's one reason the Boeing Stratocruiser, our newest, biggest and fastest air liner, now being made ready for commercial service can be sold \$1,250,000. It was developed from the Army C-54 troop and cargo carrier which in turn was evolved from the war-proved B-29 Superfortress.

The policy being followed by the British to carry out the Brabazon plan is an open, direct subsidy. The manner in which American builders are to produce competitive planes is also a government subsidy but Britain's is productive of quicker results.

British hopes to capture the coveted and profitable New York-London air trade are geared to gigantic and originally designated Bristol Model 167 now under construction and which since been named the Brabazon I in tribute to that defatigable pioneer airman, Lord Brabazon.

The Brab One, as it is popularly termed, is expected to fly early next year. The first model will be powered with eight 2,400-horsepower piston engines and propellers but the next, the Brab One, is to be equipped with eight prop-jets.

An important trump card up the British sleeve is the huge 290,000-pound Saunders Roe Model 167 also known as the Saro, a 100-passenger flying boat to be sped through the air by 12 prop-jets at 300 miles an hour. The British have kept the flying boat in their program, though we appear to have abandoned it for commercial use.

The Brabazon Committee had its eye cocked in the direction of America when it laid down plans of lesser size and performance to block out American competition not only on the prize New York-London Atlantic run but on more leisurely routes.

Built and flying are such types as the Viking twin-engined 24-passenger, 200-mile-per-hour air liners in which the King and Queen of England on their South African tour earlier this year. They are a worthy competitor in the foreign trade (and British prices together with British trading methods of the Martin 2-0-2 and Convair 240 medium twin-engined transports now being pointed for air-service later this summer. Already the Vikings are replacing the Douglas DC-3s used since the war by British European Airways' continental services. By August this famous American air liner will be gone. Also in commercial operation is the DeHavilland Dove, a little twin-engined, short-range liner carrying 8 passengers in cozy surroundings at 200 miles an hour.

Now under test is the Airspeed Ambassador, a perfectly streamlined twin-engined beauty with a wing atop the fuselage so its 40 passengers can see the ground from any window as they cruise at 300 miles an hour. Its route assignment is not as definite as that of the new Handley Page Hermes IV, Britain's fastest air liner (cruises at 250), 25 of which have been ordered for British Overseas Airways Corporation's Empire routes from London to South Africa, India, Australia and China. The model of this type is to be the Hermes V, with prop-jets which, they say, will give it a cruising speed nearly 100 miles an hour faster and a range of more than 3,000 miles with up to 63 passengers at 300 feet. This is an added menace to the North Atlantic business with the distance between Gander, Newfoundland, and Shannon, Eire, only 2,000 miles.

The Avro Tudor I and Tudor II, in general about the size of our DC-6 but 60 miles an hour slower, are now flying and undergoing further development with piston engines and propellers.

Another attractive model now flying is the four-engined Miles Marathon, with seats for 40 at speed of 200 and range of 1,000 miles. It is slated for prop-jet engines in its next edition.

Half a dozen or more other small to medium liners are being built, some as combination passenger and cargo, others as freighters. They are part of the Brabazon program yet they are competitive to American types and already are giving us a fight in the world market.

THE GOLDEN MESH

Continued from page 32

out a guide. As for this little man the earrings and the muskrat face, he t be French and listen to reason. Spaniards did not like Americans. were under the impression that siana, if it were given up, would be ned to Spain.

Trigg looked behind the man with the ngs. Under the hurricane shade of tern stood a young girl. She was not the Creoles with their chalky faces coal-black hair, but blue-eyed and cheeked. And the ringlets were light n. "Yes? You are looking for one?" she asked brightly.

Just looking for my way out of this ap." "There's no way out at this time of . You better come in. Don't mind ud on your boots and your clothes. he more reason for you to come in get warm."

Trigg took another look at the man with arnings. Either dumb, or at least le to speak English, the webfoot ed his snuff-clinkered teeth in a grin, slipped around Trigg and jumped to the shell beach outside.

"That little fellow," Trigg said as the ook his fox-skin hat, "he seems to g here, but you—I didn't know were ladies in this swamp."

"I came to see one of the family who he swamp fever."

"One of the family would be an English- not an American, judging by her ht. "Then there is someone else in bin besides your—your servant?" "I have no servants. I keep a millinery in New Orleans. There is no one See for yourself." She nodded to an-to, which was filled with muskrat fishing gear, a trawl hanging over a tten door. "No one around here t old Po-po. He is a Cajun and has olitics. An American is as welcome yone." She went to a window and l out: "Po-po, come in here and is some coffee!"

"He is, not the one who was sick?" "he one who was sick is well now and gone on his rounds to see other ers. He is a fur buyer."

"The Englishman he was pursuing was ld enough to be her father, Trigg mbered. But he could be her brother."

"The Cajun hobbled in and ducked into e kitchen, where he put on a pot and d a brandy bottle. When he brought cups he put the final touch to the e coffee by squeezing the juice from n orange. He might squeeze some- else into it, Trigg thought, if he s what brought me this far down he marsh. Aloud he said, "Thank ery much, no coffee. I can't lose me. Must get to New Orleans." "t night?" the girl laughed. "How ou get anywhere?" Her laugh d her teeth and a dimpled chin. "you could just set me right about irection—"

"You wouldn't believe the direction I ou. New Orleans is west, but to get you must first find the St. Francis ." She pointed north toward what Bayou Bienvenue. "It would take g time if you started tonight. It take forever, because you would get there. You must have supper s, then Po-po will fix you a bunk." Po-po was already slicing garlic and s in the kitchen. "That little fellow ide me," Trigg said. "I'll pay him." ok some Spanish dollars from his y belt.

"I called to the kitchen, translating uggestion into Cajun patois. Po-po wer twisted the cork out of a bottle is teeth as if killing a chicken. "He oney enough, he says."

Trigg caught the spicy smell of jam- er's for July 5, 1947

balaya simmering. The salty sea cherries he had eaten had merely sharpened his hunger. "You are very hospitable, but I simply cannot stay for dinner."

"Or for breakfast, I suppose you think?" She was very cool about it, her smile seeming to say, "You will go when I let you go." It started a panic in his chest—the panic of being trapped. He took some more dollars from his belt and stacked them on a table like a gambler sweetening the pot. "I'm taking that pirogue I saw under your window."

"Then you can have your coffee when you come back."

He swallowed an oath. There she went again, taking it for granted he couldn't get away. She was right, he discovered, when he went out on the shell beach. The canoe was not there.

He swore aloud this time, then wiped the sweat from his forehead. He had felt hot and loutish when that girl stared at his tangled hair and hunting shirt and mud-soaked pantaloons. Now she had proved him a lout! He circled the cabin toward the kitchen door, intending to

look fashionable even in a trapper's mud-and-stick shanty.

Trigg said nothing about the vanished pirogue. Instead: "That member of the family you mentioned—the sick one who got well with your nursing—he was your brother, I reckon."

The blood drained from her cheeks, but her voice was steady, "What made you think that?"

"If he buys furs from these trappers he must know his way around at night. Thought I'd wait for him."

SHE took a moment to answer, getting a small box from the cupboard. "Then you may as well make yourself comfortable. Try some of this perique tobacco in your pipe."

Po-po, wearing a flower behind his ear, brought in the jambalaya. The girl sat down at the table, motioning Trigg to the opposite chair. A pretty girl and jambalaya! He swallowed hard. But, convinced that he would have to come to close quarters with Po-po sooner or later, he refused. It would not be right to ac-

"The passengers are growing ugly. Our club soda is all gone and there's something wrong with the movie projector"

throttle that little muskrat; but under the window he caught the smell of thyme and bay leaves boiling. At that moment Po-po was pouring in the shrimp which he had already shelled and fried. Trigg's mouth watered as he remembered the jambalaya he always had when he flatboated down to New Orleans.

He could tell her the truth. She knows it all anyway because her brother—he was sure that's who it was—must have come here and warned her that he was on his trail, told her to hold him.

He circled the mud shoals in a vain search for the canoe. He could come right out with it and say: "Look here! We ran into a man dressed as a trapper. When we called to him he answered in good English that he had no time to talk to us. We chased him and he killed one of our men. We opened fire but he escaped—"

No, there was no use telling her all that. Even if she already knew it, it would be a reminder that her brother would be shot when caught.

"Yes, come in," she said when Trigg knocked once again at the front door. "Supper is ready."

She had changed her calico for a sack chemise. Perhaps, like her countrymen, she always changed for dinner; at any rate being a milliner, she knew how to

cept their hospitality and then tomahawk the cook.

"But you will have some of this pomal?" she asked, filling two cups with Burgundy.

"I can't drink on the eve of battle."

She smiled from the side of her mouth. "I heard your general said he had never heard of a Kentuckian without a gun and a pack of cards and a bottle of whisky."

"So you found out I was a Kentuckian?"

Her eyes dropped guiltily. "It's your long hair and the color of it. I wonder how you would look with it trimmed. I'm a milliner, you see, and hair either on a man or woman is very important."

He stuck to his own subject. "Will you ask Po-po where he hid that pirogue?"

She turned to the webfoot and talked in gumbo. Po-po stood biting the stem of his flower thoughtfully.

"He said you must have seen a cypress log. There was no pirogue on the beach."

Trigg almost believed this lie. The canoe had looked like an alligator, he remembered. But it occurred to him that she might have interpreted the webfoot's remarks to suit her own ends. Trigg circled the dining table and followed Po-po into the kitchen. Holding out a handful of dollars, he said, "Pirogue."

Po-po took one of the coins and bit it; then, closing one eye, he put a finger to his lips. The finger—a mere bone eaten by shrimp juice—pointed to the shell beach outside the window. It was signal enough for Trigg to meet him out there.

"Did he accept your bribe?" the girl asked as Trigg crossed the main room.

"Yes, for a pocketful of dried shrimps."

"You will never taste shrimps again if Po-po takes you away in his pirogue."

"I'll sit behind him with this."

"You'll need that tomahawk for the plat-eyes and witches and moccasins."

"Thanks for the warning." He took another hard look at her. . . .

When he went out on the beach he found Po-po dragging the pirogue out of the cane.

Trigg got in, holding his tomahawk in readiness as he recalled that a pirogue can roll over as easily as the log from which it is hewn. Every stroke of the paddle almost capsized them; so did the tangle of branches and roots that scraped them.

Po-po kept paddling steadily, first along the winding bayou, then into a maze of alligator trails in which he seemed to smell his way, for there was no other sense which could have guided him. He worked skillfully and hard, and just as skillfully he suddenly capsized the pirogue and shot it through a mass of rotting roots into clear water.

Trigg was left far behind, waist-deep in the thick ooze, the mangroves reaching for him like live things. He wriggled out of the mire only to flounder through the murderous swamp grass which sliced his cheeks and hands and even his homespun. He longed for something solid to stand on or cling to but there was not even a floating log. As for that hollowed-out cypress log, the pirogue, he never saw it or the Cajun again.

But he saw the girl. She had taken care of that, hanging a lantern high up in the door of the cabin to guide him back. I'll go back to her or else just lie here and let the carrion crows pick my bones in the morning, he thought bitterly. She came out and helped him the last few yards.

"The jambalaya is hot," the girl said when he staggered in. Trigg wanted to accuse her of ordering her man to drown him, but as he opened his mouth he remembered she had given him fair warning after all. His open mouth must have made him look like a landed fish, he thought. The resemblance was probably heightened by his face, puffing and on fire from the grass cuts. The poison grass, the chills brought on by his long trek in the marsh and finally the ducking in the swamp ooze made him shiver and burn as if in a raging fever.

"An accident—pirogue turned over," he mumbled as he slumped to a chair.

"I'll fix your face and hands to stop the poison," she said, turning to the kitchen.

HALF unconscious, his chin on his chest, he was vaguely aware of her fingers rubbing his face with lye and bacon grease. It was her laugh which brought him out of his stupor. "I wish I could cut off this hair. Just two snips would fix it—"

"Oh, no you don't!" He struggled up, but ashamed at his sudden panic, he sank back again almost in her arms.

"That's it, rest your head back."

"I'm not going to sleep! You won't get my tomahawk or my hunting knife, if that's what you're chuckling over!"

"I was only chuckling at your face. You don't look like a Kentuckian any more. You look like a webfoot. I'll get you some dry clothes, then we'll eat."

He shook his head groggily. He was too sick to eat supper.

"Then take this and you'll feel better." She held a cup to his lips and without

thinking he let the *pomal* fill his mouth. He swallowed it and the pleasant burn spread down his chest to his stomach then up to his head. It was then that he noticed her eyelids like velvety black moths fluttering. When she spread his hair back so she could rub the ointment on his forehead, he said, "That's one way to keep me here, rubbing my forehead. You should've thought of that the first time."

She pretended not to hear his mumbling. "You Kentuckians wear your hair so long—for strength, like Samson?"

"You'll find out about Kentuckians, you and your little man, if you try to hold me prisoner." He thought he had shouted at her, but like voices in a dream, no sound came out. He knew he was a prisoner, for there was no hope of escaping the swamp without her help. He felt he was her prisoner not just until morning but forever. He was sure of it as he sat across the table, watching her fill his plate with jambalaya.

HE SHOVED the plate away, too sick for food, then reached for the cup she had just refilled. A good swig of the Spanish *pomal* worked on him until he reached for a shrimp, nibbled it. The taste of thyme and peppers made his mouth water. He finished the shrimp, then another. He was suddenly raging hungry and also dead sleepy both at once.

She could have drugged that Burgundy—but where would she get the drug? She's not like those women in New Orleans who rob a flatboatman for his money, he thought. She's doing this so I won't kill her brother.

He lifted his head and tried to focus his eyes on that dimple in her chin. This seemed to drive her off, for she got up and he noticed the tilt of her nose and the young throat as white as the crepe myrtle he had seen in New Orleans courtyards. She got behind him but appeared again on the other side, circling him for no purpose he could imagine except to spin a web.

He stood up and balanced himself. "You could do it when I'm asleep," he mumbled half to himself.

"Do what?"

"Cut my hair—and get my knife and rifle gun in the bargain. Perhaps you've got my bullets already." In a panic he fumbled for the bullets in his pantaloons pockets. "But I'm not going to sleep—not here."

He went to the door, jumped aside as he saw a thin figure stalking in mud. "Your brother—" He ran to the window, lifting his rifle gun.

The girl burst out without thinking: "It can't be my brother! He's not coming back!"

"No, he's buying muskrat furs, you said, or else taking information to the invaders."

Trigg should not have taken the time to jeer at her even though the man out there had not reached the shell beach. It was the girl who made the moment count, for when Trigg snuggled the cherry stock of his gun against his shoulder and beaded on the silver sight, a rope whipped down on his head—not one rope but many as the girl yanked a trawl over him from head to knees.

He swung around, flaying his arms—which merely entangled him further in the net. It acted like swamp grass. He was a fish for sure now, a crappie flopping on the floor boards of a skiff. Although he upset benches and tables, the girl stood by calmly, doing nothing until he tried to untangle himself with both hands. Then she slid his rifle gun out from the web and stepped to the door.

"It's not my brother," she repeated without a change of voice. "But you would be lucky if it were. My brother would give you a chance—but not this redbone." She turned to Trigg. "You get into that lean-to." He struggled to his knees, trying once more to free him-

self from the bag net. "Get in there you!" she shouted. "That redbone guide for the British hunting party he'll know what you are with that hair of yours!"

Trigg was not so sure he didn't owe the redbone to this Delilah. There no doubt about the girl's breed, whether a redbone was neither black nor Indian nor Spanish but a mixture. Undecided for the moment, he dragged himself and the trawl in lean-to and the girl closed the door.

"I heard trouble in there!" a shout came from the beach.

"I tripped, chasing a muskrat," he called back. "What do you want Enrico?"

"I want a pirogue. A Dirty Shirt mine." The man's voice was such amplified as he stepped up to the platform. "I smell jambalaya!"

Through a knothole Trigg could see him now, skinny and bulletheaded piebald—the redbone who had pretended not to understand English when he commanded his canoe. Evidently he had waded and swum part of the way for his smock dripped water and oiled.

"Today your brother ran into the pickets and they shot him and hit the arm—oh, you seem to know. He came here?"

Trigg could not hear the girl's answer but he saw her nod.

"He had a dispatch for Pakenham but he could not use his arm to paddle. I gave me the dispatch. I'll tell you."

"No!" she interrupted quickly. "I tell me anything!"

"This general, Don Andres Jackson is boxed in without hope. I can tell you that much of it."

Ethan Trigg cut one of the strands of the trawl, then another.

"Why don't you sit down with the redbone asked. "You're the person thing ever seen in this marsh. No are you turning away?"

"I am going to boil some coffee."

"What's wrong with this *pomal*?"

"All right, have a glass, but not much."

There was a gurgle of the bottle and a belch. "Your brother lives high."

"I said, please not too much. I have already had some tafia rum. I know anything."

TRIGG'S mind was racing. He squirmed silently out of the net. What the redbone had said stirred blood and made it pump and sing in his head.

Just beyond his door he heard a man muttering in an injured tone. "do you draw your hand away like a gull, that's why."

The man asked suddenly, "Po-po in the kitchen?"

"No. Must be the muskrat again. go my hand, Enrico."

"Where did you get that rifle gun?"

"It belongs to a Dirty Shirt. Carroll's men, or maybe Coffee's chasing my brother."

"Let me see it."

"No." There was a scuffle.

Trigg took his tomahawk from his belt. Let her think I'm doing this for her little hellcat! Let her think it's common sense!

He inched the door open. "What are you doing, redbone, tussling with a lady?"

The redbone gaped like a giggling child. He lifted one hand to ward off the hawk, his other fumbling for the latch of his belt. Fire blazed from the muzzle of the tomahawk as the tomahawk landed; a ball roared, lopping Trigg's ear.

The pain came later, delayed pain from swamp grass. It came as the girl had fled and the redbone with the tomahawk inch-deep in his back. Trigg sank heavily to his knees, his arms, head hanging so low

The Master Blend

drops splashed one by one on the one's smock. He searched the smock the cottonade breeches, hunting with fingers—his eyes were blurred with ever and the wound had made him

like a gull picking shrimps from a noise's back," the girl said.

Trigg wondered how she happened to be in the room until he opened his eyes blinked stupidly at lantern light. He have been unconscious for a long for he was sitting in a chair. When he tried to get up he discovered his arms knees were bound by the wisteria which they used in that country for boat

Samson was helpless at last— with seven green withes.

his eyes cleared he saw the girl's white as a wax candle, then a darker over her shoulder. This was the Eng- nan, his arm in a sling.

There's something wrong with my Trigg thought. It's not this bandage with *pomal* that makes it feel so —and so empty! He looked down at shoulder then the other where his hair should have reached.

Not him gutted and gilled for mar- ure enough!" the brother said with- smiling. "But if he was picking up Enrico's clothes he might have d something."

searched his pockets. That's why I him up—so I could search him."

the brother knelt down by the red- s body. "The dispatch—it's gone!" rned and with his good hand started ng off Trigg's boots. "I'll find that tch if I have to take off every stitch ur clothes."

his might have been the reason for irl's turning to the door. Whether it a premonition of danger or modesty, rned just in time to see what was ng. "A hunting party! Horses!" She d harder. "Americans!"

the brother lifted his gun, pointing at g's chin. "You'll tell me where you hat dispatch, or else get this—"

the girl jumped in front of him. t, Hal! He's my prisoner, not s!" She chattered wildly, "He saved rom that drunk redbone and you t going to murder him! They'd find ispatch on his body anyway—"

the brother swore, repeating what aid under his breath. "Come on— this window!" he snapped. "My e's hidden outside."

he climbed over the sill the girl held glancing to the door on the other of the room. She could see the ons clearly now, as Trigg could see , wading their horses across the u.

Want to take me with you?" Trigg ed. That might have been in her , considering the certainty that he the dispatch in his clothes. "You to keep me prisoner for life, is that an't give me up?"

ou'll be a prisoner when I see you

again in New Orleans," she taunted, dart- ing to the window.

"When I see you there they'll still be singing Yankee Doodle!"

"Then drop into my millinery shop and I'll stick a feather in your cap!"

She climbed over the sill and by the time the cavalry pickets rode up to the cabin she was as safe as a muskrat in the cane.

Trigg recognized the officer dismount- ing at the door as one of Hind's Missis- sippi Dragoons. He had six men with him, one of them a swamp guide with a fuzzy marsh-bred pony—the kind they called half alligator, half horse.

"A dispatch," Trigg said before they could ask him what had happened. One of his boots was already off but he pointed with his chin at the other. "In- side my pantaloons—left boot."

THE officer found the dispatch and read it while a picket and the guide were casting off the knots in the wisteria. "It's to their general, Lord Pakenham, telling how simple will be the capture of New Orleans. Where did you get this, Trigg?" the officer asked excitedly.

"From the redbone on the floor—guide for a British courier."

"It gives the exact strength of our troops—Carroll's Tennesseans, Morgan across the river"—he ran his eye down the list—"Daquin's Negroes, the Choc- taws, Lafitte's pirates, Coffee—" he grinned at the next item: "Total arms in New Orleans, twenty-five hundred mus- kets, seventy-five pistols! *That's* good news for Pakenham if he ever gets there!"

He folded the paper and tucked it in his blouse. "Get to your horses, men! And you"—he turned to the swamp guide—"take us straight to Chalmette!"

Trigg stretched the crick out of his legs as he stood up. The officer took his arm to steady him. "Tell us what hap- pened while we're riding." He called to one of his men to help Trigg to a saddle. "What the devil happened to your hair?"

"It clotted my wound." Trigg thought up an excuse which might actually have been the truth. "The girl who doctored me wanted it cut even, being a milliner."

"And the wisteria ropes—who did that?"

Trigg blushed and lied, "She had a brother." Then suddenly he recalled a line of Shakespeare his mother had read to him as a boy . . . *a golden mesh to entrap the hearts of men*. But he swore to himself: When I'm with Old Hickory on the fire step I'll forget her.

But he contradicted this the next mo- ment when the dragoon with whom he was riding laughed, "After the battle at Chalmette we'll make a spree in New Orleans,—a *bamboche*, as these folks call it. I know a girl—a Creole—"

"I can't make *bamboche*," Trigg said, a captive forever, "until I go see a mil- liner and get a feather for my hat."

THE END

"The years have treated you kindly, Alice"

RAY HELLE

Inside story of Boxcar 82763

Solving the problem of the Broken Battery Cases

Prominent battery manufacturer plagued with broken shipments enlists the aid of Erie loading specialists.

The Erie assigned one of their loading experts to solve the problem. After close, personal observation and examination of several shipments, he planned a new method of loading.

He made sure boxcar floors were smooth and even, suggested containers be trimmed, changed methods of stacking the battery cases, recommended different blocking, bracing, and filling of empty spaces.

To check the effectiveness of this new loading method, a special impact recorder was installed that automatically registers and charts any handling that would affect the shipment.

Personally inspecting the unloading of several cars, the Erie representative found his careful study of the problem and his recommendations had paid off to the shipper's satisfaction.

These and other specialized skills and services are winning more satisfied shippers, and making more friends who say "Ship it Erie".

TIMBER! 1948

GENTLEMEN: I don't know if there enough adjectives of PRAISE to exp the merit of your presentation of the of President Truman (A President G Up, May 24th). He should be re-ele "hands down," and you awarded Pulitzer prize for the year—HERE Now.

I know it does not mean anything cial, but the writer has been a loyal re of Collier's for over fifty years. Any it is a consolation that there are a minds that can rise above petty parti ship.

R. C. BUCHA

PLEASE EXPLAIN

DEAR SIR: None of us could get the closed cartoon (May 17th). Are we plain stupid or have we no sense of mor? Would like explanation.

CARLOS A. SMITH, Bellaire, C

"Now, let's see—today is Friday, isn't it?"

Mr. Price asks any other befogged read "How would you like to be caught your pants down over a week end?"

CHANGE PARTNERS

DEAR EDITOR: Your editorial, Is This Necessary? (May 17th), indicated that do not know that we have a divorce la Mexico inaugurated by President Car called "The Mutual Divorce Law." couple who wish to separate go before judge and say so. It is not necessary one to incriminate the other. They file pers, and the judge tells them to retu one month. At the end of a month return; the judge asks if they have changed their minds. If they answer n tells them to return in a month. The ond month the thing is repeated. If return the third time and still insist o divorce, it is granted. As they married mutual consent they may be divorced same way.

R. M. GOOD

Ensenada, Baja California, Me

... I call your attention to the fact the state of Texas provides for a (30- "cooling off" period in its divorce

Your editorial implies that the r adoption of similar provision by the of Tennessee is an innovation.

FRANK Y. HILL, Laredo,

IN THE DISCARD

DEAR SIR: I enjoyed Architects in F ers (May 10th). But why does Ha Harrison have to drag in the old pr tive coloration theory?

It used to be argued that because e thing turns white in the arctic winte was protective camouflage. The th went overboard when it was found birds and animals were merely subje the law of physics which permits the retain their own body heat when the no warmth from the outside.

The French naturalist, Jean Henri F threw the protective coloration theor the window, with the remark that v one thing says yes, a thousand thing no.

A. A. PATRICK, Weatherford,

Collier's for July 5,

I'm going over with a **BANG!**

—since Reliance proved to me fine sportswear need not be expensive

... my popularity is sky-rocketing since got wise to Reliance sport shirts! They really matter a fellow—fit and look like twice their price—about \$2.50 to \$3.50 for short-sleeve models. Choice of styles and colors in a variety of washable fabrics.

No ordinary sport shirts can hold a "Roman candle" to Reliance long-sleeve models either! They're beauties, yet cost only about \$3.00 to \$5.00.

Two more big holiday hits are these swell water-repellent Reliance jackets. Both are carefully tailored and have full zipper fronts. Exhibit "A," above, is of long-wearing rayon-cotton poplin—with raincape yoke, Sta-Set collar, 4-pleat free-action sleeves and zippered tee or change pocket. About \$7.00. Jacket at left is of fine cotton poplin and is priced at only about \$5.00!

Complete quality control from fabric to finished garment guarantee you outstanding value when you Rely on Reliance. So ask for Reliance sportswear by name—at leading stores everywhere.

convalescent home, X-ray machines, and every modern appliance. Then we had something to offer a doctor. Doctor is a graduate of Vienna—and very satisfactory.

ERIC P. KELLY, Chebeague Island, Me.

... I would like to add another reason for the shortage here in South Dakota. We have only one medical school in the state—a two-year one. That means every student must finish his training outside the state—if the out-of-state ones aren't too crowded. Once settled in another state many will not return.

MRS. FRED B. FOREMAN, Watertown, S. D.

COULD I HELP YOU, SIR, PLEASE?

DEAR EDITOR: Yes, it's a relief to be able to buy a spring chicken without having to pay for all the eggs the hen would have laid if she'd lived to a ripe old age. Lester Velie is entirely correct when he tells us The Customer Is Right Again (May 31st).

Why, to give you some idea of how things have changed, the other day I saw a sign that said, "All nickel candy bars, five cents!"

PARKER FENNELLY, Peekskill, N. Y.

Yes, but what this country now needs is a good five-cent nickel.

WOMAN DOCTOR

DEAR EDITOR: When I saw the name of Ralph S. Banay, M.D., I knew I was in for a treat. I sat down, although my head was in a rag (I was cleaning house at the time) and read The Husband Really Pays. I find him keen and refreshing. Modern fiction makes a silly ninny of most of its heroines.

Collier's of May 24th is good copy all through. Your fiction, although up to the minute, does never deem it necessary to go "nausty." Many of our national family magazines are getting smeary. Please keep Collier's clean.

KATE O'LEARY, Janesville, Wis.

... If no children have entered the picture then Dr. Banay's fairly accurate, except that men being the "boss" sex pick young flowers rather than faded ones—Do I make myself clear?

MRS. M. HIRAM KAGAN

... Millions of veterans will breathe a sigh of silent gratitude to Dr. Banay for not blaming the war for broken homes, as most crackpots do.

An open-minded study of Dr. Banay's work might be beneficial to the host of judges and courts who condemn men to perpetual financial support, regardless of grounds. For a nation as civilized as ours, it is a shame, injustice, and disgrace to tolerate the archaic divorce laws and practices that they have condemned men to for decades. ...

GEORGE H. MULDER, Bellflower, Cal.

... We have a life insurance against death, why can't we have one against divorce? If we had divorce insurance, all cheating and lies would be outlawed.

(MRS.) JEWEL SCAREY, New York City

... The demand of public sympathy, the assumed attitude of defenselessness, the exaggeration of supposed physical weaknesses, the airing of marital grievances to the local sewing circle have made purely feminine attributes an undesirable quantity. Excuses have been made that woman is a creature of emotions, but no emotion ever conceived blackmail, which is woman's most potent weapon. The subtle, dripping-tap method of persuasion is the result of cold-blooded logic and is conceived in ice-encapsulated brain cells.

Don't stop now, Dr. Banay. you have a crowd of disciples only waiting for their ideas to be crystallized for them.

LEE WHITE, London, Ontario

They're putting
the bite on me!

Fleas are like poor relatives after a rich uncle—they're out for all they can get. Mother told me there'd be days like this—times when the best thing to do is to treat me with Sergeant's SKIP-FLEA Soap, followed by regular dustings with SKIP-FLEA Powder. The powder contains proved anti-flea ingredients, and it brings fast relief... it's tested for safety, too. For economy, try the new 50c size. Sergeant's 73 years of clinical research and laboratory testing have developed 19 dog care products, each of which helps you to give your dog the care he deserves.

You can pick up a number of valuable hints on dog training and dog health in Sergeant's new Dog Book. It's FREE for the asking at drug and pet stores, or by writing to Sergeant's, Richmond 20, Va.

THE GRAND MARCH OF THE UNITED STATES OF AMERICA

Continued from page 19

discovered that weakness it would mean the end of the only career for which he had been trained. It would mean goodbye to the Army in which he had served with honor, even with distinction. His own future would tumble silently around him, and he would be lost indeed.

The sound of radio music came insistently to his ears through that door in front of him, and somehow its measured beat brought him back to present reality. He lifted his hand and knocked on the panel he could not see.

The music stopped. Someone came with quick steps to the door and opened it. David Hammond, a tall man, found himself looking down at a young woman whose upturned brown face startled him with its unmistakable familiarity. He was astonished not so much by this recognition as by the fact that he remembered so clearly the original—the face of the boy he had last seen alive many months ago, and of which the young woman's face was a true but softer copy. Over her shoulder he saw three vague figures sitting motionless in a dimly lighted room.

"Are you—?" he began, then changed his question. "Is this the Taylors' apartment?"

"I'm Lucy Taylor," the girl said. Her eyes moved in swift appraisal of this stranger, this white man who wore the cloth, if not the manner, of authority. For the first time in years, David was conscious of his uniform.

"My name's Hammond. Captain Hammond. I've come—"

"Lucy," a woman's voice broke in calmly, "if he's from the station house, I already bought my ticket to the police benefit."

"Mama, this gentleman's an Army officer."

The pause that followed was curiously disturbing. David had again that sense of helplessness, as though the whole scene, and his purpose within it, were dissolving into illusion. The figures in the room were shadows, the girl scarcely more substantial except for the imprint of her face recalling that other face in his mind. He said, "You must be Buddy Taylor's sister"—and felt like a man who had smashed his way out of a dream.

"Buddy?" the girl said. "Why, yes. I—"

Then he heard her catch her breath. "Buddy?"

"I knew him," David said. "He was in charge of a platoon of engineers attached to our headquarters near Pilsen, in Czechoslovakia. That was in May, '45."

LUCY TAYLOR spoke in a low tone that had the resonance of an organ note. "Come in, please."

He stepped into the room. It was lighted by a single lamp with a pleated, brown paper shade that stood on a card table near an overstuffed sofa whose springs dragged on the floor. On the sofa sat two women; a dark-skinned girl, with a baby asleep in her arms, and a big-bosomed, gray-haired matriarch in a black dress, with a proud black face that seemed to Captain Hammond wonderful in the lamplight. The only other person in the room was an old man wearing a stocking cap and a shabby, brown dressing gown tied with a string around his waist, like a monk's robe. He sat erect in a straight-backed chair at the window and stared out into the mild autumn night.

David had heard the door click shut behind him and now Lucy was standing at his side.

"Mama, this is Captain—" She glanced up at him quickly. "I'm sorry I didn't catch your name."

He repeated it for her.

"Captain Hammond," the girl said to her mother.

The gray-haired woman inclined her head but did not speak. David waited till the proud, challenging eyes again met his.

"Mrs. Taylor, I hope you won't think this is an intrusion. I've been looking forward for a long time to meeting you and your family. I got your address from the Army chaplain who wrote you about your son."

The eyes flickered momentarily. "I heard you say you knew Buddy." Then the matriarch resumed her impenetrable mask. "Lucy," she said, "introduce the captain to your sister and grandpa."

Lucy's sister was the girl with the baby. Her name was Mrs. Williams. The grandfather was the old man by the window. When Lucy introduced him he got up and bowed gravely to the visitor in uniform.

"Lost my son in the first World War and my gran'son in this one," Grandpa Taylor said, in a thin, sweet, wandering voice. "I was at El Caney in Cuba in '98, but I don't study 'bout war no more." He sat down again, and turned his wrinkled, leathery face to the night. "I got no comfort but my Jesus now," he said.

"Lucy," Mrs. Taylor said, "get a chair for the captain."

THERE was only one other chair in the room. Lucy pulled it into the circle of lamplight, then sat down on the sofa between her mother and sister. Facing them, David was conscious of a blurred symphony of noises coming up from the street and through the floor. But here was a stillness that would defeat him unless he overcame it. He said to Mrs. Taylor, "I've come to ask a favor—or rather to try to find something that may not even exist. It has to do with your son, and I—"

"My son is dead, isn't he?" the mother said.

"Yes."

"Killed after the war was over and done."

"Yes."

"Over and done," she said, with a finality beyond lament, beyond even bitterness. "I don't ask why. I got over asking why Buddy had to do that terrible work, whatever they call it—"

"Demolition."

"Whatever big name they call it, he was doing what the gov'ment told him. Gov'ment took him the way it took his father in '17. Carried him across the ocean, and Buddy hated it and was proud of it, too. Got blown up by a German bomb"—(It was a mine, David thought mechanically)—"a week after peace had come, and they buried him in foreign ground. What more does the gov'ment want of him? Why does it come bothering 'bout him now?"

David was puzzled. "The government?" he said. Then he understood. "I'm not representing the government."

"You said you wanted to find out something."

"I said find, not find out."

"Well, that sound like gov'ment."

It would have been funny if it had not been so completely and profoundly the reverse. He said, "I'm here for a purely personal reason."

"You wearing the uniform, so I thought—"

"I'm an officer in the Regular Army. I've just got back from four years' service overseas, including a seventeen months' tour of occupation duty. At present I'm stationed on Governors Island." He gave her these facts deliberately, and with still more deliberation

Meet "DEAR RUTH"

Whose love letters should have been mailed in asbestos envelopes...

CARLING'S ALE

Here's something that happens more than a million times a day (and more on holidays).

Every time one of those Carling's caps pops off, here's what someone gets:

A brew that's better, not bitter—deliberately different—a light, bright flavor cross-blended for the American taste.

BREWING CORPORATION OF AMERICA
Cleveland, Ohio

"The last thing I did before I left was to visit your son's grave. I tried to pay my respects to a man only once, but will never forget. The three women simply stared at him. Only Lucy's wide brown eyes seemed responsive—and David went on going against the stillness. 'He was buried in the Corps cemetery just outside the city in a green and quiet place. At least it was green when I was there. The grave was well cared for and—' 'Yes,' Mrs. Taylor said without emotion, 'the chaplain sent us a picture of it. Shows Buddy's name plain on the cross.' Her look was remote. 'He was baptized 'Buddy.' I was afraid I wouldn't put that on the cross.' 'They did.'"

HE mother nodded. She said, "We never called him anything else from the day he was born."

Grandpa Taylor's reedy voice came ringing across the room, "The Lord, and the Lord taken away. Blessed be the name of the Lord."

Mrs. Williams' baby stirred and whimpered with a tiny animal noise. She patted it till it slept quietly again. Lucy said to David, "Just what is it that you came to find, Captain Hammond?"

He looked at her with sudden relief. "My brother was a musician," he said. "Why, yes, he played piano."

He was also a composer, wasn't he?" "Why," Lucy said, "he was always humming up tunes and playing them. But I don't know that you'd call him a composer."

"I would," David said. "But maybe I'd better tell you my whole story. It was with a party we gave for the Russians at our regimental headquarters in Czechoslovakia. I know the chaplain didn't write you about that because he wasn't there. It was May 13, 1945."

Lucy glanced at her mother, then at David. "The day before Buddy was killed," she said.

The night before, yes." He tried to speak as factually as possible. "We had moved Pilsen on the sixth, the war ended on the seventh and on the tenth a group of Russian officers, the staff of one of our units opposite us, asked some of us to a celebration on their side of the line. Everyone was busy celebrating right up to the victory, and three days later Colonel Grace, my commanding officer, made the compliment. He invited the Russians to dinner at our headquarters. The faces of his listeners showed only interest and puzzled curiosity. He hurried to the line between the two zones of operation ran about ten kilometers east of Pilsen and we were living in a country not far from the line. The villa had been used during the war by a German staff officer who had got out without losing any damage. It had belonged originally to a Czech official of the big works in Pilsen and was handsomely furnished. There was a grand piano in the drawing room."

He paused, aware that he had struck a chord between the women's memories of his own. He said to Lucy, "I first saw your brother sitting at that piano. He wasn't playing anything. He just sat there with his hands resting on the keyboard. His head turned as if he were listening to something inside the instrument." "I know!" the girl said. "I can just imagine." She did not finish the sentence.

He'd come in from the dining room where the longest and most tiresome dinner he ever sat through." He was telling her as he would have told it at the Officers' Club on the Post; any attempt to embellish or dramatize it for their entertainment would have been an inexcusable transgression. "We couldn't get to first base with the Russians. They'd been our hosts at their own party, but now they acted as if they were afraid or suspicious of any friendliness. We'd had a few toasts—there was plenty to drink, including vodka in honor of our guests—but nobody seemed to loosen up, and the whole thing dragged like a bad movie. "They were combat men, just as we were—some of them wore the Stalingrad medal—and we admired them and made half a dozen speeches saying so. They made speeches, too, but I got the impression that they thought our contribution to the victory was mostly technical and mechanical. On the human side, we and our Soviet friends were a long way apart. "A couple of them spoke a little English, but they were cautious about using it in front of their fellow officers, so almost every word had to be translated by interpreters. It struck me as a kind of stupid practical joke that we should all be eating the same food and drinking the same drinks, that we had all fought the same war for the same reasons, yet couldn't speak the same language." The old man at the window, in spite of his assumed indifference, must have

heard every word, for now he said in his piping quaver, "It all goes back to the time of Babel. The Lord mix up the language then, and it stay mix up till yet."

The women paid no attention to this interruption, and David said to Mrs. Taylor, "As it turned out, your son had the only language that was worth anything. His music saved the evening. It did something more. It spoke for us Americans as we never could have spoken for ourselves."

FOR the first time Mrs. Williams, the young woman with the baby, broke her curious, dreamlike silence. "How come Buddy was there?"

David said, "He'd appeared at a victory concert in the Pilsen Municipal Theater a couple of nights before. His playing had stopped the show. Colonel Grace heard of it—news like that travels fast in the Army, especially a halted Army—and he asked Sergeant Taylor to come to the villa. I happen to know the invitation was a request, not an order."

Lucy said, "Buddy would play for anybody, any time, anywhere he could get his hands on a piano."

"Yes," Mrs. Taylor said, and suddenly her great bosom heaved. "Oh, yes, Lord! He was born with a misery of

music in him!" There was a kind of anger in her eyes. "Why, when he was just a little skinny boy, I'd miss him and go looking for him and find him in the corner saloon, in the back room where they had the piano." She shook her head in still-smoldering resentment. "Be sitting up there on the stool screwed as high as he could get it, fooling with his chords."

"The chords come natural to him," Mrs. Williams said.

"Natural or unnatural," Mrs. Taylor said, sighing, "Buddy grew up with his head full of tunes and his fingers fixed to play them. Taught himself by working in bars or dance halls or any place they would let him practice. Every new piece he heard he was possessed to learn it. But it was his own tunes that really deviled him."

David leaned forward. "Did he ever write them down?"

The blank look came back to the ma-

tered with medals and their shoulder boards giving them a stiff, square look. He could see their faces as Sergeant Taylor's long title was translated to them. Their expressions showed that they expected an outburst of musical boasting. Then Buddy began to play. . . .

Captain Hammond said to Mrs. Taylor, "I'm a professional soldier. I know little about music, except that I'm fond of it. So I'm not competent to judge whether your son's concerto, if that's the right name for it, was as great as it seemed to me. All I can tell you is that when he'd finished—he must have played for an hour—our colonel got up and went to him and shook hands with him. The rest of us followed, and so did the Russians. They kept shouting 'Bravo! Bravo!' and I saw one of them unpin a medal from his blouse and shove it into Buddy's hands. They had heard something that really moved them, something they understood and respected."

He stopped, conscious of values beyond his power to project. He had told it as well as he could in terms of fact; but there was no way he could convey to them either the quality of Buddy's music, or the kind of truth it had let loose in the room, a truth deeper and stronger than words, that had broken the tension between the two groups as a thunderstorm clears the air on a stifling summer day.

ONLY the music itself could bear witness to that truth, and now David Hammond turned again to the girl whose face in the lamplight was a link between the living and the dead.

He said bluntly, "I came here hoping to find the manuscript of your brother's composition."

"Manuscript?"

"A score, if that's what it's called. Or at least some notes—?" His bluntness had become a kind of pleading.

"I see," Lucy said. And then, "Do you have any reason to believe there ever was such a manuscript?"

"Only that Buddy said he'd been thinking about his Grand March for a long time. Then, too, it seems incredible that he could have improvised such a complicated thing. He played it as though he knew it by heart."

Lucy said gently, "He probably did, but I don't think he ever put anything on paper. I don't think he could." She looked sidelong at her mother. "Mama, was there anything like a music manuscript in the package the chaplain sent us?"

"No," Mrs. Taylor said. "It was just my letters to Buddy and his watch and a medal and some little things."

"What about the box he tied up before he left? That cardboard box on the shelf in his closet?"

"I don't know," Mrs. Taylor said. "I never opened it or bothered it, except to dust it. I don't know what's in it."

Lucy looked at David Hammond. Then she got up and walked quickly out of the room.

From his chair by the window Grandpa Taylor spoke his ancient mind. "The Book say, when the dead is at rest, let his remembrance rest."

It was a ghostly warning, empty as an echo; yet David was grateful when the old man's protest was overborne by the fretting of Mrs. Williams' baby. "You better put that child to bed," Mrs. Taylor told her daughter.

"In a minute," Mrs. Williams said.

Lucy came back into the room. She was carrying a shoe box tied with a white string. She sat down on the sofa and held out the box to her mother, but Mrs. Taylor folded her hands in her lap.

"You thought of it. You open it, Lucy."

The girl tried to loosen the knot, then broke the string and removed the lid from the box.

David drew his chair closer, and Mrs.

Critical Comment from Coast to Coast on

THE GRAND MARCH OF THE UNITED STATES OF AMERICA

BY DANA BURNET

"Burnet's story is a vivid treatment of a fundamental and patriotic theme and illuminates one of the most urgent national issues of our time."—Lee Casey, Rocky Mountain News, Denver, Colorado.

"... Inspired by something greater than insular or dated patriotism. Perhaps a black boy's march is a symbol of the leadership our powerful democracy must take in guiding the nations of the world into the promised land of peace."—Olga Owens, Boston Sunday Post.

"A profoundly beautiful story that clutches at the heart and yet never betrays the head."—Paul Jordan Smith, Los Angeles Times.

"Dana Burnet has magnificently dramatized eight essentials to our understanding of the troubled world today . . ."—Yandray Wilson Vance, Hartford Courant, Hartford, Connecticut.

"The visitor in the office said, 'Everywhere I go in the United States the people look as though they had lost the war.' He was an English newspaperman from

Bombay . . . What have we lost? Nothing, if we catch the spirit defined by Dana Burnet in The Grand March of the United States of America . . . Here is a parable for the times."—William E. Hall, Toledo Blade.

"... A message of reassurance and comfort to the people of a troubled nation."—Sam Raddon, Jr., Oregon Journal, Portland, Oregon.

"Dana Burnet's story is strongly appealing and affecting. Congratulations to Mr. Burnet and Collier's."—Frank Daniel, Atlanta Journal.

"... Burnet story is a splendid expression of the value and nobility of the contribution by an unrecognized racial minority to the rich texture of total democracy . . ."—Marjory Stoneman Douglas, Miami Herald.

"... A deeply moving story . . . It expresses without bombast or bathos the sort of patriotism all of us who love our country have felt."—Carler Brooke Jones, Washington (D.C.) Evening Star.

triarch's face. He turned to Lucy. "Did your brother ever write down the tunes he played? I mean his original compositions?"

"No. At least I don't think so." Then, aware of his eagerness, she said, "Why do you ask, Captain Hammond?"

"Because I heard him play something, on the night we entertained the Russians, that I'd hate to think was lost. I'd hate to think it was one more fine thing lost—"

His voice was too loud. He controlled it and went on quietly: "The party was almost over—I remember the windows of the room were getting gray—when Buddy stood up to make an announcement."

"He said to Colonel Grace, 'Sir, now I'd like to play something special for this occasion. It's a piece I've been carrying around in my head for a long time. I call it The Grand March of the United States of America.'"

It was strange how the rhythm of the words brought back to David Hammond the exact look and mood of that scene in the villa. He remembered the gray-green landscape taking shape beyond the windows and the lights in the room turning pale. He could see the Soviet officers in their dress uniforms, their blouses cov-

SICK RELIEF FOR SUMMER TEETHING

EXPERIENCED Mothers know that summer teething must not be trifled with—that summer upsets due to teething may seriously interfere with Baby's progress.

Relieve your Baby's teething pains this summer by rubbing on Dr. Hand's Teething Lotion—the actual prescription of a famous Baby Specialist. It is effective and economical, and has been used and recommended by millions of Mothers. Your druggist has it.

**DR. HAND'S
TEETHING LOTION**
Just rub it on the gums

Dr. Scholl's ONIXOL

Williams, mechanically patting her baby, craned her neck to see.

"I don't know why you had to break the string," Mrs. Taylor said.

No one answered. David watched Lucy's slow brown hand as it lifted and then replaced, one by one, the objects in the box.

There was a spinning-top, painted yellow with a red stripe and cracked down one side; a soiled cheesecloth marble bag; a wad of tin foil; a Christmas tree ornament in the shape of a swan; a sling-shot; a small metal airplane; a jackknife with a broken horn handle; a greenish copper penny; a homemade baseball—the kind boys make by winding tar-tape around a hard rubber core; a mouth organ; and a small American flag furled on its slender stick. That was all.

Except for the mouth organ, there was no hint of Buddy Taylor's musical life, which apparently he had lived without record or visible symbol. . . .

"I'm sorry, Captain Hammond," Lucy said.

FOR an instant David was tempted to resist defeat, to continue his questions, his search for the manuscript he had pictured, so conveniently, in his mind. But now he knew, by the very tone of the girl's voice, that he had been cherishing an illusion on which she had pronounced a final judgment.

He stood up, not trying to hide his disappointment. "I'm sorry, too," he said.

Mrs. Williams gathered up her baby and rose from the sofa. With that gesture she seemed to recapture her air of detachment, to withdraw into a world that included only herself and her child. "Well, time to say good night," she murmured, and walked with easy languid grace from the room.

Mrs. Taylor got up and stood facing David.

"It was kind of you," she said, "to come and tell us about Buddy."

"No," he said, "it wasn't kindness. It was just—it was something that seemed important to me." But he could not tell her why. You could never explain the really important things, and yet he felt he must say something more. "You see, I'd counted a good deal on hearing your son's music again."

"I would rather hear his voice again," the mother said, "but I got to wait till the Judgment Day."

She said it calmly, without grieving or complaint; but the dark face, the dark stately figure seemed to Captain Hammond the personification of bereavement. He thought of the thousands of her sisters he'd seen in other lands, the shadowy ones to whom suffering had brought the final equality.

He thought of the great democracy of sorrow that made no distinction of kind or color in the faces it set its seal upon; and in himself he felt the fear that had nothing to do with cowardice, but was rather despair of a world unable to make the one distinction that counted—the simple, vital difference between man and man-beast. . . .

He felt the fear in his belly, and pity like a hand at his throat; and he turned away, and saw the old grandfather in his monklike robe getting up from his chair by the window.

"Ain't so long to wait till the Judgment," Grandpa Taylor said. He began a slow, stooping advance toward the sofa. "Anybody study Scripture know the first sign already been fulfilled. Like it say in the Book, hail and fire mix with blood going to be cast down upon the earth—and it sure been cast down!" He came into the lamplight, stopped and lifted his arms. They were like charred branches thrusting from the sleeves of his dressing gown. "Then the sun going to turn black, and the stars fall, and all us poor sinners going to hide from the wrath of the Lamb. For the great day of His wrath is come—" The frail voice gasped

and broke, the scarecrow body drooped in sudden impotence, bent double by a twitch of pain.

"There now you see!" Mrs. Taylor said. She went to the old man quickly and put her arm around him.

"Crick in my back. Lord, Lord—!" His hand fumbled for the place.

"Yes, all right, Papa Taylor, you come with me. I'll rub it with the liniment."

One moment he was the inspired prophet, uttering solemn portents of doom; the next, he was a shriveled child being helped by a woman to the humiliation of his bed.

"Can I help?" David asked.

"No, but you will have to excuse us, Captain, please."

The old man was making the most of his infirmity. As she led him away he kept groaning and calling on the Lord and saying that the liniment was no good. Then the door closed on them, and David was alone in the room with Lucy Taylor.

He had a queer notion that she had not seen or heard anything that had happened since she last spoke to him. She sat in a kind of trance, staring down at the shoe box on her lap.

"I'm afraid I've upset you all," he said.

"No. . . . No, I'm glad you came. It makes me feel better about my brother." She didn't raise her head. "I miss him. . . . We were twins. I guess twins are specially close—" Her speech blurred, became clear again. "Now I can think of him always in that room, sitting at the piano the way you told it, the way I used to see him—"

"Well—" David said.

HE HAD put his cap on the table under the lamp and now he moved to get the cap. But the girl spoke again, and he heard in her voice the deep, resonant organ note.

"You said it was important to you, Captain."

"My coming here? Yes." He turned back abruptly, almost blundering into the chair opposite the sofa. "I've been telling myself it was my duty to make this call—to try to salvage a work of genius. But that was just an excuse."

"An excuse?"

"The truth is I was looking for something I seem to have lost. Something I had once—a feeling—a conviction—" His hands went out and gripped the back of the chair. He was like a blind man reaching for some tangible support. "Anyway, I think I should tell you that my reason for coming here was a selfish one."

She looked up at him then; and he wondered confusedly why the faces of saints were always painted white or ivory

or rose. He had never seen any saintlier or more compassionate than this autumnal face lifted toward him by the lamplight.

Lucy said, "Selfish people don't about their selfishness, Captain Hammond. You seem more like some seeking."

"Seeking?"

"It's a word Grandpa Taylor sometimes. It means somebody seeking salvation. Seeking faith."

David said slowly, "I guess that word for me."

She said, "When you were talking about Buddy, I thought there was something bothering you more than justing the music—"

"You're right."

He sat down again in the chair facing her. "Going back to the night of victory party," he said; then paused, absorbed in recollection, till the girl said "Yes?"

He went on: "I've told you I thought Buddy's Grand March was great. The reason I thought so was that it gave me a feeling I'd had only once in my life before. That was when I was crossing the Channel on D-Day, when I stood on the deck of an American transport and saw with my own eyes the power and greatness, of our America in action."

"The piece your brother played had that same greatness. Except it seemed to get at the thing behind ships and the planes and the guns—the thing inside the men, behind them, back to the factories and the home farms and the streets they'd come from. The thing going back—the spirit, the pose you'd call it—reaching all the way back to the Hudson River rebellion, Concord Bridge and Lexington. . . ."

He had thought he could never explain it to anyone, but it did seem impossible there in the room on that lonely night with Buddy Taylor's

"I don't mean that what we hear is patriotic bragging or even a march, though it was full of the spirit of marching—"

"Oh!" the girl said softly.

"But it seemed closer to the music than your own great spirituals. . . . and how your brother was using that as a language to tell the truth about America."

"Because it was the truth, then, the discords that hurt your ears to listen to. But even in the discords you could hear the note of power, the people's forward and the greatness finding itself. . . ."

"I think that's what impressed the Russians; that, and the fact that they heard in Buddy's masterpiece a

ry faith much older and deeper-
ed than their own.

hey'd been taught that Americans
reactionaries, modern barbarians
were out to conquer the world with

was thinking about the ice cream
promised us after the celebration,
ool it would taste, but they had a
for us to march to, and when I
d at Buddy I saw he was excited
behind the band. His eyes were big and

shiny the way they always got when he
heard music, and he walked so light I
knew he felt proud. One of his shoelaces
came untied and I told him to stop and
fix it, but he wouldn't break the step. I
don't know why I should think of
that. . .

"I don't know why we were there at
all, except it was election year and they
had somebody big, a big man from
Albany, going to make a speech. I guess
the politicians thought it would be showy
to have us children march, or maybe they
figured it would help to get the parents
out. Anyway, the word was passed down
through the precinct captains, and you
could go or not, but when I heard about
the ice cream I begged Mama to let us go.

"It was hotter than ever in the hall
and I felt sorry for the man from Albany.
He was a fat man with a fat, red face
that he kept mopping all the time. Drink-
ing water and mopping his face all the
time, and I guess I got to giggling, be-
cause Buddy grabbed my arm and told
me hush, and then I saw he was listening
to the speech, so I listened too.

"It was all about the first Independence
Day and what it meant and what the flags
we were carrying stood for. I suppose it
was just an ordinary Fourth of July
speech, but I remember some things the
speaker said. He said the world had
never had but two ideas about govern-
ment: one that it should be master of the
people and the other that it should be
servant. He said the first meant slavery
no matter what name you called it and
the second was freedom. He told how
America had made its choice for free-
dom, and how there were some who said
it would never work and some who
abused it and others who were afraid of
it, but it was still the best idea anybody'd
ever had, and someday it would lead
human beings everywhere out of dark-
ness into the light.

"Then it was over and we got our ice
cream and had to eat it fast before it
melted, and then we walked home. When
we got to our building I was tired, and
wanted to sit on the steps till supertime,
but Buddy said no, we were going to
play the marching game.

"I said, 'What game is that?' and he
said, 'I just made it up. Come on, I'll
show you.' Then he told me to get be-
hind him and we would march up the
stairs to the roof, and I said, 'What for?'
And he said, 'Because we have to. Be-
cause it's part of the game. I'll be the
leader because I've got the flag.'

"Well, I'd lost my flag somewhere, but
he still had his, so I didn't argue with
him. I never did anyway. I just asked
him who I was supposed to be. He said,
'You're the people. You're all the peo-

ple, and you have to follow me because
I've got the flag.'

"So then we started up the steps from
the street and went through the hall and
up the stairs past the door of our flat,
with Buddy stomping in front and me
marching behind him. It was black as
night on the stairs and I heard him sing-
ing, 'Dark! Dark! Dark!'—not singing
loud but sort of chanting it to himself;
and then we came out on the roof.

"It was empty because everybody was
down getting supper and I remember
there was a breeze blowing and the sky
was all red and bright with sunset. We
didn't stop but went right on marching
around the roof, and Buddy had the little
flag held up to catch the breeze, and
there was something about the way he
looked, and the brightness and the wind
blowing on my face, that made me want
to cry. I began to think the marching
game was wonderful, and then all at once
Buddy burst out singing again, really
singing this time, at the top of his lungs,
like this!"

The girl lifted her head and sang:
"March, march, march, march, march,
march, march!"

Now all the people are marching in the
light!"

The rich, full-throated contralto rose
and soared and overflowed the room,
triumphant and briefly joyous, repeating
in that single phrase, that musical frag-
ment, the great theme that David Ham-
mond remembered, and would always
remember now.

Then without any pause or false still-
ness she was speaking again: "We played
the marching game every night for
maybe a week or so, and then we didn't
play it any more. But I guess Buddy
never forgot—"

"No," David said, "I'm sure he never
forgot." He leaned toward her, wishing
that he could share with her his exalta-
tion for something of value saved from
the obscene waste of war and death. But
all he could think to say was, "Thank
you." And again, "Thank you, Lucy
Taylor."

Her look was fixed on the open box
that rested like a miniature white coffin
on her lap. Her hand moved slowly,
but with decision, among her brother's
childhood treasures.

"I'd like you to have this," she said,
and held out to him the gift she'd se-
lected. "Please take it—and keep it. . ."

This time he couldn't thank her. He
couldn't say anything at all.

GOING down the stairs Captain Ham-
mond did not think about their
darkness. Nor did he have now any sense
of shadow within himself. The force of
his consciousness was directed outward,
flowing as a man's strength should flow
in calmness and clarity toward the future.

Inevitably he thought of the test he
had dreaded, the physical examination
that he'd have to take tomorrow. By the
time he reached the street, he knew he no
longer was worried about it. He was no
longer afraid of what the doctors would
discover in his mind or in his spirit.

He was no longer afraid.

The night air was cool and good to
breathe, it was good to be walking the
street of an American city, the muffled,
oceanic rhythm of which still came serene
and unbroken to his ear. He reached the
corner and turned south on Lenox
Avenue toward the subway.

He was carrying the gift that Lucy
had given him, the small American flag
that had once belonged to Buddy Taylor.
He carried it upright in his hand, clutch-
ing it tightly by its slender stick. He
knew he must look ridiculous to the
shadowy figures he passed on the side-
walk. But he didn't care. He did not
feel ridiculous. He felt as if he were
holding on to the one sure thing left in a
fearfully shaken and vastly uncertain
world.

ERIC ERICSON

DAY OF INDEPENDENCE

The Star-Spangled Banner bring hither;
O'er Columbia's true sons let it wave.
May the wreaths they have won never wither,
Nor its stars cease to shine on the brave.

—Thomas à Becket: The Red, White and Blue
(better known as Columbia the Gem of the Ocean).

NO POSSESSION is more valuable to a nation than its independence—freedom to make its own decisions and go its own way in the world. Any American who doesn't realize that fact might profitably spend a half hour or so on July 4, 1947, the anniversary of our Declaration of Independence, reading about how France enjoyed its recent German occupation or how the various nations under the Russian shadow relish their lack of freedom today.

With independence, a people can work out its own destiny, for better or for worse. Without independence, virtually all is lost.

We've been fortunate enough to preserve our freedom since the Revolution of 1776-83, against progressively more serious threats. The last time—1941-45—we did it by the grace of God and a great deal of luck, as invaluable aids to the fighting courage of millions of American warriors and the skill of a group of great generals and admirals, plus the immense productive power of our industries.

Why not make July 4, 1947, an occasion for renewing the resolve, so fervently and frequently voiced during the war, that never again will we let ourselves be caught unprepared or half prepared by any enemy?

We can work to make the United Nations a success; true. But the U.N. is a long way from being a success as yet.

Meanwhile, the possibility of further huge wars continues unabated; eternal vigilance goes on being the price of liberty; and it is still true that the best way to remain at peace is to be constantly prepared to fight.

We can't stay prepared merely by telling one an-

other with loud, proud cheers that, "I am an American," or by putting a blind Maginot-line kind of faith in the atom bomb.

What we need are a first-class Air Force, a top-drawer Navy, and an Army of ample size—all of them tuned up ceaselessly, and as expensively as need be, to every new development in the art and science of war.

These are the essentials of national defense, and there are no substitutes for them.

And on this Independence Day, 1947, while we congratulate ourselves on our democracy's long life and good health to date, and renew our resolves to stay in training, we'd also do well to give some thought to a couple of rather important shortcomings of ours.

One of these is external, the other internal.

The external one has to do with the way too many of our occupation troops have been misconducting themselves in Germany. There is no need to go into the details here; most of us are well aware of them.

It is customary to blame this aromatic record of our German legionaries on the fact that these are new soldiers who saw none of the fighting in the war, the combat veterans having been brought home as fast as possible after V-E Day.

If that is true, then why is it that in Japan, on the other side of the world, our occupation troops have made such an admirable showing? These are new soldiers, too; MacArthur's veterans of Luzon and Okinawa are long gone.

We're not holding any brief for either the Germans or the Japs. But what is important to Americans is that the Germans by and large dislike us because of our occupation forces, while the Japs, again because of our occupation forces, are now potential allies of ours and think MacArthur is some species of god.

Since we preach democracy so loudly at home, the biggest job facing General Lucius Clay, our new commander in Germany, would appear to be to see to it that all of his boys—not just a goodly majority

of them—practice democracy in the Reich, as MacArthur's boys do in Japan.

Our biggest internal shortcoming just now, believe it or not, is our handling of interracial relations—mainly those between white people and colored people.

A brutal lynching of a Negro is perpetrated by a gang of white men in Greenville, South Carolina. The governor of the state and the prosecuting attorney of the county bulldoze the affair to a trial. The evidence is open and shut, consisting of confessions by 26 of the men involved. Yet the jury acquits them all.

The verdict gives aid and comfort to anti-democratic propagandists, Communist and otherwise, all over the world; and, like the conduct of some of our troops in Germany, it belies our democratic professions.

This episode is a tragically dramatic symptom of a real disease afflicting our democracy. All kinds of cures are suggested, from anti-lynch laws and discrimination laws down.

It seems to us that the most effective remedy lies in the hands of decent, responsible, substantial people in every community, rather than in law. These people will take to letting it be known, in plain son and out, that they will not approve and will not tolerate violence, hatred and intolerance of all kind. They think those things can be gradually cut to the ducible minimum in this country. If not, not—we'll go on having lynchings, race riots, and high unbearable racial tensions.

On Independence Day, 1947, then, let's get around for ways and means of making our part of the grand old song mentioned above closer to 100 per cent true than it now is; the way we mean, that goes:

Thy mandates make heroes assemble
When Liberty's form stands in view;
Thy banners make Tyranny tremble
When borne by the Red, White and Blue.

This Model Mother tries not to be glamorous

But that's not easy when you're a Powers Girl with a
dazzling smile like Frances Nalle's

Service with a smile—a *model* smile—for the Criders use Ipana—specially designed to help keep teeth sparkling bright. And knowing how today's soft foods often rob gums of exercise, Frances' family helps keep gums firm and healthy with brief, gentle gum massage.

Two sparkling smiles coming up! Eight years a Cover Girl, Frances knows the importance of a dazzling smile. So she's taught her children the importance of gum massage, recommended by 7 out of 10 dentists, according to a national survey. (Same survey shows that dentists prefer Ipana 2 to 1 for their own personal use!) But let your dentist decide whether and how to massage your gums.

MRS. FRANCES NALLE CRIDER is one model who doesn't try to look glamorous. Because New York's modeling circles know her as the ideal "Young Mother" type of model. And she is: she has two adorable youngsters of her own. And she has the brilliant smile that's so important to *any* kind of modeling job.

"Model" Mother that she is, Mrs. Crider has already taught 5-year-old Amanda and

3-year-old "Bobo" to safeguard *their* smiles by following her own prized dental routine: *Regular brushing with Ipana Tooth Paste, then brief, gentle gum massage.*

Smile-conscious as Frances (and *every* successful model) is, she naturally knows what thousands of schools and dentists are teaching—that a radiant smile depends largely on sparkling teeth. And sparkling teeth call for firm, healthy gums.

The chimney goes here. Amanda and "Bobo" Crider seem to be rushing things slightly. But not "model" mother Frances when she teaches them proper care of teeth and gums. Sensitive gums, among adults, often herald their warning with "pink tooth brush"—a sign to *see your dentist*. Let him decide whether yours is simply a case for "the helpful stimulation of Ipana and massage."

o massage your gums. Gently massage at the gum line, always keeping tip in contact with the tooth surface. It's at the gum line, where teeth and meet, that so many troubles start—where gentle massage can be so helpful. *on regular visits to your dentist, help him guard your smile of beauty.*

THE WEEK'S MAIL

SONG OF THE FLORENCE NIGHTINGALE

DEAR EDITOR: Our white caps are a Howard Whitman's and Douglas In article Don't Curse the Nurse (May). The true condition of nursing today never been expressed more vividly.

Only when the public and the hospital officials fully realize the seriousness of the situation can the standards of the nursing profession be raised.

SENIORS OF BECKLEY METHODIST HOSPITAL, Dallas, Tex.

... Another gripe about long hours, pay, help shortage and bad working conditions! When a girl becomes a nurse knows that she must like the bitter with sweet—why all the fuss about bandages and bedpans? During the war most nurses were so pampered and so paid that they consider normal nursing conditions below their standard. A single girl with room and board can live on \$20 a week, yet these spoiled prima donnas expect \$40, \$50 and more!

MRS. ANN S.

... My greatest sympathy lies with the student nurse. They are usually under the directorship of wizened old maids, have no understanding of youth except their own ancient standards. And my advice follows the line of, quote: "I must sit on a man's lap, place a thick of newspapers over his legs first!" unquote.

GRACE TRENARY BILLS, Fox Lake, Ill.

... I would love to place this article in the most conspicuous places throughout the hospital where I am employed, and in the hands of each patient as well.

M. W., Calif.

... I have found most nurses wonderful and considering what they do go through they really must love humanity to do it certainly isn't for the glory they receive.

HELEN M. DOANE, Pawtucket, R.I.

FROM BAD DIVORCE

DEAR SIR: Re Dr. Banay's The Husband Really Pays (May 24th). How many men know if they have grounds for divorce or not until they have a consultation with their shyster? The first leading question usually, "Think hard, didn't he ever hurt you in all your married life, or throw some at you?"

These men promise anything just to get that decree and even double-cross the other in testimony of their clients' stand.

Regardless of their promises,

Can you answer these questions about HIGH BLOOD PRESSURE?

1. What is high blood pressure?

A. High blood pressure, or hypertension, is a condition in which the pressure of the blood against the walls of the arteries and their smaller branches shows a persisting and large increase above normal. A temporary rise in pressure, such as may result from physical or

emotional strain, is a perfectly normal reaction, and is NOT high blood pressure. However, if such rises occur frequently and are excessive, they may indicate a tendency toward hypertension in later years.

2. What are the causes of hypertension?

A. Sometimes high blood pressure is associated with kidney ailments, local infections, or glandular disturbance, but the cause in most cases is unknown. It is known that hypertension occurs most frequently

among those who are *middle-aged or older*, those who have a *family history* of hypertension, and those who are *overweight*.

3. How does hypertension affect your health?

A. Persistent high blood pressure makes your heart work harder and nearly always results in enlargement of the heart muscle. The arteries are usually affected, and there may be damage to kidneys, eyes, the blood

vessels of the brain, and other organs. Fortunately, *if discovered early*, hypertension can often be controlled.

4. How can you tell if your blood pressure is too high?

A. You can't, for high blood pressure often has no symptoms. But if you have periodic physical examinations your physician will check your blood pressure regularly. His guidance can probably help you keep your

blood pressure down, or, if it should go above normal and stay there, he may be able to start corrective measures at once, before serious damage has been done.

Real hope for those with high blood pressure

anks to modern medical science, people with high pressure today can often avoid serious complications, and enjoy a long and happy life...especially if the condition is discovered in its early stages.

many cases treatment such as diets, rest, elimination of infections, reduction of weight at least to normal, and special drugs may be necessary. Surgery has been used effectively in some instances, and psychotherapy has proved helpful at times in removing

fear of the disease and lessening emotional strains.

Medical science is constantly increasing its knowledge of high blood pressure. Aiding in this work is the Life Insurance Medical Research Fund, supported by 150 Life Insurance Companies, which makes grants for special research in diseases related to the heart.

THE NATIONAL JOY SMOKE

KEEP UP WITH THE WORLD

BY FRELING FOSTER

John Cleves Symmes, in hundreds of lectures between 1818 and 1829, attracted world-wide attention with his claim that the earth was a hollow sphere whose interior was inhabited and could be reached through a large opening at the North Pole, since known as Symmes' Hole. Of several globes made to illustrate his theory, one is preserved in the Academy of Natural Sciences in Philadelphia.

For several generations, unwanted babies left secretly and without identification in the receiving crib of the huge orphanage in Havana have been given the surname Valdes in honor of a founder of the institution. Having this name, however, does not arouse suspicion of illegitimacy as it is one of the most widely used and highly respected names in Cuba.

Not long ago, a man committed a murder which he had carefully planned so every detail would indicate suicide. There were no signs of a struggle, the deceased had been shot with his own revolver and the windows and doors of his apartment were locked from the inside. But the killer made one mistake that led to his capture. He had aimed the gun so the bullet passed through the eye of the victim. No suicide has ever yet been known to shoot himself in either eye.

Despite years of opposition, American race tracks are still allowed by law to withhold the odd change called "breakage" in paying off winning bets, on the theory that their patrons dislike bothering with pennies and nickels. Although the amounts withheld range only from one to nine cents, they now total annually about \$18,000,000.

The world's largest plow, now in use on a Texas farm, weighs ten tons, is 60 feet wide and cuts 88 furrows. Drawn by an 85-horsepower tractor, it can till 17 acres in an hour.

Until a century ago in England churchgoing was required by law; consequently, many who attended either fell asleep or paid no attention to the service. To make certain, however, that all heard the announcements, the minister would read through a vavp horn, a metal trumpet about six feet long, which magnified his voice that no one could possibly ignore it.

The most peculiar eyelid known—that of a rare fish, the cuckoo (Raia circularis). This lid is round, has a large fringe and is located inside the eyeball, directly under instead of over the cornea.—By Virginia Herbert, New York City.

The personal papers of Abraham Lincoln, given to the Library of Congress by his son 24 years ago, will be made available to the public for the first time on July 26, 1947.

The strangest electronic musical instrument, developed by Leon Thomas, of New York, in the early 1930s, consists of an inch-high platform backed by a stand having a loudspeaker and two six-foot vertical metal rods. As the pitch and volume are controlled by the waving of hands near these rods, a dancer performing on the platform can, by her movements, produce her own accompanying music.

The world record for the longest run of a stage play is held by Drunkard, which will, on July 6, 1947, begin its 15th year and be presented for the 5,257th consecutive time at Theatre Mart in Los Angeles.—Eda Johnstone, Los Angeles, California.

Ten dollars will be paid for each fact accepted for this column. Contributions should be accompanied by their source of information. Address Keep Up With the World, Collier's, 250 Park Ave., New York (N. Y.). This column is copyrighted and items may be reproduced without permission.

THE WEEK'S WORK

WHILE sniffing around behind the Washington scenes for their frenetic Washington Side Show (p. 11), the Messrs. Whitman and Knopf learned that once a year the D. C. fire laddies come charging up Capitol Hill and squirt water all over the Capitol, giving it an annual bath. "This we have got to see," cried The Boys, and contacted David Lynn, architect of the Capitol.

Mr. Lynn raised aged eyebrows, and allowed as how since the dunking didn't take place till fall, any other time would be highly irregular. However, if Chief Clement Murphy of the D. C. Fire Department was willing to send a truck, he wouldn't object.

Whitman-Knopf called Murphy, gave him a big line, and Murphy agreed to send someone over. The Boys sat around expecting maybe a little hose wagon, maybe bearing a short garden hose. "Instead, within ten minutes," Whitman says, "we heard sirens. Then bells. Then roaring trucks. Hans and I dashed out of the Senate wing—and clanging up the Hill was a whole fire company—chief's car, hose wagons, hook and ladder—the works!"

The works slammed to a stop, a battalion chief stuck a head out of a car window, yelled: "You from Collier's—what do you want us to do?" The Boys gulped their request and were darned if the chief didn't start barking orders.

Instantly hundreds of Washingtonians had sprung from the Capitol lawn and shrubbery and word had spread the Capitol was on fire with both Houses in full swing. Also at this moment, a senator chose to pass out on the Senate floor. An ambulance came sirening up the Hill to rush the lawmaker to the hospital. It promptly became jammed between two fire trucks. "It was confusion à la mode!" marvels Whitman.

Meanwhile the firemen had a stream pistoling toward the Noblest Dome of Them All. Unfortunately it fell short—just enough to inundate a congressman leaving the Capitol to enter his waiting limousine. He looked surprised, started an extemporaneous oration, but ceased hastily.

Just about now, Whitman caught sight of a fiery eye through the pressing mob. The eye belonged to Acting Captain Billy Ballinger, of the Capitol police, and he was snorting across the

lawn at the head of a squad Congress constables. Whitman to sweat, and someone tapped the shoulder, saying, "I'm from U. P.—where's the fire?"

"Yipe!" was Whitman's cry. Meanwhile Hans Knopf was taking pictures as calmly as a k herring, and when Ballinger tried to throw the boys into jail, Whitman realized he was in it over his head. "But we apologized properly," says Whitman, "and said if the way Ballinger felt we'd refrain from taking any more pictures. But what the heck—we had pictures we wanted anyway." It can be more exciting outside the Capitol than in; and never bathe the Capitol in the year. It's dangerous.

THE authors of The Sun Tan (p. 16), Messrs. Herrick and Pfeiffer, started careers together about four years apart, Herrick being Pfeiffer while cleaning him after a football party. Since that day Pfeiffer has been science editor of Newsweek, medical consultant for the Army, now science director for CBS. Herrick has been newsman and relationist in war and peace.

Both gentlemen have conducted sun tan experiments on beaches from Ogunquit, Maine, to Miami, Fla., and from Bari, Italy, to Venice. "Pfeiffer went to beaches by the dozen," says Herrick; "I mostly quest of the U.S. Army! Pfeiffer without burning; his wife and son burn without tanning. I t burn and so does my wife!"

"While writing about sunbathing its pleasant points—such as the ery in the Peskin illustrations of 16," continues Mr. Herrick, "summer comes, and the ine erythema, pruritus and desquamation (see our article) afflict a self sunburn expert, he gets even less pathy than the average sufferer."

This week's cover: Shescape Metcalf is the tidy bit with the midriff, and is wearing a France bathing suit. Larry Gordon m. Kodachrome at Jones Beach, York. Betty is a top Powers m. talented pianist, has a flair for decorating and is now ra around the world, using Paris hub, bub. . . . TED S.

YOUR CAR WILL LAST LONGER WITH A PUROLATOR MICRONIC FILTER

... this airline uses Purolators exclusively

Purolator filters are standard equipment on airlines the world over.

Take a tip from the airlines. Protect your car the way they protect their planes. For longer car life and trouble-free motor-ing equip your car with a Purolator Micronic Oil Filter. Do it *before* performance starts to lag . . . *before* repair costs start to mount. The Purolator Micronic Oil Filter effectively traps the bearing damaging dirt, dust, grime and harsh abrasives that work into your lubricating oil when your car is running.

During the war, thousands upon thousands of Purolator Mi-cronic Oil Filters were produced for the Armed Services and essential industry. Today they are standard equipment on almost every type of transportation vehicle.

If your car is *not* equipped with a Purolator Micronic Oil Filter have your service man install one today. If it *is* equipped with a Purolator be sure that every time you change the filter element you get a genuine Purolator Micronic Oil Filter Element. Remember—Only Purolator makes the Purolator—for your car's protection.

PUROLATOR PRODUCTS, INC., NEWARK 2, NEW JERSEY
In Canada: Purolator Products (Canada) Ltd., Windsor, Ont.

Traps harmful abrasives measured in microns (.000039 of an inch).

Heat-proof, warp-proof, water-proof and resistant to crankcase acids.

Filtering area 3 times greater . . . triple protection against abrasives.

PUROLATOR
Micronic OIL FILTER

PUROLATOR FILTERS ARE USED ON MORE CARS, TRUCKS, TRACTORS, BUSES, DIESELS, TRAINS, PLANES AND SHIPS THAN ANY OTHER BRAND OF FILTER OR FILTER ELEMENT

It will be love at first touch—when you feel the magic comfort of the smart new furniture cushioned with **Airfoam**. For this incomparable latex cushioning is so buoyant, so “alive,” it makes any chair or sofa luxuriously restful. That’s because **Airfoam** contains millions of tiny air cells on which you literally float, cradled in softness. **Airfoam** keeps its plump, well-tailored look for life, doesn’t sag or flatten with age. This wonder product of Goodyear Research will soon be available in all new furniture, at prices less than you’d think.

WASHINGTON SIDE SHOW

BY HOWARD WHITMAN

Besides the main ring where the elephants and donkeys go through their paces the Capitol has many attractions, some of which visitors never see

DAVID LYNN, graying architect of the Capitol, is a little weary of visitors to Washington, D.C., who want to know whether the statue atop the Capitol dome is the Statue of Liberty or a big cigarette Indian. He patiently explains that it is neither. The Statue of Freedom, a determined lady nine feet and a half tall with a hat that the Fifth Avenue milliners will be copying any day, being proposed as it is of stars, an eagle's head, Indian feathers, and six lightning rods.

Lynn also explains to the Capitol pilgrims that George Washington never slept there, Harry Truman doesn't live there, and there is no guarantee that wishes made over the compass points on the Capitol floor will necessarily come true.

The Capitol being as big as it is (432 rooms with a floor area of fourteen acres), Architect Lynn requires a small army to keep it functioning. His office has 1,088 employees, charged with maintaining the Capitol buildings (including the Capitol, the Senate Office Building and the Old and New House Office Buildings) as well as the Supreme Court, the Library of Congress, several other public buildings, and the 120-acre Capitol grounds.

Though he is in fact the Capitol's general custodian, Lynn prefers the title "Architect," which has historic validity, since Congress has a penchant for tearing or rebuilding its abode every few decades. In the twenty-four years that Lynn, 72, has held the post, he has supervised new building and alteration costing \$45,000,000. One of his latest projects was shoring up of the ceilings over the House and Senate chambers, these having weakened with age to the point where members of the Congress, frequently on the verge of hitting the ceiling, now were in danger of having the ceiling hit them.

Besides the top-billed acts beneath the Capitol's dome, there are many side shows, often tucked away from public view. While the elephants and donkeys are disporting in the two main rings, the hidden recesses of the big top have their clowns and jugglers, their roustabouts and barkers.

In a marble-walled suite in the Senate Office Building quaintly known as the "Bathing Rooms," we find a distinguished gentleman from Rhode Island, Senator Theodore Francis Green. Green, 61, is getting himself in shape for an afternoon bout with labor, taxes and foreign relations.

"Nothing like physical exercise," he remarks as he swings a dumbbell with consummate vehemence. Green is one of forty or fifty senators who, in off hours, come to the Bathing Rooms to work up a sweat on the rowing machine, the chest weights, or what is undoubtedly one of the very few marble-floored handball courts in existence.

Doing an upside-down bicycle routine, Senator Green declares, "This sort of thing makes my mind work better. Never get tired."

Reluctantly he gave up wrestling and high diving after his 76th birthday but he highly recommends his biweekly visits to the Bathing Rooms for every man jack in the Senate.

Wellington Dangerfield Scott, an amiable Negro, resides over the Bathing Rooms as physiotherapist. He coaches the senators in their weight lifting, fixes the antiquated rowing machine when it gets stuck in midstream, and occasionally prescribes a dunking in the tiny pea-green pool which, only ten by sixteen feet, once prompted a visitor to remark that talking in circles, not swimming in circles, is the Senate's specialty.

After the workout Scott puts his charge on an ancient marble rubbing slab, something like a porgie stone, and scrubs him with a stiff brush. This, in therapeutic language, is known as desquamation. It removes dead tissue and is, of course, not applied to the scalp. Scott is entirely neutral when the desquamates and quickly spikes the rumor that Republicans have thicker skins than Democrats. "With me it's unbiased. It's just like scrubbing the kitchen table," he remarks.

After the scrubbing, Scott provides a rubbing (Swedish type) and sends the senators away full of pep and ultraviolet. The elderly status of most of

Valerie Popham tells visitors about Capitol's cast-iron dome 180 feet above. Fifteen guides convoy about 2,000 visitors through the Capitol each day

Illustration by John Collier's for July 12, 1947

TO THE DOME

12

his customers does not dampen Scott's enthusiasm for the strenuous life, though, being 65 years himself, he chafes when the senators call him "se

At the other extreme of the Capitol buildings the New House Office Building, Pete Henderson, former Army drill sergeant, maintains a somewhat more vigorous sweatshop for congressmen. The favored activity is paddle ball, played with wooden paddles about midsize between a Ping-pong paddle and a tennis racket.

In paddle ball you slam the ball with all your might, and Pete Henderson, along with the loudest psychiatric minds in the country, feels this is an ideal outlet for aggressions. In smashing the ball with a great, brutal gesture the representative not only for all he knows, but satisfying unconscious cravings toward John L. Lewis or some colleague.

To congressmen who pay \$5 a year to defray the gym's expenses, Pete insists, "Politics is out of the here. If you want to argue whether the ball is in or out, okay—but no politics."

So well has he hewed to a strictly recreation line that Representative Karl E. Mundt of South Dakota was moved to state on the House floor that "Pete Henderson has developed a canny Scott sixth sense. He arbitrates political arguments that members get practice in the art of disagreeing without becoming disagreeable. To this day, I do not know whether Pete is a Democrat or a Republican, so impartially does he steer the course of a matter umpire in the discussions which reverberate throughout the locker rooms near the end of each busy day in Congress." Pete, however, admits to certain mischievous satisfaction in pairing up bit House opponents as partners in a game of paddle ball.

For men in a hurry, as any good senator should be, the Capitol maintains an electric monorail running through the subway which connects the Capitol with the Senate Office Building. In its early days it was dubbed the N.M.E.R. (Nation's Most Exclusive Railway) inasmuch as all passengers had to be senators. Today, however, it is open to all comers.

The N.M.E.R. comprises two 18-passenger cars which shuttle alternately through the 760-foot subway, making the run in 45 seconds and sometimes hitting it up to thirty miles per hour. A mysterious crash and a mayonnaise incident figure in the history of the line.

Left: Shoes were too much for Jackie Allen after a 36-step climb up the Capitol dome. Some tourists (with G.I. escorts) have fainted from the climb. Below: Greer of Rhode Island, 79, keeps fit in Senate Bathing Room.

of this railway. The former occurred in 1941, when someone turned up the throttle at night so when the power was turned on in the morning of the cars took off with a leap, raced through subway, jumped clear off the track at the Capitol and smashed noisily into a wall. The car was empty, but the F.B.I., livid with the thought of what might have happened to a carload of senators, conducted an exhaustive, if fruitless, investigation.

The mayonnaise incident occurred in April, 1943. A waiter coming from the Senate restaurant with a tray of supplies dropped a gallon jar of mayonnaise on the N.M.E.R. track about 100 feet from the Capitol end. Before the mishap could be communicated down the line a car had already pulled out with its full complement of senators and was speeding around the bend at its usual merry clip.

The waiter made futile gestures as the car sped by, but, not accustomed to being flagged, the motorman kept his throttle open and with a dull crash the party of senators and the pile of mayonnaise met. All traction gone, the monorail splashed to a halt, its underside well garnished with salad dressing and its drive wheel spinning ineffectively on the tasty track.

The motorman threw her into reverse and made a general running start up the incline, but each time the car and its senators came to rest midway in the mess of mayonnaise. In high dudgeon the legislators finally got out and walked. Service on the N.M.E.R. was disrupted for twenty minutes.

To keep order under the big top, Captain Wm. J. Broderick has a force of 140 Capitol police. They have quelled ebullient "mothers" who stormed the Capitol lawn intent on burning Senator Pepper in agony. They have carted Mrs. Elizabeth Dilling to the District of Columbia jail. In the winter they have removed, by paddy wagon, such drunks who have mislaid week ends on the Capitol grounds and have been in danger of freezing to death.

To Lieutenant Billy Ballinger, who aptly hails from Death Valley, California, the arrival of "sissies" in the Capitol has become a source of monotony. "We get 'em down here by the dozen," he relates. "Every one of 'em comes down here to see the country. Napoleon, George Washington—I can say! Talk about Julius Caesar, I've had him here one or four times." Such visitors are given kindly

treatment and routed back home for psychiatric care.

A few years ago an ailing veteran of World War I flashed a gun in the Senate gallery and had to be pacified, and back in 1916 a bomb exploded in the Senate post office where it had been checked inside a suitcase. These are the things Bill Broderick and his boys have to worry about. They are backed up by an arsenal in the basement stocked with sawed-off shotguns, tear-gas pistols and gas grenades.

Committee hearings have probably been the most popular side shows for visitors this year, what with such star billings as labor bills, rent control and Lilienthal. Visitors are admitted free as long as the public seats last, but guards have had their troubles with the overflow. Some have resorted to barker techniques in an effort to distribute the crowds more evenly. When the Lilienthal hearing got all the play, sending an overflow queue snaking down the corridor, a harried guard paced back and forth chanting, "All right, folks, Armed Services hearing down the hall—immediate seating! L-o-t-s of room at the Armed Services hearing. No wait for seats!"

Chf Plans Menus for Aging Digestions

Scattered through the Capitol buildings are a number of restaurants and cafeterias for members of the Congress, employees and press. The most imposing is the Senate restaurant, ornate with gold leaf and crystal chandeliers, where senators can get a good lunch for 65 cents or a superior one for \$1.75. Derwin W. Darling, formerly of the Clearwater Beach Hotel, Florida, is general manager of this establishment and prides himself on giving the senators plenty of fruit salad and no heavy food likely to impede their venerable digestions. His chef, Victor Lenzi, as temperamental as most chefs are, has been providing the fare since 1942 with no gastronomic disasters. His secret, he moodily reveals, is "lots of combination salad."

In the Capitol's nether regions are the maintenance shops run by amiable bachelor Arthur E. (Gus) Cook, the Capitol's supervising engineer. Here artisans of sundry callings see to it that the Capitol buildings' 124 elevators keep running, that the 200 lavatories keep flushing, that the \$500,000 worth of copper on the roofs doesn't leak.

Thirty-five-year-old John Norton, like his father before him, is the Capitol plumber. The elder Norton spent twenty-five years guarding against burst pipes and leaky faucets. His son hopes to perpetuate a fine record, in which there was no greater diluvial disaster than a bursted shampoo hose which drenched a senator in the Capitol barbershop. The only two bathtubs in the Capitol, carved out of solid marble, are no longer in use and cause Norton no trouble.

Dean of the guides who elaborate on the points of interest to thousands of pilgrims every year is 80-year-old Charles Roger Evans, who was a congressman from Nevada from 1919 to 1921. Like an aged actor turned stagehand, Evans regales the visitors with intimate stories of the Capitol. He loves to stand on the "Whispering Stone" in Statuary Hall and sing Long, Long Ago almost inaudibly while the strange acoustics carry his song across the hall to the delight of his tourists. Evans will be 81 on August 9th and plans to celebrate his birthday by his annual climb up some 365 eight-inch steps to the dome of the Capitol.

To tourists with a taste for the macabre, Evans shows blood spots on the marble stairs leading from the east corridor of the House. These remain from a duel in 1890 between Congressman William P. Taulbee of Kentucky and Charles Kincaid, a correspondent of the Louisville Times. The congressman died of bullet wounds, and the newspaperman, with whom he had quarreled over a story, was later tried and acquitted.

The cornerstone of the Capitol was laid in 1793, and the building was first occupied in 1800. Its building and rebuilding covered six periods, including reconstruction of parts fixed by the British in 1814; the present structure finally was completed in 1865.

To keep its Big Top ever shining, Chief Clement Murphy of the District of Columbia Fire Department sends an engine company over once a year to hose down the Capitol. They splash water all over it, much as you'd wash an elephant, and usually bring crowds to the scene including excitable people who think the British have set it on fire again. "Now, we just wash it down to clear away the cobwebs," Chief Murphy explains. And he always has a quick answer for those who suggest he try the same treatment in Congress. ★★★

THE FEELING IS MUTUAL

BY IRVING GAYNOR NEIMAN

Mabel turns her attention to baseball—as if Joe and the Dodgers didn't have problems enough

TAKE any guy. I don't care if he's seventy years old without no teeth yet, or two years old without no teeth yet, or any place in between, with teeth. If he's a man of the male sex, I got one big problem and that's trying to figure out the women of the opposite sex. I can save them a lot of trouble because I got the answer. All you gotta know about the women is if you're married they wanna stay that way, and if you're single they wanna get that way. Anything that comes up is window dressin'. I'm talkin' from experience.

In my case, the woman is a redhead by the name Miss Mabel Stooler, my girl friend. We're sittin' in her parlor this evening, enjoyin' a quiet evening alone, which is usually the quiet before the storm. "Joey," she says, out of a clear sky, "what are you interested in?"

"Huh?" I says. "I'm interested in the future," she says. "How about you?"

"Everybody's interested in the future," I says, "which don't commit me one way or the other. "Did you read any good books lately?"

"This ain't the best switch in the conversation I ever dug up but it's all I can think of right then. I don't switch.

"I don't mean just interested, like that," she says. "I mean finding out about the future, the way a guy can through psychoanalyzing his dreams." "Dreams can't tell you the future," I says. "They can just tell you you ate something wrong in the past."

"If you don't understand about modern science," she says, "then don't brag about it." She gets a thoughtful look on her face. "That's what I mean," she says.

"What?" I says.

"Definitely," she says. "If one party is interested in the future, and another party isn't interested, then it makes it very hard to have mutual interests, the way everybody says you should for a successful marriage, especially when all the other party is interested in is baseball players, the way it looks to me."

You see how she works it in? It starts out with me at I'm interested in and the next thing I know I'm preparing for a wedding with mutual interests. The thing about a wedding is, I'm in favor of it, but not yet. Not right away. Not so soon.

"Sure I'm interested in baseball," I says. "Especially the Dodgers, my favorite team. What's wrong with bein' interested in the Dodgers?"

"Nothing," she says, but in a frigid way. "You know what I dreamed last night?"

"Lemme see," I says. "You dreamed you was married to Tyrone Power, and you had a million bucks, and—"

"Joey," she says, real quiet.

"Okay, okay," I says. "You tell me."

"Well," she says, "I dreamed that about bein' married to Tyrone Power, only the important thing is the interpretation, according to the new book I got. Dr. Frank Freud's Magic Psychoanalysis and Dream Book."

"Hah!" I says, loud enough so she'll know what I think about this dream stuff, only not so loud that she'll get sore.

"The interpretation, in case you're interested," she says, "is that I am going to get a visitation from above in a romantic way."

I heard this line a dozen times before, each time a little different depending on whether she gets it from a fortuneteller, or from numerology, or something else like that. The idea is always that romance is comin' or she's gonna marry Tyrone Power.

"It wouldn't hurt you to get interested in dreams, also," she says, after givin' me all the details on the interpretation. "That way you would have a common interest with me."

"You could get interested in baseball with the same results," I says, feelin' pretty clever. "How about that?"

"It's a deal," she says, too quick.

"Now, wait," I says.

"I'll be interested in baseball and you'll be interested in the future," she says. "I'm glad you are finally takin' a favorable attitude toward our marriage."

Figurin' out the women ain't so tough. It's knowin' what to do about it once you get them figured that's the problem. There, I ain't doin' so hot yet.

SHE starts gettin' mutual with my interests a couple of days after this. It happens a guy who rides in my hack pretty regular gives me a couple of tickets to the Dodgers-St. Looey game, in a box, and Mabel jumps at the chance to go.

We're sittin' right back of first base watchin' the game, and the Dodgers are murderin' the St. Looeys, which is always a pleasure to watch. I'm watchin' the game, anyways. Mabel is lookin' around at the kind of hats the women are wearing, and complainin' about why the people yell so much, and gettin' me to buy hot dogs and ice cream.

At first I try to get interested in the game, but after she asks me a couple of questions, I give up. You know—"What's the difference between a pitcher and a grounder, Joey?" "Which is better, a strike or a fly?"—that kind of stuff.

The only other observation she makes is that the first baseman for the St. Looeys, a rookie named Bud Simmons, ain't a bad-looking guy. This is in the first inning. In the second inning she remarks that Bud Simmons has wavy hair; and in the third inning she notices he's got a dimple when he smiles.

"This is not an interest in baseball," I tell her. "This is an interest in Bud Simmons, which ain't part of the bargain."

"Me interested in a baseball player I never even met to speak to?" she says, with a little laugh. "Don't be silly." She gives the little laugh again, which is overdoing it.

The pay-off comes in the seventh inning. The Dodgers are two runs ahead, not to mention leading

the league also. We're up, and Pete Reiser is coming up to bat.

"Watch Reiser," I says. "That kid is terrific."

"Is he for the Dodgers or the other team?" she says, looking very interested.

"Never mind," I says.

Reiser lets a couple of bad ones go by, and then he takes a big swing and the ball starts travelin'. It goes a long way, only practically straight up. When it starts comin' down, I can see that it's headed right for our box.

"Look out, baby!" I says. "Foul ball!"

Bud Simmons is racin' back to catch the ball. I start gettin' up to see if I can grab it for a souvenir.

"Is a foul ball the same as a curve ball?" Mabel says, with that interested expression.

IT'S the most intelligent question she asks all afternoon, but I got no time to answer her. The ball comes tearin' down. Bud Simmons makes a dive after it, right over the railing into our box.

Mabel lets out a yell, there's a smack when the ball hits a glove—a lucky catch—and Bud Simmons is lying in Mabel's lap. The crowd is screamin' its head off.

"Mabel," I holler, "are you all right?"

She don't even hear me. She looks down at her lap and says, "How do you do? My name is Mabel Stooler, and I'm pleased to make your acquaintance."

This Simmons gets back on his feet and gives her a grin with dimples.

"Glad to know you," he says. "I hope I didn't land too hard."

"Not at all," she says. "The pleasure is mutual." He gives her another sample of the dimples, then he throws out the ball to show he caught it, and jumps over the railing.

"Gee," Mabel says with a sigh.

"How do you like that jerk?" I says. "He could kill people like that. You sure you're okay?"

She's sittin' there with a faraway look on her face.

"Mabel," I says, "are you okay?"

"A visitation from above in a romantic way," she says, like she was talkin' to herself. "Come on, Joey. We better go."

"Never mind that dream doubletalk," I says, "and whaddya mean, come on? The game ain't over yet."

She stops lookin' dreamy and looks at me.

"I gotta have another dream right away," she says, "so I can get a further interpretation."

"Aw, now look—" I says.

"For goodness' sakes," she says, "I been interested in your interests all afternoon, practically. It won't kill you to let me do likewise for my own interests for the rest of the time."

So I take her home—in silence. At the door, she says, "Good night, Joey."

"Sleep tight," I says. I'm kinda mad. "Pleasant dreams." If I'd known what kind of pleasant dreams she was gonna have, maybe I woulda kept my big mouth closed.

I spend the rest of the afternoon tryin' to find a radio some place where I can hear the balance of the game. The Dodgers win, only I find out about it from the evening papers.

This same night, after I get to sleep about eleven, I'm havin' a dream. This is the result of all the ice cream and hot dogs I ate at the ball game. I'm hangin' up by my toes over a big pot of boilin' water, where people are gettin' cooked like hot dogs. When the bell rings, I'm supposed to fall into the pot. A bell rings, and I start fallin'. The bell keeps ringin', I keep fallin', only when I hit, it's the floor where I fell out of bed, and the bell is the telephone ringin'. It's three o'clock in the morning.

I pick up the phone and holler, "Hang up! You got the wrong number!"

Mabel says, "Hello, Joey. Did I wake you up?"

"No," I says, real sarcastic. "I was sittin' up to all hours knittin' a sweater. Whatsamatter?"

"I ain't sure I like your tone of voice," she says, "only I gotta tell you. It happened."

"I know it happened," I says. "It woke me up at three o'clock in the morning. Why ain't you sleepin'?"

"I slept so much this afternoon I can't sleep no more," she says. "Don't you even wanna know what I dreamed, for goodness' sakes?"

I'm still half asleep, or I wouldna said what I said next. I guess.

"Are you nuts or somethin'?" I says. "Wakin' a guy up to tell him your dreams in the middle of the night?"

(Continued on page 72)

THE SUN TAN MYTH

BY SNOWDEN T. HERRICK AND JOHN E. PFEIFFER

PHOTOGRAPHS FOR COLLIER'S BY DAVID PESKIN

ABOUT a hundred Americans are going burned a shocking pi deep shades of red this summer a tortured couple of days it ma into a beautiful tan. At which they become the healthy, o type, and look with condescen their bleached, anemic fellow these red and blistered and tann ferers will be victims of a myth as the Pyramids and the Great China.

The sun worshipers of ancie sia built great shrines to the gl Mithras, the sun god. Their n counterparts dredged Miami out of the Florida mangrove s and made sunshine the leading try of southern California. A over the country otherwise s people prostrate themselves as a offering, in their own back yard the nearest beach.

Regretfully, we must report t this faith in health from the based on a false gospel. For s now says that exposure of the b sunlight is of little practical va the average human.

This shattering statement, we ize, will result in not a blister l the American epidermis. Even sun isn't as health-giving as it ha reputed, sun addicts think t more beautiful in their coats o So they gather into their con gations clinging to the elusive ho acquiring brown beauty witho much torment.

Many erroneous theories have advanced by the sun cult as t health-giving properties of sur One is the mammoth fable tha sun is the source of all life. Th the marvelous chemistry of phot thesis, plants convert sunlight int ergy for their growth by means o green substance, chlorophyll, in leaves. If sunlight is good for p it's good for us, too, say the cultists. The trouble with this logic is that animals aren't plants bodies don't photosynthesize sun into energy, and won't, unles change our anatomy.

Then there's the theory that light has a "tonic" effect on the h system. This once had scientific l ing, based on heliotherapy, or cure, a treatment often used by ancient Egyptians and Chinese. some modern works claim that light increases the bacteria-k power of the blood. And at Swis Danish solariums it was discov that sunlight is a big help in c skin tuberculosis.

In Switzerland, city children for long vacations high in the returned to their tenements, hea chubby and bronzed. They looked upon as living testimonia the value of sunshine. But remen the kids also got fresh air, exer lots of rest and better food.

The truth of the matter is There is evidence that ultraviolet can kill germs, but it can't kill the the skin without severe damage to epidermis.

Akin to this is the sunshine-g us-vitamins story. The only vita produced by sunlight is vitamin which prevents rickets in children young animals.

The rub is that it is much simpl get your vitamin D without ris the damaging effects of a burn. nature, animals and men get mos it through eating fats. Then, too, can get all the vitamin you need f the sun through much shorter e sures than those that produce a ta

If it's health you seek in getting sunburned, you may as well stay pale. The tan won't help you. If it's beauty you're after, nothing will stop you. But be careful how you get it

farthest of all from the truth is the belief that the browner we are, the more we will burn; that a suntan gives protection against the sun. Scientists say that if a tan gives you any help at all, the amount is extremely small and it can't be accurately estimated. All the sun does is to hide the burn.

For years, skin specialists fell for this yarn themselves. But shortly after World War I they began to suspect that a good tanning had little to do with immunity to sunburn. They tested albinos (who have absolutely no melanin, the pigment that colors ordinary skin and produces a tan) and found that the albinos' transparent dermis acquired a certain immunity after the first dose of sunlight, and of course did not tan.

Pigmentation in Patches

Then they went to work on victims of vitiligo, an ailment that creates patches of unpigmented and normally pigmented skin side by side. After a year the two shades of skin of the vitiligo patients got the same degree of immunity, though one patch had tanned while the other remained pink. These are, of course, abnormal cases, but the lessons drawn from them have been supplemented by conclusions derived from the study of normal skins.

There's nothing to a lot of widely accepted nonsense about the evils of sunlight either. About all a sunburn is the equivalent of a first-degree or surface heat burn. It's not good. On the other hand, it's not very bad.

There is a relation between skin cancer and ultraviolet light, but it shouldn't worry any but those with the most sensitive skin. And it's not true that tropical sunlight makes the white man prematurely aged, sterile and lacking in moral character; that rains will cook if not protected by complicated sun helmets; that sun-

light can damage the spinal cord. Other fallacies are based on coincidence. Hay fever was blamed on the sun before the discovery of allergies, because it occurred during the hottest time of the year. And the sun took the blame for many skin diseases with a variety of causes, because they appear mainly on the exposed portions of the body.

Let's see just what a sunburn is.

Sunlight is a product of the atomic fission constantly taking place in the sun. Ultraviolet rays, which bring us sunburn, are part of it—about two tenths of one per cent. Most of the ultraviolet from the sun is filtered out in the stratosphere by a layer of ozone, and some is stopped by clouds, dust and smoke in the lower atmosphere.

The rays that hit your skin penetrate less than three hundredths of an inch, not as deep as your skin is thick. Most of them are absorbed almost at the surface by the horny layer, a sometimes microscopically thin coating of flattened dead cells over the live epidermis.

The invisible rays of ultraviolet that sneak past this horny layer are the ones that do the damage. They kill the living cells at a rate greater than normal. In the course of the death throes, a chemical reaction takes place that leads to the effects of sunburn—medically known as erythema, edema, pruritus, desquamation and pain. That is, your skin reddens, swells, itches, peels and, of course, aches.

Sun tan comes in three ways, all as a result of exposure to ultraviolet light. First, the pigment already present in the skin moves to the surface, concentrating in the horny layer. Second, the pigment-manufacturing cells in the lower depths of the skin go to work making new pigment, which sticks with you. It's not quite permanent, as it bleaches in the winter.

Recently it was discovered that a

third kind of tan is created when the bleached pigment darkens. This is the quickest of all, appearing within an hour of exposure. But don't count on getting a real tan this easy way. You've got to get burned once, to produce the pigment to be darkened.

The lifeboat Odyssey of Eddie Rickenbacker in 1942 inspired the government to sponsor sunburn research during the war. Of course, the services were not particularly interested in tan; they were looking for a sunburn preventive.

The services sought something that would reinforce the action of the horny layer. The Naval Medical Research Laboratory found that clothing is not necessarily a protection—a point for sunbathers to remember. You can get burned quite neatly through a lightweight cotton shirt. Khaki turned out to be better than white as a color, and dry clothing is more protective than wet.

The scientists then began to experiment with various preparations. Generally, they found that preventives were very hard to evaluate. But two substances have been recently recommended for the druggists' National Formulary, phenyl salicylate and titanium dioxide. Used together, the mixture can be smeared on the skin to suit the individual. It is cheap and available. And there are many proprietary substances that will similarly protect against burn.

Two Basic Facts About Skin

Nature tends to protect us from the damage done by ultraviolet rays, but there are certain principles to keep in mind.

First, remember that a sunburn is the product of two variables: your skin and the amount of ultraviolet radiation hitting that skin. Second, keep in mind that the reaction to radiation is always delayed; when your

skin turns red, that's a sign you've already been burned.

The individual sunburn "threshold," or point at which your skin does turn red, changes from time to time. You can't tell in advance, from past experience, just how badly you will react to exposure.

Even more unpredictable is the amount of ultraviolet light that will puncture your hide at any given time. It varies by the hour of day, season of the year, geography and weather. No sensation of eye or touch will tell you how much you are getting.

A phenomenon known as "skyshine" is responsible for many burns. This is the ultraviolet scattered in all directions by the molecules of the atmosphere, and by large particles such as water vapor. As it doesn't come directly out of the sun, you often get burned on a presumably unexposed part of your body or when you are lying under an umbrella. On a clear day the skyshine can be as strong as the direct radiation.

There is a ray of hope for the sun worshippers trying to cope with the invisible menace of the ultraviolet. It won't help you this summer, but it may in years to come. It is a device that will let you decide how long to stay in the sun in the same way that you determine whether to wear an overcoat when the thermometer stands at freezing.

With a little ingenuity, apparatus can be constructed to use a photocell as a sunlight meter. Photocells measure light, and one kind registers the quantity of ultraviolet radiation from any source. Properly designed to pick up all the skyshine, as well as the rays coming directly from the sun, the device could be set upon a beach to operate a dial for everyone to read.

Then the sun will be the servant of his followers and not a capricious tyrant, haphazardly handing out tans, burns and blisters. ★★★

HOW ARE THINGS ON OKINAWA?

Typical thatched-hut village of prefabricated houses overlooking Buckner Bay. The American housing program has produced prefabricated frames for 40 huts, enough to get a half-million Okinawans out of the caves and hills where they had taken refuge. The military government's goal is 100,000 of these new huts.

The never-never land that fell in bloody battles two years ago has acquired a strangely American flavor that may be of increasing importance in the Orient. Today our experts see the island as a key to the future

BY WELDON JAMES

ON OKINAWA the guns have been silent for almost two years. The beaches where American soldiers and Marines stormed ashore on Easter Sunday, 1945, to begin the 82-day battle for the 67-mile-long island, are undisturbed save for the never-ending roll of the sea. The scorched earth is green again. The woods and forests of the battlefields are gone forever, but crops are growing in the fertile valleys below Hacksaw Ridge, Chocolate Top, Sugar Loaf Hill, and all the other high places where thousands of Americans died.

The people long since have returned from the hills and caves of the northern part of the island, where there was little fighting. The quiet countryside is alive with farmers tilling their little plots of land, producing 40 per cent of the food requirements of the island's 512,000 inhabitants. And most of these inhabitants, if not all, are content with the way things are going. As Gioga Shimabuku, a pottery worker, put it: "Very good prestige, being under the Americans. We hope they stay. We would like to be the Americans of the Orient."

If the War and Navy Departments have their

way, the wish of Shimabuku that the Americans might remain on the island will be realized; the War Department, in particular, thinks that the 23 airstrips on Okinawa, and the three on Ie Shima, a tiny islet to the west where Ernie Pyle was killed, are worth whatever investment we might have to make.

The Army is putting in some permanent typhoon-base installations; its engineers know that Okinawa has from a dozen to forty destructive typhoons a year, and they're building to withstand the stiffest wind yet recorded. And the military government, in its campaign to Americanize Okinawa and the other islands of the Ryukyu chain, is requiring English to be taught in the schools, and is making plans for a University of Okinawa, with both native and American instructors.

Army and Air Force officers, peering at their new-type maps, have described Okinawa as "the most important island the United States now holds, the key to stability in Asia." A high American in Tokyo was even more explicit. He said:

"Okinawa is essential to the protection of a disarmed and pacifist Japan, and air power based on the island is equally important in guaranteeing that

no large-scale attacks will be launched against the American Pacific Coast. An invasion of Japan would require a large amphibious operation. A concentration of American air power at Okinawa, backed up by bases in the Marshall and Mariana Islands, it would be impossible. As far as our country is concerned, our power at Okinawa would prevent raids on our West Coast."

Compared to the rest of the world, Okinawa a few years under the American flag is a queer place—a never-never land without labor unions, political parties, or international complications where never a Communist has raised his ideological banner; where murder is virtually unknown; where people spend more on the dead than on the living; where, in obedience to an ancient custom, the bodies of the dead must be scraped clean by virgins.

It is the one war-wrecked land in the world where a family of eight can buy a month's supply of groceries, including delicacies from the black market, for less than \$7; where a native can buy a pair of U.S. Army field shoes for 50 cents, a cotton field jacket for 20 cents, and rice at one tenth the price an American must pay.

sixth-grade class in Japanese, English and arithmetic uses grocery crates for desks the pupils squat on the floor. New desks and chairs are being built, 4,000 a month

These Okinawans support a family of nine by making small Shinto temples and household utensils from G.I. tin ration cans. Gaily decorated temples sell for 150 yen (three dollars)

Toyo-ko Hanagusuku, 20, whose father was killed in the battle for Okinawa, runs this power saw making frames for prefabricated huts

Although 40,000 natives are on relief, no one is starving; the United States supplies enough additional food to bring the average daily ration up to about 1,900 calories. No Okinawan is without shelter; the housing program organized by the military government and the newly established civil government has turned out 40,000 prefabricated hatched huts, and production is steadily increasing. There are 283 schools in operation, with 4,257 teachers and 137,000 pupils. There are three hospitals and four dispensaries, staffed by native doctors and nurses.

Shimabuku, the pottery worker (and apparently the great majority of his fellow workers) approves almost everything the Americans have done in their efforts to restore the island. He likes the 600 miles of improved roads the Americans have built, the 35 miles they've paved with asphalt, and the widening of 450 miles of native roads so jeeps can run over them. He likes the fleet of more than 600 jeeps and trucks which are operated on these roads by Okinawans, and the necessary graders, bulldozers and other machines provided by the Americans to keep them in shape.

Shimabuku likes the 47 American ships which, manned by Okinawans, keep trade going between Okinawa and the other islands of the Ryukyu chain; and the fleet of powerboats with which Okinawa fishermen bring in thousands of pounds of fish every month. He likes the sawmills, foundries, breweries, distilleries and other business and industrial establishments now operated by the military government, but which will eventually be turned over to private enterprise.

But there is one thing about the Americans that Shimabuku doesn't like, and he says so freely. He thinks they eat very curious food, scarcely suitable for humans, and he looks forward to the day when he can resume his ancient diet of sweet potatoes, rice, fish, vegetables and tea, on which he lived all his life until the Americans came. He has had more than enough of canned beef, boned turkey, coffee, and doughnuts, which is all the Okinawans can think of to make from American wheat. He will admit that "coffee and such" are better than going hungry, but he will say nothing at all good about boned turkey. His aversion to this Occidental delicacy seems to be shared by practically every other Okinawan.

"We've still got tons of boned turkey on this island," said a young military government officer. "It's good food, and we sell it to the Okinawans at a penny or two a pound. And what do you think happens? They sniff at it, laugh a little, thank us very politely—and use it for fish bait!"

Economic Picture of a Native Family

Gioga Shimabuku, a wizened little man of forty-five with a wife and six children, is typical of the industrious race which is rapidly rebuilding the island with American help and planning. He works in a pottery near the ruins of Naha, once a city of 65,000 population, which was destroyed when the 6th Marine Division took it block by block from the Japanese. He is a skilled workman, and receives comparatively high pay, 10 yen (20 cents) a day. His eldest daughter works for the local ration-

ing board, and is paid the minimum wage of five yen 60 sen (a little more than 11 cents) a day. The family's cash income each month is thus 400 yen (\$8), and on this amount the Shimabukus live very well.

For a month's food ration they pay 150 yen (\$3), and they buy another two or three dollars' worth of food on the black market. This is usually sweet potatoes, of which all Okinawans are extremely fond, and which sell on the black market for four cents a four-pound package, compared to the government-fixed price of one third of a cent.

All this is supplemented by produce raised on a small plot of land, which Shimabuku owns and which is cultivated by his wife and their five youngest children. He pays no rent for his house; it was provided by the government. When he and his family came out of the hills the Americans issued clothing to them; since then Shimabuku has bought a pair of Army field shoes and a cotton field jacket, for a total expenditure of 35 yen, or 70 cents.

And, thanks to the American program for rehabilitating private industry, Shimabuku will eventually become, in a small way, a capitalist. The firm for which he works, the Tsuboya Pottery Company, was organized about two months ago with a loan of 70,000 yen from the Industry Division of the civil government. It is retiring the loan by selling shares of stock to the adults among its 70 employees. These shares sell for 50 yen each, and Shimabuku is buying one a month, as are most of the other employees except the manager and the assistant manager, who are buying two each. Their wages are 500 and 400 yen a month respectively. (Continued on page 64)

THE NUCLEAR FISSION OF EDWARD ANGUS GILMARTIN

BY ALBERT POPE HINCKLEY

Professor Gilmartin had a good mind for figures—and a discerning eye, too

THE horrors of war seen have had no effect whatsoever on Edward Angus Gilmartin. He was through no fault of his own had volunteered for combat regularly and the fact that he had undergone nothing more rigorous than three years in the Aleutians due solely to the ever capricious classification system. A naive, modest young man, he had neglected to tell the classification specialists he was entirely at home in the fields of chemistry and physics; he gave his vocation simply as mathematician.

That meant only one thing: erstwhile haberdasher who was being stooped under the weight of taint's bars in the reception of personnel office.

Edward Angus became a private clerk in the Finance Corps. Although he was quite capable of doing the fantastic equations in his head, faced with longevity, rations quarters, he became more than a little starry-eyed.

Naturally, as soon as the big began to be interested in nuclear fission, a hurry call was sent to Professor Gilmartin. By the time the urgent summons had fought through the red tape, the bomb had done its work. Edward Angus finished his last few months of his military service in and around Bikini Atoll where as he had intermittently for years, the single stripe of a private's class. Finally, the Army offered him the eagles of a full colonel if he would stay and help them with their problems; when Edward Angus refused, his heads were gravely shaken, but he did.

A frugal person, with no real bad habits beyond an addiction to hard work and an occasional drink, Edward Angus had actually made money during his incarceration in a land of fog and frostbite. His character was only adjusted to a very simple mixture; an occasional drink which he could deal with.

With no immediate economic necessity to get back on the academic treadmill, he determined to spend a couple of months in private research. Several intriguing hypotheses had come during the preparations for the show, and Edward Angus was intrigued. He belonged to a society of mathematicians which reported an exclusive library in New York. Taking a hall bedroom in the city, he prepared to settle down to delightful months of unadulterated research.

He experienced no difficulty, nearly four years, in remembering the address of the library and, changing into civilian clothes, complete with ruptured duck, he set for it on the very first afternoon. It was in the West Fifties and from both personal and military, he was a healthy mind in a healthy body. A healthy mind in a healthy body, a fetish with Professor Gilmartin, there was no course of training to end for which he had not enthusiastically volunteered during his Army career. It was probably safe to say that Private Gilmartin was the finance clerk in the whole United States Army who was thoroughly trained and conditioned to land the first wave of commandos. . . .

The front entrance of the building as he came up to it, seemed

"I'm free, white and twenty-one," Edward Angus said to Mr. Lacy. "From now on, keep out of my business."

Collier's for July 12,

altered substantially, but his

BOWED vaguely to a female
someone who appeared in the
ay on his right.

y name is Gilmartin. I haven't
able to use your facilities during
of it, but I would very much like to
use of the reading room for a
or two if I may."

ow I've heard it called every-
"said the figure in the doorway.
beg your pardon?" Edward
s was lost in the problem of
er to begin on the theories of
or Conant. "I asked if I might
e reading room and, of course,
big acks."

ll it anything you like," said the
"just you give me your hat."

handed over his hat, wondering
haps it would not be better to
with Einstein or even further
than that, and then work for-

n sorry," he said apologetically,
place seems a good deal changed.
you direct me?"

at's the door right there on your
said the voice, "but in my
on, you're carrying all the load
rean handle right now."

s seemed rather a silly remark to
rd Angus, for he wasn't carrying
a book. The war had made it
alt to replace trained personnel,
ecided, and pushed open the door
s left.

nothing was very definitely
g. The room, except that it was
too dark, looked like nothing so
as a PX beer garden. As he
ted, a man in a dinner jacket
d up to him.

o you wish to sit at the bar, sir, or
d you prefer a table?"

ward Angus regarded this at-
nt severely.

n trying to find the library."
e man in the dinner jacket re-
ed himself with a start.

he gents' room is just around the
er to your right," he said in
ned voice. "Can I order you a
now, sir?"

hank you very much, I'm not
y. Perhaps I did not make my-
lear. I asked you to direct me to
eading room."

e man put his hands on his hips
regarded Edward Angus with a
that balanced a nice mixture of
ty and fury.

ook, friend, a joke's a joke. Did
come in here for a drink or didn't
," he demanded.

certainly not!" Edward Angus
eriously affronted. Unconsciously
ning his crispest classroom man-
he said: "I wish to make use of
facilities. I'm a mathematician.
nterest is in figures. Do I make
lf clear?"

an't you ex-servicemen ever
about anything but women? I
wo brothers in the Army, so I'm
our side, but this ain't that kind of
ce, friend. If you want a drink
will behave yourself, you can

Edward Angus stared at the man in
lief.

ne of us is crazy," he said, as if
ag an axiom in geometry.

"Well one guess will tell you who's
going to win the decision. Come on,
now, get on your horse—"

Edward Angus, for the first time in
his sober life, thought over all the de-
lightful possibilities offered by the
intensive course that he had taken in
Army judo. But the habits of a life-
time were too strong, and he turned
on his heel.

"There's been a stupid mistake," he
said to the girl who had taken his hat.
Everything looked red to him, as he
understood it always did to people
who were the victims of uncontrolla-
ble furies. Even the hair of the figure
facing him was a flaming challenge.

"I tried to tell you that you were
down on your axles when you went
in," said the red hair. "Look, sonny,
why don't you go home and leave the
stuff alone?"

"Is everybody out of his mind in
this establishment?" Edward Angus
demanded. "Or isn't this the Library
for the Society of Higher Mathe-
matics?"

"Oh, you poor thing," said the
figure. "And I thought you were
canned to the eyes. That place was
moved up to Morningside Heights a
couple of years ago."

"Why?" Edward Angus was still
intent on the pursuit of elusive
theorems and the question came
easily.

"Why, because they're all big shots
now. Haven't you heard about the
atomic bomb? Those guys don't just
make out your income tax any more;
they're going to make over the world.
What part of this man's army were
you stuck in?"

The mention of the Army and
atomics cleared the fog in Edward
Angus' cranial cavity. He returned to
the land of fact with a rush.

Before him was quite the prettiest
girl he had ever seen. Her eyes were
blue and direct; her nose, even through
the powder, betrayed three or four
highly intriguing freckles; no more of
her could possibly have been crammed
into the bodice of her blue dress and
her hair was of a red to make sunsets
jealous.

"Really," said Edward Angus, "I
owe you an apology." He found he
was having as much difficulty making
his hands and eyes behave as would a
starving man in front of a delicatessen.

"You will if you keep on looking at
me like that," the girl assured him.

Furious color rushed to his face,
and he pretended to search the racks
behind her for his hat.

"I am Professor Gilmartin," he
announced stiffly. "I had no idea that
the library had moved and I am sorry
to have troubled you." He abandoned
the search for his hat, and his eyes re-
turned irresistibly to the girl. "I was
three years in the Aleutians," he
added lamely.

"That's tough: I have a brother
spent the whole war in Iceland."

"You did?" Edward Angus bright-
ened visibly at the news of such suf-
fering. "We heard it was pretty rough
there. Now, with us, the wind never
dropped below—"

"You going to take my hat, Angie?"
a voice behind him broke in.

Edward Angus turned with a start
to confront a thin, sharp face which
came up out of a collar whose tight-
ness bordered on strangulation. Black,
greasy hair was plastered to the skull,
and if the shoulders of the coat
weren't padded, the man was built like
a prize fighter.

"You're looking mighty sweet to-
night, Angie," said the newcomer.
"This character bothering you?"

"Really," said Edward Angus, "I owe you an apology"

"Oh no, Mr. Lacy. This gentleman
just made a mistake in the address.
Here's your hat, Professor. You can
find out where the library is now, in
the phone book." She gave Edward
Angus such a smile that he was half-
way to the door before he remem-
bered the tip. He found a quarter and
then fell over his own feet in a re-
newed start for the exit.

"What's the matter with that goof?"
said Mr. Lacy. "Plastered?"

"I should say not!" Angie pro-
tested. "He was looking for that li-
brary used to be here, before you
opened up. He's a professor."

"Of what? He don't look to me
like he could read and write."

"Mathematics, I guess. I thought he
looked cute."

"He's a dope," said Mr. Lacy with
finality.

STRANGELY enough, that was
what Edward Angus was calling
himself the next afternoon. He had
found the new quarters of the Society
without difficulty and his reception
there had been in the nature of a tri-
umph. The librarian had wanted to
know all about his experiences at Bi-
kini, had cursed the stupidity of an
Army that would waste such bril-
liance on the arctic air and had im-
mediately supplied him with the books
and pamphlets that he required. Se-
cure in a cubicle where the world
could not enter, Professor Gilmartin
had sat down with sharpened pencils
and a block of yellow paper—sat
down to two months of uninterrupted
theorizing. The only trouble seemed
to be the interruptions.

These, of course, were not caused
by the staff, who came only when
summoned, or by sounds from the
outside, which were barred by all the
acoustical controls known to science.
They were caused by Pfc. Edward
Angus Gilmartin, who heretofore had
given very little trouble of that par-
ticular nature to the Professor and
none at all to his superior officers. In
Army parlance, the Private appeared
to have ants in his pants.

It did no good to remind the Pri-
vate that the Professor was interested

in figures. The Private was interested
in figures, too, and they weren't on
paper. Equations that were as un-
complicated to a trained mathemati-
cal mind as the alphabet is to a
member of the eighth grade became
so confused with unknowns like red
hair and blue eyes, that the Professor
had to spend more time chiding the
Private than he did using his pencil;
and everywhere there were freckles.
For the life of him, Edward Angus
couldn't remember whether there had
been three or four.

To decide the matter he tried draw-
ing a nose, but it wiggled at him like a
rabbit's.

"This is perfectly preposterous,"
Professor Gilmartin assured himself.
"What I need is a good walk."

"That's a swell idea," said Private
Gilmartin. "I'll go along with you."

Edward Angus thanked the librar-
ian for his courtesy, assured him that
the morrow would be no more than
started when he returned, and set off
blithely to conquer his distractions
with that fine old puritan medicine,
fresh air.

To secure what little of the country
New York afforded, he headed over
to the Drive and tramped downtown,
breathing deep while assuring himself
that he was deriving much good from
it. The river stretched wide and placid
on his right, children romped across
his path, and he passed monuments
with gratifying regularity. Both the
children and the monuments ap-
peared to be surrounded by nurses.

"That was a pretty tasty shape we
just passed," said Private Gilmartin.

"You mean the one with the yellow
dress and no hat—? I didn't see it,"
said the Professor.

He turned east at the end of the
Drive and there seemed to be a great
many girls getting off busses and com-
ing out of subways. The Professor
averted his eyes but the Private was
continually looking everywhere ex-
cept where they were going.

Suddenly the Private said, "Let's
have a drink."

"Where?" said the Professor, taken
by surprise.

(Continued on page 74)

MERCHANT OF VALOR

The Story:

The events narrated take place in sixteenth-century Europe; Henry VIII is King of England; the Medicis rule an Italy turbulent with internal strife.

At a fair in England, big PETER CAREW, straightforward son of a wool merchant, encounters a beautiful Italian girl disguised as a fortunetelling hag. BETSY, for so he calls her, predicts Peter will go to Italy; she gives him a charm to pro-

tect him. Shortly afterward, Peter is sent by his father to transact business in Florence.

The first night he is in Italy he comes upon a cheerfully unscrupulous friar searching his baggage. Shortly thereafter Peter saves a powerful nobleman, GIOVANNI DE' MEDICI, who is being attacked in a dark street by assassins. As predicted by Betsy, Peter and Giovanni, who is the leader of a free-lance army,

known as the Black Bands, strike up a friendship.

The next day at a carnival in Florence, Peter recognizes the fortuneteller, Betsy—this time disguised as an apprentice boy. Haughtily she demands that he return the charm she had given him in England. Just as he gives it to her, Peter is arrested by agents of CARDINAL PASSERINI. From him Peter learns that the "charm" was in reality a stolen letter of

critical interest to the Pope; when he refuses to divulge the identity of the letter's recipient he is led away to prison and the torture chamber.

A mob delivers him from his cell, and he is whisked off to a nunnery, where he is brought into the presence of a gloriously lovely woman. It is Betsy, smiling. Peter's blood turns to water. As if under a spell, he nods helplessly.

"In my land we do not harry maidens with dogs, nor tree them like wild beasts," I said. "In this country," said the handsome one, "we do what gives us pleasure"

"we must be rid of you. Cardinal Passerini and the Eight have loosed an order against you—that you be found and brought to them."

"For which," said I, "I have only thee to thank."

Her lip curled. "Does the sword thank the arm that wields it?" she asked. "Or the needle thank the fingers that ply it?"

"The sword hath no soul," I answered, "nor hath the needle a heart. But a human man doth possess both and is not to be used as if he were but a thing of steel or wood."

"I had need of thee," she said. "Who will not serve freely in time of need must be made to serve by guile or force."

"That," I told her, "is a heartless saying and cruel. Who are you that hides under the disguise of hag and scullery maid and apprentice boy and noble lady? Against me you have practiced treachery. What wider treachery do you plot? Whom dost thou serve?"

"I serve a purpose that is above thy base understanding," she said. "Who or what I am is nothing to thee."

"Nothing, perchance, but the loss of life, which is precious to me," I answered.

I hated her and I feared her, yet I was drawn to her so powerfully that my head swam with it. I deemed this the result of some evil charm which she had put upon me, but, knowing it full well, I was not strong to resist it.

She made her eyes to narrow and peered at me with a strange expression which I could not read. "There is honesty in thee, and loyalty and stubbornness. Why didst not betray me to the Cardinal? He would have rewarded thee with a castle."

"It was not for thee I stood silent," I said angrily, "but because the man made my gorge to rise, and the sullen brat that hungered unnaturally to see me stretched upon the rack."

She smiled in a queer, mysterious way and said, "Whatever the reason, it compels me to save thy neck. So I shall pluck thee out of this city and send thee to safety."

"Where should I find safety?" I asked.

"With wife and train Giovanni de' Medici left Florence yesterday for Trebbio."

"Art thou friend to My Lord Giovanni?"

"I be friend to no Medici," she said. "Nevertheless of all the spawn, he alone is without guile and, now that Bayard is dead, the most knightly man alive. The evil Medici blood hath been cleansed by joining with the blood of his great mother. He will protect thee for the mere sport of thwarting the Cardinal."

"I would back to England," I told her.

"Dost mind the crystal into which you gazed? When I was witch and teller of fortunes?"

"I remember well." I made the holy sign. "'Twas black magic."

"Nay. It was true picture. Ere thou comest back to England many things must be fulfilled."

"The devil hath given thee power to read the future?"

"Nay." She shivered a little. "I know not if the power come from God or Satan. But I can make others see

pictures in the ball. And they be true pictures. Now—My Lord Vitello Vitelli leaves the city at noon, journeying to Bologna. The gates will be watched for thee. But thou shall ride in his train and pass safely. Under the robe and cowl of a monk. The abbess of this holy house hath asked the favor of him."

"It was not thou that asked it?"

She shook her head. "Thou wilt be but a monk riding on errand for the abbess. Betray not thyself to any."

"You accomplish all things by guile and deception," I said bitterly.

"What other weapons hath a woman but guile and deception—and beauty?"

"There be also," I said, "truth and modesty and virtue, so that men will do her bidding for honest love of her."

"Honest love is for scullery maids." She rang a little silver bell that she lifted from the table. "Go to thy cell and don friar's robes for the journey."

"I would prefer an honest sword and corselet of steel."

"They await thee on the road," she said. "Farewell, Messire Pietro. Go with God."

"Shall I see thee again?" I asked, and was wretched at the thought of parting from her.

She merely smiled.

And so I passed from her presence and went to my cell where the brown habit of a friar awaited me and I donned it over my proper clothing, and put sandals upon my feet and awaited the outcome.

FOR an hour I sat alone. Then I was summoned, and passed out into the street where saddled mules awaited me and another clothed like myself who said he was to be my guide. We rode through narrow streets until we joined the cavalcade of this Vitello Vitelli. And with this company of twenty men we passed unchallenged through the Porto al Prata and into the smiling country beyond.

In those troubled days the roads were unsafe to travelers who could make no display of armed numbers. Unpaid soldiers deserting from the armies or from bands of *condottieri* took easily to the trade of robbery, and more honest men, dispossessed of their homes by the trappings of war, had been driven by hunger to take to the hills. In Milan the plague raged and it seemed that God had seen fit, in His wisdom, to give over northern Italy to rapine, fire and starvation.

My guide and I rode for some ten leagues with the company until we came to a tiny inn—a crude, forbidding shelter standing stark beside the road. Here we separated ourselves from My Lord Vitello, who called jocularly over his shoulder, warning us to sleep with one eye open lest a rascally landlord slit our throats in the night to rob us of our very sandals. But the inn, when we entered it, was better than the promise of its exterior, and the landlord, a thin, tall man with honest face, made us welcome and provided us with pleasant wine and the remains of a pasty upon which we fell hungrily. He stared at my left hand upon which I wore the King of England's ring.

"By that I am to know thee," he said. "But my advice to thee is that

(Continued on page 35)

CONTINUING THE EXCITING STORY OF ROMANCE AND HIGH ADVENTURE

BY CLARENCE BUDINGTON KELLAND

II

I AWAKENED in the morning in a soft, clean bed in a tiny cell in the convent; food was brought to me, and I was much refreshed. But as full recollection returned to me, I was ill at ease because, though no fault of my own, I was a fugitive and like to come to my death the Eight should lay hands upon me. Though my father's business had been all in hand, I despaired of bringing it

to satisfactory conclusion, for Florence would be no safe spot for me.

While these thoughts were vexing me, one came to my door and summoned me. I followed to that fine room where I had first seen the girl Betsy arrayed as a great lady, and there she awaited me again, and once more I was overcome by the beauty of her and the mystery of her.

"Messire Pietro," she said at once,

SHOWDOWN WITH THE BOSS

WHY I BROKE WITH ROOSEVELT—IV

BY JAMES A. FARLEY

"Presidents find it hard to believe anyone can fill their chairs," Jim Farley told Vice-President Garner. But the time had come for a declaration of intentions. Here is a straightforward account of the elaborate political maneuvering which led to the President's third term

THE WHITE HOUSE
WASHINGTON

February 8, 1940.

MEMORANDUM FOR

THE POSTMASTER GENERAL

At the Poughkeepsie Post Office there are approximately twenty-five steps leading up from the street to the front door. I hear considerable complaints from elderly people, especially in the Winter, who are forced to use these steps without a hand-rail. What can you do?

F. D. R.

Talk of a rift between Roosevelt and Garner continued. But "Cactus Jack" to Farley he had more affection for F.D.R. than any of the crowd around him

BY UNANIMOUS consent, politics took an enforced holiday at the outbreak of the war in Europe. I saw the war come and it was not a pretty sight, even though I was spared the witnessing of scenes of carnage and destruction.

I had gone abroad with my daughters, Betty and Ann, and Edward Roddan of the Democratic National Committee, in July of 1939. On September 3d, when Britain declared war, we were homeward bound.

No one was more happy than I to set foot on American soil again.

Shortly after my return, I had lunch with the President.

"Boss," I began, "we are to all intents and purposes in a state of war. I think that at this time politics should be adjourned. The people aren't interested in politics; they are interested in their country and in their families."

"Jim, you have hit the nail right on the head," he replied with hearty cordiality. "You were never more right. I feel exactly the way you do."

"I wonder whether it would not be a good idea to cancel the Jackson Day dinner?" I suggested.

"I don't think there will be any necessity for that," he answered slowly. "We could bring in a few Republicans and make it a bipartisan affair."

"I'm afraid it might look as though we were trying to talk politics at a time when we were urging national unity," I said, "but there's no need to make a decision this minute."

"Jim, we are on a day-to-day basis now," he said seriously. "Our foreign policy may shift within twenty-four hours or within an hour. The same is true of domestic matters, including politics. You remember, before you

went away, I said I would have made my position clear on the term early in the year. Now it looks as if I could do nothing until spring—March or April."

"That makes sense to me," I agreed. "I think it would be a mistake to have anyone connected with the Administration make political speeches at this time."

We then fell to a discussion of the international situation, hinged on the trip. I told him I regretted that I had not had a chance to visit England and asked how Ambassador Kennedy was getting along. As usual he was critical of Joe, whom he never really liked.

"You know," he explained confidentially, "Joe has been taken in by the British government, the people and the royal family. He's more British than Walter Hines Page (American ambassador to Britain in World War I). The trouble with the British is that they have for several hundred years been controlled by the upper classes. Therefore the policy of the British government relates entirely to the protection of this class."

In prewar days the President was never very generous before me in his references to the British. He was forever expressing doubt that Britain would ever go through for anyone else, declaring they were for England and England alone all the time.

The President switched the conversation to a consideration of the War Industries Board, headed by Edward R. Stettinius, Jr., son of a former J. P. Morgan & Company partner.

"When they turn in their report I think I'll put them on the shelf," he said musingly. "I realize fully that they are under the Morgan influence. If the war industries are dominated by the Morgan crowd, they will do all

No detail of his Administration was too trivial for the President to consider. Here is a routine memo which he sent to Jim Farley early in 1940

At the Jackson Day dinner of 1940, Secretary of State and Mrs. Cordell Hull chat with Postmaster General Farley. Hull refused to capitalize on his accomplishments in office to have his name announced for the Presidency. While Roosevelt was telling others that Hull was his choice to succeed him, he never told Hull

business and make all the money. The Morgan crowd has been bitterly opposed to me and all I have advocated."

"Boss," I began lightly, "I'd like to have a word for a fellow I know quite well—James A. Farley."

"Why, Aloysius," he laughed.

"If you set up any organization to control the activities of government business, I could head it up and do a better job than anyone else."

"Jim, I think you have something there," he said. "But what opposition would come from your being Democratic chairman? I wouldn't want you to give that up."

"I don't think there would be any objection, although I'd be glad to step out," I said. "I could handle the matter by saying politics had been abandoned as far as I was concerned."

"I think it might be worked out," he said.

I told the President the affairs of the post office were in good order and did not need my attention every moment. I asked him not to give his decision at once but to give my suggestion every consideration. He said he would do that. But I never heard of it again.

Urging Neutrality Repeal

The President asked me to talk to members of Congress in behalf of neutrality revision. On September 22, 1939, I went to the White House to report on the situation.

"Boss, if I may say so," I added, "I couldn't let my personal feelings interfere with my relations with Congress. All your friends will be for repeal. I think it is absolutely necessary that you avoid friction in order to have a united country behind you.

And to be perfectly frank, it will strengthen the Democratic party. I think you made a good start seeing Senator Glass."

"Yes, I had an interesting talk with Carter," he said. "You know, he's going to make a short speech in favor of neutrality repeal. That's real progress."

"How are you getting along with O'Mahoney?" I asked.

"Splendidly," he said. "Joe came in and asked how he could help on neutrality repeal, then answered the question by saying he thought he could help by talking to Senator Maloney of Connecticut."

"I think you should see some of the others who have been on the other side of the street," I said. "How about seeing Senator Tydings of Maryland?"

"I would be glad to if there was something we could discuss," was his answer.

On October 2, 1939, I called former Governor Alfred E. Smith to congratulate him on the radio speech he had delivered the night before in behalf of neutrality revision. He bowed me over by reporting he had received a congratulatory message from Roosevelt. He and the President had long been going their own ways.

I was most pleased to see the President so interested in healing the split within the party. But I still felt that the time was not one for politics. I confidently expected to be in the national defense picture and was willing to let politics rest.

About this time I rode up to the Capitol to have lunch with Jack Garner in his office. The Vice-President greeted me with an expression of regret that I could not join him in "striking a blow for liberty," as he in-

variably described the rite of drinking.

"Jim, you don't drink, you don't smoke, and you don't run out of harness—don't you have any vices?" he asked jokingly.

"Only politics," I answered in the same spirit. "And Mrs. Farley considers that worse than gum chewing, my other bad habit. She's trying to break me of both."

Mr. Garner Goes on Record

"Politics is what I invited you up here for," he said more seriously. "I want to tell you exactly where I stand so that you can govern yourself accordingly. As you know I am opposed to the third term. I don't know what the Boss is going to do, but I know he doesn't dislike third-term talk and he's doing nothing to discourage it."

"That's only natural," I put in. "Presidents find it hard to believe anyone can fill their chairs. Alice Longworth told me her father (Theodore Roosevelt) began to worry about the future of the country as the time came for him to turn over his office to Taft. Joe Tumulty said that Woodrow Wilson had similar fears and Coolidge spent restless nights in his final days down the Avenue. Not that they wanted to stay particularly; they didn't like to see themselves replaced."

"Maybe so," he said thoughtfully. "I am not worried about the Boss. It's those people around him. All they are interested in is staying in power. I don't think that they give a damn for the Boss at heart. They would climb onto Wallace's coattails if they thought they could sell him to the people. Wallace is a dangerous character, Jim, not because he's bad at

heart, but because he doesn't know where he's going."

"I agree with you thoroughly on the men around the President," I said. "I am convinced that those about him have no genuine affection for him or they would not ask him to carry them along. I doubt if he can stand the strain of another four years, particularly war years."

"God knows I hope nothing happens to him," Garner said earnestly. "He and I have had our differences, but I have more honest affection for him in my little finger than they have in their whole bodies. I don't want anything to happen to him and I don't want his job. But I can't swallow this third-term business. I absolutely will not run with him for a third term. I don't want to run for anything, but if no one else will come out against him for a third term, I'll do it, even if it's only for the record."

"I feel the same way," I told him. "There is only one thing that would cause me to change my mind about the third term and that is if the very existence of the country were threatened. I don't mean just a threat, but actual danger."

"I don't want him to run again," Garner said. "whether we are at war or not. I see a dangerous precedent in this third-term business. The Boss could never be a dictator, but someone might come along who could be."

On October 27, 1939, I had lunch with the President right after Henry Wallace shattered the unnegotiated truce on partisan politics. With the 1940 Presidential election a year and eleven days off, the Secretary of Agriculture told an audience at Berkeley, California, "The war situation obviously makes it clear that the

"Who are you?" Becky asked. "I'm Cull Bence, ma'am," said the man. "Ain't a mother's son of us amounted to a hill of cow beans in three generations"

STRANGLER FIG

—Its life was the death of beauty

BY WILLIAM FULLER

BECKY stood stiffly on the back steps of the small frame house in the clearing until she saw her husband's truck disappearing around the first curve in the rutted road. Her sense of release was immediate. Swiftly on bare feet, she padded into the bedroom she shared with her husband. She opened the bottom drawer of the bureau that squatted in the corner of the room. She groped quickly beneath muslin for the three paper-thin reproductions of paintings that Lonnie Rand, the storekeeper in Fruitville, had given her months before. She had hidden them away, waiting for Norlee's first-of-

the-summer trip to Arcadia. Now she spread them on the patchwork quilt of the bed, sighing in admiration, trying to decide which was her favorite.

Niagara Falls was pretty, she decided. That Grand Canyon was fine. Mighty fine. But the Gloucester Fisherman, the sailboat slanting through that bright and maddened sea, well—Becky reckoned that was about the finest of the three. That one reminded her of the time—five years before, when they had first been married—that Norlee had carried her across the state to a place called Tarpon Springs. She had seen boats there, boats with (Continued on page 58)

5 of 1,000 *Specialized* INTERNATIONAL TRUCKS

AMERICA needs trucks *specialized* to their jobs. And International Harvester supplies them—more than 1,000 types, with chassis, engines, transmissions and axles expertly fitted to the work they are to do.

That's one reason why more heavy-duty International Trucks have served American commerce and industry for the past 16 years than any other make.

Another is the rugged strength, long, trouble-free life, and ease and economy of

operation that are as much a part of every International as the famous Triple Diamond Emblem on the hood.

Specialized International Service backs International Trucks. This *specialized* service is quickly available everywhere from the nation's largest company-owned truck service organization—International Branches—and thousands of International Dealers.

HOLLYWOOD'S MILLION-DOLLAR SHOESTRINGS

You too can be a movie producer. All you need is an idea, a little cash and a tolerance for headaches. If you doubt it, take a look at the flock of independents making much from little

BY CAMERON SHU

HAPPEN to have \$800, mister? \$200,000? \$5,000? \$500? No? Well, don't it a second thought. Do you have an idea? No idea? That does make shade more difficult—but you know somebody with an idea, no doubt? right.

You are now in business as a Hollywood motion-picture producer. You stand to make one million dollars this year, on which the nice men in Washington will smile indulgently and demand a mere 25 per cent capital gains tax. That is, this charming possibility is wide open to you unless you insist on such stultifying devices as cost accounting, art for art's sake and eight hours' sleep every night.

The opportunity may not last long for a very practical reason and Hollywood is rapidly running out of stage space for all its would-be producers. But until the last stage bursts its seams, splattering excess ad revenue and glamor over southern California's French pastry landscape, Hollywood is the republic's last roaring frontier of free enterprise, *laissez faire*, the good old-fashioned custom of pyramiding shoestrings into fortune.

In fact, independent motion picture production is already very big business. One hundred and fifty independent as-the-birds entrepreneurs will manufacture around \$100,000,000 worth of film during 1947. The Society of Independent Motion Picture Producers, a lusty organization comprising 25 of the healthiest independent producers now headed by Donald Nelson, a gentleman who grew accustomed to large-scale operations as executive vice-president of Sears-Roebuck and as War Production Administrator.

Ex-dentists, ex-theater managers, ex-publicity men and a startling portion of actors, actresses, directors and writers are becoming producers faster than you can mutter "Lou O. Parsons." How come? And in particular, how?

The opportunity exists for sound reasons. First, the federal courts have loosened up distribution markets, breaking the theater monopoly of the majors; and second, the major studios are making bigger but fewer pictures.

Consider the Brothers King (formerly Morrie, Frank and Hy King), who operated slot machines in Los Angeles a few years ago. They launched themselves in business with a simple but shrewd improvement on the claw machine, which operates on the grab-bag principle. They offered expensive wrist watches, cigarette lighters, which, to be sure, the cash customers found as difficult to capture as cheap gewgaws, which raised the machine's income from \$5 to \$200 a week.

From claw machines, the Kings advanced in the art world to slot-machine movies, for a while with a distinguished partner—Cecil B. Mille. This alliance lasted for a while only.

"It took too long to get in to see Cecil Mille," says Morrie. "Guess he has an inferiority complex. And his is

The King Brothers—Morrie, Frank and Hy (top)—launched themselves on the arts with an improved version of the claw machine. Now they are all wrapped up in producing films

about pictures for slot machines were to have Sally Rand and some trapeze artists for performers.

"Now, you know yourself, if you're out with a girl relaxing at a bar, you don't want any bubble dancer or acrobat interfering. You want some good music, like Crosby, maybe. De Mille might make big epics, but for us he didn't have class."

The Kings went out of the juke-box movie business fast, brooding over De Mille.

"What is this movie racket, anyway?" asked Morrie. "If De Mille can lick it, why can't we?"

They knew nothing about the art of motion pictures, but they knew what they liked. They liked an idea they had about two orphans, a boy and a girl, who grew up in a life of crime and dirty politics.

Morrie met Jack La Rue, the actor, at the races. La Rue was betting ten-dollar bills.

"Like to bet hundred-dollar bills?" Morrie asked him.

"Yeah," said La Rue.

"You're in my picture," said Morrie.

Rochelle Hudson applied as leading lady, but she turned up with two agents. The King Brothers winced, said they'd let her know if anything turned up. Joan Woodbury heard about the new picture, dropped in to see if these wild men perhaps had something.

Morrie asked her to wait while he went next door and borrowed a chair. Joan said not to bother and sat on the floor. The King boys beamed, figured that was exactly the kind of star they needed and signed her to a run-of-the-picture contract—exactly six days.

Nice Profits from a Cheapie

The picture they made, subsequently released as Paper Bullets, cost exactly \$18,000. According to the Kings' deal with Producers Releasing Corporation, they received \$19,500 on delivery of the film and 50 per cent of the profits. Paper Bullets grossed \$750,000 during its first run, and is now fetching in a handsome \$2,000 per month from the foreign markets.

This coup enabled the Kings to make the most sensational low-budget picture of all time, the smash hit, Dillinger, which they turned out in 23 days at a cost of \$180,000. Dillinger grossed \$2,000,000 domestically, and is currently breaking records in England, India and South America.

Now well-heeled, the ebullient King Brothers are marching rapidly onward and upward. Their latest picture is a big Class-A production costing close to \$1,000,000. But the Kings are faithful to the mob and scornful of carriage trade. The new picture is called The Gangster.

The King story is reasonably typical. It is especially representative in this respect: As soon as your small independent begins to lay hands on respectable cash, he spends more on his pictures, moves up, and makes way for the next man with a borrowed shoestring.

Edward A. Golden, a ruddy-cheeked benevolent character universally known as "Doc," practiced dentistry in Boston, drifted into motion-picture distribution because his office was over a theater and wound up as a Hollywood producer as a result of his interest in an educational campaign on syphilis.

Doc sponsored a cheap nine-day picture, called No Greater Sin. This film, which was later approved by the U.S. Public Health Service, made a little money because its subject matter lent itself to sensational exploitation.

Doc let most of his profits trickle through his fingers and decided to recoup with another picture. He read a magazine condensation of Gregor Ziemer's book, Education for Death, sought out the author and pressed \$500 on him for a 30-day option.

In Hollywood, Doc got to know every

studio receptionist by her first name, being thoroughly rejected by every lot in town, until RKO, which was in corporate distress, decided they might risk a few dollars on a good title before the receivers closed in. The good title which exploitation-wise Doc had applied to Ziemer's work was Hitler's Children.

RKO gambled a pittance, a mere \$175,000—the price of one good star name in most A productions—and 21 days of shooting on Hitler's Children, hoping to get the money back with a reasonable profit. The picture grossed \$3,500,000, put the studio on its feet financially, and showered fortunes on virtually everybody associated with it.

Author Ziemer, an ex-schoolteacher, received \$5,000 cash and 50 per cent of Doc's profits as his share. Eddie Dmytryk, who had been called in to direct the last eleven days' shooting when another director fell ill, bounced to fame and made Murder My Sweet. Bonita Gran-

options, and going into business. I like this:

Would-be Producer O'Malley a an option on a story. He then press agent, or becomes one shouting in the better saloon through the trade press that he story every star in Hollywood w appear in.

This impresses the stars more than might think. All of them are often desperately, in search of suited to their special talents. A then, that our fictitious Mr. O' and his good story do attract a star's interest.

With that backing, O'Malley approach a distributing company, United Artists, which will not hes sign an agreement to release any a first-caliber star cares to app Mr. O'Malley can then go to a bar his story, star, and release agreem come away with actual cash in ha

ville became a star. Emmett Lavery, who had written the screen play and retired to the Smith College campus to teach when RKO dropped his option, returned to Hollywood as one of the highest-priced writers in town and became president of the Screen Writers Guild. Doc's son, Bob, a literate Amherst graduate, became an associate producer.

The Golden today are able to roll a disinterested eye at any bank president and refuse his money. They are interested solely in quality productions and first-rate stories. They are now making a picture based on the book, Eddie and the Archangel Mike.

Unless you write your own story, you'll have to make at least a small cash outlay to become a producer. Five hundred dollars is about as low as you can get, since the first step is invariably acquisition of a story. Writing people are spoiled these days and demand pay for their wares. But the public libraries are stacked high with tales the high-priced producers never heard of, and bootlace operators are ferreting them out daily, tying them up with short-term

If Mr. O'Malley is considered ceptional risk, he can get as much per cent of the money he needs fr Security-First National Bank of Angeles, the Bank of America, Bankers Trust Company of New The interest will be 5 per cent, a picture itself will be security.

In a factory town where the hands receive wages running into sands a week, Mr. O'Malley do from now on find it too difficult the remainder of the money on p loans.

It all works out approximate this: A competent director will th for 15 per cent of the take. The d tor wants 25 per cent, and the l will get 45 per cent. That leaves cent to the entrepreneur.

And even if it costs Mr. O' \$100,000 to pay good writers to screen play out of his original m and \$350 to \$1,500 a day for stage he stands to make a fair-sized po money on his original \$500 inve

guard the peace
these sun-swept hills

the role of the red-blooded men who guard the National Guard. It's an historic and most significant in this proud organization and illustrious history.

The new National Guard's M divisions and groups, superbly equipped and highly trained, will be America's M-Day force of citizen-soldiers. Standing shoulder to shoulder with the Regular Army, they will be a stabilizing force in a restless world.

These regiments, with unit histories older

than the nation itself, are reorganizing daily under National Guard banners to resume their peacetime mission. Young men from every walk of life are joining up, men who measure up to high physical and mental standards.

These men will be the leaders of business and industry in the days and years to come. For service in the new National Guard teaches them the principles of leadership and gives them a chance to learn valuable skills that will serve them well in civilian life.

The National Guard needs many more alert young men to help it guard the peace. It offers a full day's pay at new high Regular Army rates for one night each week of Army training and for each day of summer field exercises.

Look for the "National Guard America" with Pat Williams, Wednesday, 8:30 P.M., 8:30-9:30 Network.

Many employers recognize that National Guard training helps make better employees. They further the National Guard's mission by granting their Guardsmen-employees time off for non-overhead training without sacrifice of income or vacation period. "Our National Guard helps guard the peace."

For full information about the new National Guard, contact the officers of your local unit, or write the Adjutant General in the capital city of your state.

Sam Goldwyn (center) looks over his awards with star Virginia Mayo and Donald M. Nelson, head of the Society of Independent Producers

At Enterprise, biggest new independent studio, employees get free meals, insurance, shoeshines and other pampering. Above, studio secretaries relax on the sun-roof during their lunch hour. Seated in the barbershop (below) are carpenter Lazarus Feldman and Joel McCrea

netted Mr. Wanger \$1,241,000. This was a pretty good picture, but Hollywood proves every day that the American appetite for screen entertainment is so voracious that it is almost impossible to make a film so bad that it won't show a profit.

Most new independent producers, like the Brothers King and Doc Golden, prudently start at the bottom with low-budget pictures that lend themselves to exploitation—sexploitation, the boys like to say. Some, like Bette Davis, Ginger Rogers, James Cagney, John Garfield, Constance Bennett, Paulette Goddard, Gary Cooper, Bing Crosby and an express agent named Charles Einfeld, start at the top.

Mr. Einfeld, to be sure, was no run-of-the-salt-mine press agent. He was vice-president in charge of advertising and publicity for Warner Brothers and is reported to have earned \$156,000 a year. But like many another employee, when he quarreled with his boss he found himself jobless.

The upshot of Mr. Einfeld's hurried departure from Warner Brothers is Enterprise, biggest, fanciest, and happiest of the new independents. Enterprise came about when Einfeld and David Loew, the movie financier, met at a dinner party, discovered they had time on their hands, and agreed to become producers. Their *modus operandi* has made their rivals bug their eyes in wonder.

Taking over six sound stages at the California Studio, a rental lot, Einfeld and Loew have established what at first examination appears to be a kind of country club with free lunch. Breakfast is served at the desks of all employees. Later in the morning, white-coated waiters urge extra cups of coffee and doughnuts on everybody, following up this service with hot tea or cold drinks in the afternoon. All cars parked on the lot are immediately seized and washed, for free. Shaves, haircuts, shoeshines, steam baths, manicures, and \$10,000 insurance policies are also free. There are no private dining rooms—all the hands eat together, catered to by a top-flight chef, no checks or tips allowed.

"All this and wages, too!" a worker in a rival studio moaned. "When I die, I want to go to Enterprise."

This largesse on the part of Einfeld and Loew is not entirely a calculated talent trap. It springs in large measure from Einfeld's social consciousness, which, indeed, inspired many of Warners' "Good Citizenship" pictures, and it represents revolt against the somewhat penal atmosphere of the major film factories. It has, however, served as a kind of daily coming-out party for a new kind of motion-picture making.

Percentage Lure Attracts Star

Enterprise started production with Arch of Triumph, a \$4,000,000 picture starring Ingrid Bergman and Charles Boyer, made possible by the new technique. Miss Bergman, who is by a dozen leagues the most desirable star in town and can write her own ticket, joined the brand-new and untried outfit because she receives not only a salary of \$175,000, her usual fee, but 37½ per cent of the profits. Erich Remarque, who wrote the story (which was serialized in Collier's), gets 20 per cent. Producer David Lewis 17½ per cent, and Director Lewis Milestone, two per cent.

Meantime, Einfeld and Loew let their friendly point of view be known to other stars. Barbara Stanwyck was attracted by \$150,000 and a percentage. Ginger Rogers and John Garfield, who produce as well as act, and Joel McCrea, who gets one half the profits from his films, also found it pleasant to be served hot coffee and percentages. And with this bright handful of star power as security, any Hollywood bank in its right mind would bust a gusset to lay cash on the

Enterprise barrelhead. That is precisely what happened: \$20,000,000, of the Bank of America put up the bite, is constantly available.

Envious screams of "Capitalism" echoed through the Hollywood when all this became known, but surprise has an answer. The studio nounced eight major production \$16,000,000 budget, is in business and cannot be accused of incorporating one-shots merely to escape taxes.

Apparently, the jaywalking jurisdictioned certain Hollywood acting tale incorporating individual pictures to take advantage of that 25 per cent capital gains benevolence, did not directly foresee the mood of the Department of Justice. There has been a crackdown recently, and all the legal are not yet clear.

Government Takes a Smaller

Still many a star has become producer and has legitimately profited from capital gains. Gary Cooper, who made a picture, for his own company and made a net of \$1,000,000 on Along Came Jones. James Cagney works half as hard and makes twice as much, as star and backer of a small company headed by his brother-in-law, Bill. Lester Cowan formed his own company for The Story of G.I. Joe, though his interest as a stockholder in it for \$1,000,000. The government let him pay \$750,000. The tax on a million salary would be \$900,000.

Bette Davis and Errol Flynn, once under the thumb of Warner Brothers, now have deals which allow them to become producers of their own picture a year on their own lots. Their deals are not so much money-making arrangements as they are concessions to the stars' demands that once in a while they be allowed to make a motion picture the way they think a motion picture ought to be made.

If some of the preceding are not enough, about small-potato producers, the country-club studio seem to make the independents as a whimsical and amusing lot, consider the Society of Independent Motion Picture Producers, headed by Donald Nelson. Mr. Nelson, who was production Administrator during the war, was unquestionably the second most powerful man in the world, called Hollywood at the behest of David Selznick, most distinguished of the independent producers.

These independents, who include Sam Goldwyn, Charlie Chaplin, Hal Roach, Pickford, Sol Lesser and other superb operators, fetched Mr. Nelson as president of their society at high largely because they feared the big guns of the majors—Warner, Paramount, Universal, Twentieth Century-Fox, Columbia and RKO.

But Nelson, who started as an industrial chemist and rose to the board of manship of Sears-Roebuck, disappeared quickly enough that there was no fear from the majors. The trouble instantly saw, was to get the daggers of the independents away from each other's necks.

Early in his administration, even before he had succeeded in getting the members of his group to speak to each other, Nelson ran into Petrillo trouble.

James Caesar Petrillo, as czar of the musicians' union, informed the independents that, whereas musicians could afford to work for the major studios at \$13.30 per hour, they would have to work for \$25 an hour for a minimum of fifty hours from such casual customers as the independents. The ultimatum was to give effect in four days.

Staggered by this demand, Nelson took a plane to New York. He had a factor in his favor, in that he and I had come up together on Chicago's South Side. He opened the conversation with "Jimmie, I knew you when you

You take big slices off your delivery costs with this modernly engineered Studebaker truck

a handsome truck to look at. It's a beauty and a performer.

The pay-off distinction of this hustling, husky, heavy-duty-model Studebaker truck is its low-cost mileage. That's why many of the nation's most truck buyers rate it right at the top.

Powered by unique Hy-Mileage engine—big savings that this Studebaker truck chalks up begin with its fine 6-cylinder power plant—named "Hy-Mileage" engine.

That engine is a triumph of years of intensive research. It's an honor graduate of Studebaker's great technical laboratories and 800-million-dollar proving ground.

A truck with many stand-out features—this heavy-duty model and all other Studebaker

trucks, you get numerous modern performance helps that are included in the list price.

Among these are automatic choke, automatic spark control, oil bath air cleaner, adjustable octane selector, oil filter.

Moreover, each cab has a dome light; adjustable window wings; two arm rests and adjustable seat; dual sun visors; dual windshield wipers; tight-gripping rotary door latches—all at no extra cost.

Plenty of people want all this value that Studebaker trucks offer. So be forehanded. Get in touch with the nearest Studebaker dealer now.

have a seat in your pants. Let's get together."

This brisk approach won a grin and a delay, concessions not even the President of the United States had been able to win from Petrillo before, and the delay gave Nelson time to work out something. What he worked out appears to be far more than a solution to a musical labor problem, but a formula of vital importance to independent motion picture production.

Nelson formed a co-operative, full-time, all-year-round orchestra of fifty men—to be paid at major-studio rates. The novelty of any kind of co-operation stunned the independents, and awed the musicians, too, but charm and argument won out for Nelson in the long run. If you have seen Selznick's *Duel in the Sun* or Goldwyn's *The Best Years of Our Lives*, you have heard the co-operative orchestra. Playing together constantly, the only recording orchestra in Hollywood that has this advantage, it promises to develop into an unusual instrument.

Extends the Pooling Principle

With this problem licked, Nelson sailed into his independents again with an idea. The revolutionary notion this time was that they share not only an orchestra, but everything. When the independents recovered from shock, they realized that by pooling their resources, such as expensive properties, stock shots, and equipment, they would not only save enormous sums of money but make available to each producer facilities comparable to those, say, at Metro-Goldwyn-Mayer, largest studio in the world.

The next idea, which the independents swallowed with smacking lips this time, allowing that Donald Nelson was a remarkable fellow, was to catalogue personnel, to list stage space and make it available to members instead of concealing it, and to start organization of a story analysis office.

All this and labor peace, too, is the happy lot of the 25 independents under the Nelson regime. No independent studio has yet been closed by strike, due largely to Nelson's co-operative approach. The indies revel in freedom, but are now thoroughly convinced that

in union—or Nelson—there is strength.

Mr. Nelson's clients, of course, sent the cream of the minors. All be producers who come to town ambitions of setting Vine Street do not enjoy the happy experience of easy financing and quick success.

Louis K. Ansell, of St. Louis, is in point. Mr. Ansell talked himself into motion picture producing. Owne a prosperous chain of theaters for years, and a first-rate exploitee, Ansell was in the habit of telling his friends that producing would be a nice place to live. Early last year, Mrs. Ansell announced that she was tired of hearing him brag, and that she thought California would be a nice place to live. Chall Mr. Ansell moved on Hollywood.

He had neither story, star, nor but he had cash. He found, to his dismay, that cash was no great thing in that stage space was rare, and that wanted to peddle stories to him who knew at first glance were not exploitable. It took him several months to touch with William Rowland, the actor, who did have an idea. Rowland thought it would be a fine thing to do a picture about how the Japanese mistreated white women in Shanghai. Ansell saw box-office possibilities in a theme and went for his pocketbook.

Mr. Ansell's trials in producing his first picture constitute a saga of romance and grief. For stage space, he was compelled to rent an abandoned building in Ensenada, Mexico, transporting equipment from Hollywood. He was afraid of the Mexican army, which he fully maneuvered around him and down his electrical connections. He fought the Mexican unions and the United States unions demanded jurisdiction. A steam heating plant broke down and actors caught colds. He had to buy a camera for \$3,000—and another same price in case the first camera broke apart. His four weeks' schedule dragged into two and a half months. He spent \$800,000 where he expected to spend \$225,000.

But Mr. Ansell now has a full-motion picture, called *Women in Night* because titles like that always sell. He is happy, and he is a producer even if he had to use cash.

THE END

us seek out a piece of soft earth,
d from the night winds," I said,
re I could finish we turned a bend
cky road and came upon a sort of
between two crags and it was
with little, gnarled trees. And
ne such tree were three gaunt dogs
vered with their muzzles pointing
while two men sat horses and
l. But the quarry was none such
should hunt. for it was a girl,
more than a child, who sat in a
of the tree, barelegged and ragged,
kempt hair about her face. She
nb with terror and gazed down at
ut dogs and the laughing men, and

when she saw Christoforo and me she
stretched out an arm piteously toward us.
Now the customs of the country are the
customs thereof, and it were wiser for
strangers not to interfere with them, but
it did seem to me that to hunt a maiden
with dogs were an evil thing even if the
maidens were brought up to it and ex-
pected it. It goes against me to see a
weak thing harmed. So I turned aside.

As I approached nearer I saw that the
two were young and one was very hand-
some with pointed beard and azure cloak,
but the other, though also dressed as a
young lord, was black and ill-favored
with bushing brows and heavy shoulders.
They turned in their saddles and stared at
me arrogantly.

"What's to do, young sirs?" I asked
gently.

"A thing that concerns thee not," said
the ill-favored one.

"That is to be seen," said I. "I be
stranger here. In my own land we do not
harry maidens with dogs, nor tree them
like wild beasts."

"In this country," said the handsome
one, "we do what gives us pleasure."

"Hath the girl done ill to thee, or is she
guilty of some crime?" I asked.

"Oh, sir," said the child piteously, "I
have done no evil, and I have not
wronged nor sinned against this gentle-
man. My only fault is that I be young
and not ill-favored and a maid, and desire
to remain so till God sends me a hus-
band."

"Go thy ways," growled the heavy one,
"lest I put the dogs upon thee for a
meddler."

To threaten me is an ill way to gain my
favor or to cause me to desist from any-
thing, and already I was burning hotly at
sight of the maiden's plight, and the evil
intentions of the young gallants. So I
said in high tones, "Wilt send thy dog to
do a task thou thyself fearest to under-
take?"

I RODE nearer to the tree, hoping
they would do something about it.
Whereupon the one with the eyebrows
and black beard spoke sharply to his dogs
and pointed to me. They leaped toward
me, slaving and growling in their
throats. I snatched forth my sword, and
as the first gaunt animal sprang, I split
its skull cleanly, and Christoforo did as
much for the second, and then my horse
reared and as the third dog leaped I struck
at it with downward sweeping blow and
severed its head from its trunk. The two
gentlemen drew their swords, when I
heard Christoforo's voice.

"Ho, sweet gentlemen!" he said in his
unmusical voice. "Ho, my gallants who
chase young maidens into treetops! Stand
still prettily, Messires, and nibble your
thumbs, for, by my patron St. Christo-
pher, otherwise will I let fly at you with
leaden bullets, and with pleasure."

He was standing beside his mount
menacing them with his harquebus, and
they did pause irresolute.

"Wouldst dare," shouted the swarthy
one, "to threaten the Count of Monte
Cavallo? Wouldst dare to pull filthy
trigger upon Piero Riario, intimate of the
Cardinal Passerini?"

"Aye," answered Christoforo, "and
upon the Emperor himself if he came
riding at me sword in hand. A gentleman
is equally dead if he be slain by king or
swineherd. So go!"

They consulted together, scowling, but
had no stomach to charge a weapon
loaded with powder and leaden pellets.

"Scum," said the handsome one, "for
this I will have thee flayed alive."

"That is as God wills," I told him, "but
on this occasion you will do nothing."
As I spoke I caught sight of movement
behind the rocks and saw peering a most

How AO Polaroid Day Glasses Filter Reflected Glare!

- A** Bright light from the sun strikes a surface.
- B** Some rays bounce off as glare; others reflect to the eyes as useful "seeing" rays, show color and detail.
- C** Ordinary sun glasses dim both glare-light and useful light. Glare remains to hide detail, to dilute true colors.
- D** AO Polaroid Day Glasses reduce annoying glare, reveal detail, transmit undiluted color rays.

Get my New "Dutch Boy" Blended Paint!

In Colors or White
It's Blended just Right
To Keep Your Home Bright

It's true of so many good things . . . blending brings out the best.

And now the "Dutch Boy" brings out "Blended" Paint!

Here's a completely new line of "Dutch Boy" House Paint . . . in colors and white . . . blended by the experienced hand of the "Dutch Boy," whose fine paint has protected America's homes for generations. Blended of the right combination of the right ingredients to make your home lovely — and keep it that way.

Special Blends for 3-Way Lasting Beauty...

one, but *three* different services are blended of house paint. *Blending* gives the right paint for each purpose. *Blending* gives you full beauty-life from the start.

Here's the "Dutch Boy's" 3-way service:

Bright White, blended to clean itself and stay white.

Sparkling Tints, blended to stay fresh and true.

Gay Trim Colors, blended to stay glossy and brilliant.

is as accurately blended as a doctor's prescription, to do its own particular job

. . . to play its part in keeping your house cheery and bright.

No higher quality paint has ever been sold under the "Dutch Boy" name.

These new "Dutch Boy" Blended Paints are the result of more than thirty years of weather testing with all types of house paint . . . the longest continuous, outdoor paint testing project of its kind. They're blended to prove that, in colors as in white, "Dutch Boy" is *Good Paint's Other Name*.

Preview Your
Color Scheme at Your
"Dutch Boy" Dealer's . . .

Picture your home in the "Dutch Boy's" beautiful new blended paints. Preview your color scheme from this handy, miniature-house display at your "Dutch Boy" Dealer's. Choose from smart combinations of brilliant white, lovely tints, bright sash and trim colors.

1. Dazzling White, Blended to Stay White: The beauty of this "Dutch Boy" Bright White is that it's *self cleaning*! The surface continually renews itself — permitting rain to wash away dirt. It covers amazingly well and gives a dazzling white exterior finish.

2. Sparkling Tints, Blended to Stay Right: These fresh, lively "Dutch Boy" Tints are specially blended to keep their sparkling good looks . . . to assure lasting color and uniformity.

3. Gay Trim Colors, Blended to Stay Bright: "Trim" is the word for the "Dutch Boy" Sash and Trim Colors. They're blended to hold their glossy brilliance — blended for true color permanence. Ideal not only for shutters and trim, but also for garden and porch furniture.

Special "Dutch Boy" Blended Primer: An undercoat of exceptional sealing and hiding power that holds fast. When used under a finish coat of "Dutch Boy" Bright White or Tints, you get an outstanding two-coat paint job, even on unpainted wood.

malignant face distorted with hatred. "Also, were I in your shoes I would touch spurs to your horses and ride abruptly. For behind you lurk enemies more dangerous than ourselves."

Even as I spoke a thrown stone bounced off the ribs of Riario's steed, and harsh, wild cries arose so that the hillside seemed alive with men. The two glanced behind them, and he of the beetling brows uttered a curse. The air filled with clods and stones, and the pair, at disadvantage between us and these men of the hills, clapped spurs to horses' flanks and galloped away.

I RODE beneath the tree and stretched upward my arms, and the maid lowered herself into them trustingly and I placed her upon the saddle before me and covered somewhat of her nakedness with my cloak. She was small and slight, but well rounded withal, and with pert, tear-streaked face.

"Oh, sir," she said in her gratitude, "both morning and night will I pray for thee—for thou hast preserved to me what I hold most precious, and I am beholden."

The tattered, gaunt, fierce mountain men vainly pursued the pair of lordlings, but presently returned to the tree. There were a couple of score of them, hairy, with knobby, protruding bones, and there was scarce a weapon among them, save clubs and a few bows and knives. They surrounded our horses, seeming more animal than human.

"Who be these creatures?" I asked of the maid.

"Homeless ones," she said bitterly. "So doth war betwixt princes deal with those who desire but to till the soil and live in peace. And, being driven to the shelter of the mountains, we be hunted here like vermin by My Lord Piero Riario and his men, as thou didst see me hunted."

"Aye, young sir," said the leader of the pack. "But give us arms; give us wherewith to defend ourselves and there will be a different story." He advanced to my stirrup strap. "The maid is my daughter," he said, "and I be chief of these. For what thou didst this day thy name will be remembered in these hills." He turned to his followers. "Look well on these two," he shouted. "Print their faces upon your memories. Always they shall find welcome in these hills, and refuge and shelter. And if need be, men to follow them."

"It was no great deed," I said to him, "and requires no thanks."

"We be the judges of that," he said. And then, "Thou hast made a potent enemy, young sir. You have thwarted and shamed him, and he will be revenged upon thee. This night his men will search for thee and lie in wait for thee. No road will be safe for thy passage. What is thy destination?"

"We fare to Trebbio," said I, "to My Lord Giovanni de' Medici."

"General of free companions," said the man, and then with dour humor: "We also are free companions, like to his Black Bands in all things except that we starve for lack of food, and die for lack of weapons. Of him we hear much good, though his men be playful and overrough at times." He became grave, even courteous: "Come with us, young sir, and we will see thee warm and safe through the night. On the morrow we will guide thee by secret ways to Trebbio."

There was nothing else for it, so we suffered them to take our horses by the bridles and lead us by fearsome paths into the secret heart of the mountains where was their lair. And far into the night we sat with them about a blazing fire and listened until our hearts were sore to tales of horrid suffering and cruelties that could be inspired only by the Father of Evil. The little maid whom we had saved from ravage sat beside me, and from time to time, with her great hungry eyes she looked up into my face like a

starved dog that finds unexpected friendship. And then we slept, wrapped in our cloaks while the mountain men served the fire to keep us warm.

In the early dawn, when the sun had scarce risen above the circling crags, I was aroused by the rough hands of the leader of the mountain men and bidden to make ready for our journey.

"The rascals of Piero Riario are afoot," he said. "My men have watched through the night."

"My thanks to thee."

"There is scant food," he said, "but we share it with you."

"Nay," I said, and then to Christoforo: "Bring forth thy pouch of bread and sausages. And the wine. We will not take from these who have so little."

So we breakfasted, sharing with the girl, whose name was Beatrice, and her father, and left our bottles of wine for their future use. The maid was silent, crouching in her rags, and all the time staring at me with big, hungry eyes so that I was discomforted by it.

Then we mounted, our mules at our horses' tails, and the captain of the mountain men got up on a scrubby forest pony and led the way.

sword, and pike by pike, and I bow, until one day we shall have it. When that day comes, there reckoning writ in blood and fire. called robbers and masterless men doers of evil deeds. It may be so must keep ourselves and our women by food—against the day when we shall be ours."

He was a bitter and dangerous but the fault was not his, but rested the souls of them who had driven it. He remained with us through day and through the night. At night the day that followed he left us. "The mountains are free to thee, thine. Mention the name of Tasso is what men call me, and thou goest out scathe. Or if ever thou receive service of me, speak my name and wilt be conducted to me wherever I am. What I promise, that I perform."

"My thanks to thee for thy ship."

"A day may come when thou wilt need it," he said, and rode away leaving me to proceed upon the traveled road.

So at last we came to Trebbio, a fortified and grim castle in the Mugello district of Santa Maria. There was

"Can you speed it up, Professor? The air is a bit bumpy tonight"

COLLIER'S

CARL

"Farewell, Beatrice," I said, "and may your desires come true."

She grasped my hand in both her small ones and pressed her lips to it, and again looked wide-eyed into my face.

"For such as I am," she said, "there is not hope of happiness, but only a prayer to escape from evil. I pray God keep me undefiled against the day of the coming of love," she said, "and then to bestow such love as woman ne'er gave to man."

I was abashed and knew not what to say, for never before had I heard woman or maid speak out so straitly of her craving to love and to be loved.

"Heaven send thee thy wish," I said, and so we rode away, with her standing slim and straight upon a rock gazing after us with haunting eyes.

I was thankful that our horses were sure of foot, for we were to follow frightening paths that day, and thread defiles that turned the heart to water. Dark abysses yawned and torrents raged, but following close upon the heels of our conductor we passed in safety.

"We pass far to eastward of the hold of My Lord Piero," said the mountain man, "a hold that one day I shall tear stone from stone. For he hath done much cruelty to us and to others. Aye. We add to our store of weapons, sword by

ing for My Lord Giovanni with a little meadow and garden, with stables and other buildings for grain and animals. It was a fortress of massive walls with moat and drawbridge. Mounds and forests hemmed in this strong place. Sentinels, wearing the black shoulder and markings of the Black Bands, on guard at the drawbridge.

TO THESE watchful men I named my name and craved admission to the presence of My Lord Giovanni. He bade to wait while one clanked through the gates and disappeared within the castle. Anon he returned and motioned me to follow him, which I did with Christoforo at my back.

My Lord sat at ease in such a room as you would expect to find in so great a structure, and on either side of him sat great dogs whose noble heads he favored. His keen eyes scrutinized me as I approached: I was in doubt as to what my reception would be good or evil.

"What brings thee to Trebbio, Sentinel?" he asked.

"Necessity, My Lord," said I, "because I had no alternative."

"This necessity came upon thee suddenly," he said.

"My Lord," I said, "I have no

thee nor upon thy hospitality. I because I was bidden to do so, and so I knew not where else to go. I that my coming is unwelcome, and I give permission to take my leave." Her eyes studied me a moment without speaking. "Art a stiff-backed fellow," he said. "Before we discuss the matter of my coming, tell thy tale."

MY PRIDE forbade me to mention the service I had done him or our conversation together in the Salvati Palati. But I told him of the mysterious letter and of my interview with Cardinal Passerini and Ippolito, and of the convent, the Annalena Convent," he said musically. "The abbess sent thee?" I saw her not. 'Twas a woman who came in darkness. It was this woman, intending to be a sibyl, who diddle me carrying the letter. Soldiers of the final Wolsey sought to take her prisoner in her pavilion at the fair. She escaped to the forest where I came upon her and her dwarf and took them home with me to stay in safety. I saw her next

soul is endangered by her magic."

His eyes kindled and he smiled faintly and said, "I would like to feast my eyes upon this uncanny woman." He opened his mouth and called loudly, "Hey, Filippino," and a servant entered.

"Bid my sweet wife hither, if it suit her convenience," he directed. And then to me: "I have deep faith in my wife's wisdom and judgment of men with strange stories. Shalt repeat thy romance to her and we shall abide by her judgment."

"I am no teller of lies, My Lord," I said firmly.

"At least thou dost relate most divertingly," he answered.

So, after a little time entered the gracious lady who was wife to My Lord, and I was required to repeat in detail all that I had told him. While I talked she studied me gravely and made no interruption. At the end My Lord Giovanni said, "Now, my sweet, what thinkest thou of this strange tale?"

She did not speak at once, but studied my face steadily, and her eyes met mine and I did not flinch from her gaze.

"He hath plain, honest face," she said

My Lord Giovanni of the Black Bands, and though suffering came of it, and danger and great agony of mind and heart, I would not undo it, nor have it other than it was. For though My Lord was at times a fearsome man, ready to anger and harsh to those who did less than their duty, I came to love him more than I ever have loved any man. And as for his gentle lady, I became most devoted to her. Unhappiness and tragedy were her portion. Adoring her husband, she was ever separated from him, lying lonely at night, and not knowing from one minute to the next when word would come to her that he would never come again. Truly a gracious and noble woman.

My sweet lady seemed to find pleasure or solace in my society, and she was much alone during the daylight hours. Little Cosimo, their son, took to me nightly. While My Lord hunted and exercised his men, My Lady turned the talk often to England and the safety enjoyed by our island from jealous invasions, and of our pleasant customs; but mostly her mind turned to My Lord Giovanni, for she loved him greatly.

"The Pope," she said somberly, "would see him dead. There stand but two boys between my husband and the rule of Florence," she said. "Ippolito and Alessandro. Pope Clement fears the Florentines, being a turbulent people, will have neither of them, and will turn to my husband."

"He hath often declared his love for My Lord," I said. "And employs him constantly."

"He dissembles," she said. "He is a devious man and full of deceit. He promises and withholds performance, and treachery is in his heart. It is true, Ser Pietro, that he employs my husband, but always in places of peril, hoping that My Lord's rash valor will bring him to his death."

"He is the greatest soldier of his age," said I, "and the most chivalrous knight."

"Aye," she answered proudly. "There be none like him. But he is rash and covetous of glory. He throws himself headlong upon the enemy."

"His men love him," I said.

"Why should they not?" she said, bitterness still in her soft voice. "Always his first thought is for them. For their feeding and their equipping and their comfort. They are My Lord Giovanni's children to nurture and cosset and defend. Were it otherwise, would they cling to him when there is no money for their pay? I find it in my heart to be almost jealous of his ruffians."

A PART of the Black Bands were in Fano, on the Adriatic, lawless in their idleness and causing great annoyance to the people. They caused great trouble to My Lord. Letters of expostulation came from His Holiness, so urgent that late in August we set out for the sea to see what could be done about restoring discipline and quelling the turbulence.

The salt smell of the sea came to us as we neared the little port in midafternoon, and soon we entered the camp to be received by the cheers of the soldiers at sight of their beloved general. Never have I seen so hard-bitten a company, nor have I seen the equal of the fourteen captains who were summoned forthwith to My Lord's quarters.

While they held council I was free, and as is the way with young men, I was curious to see strange towns and new peoples, so I sought out Christoforo, and together we strode down into Fano, seeking sights and amusements.

The people looked askance at us and gave us room and muttered, but we paid no heed and walked onward to the wharves to look at the sea and the ships, of which there were few. As we stood beside the lapping water a cockleshell put out from a low, brightly painted galley that was moored a hundred yards

"Take off your hat, Harry! Here comes the flag!"

HANK KETCHAM

the street beside the Palazzo Vecchio where she warned me of the guards of Cardinal Passerini who came upon me suddenly. Before they came at me to arrest me I returned to her the packet she given me in England. She was clothed in an apprentice boy. She awaited me in the convent, not as witch nor scullery maid, nor apprentice boy, but as high-born lady, richly arrayed. It was she who begged my coming hither."

"Never," said My Lord Giovanni, "I have heard more unlikely tale."

"I am loath to believe it myself, My Lord," said I.

"What further befell?" he asked. "A story so romantic a tale must have wonders in stock."

"I told him of my experience with Piero in the mountains, and of how he so led me to safety."

"Thou shouldst write it down with odd rhymes and make a romance of it," he said gravely. "Who is this woman, girl, or witch who doth appear in various disguises?"

"I know not, My Lord, save that I call her Betsy."

"So she sent thee to me. Doubtless she has some message."

"With none, My Lord." I spoke then with bitterness against her. "She did not come to me and speak hardly to me and tell me I was but a tool to be used at will, and a fool, to boot. But, My Lord, she was beautiful beyond words to describe and cast a spell upon me. I fear her, My Lord, and most wisely do I detest her. But my

softly. "He is a doer of deeds, and is a simple man without the imagination to invent such a romance. So I read him. There is forthrightness in his eyes, and not guile. My Lord, it is my rede that he hath related these things as they befell, and that he is true man."

"So it seemed to me," said My Lord Giovanni, "but it almost passeth belief. Thou hast heard, Ser Pietro. The judge hath listened to thy case and handed down her judgment, by which I abide. Thou art welcome to Trebbio, my friend, and he who seeks to spirit thee away will have his hands well filled."

"I thank thee, My Lord," I said. "I bring a fellow, this Christoforo, who greatly desires to enlist under thy leadership."

"He, too, is welcome," My Lord smiled. "He craves fighting, eh? He shall have his gizzard full of it. But thou, Ser Pietro, wilt also wear the uniform of my Black Bands?"

"I be a merchant," said I.

"But a most potent one, as I have seen."

"It seems," I said slowly, "that I have no alternative. Besides I read it in the crystal ball. Man cannot escape his fate, nor shall I struggle against it. If it please you, My Lord, I am your man, pledging fealty and loyalty to your banner."

"First," said he, "thou shalt serve as volunteer until thou art trained in our ways and in the art of war. Then we shall see, Ser Pietro."

So it was that I entered the service of

"Like my new hat, Joe?" she asks. "The boy friend says it gives me that angel look."

"Humph," I snort.

"Why the gloom, sour-puss?" she asks. "Indigestion?"

"No," I shoot back. "It's just I'm thinkin' if you don't reline those brakes, you may really look like an angel."

"Oh," she says casually, "I can still stop can't I?"

"Not quick enough or easy enough," I reply.

"Well, it does take a lot of pressure to stop this old bus," she admits grudgingly. "Will new lining make it easier to stop?"

"My Grizzly Brake Lining will," I tell her. "Plus giving you greater stopping safety, Grizzly also permits you to slow down and stop with a 'soft' pedal. That's why Grizzly is the perfect lining for both men and women drivers and—"

"Whoa," she laughs, "that's enough. Reline 'er with Grizzly, Joe, and I'll drive relaxed!"

the new Cooper Safety- Grip

- ★ 5 Plies (instead of 4)
 - ★ 100% Rayon Cord Body
 - ★ Safety-Grip Traction
 - ★ More Natural Rubber
 - ★ Longer-Wearing Tread
 - ★ Road Hazard Guarantee*
- *(24-months)

Step on the gas and the new Cooper Safety-Grip takes you over the road safe as safe can be. You're riding on a tire with 5-rayon plies — springy and tough and actually stronger than structural steel.

Step on the brakes and you stop — safer, quicker, straight-in-line. You're riding on a tire with 9 flex-action ribs, each rib traction-slotted to hold the road with a real safety grip.

A safer tire like the great new Cooper Safety-Grip naturally sells for more because it gives so much more life-saving protection. Yet the cost of a change-over will be less than you think. See your Cooper dealer soon for complete details.

Look for this sign whenever you need tires. It identifies your Cooper tire dealer, the man who knows — "You Can't Buy Better Tires To Save Your Life."

COOPER TIRE & RUBBER COMPANY
Factories at Findlay, Ohio

from the shore. We could see that its passengers were a monk and another in plum-colored cloak.

"Ho!" exclaimed Christoforo, whose eyes were of the sharpest. "It is he!"

"It is who?" I asked.

"Him who doth hunt damsels with dogs," he said.

"The Count of Monte Cavallo? Piero Riario?"

"The same," he said. "If his anger has not cooled, this is an ill spot for us."

But I lingered, for now the faces of the two were more distinct. But it was not at Riario that I peered, but at the monk, his companion. For I recognized that round, jolly face with the keen little eyes of a pig, and the sight of it gave me unease. It was the man I had caught in the act of rifling my baggage in the inn at Livorno.

"Draw back to a spot where we may see and not be seen," I said, and we retreated to the archway of an ill-smelling warehouse, where we stood in the shadows to watch their landing. They scrambled upon the wharf, the handsome young gallant and the brown-robed monk.

"Where be those who were to meet us?" Riario demanded surlily.

"Patience, My Lord, patience," said the monk. "Daylight remains. Our business requires darkness."

"I like not this chase of the wild goose," said Piero.

"But if there be a beautiful, sleek goose at the end of it?" said the monk slyly.

"Again I ask you, how dost know she is here?"

"I know neither that she is here, nor that she exists at all," said the monk. "We do pursue a phantom and a mystery. It may be we pursue a wisp of air. Yet who could make such trouble as has been made but a woman! Who could accomplish what has been accomplished but a beautiful woman, using her beauty to cozen weak men! I am but the hunting dog of His Holiness, but my scent is keen."

"No one has seen her," Riario said.

"There was a woman in England. There is evidence to that. That she was in Florence, I am certain, and had skillful hand in the rescue of the Englishman. He was a great, wholesome dolt, incapable of helping himself. You may recognize the painting of Botticelli by the brush strokes, even though his name be not signed to the picture. So you may recognize the plottings of this woman by the identical deftness employed."

"You are positive she came to Fano?"

"I am positive of nothing. I but fol-

low the faint scent like a good I hoping it will lead me to the game. subordinate noses everywhere, even Fano. They have been sniffing. It came to this place a strange, beautiful woman, they will lead us to her."

"Why should she come hither?"

The monk shrugged. "In my business one follows chance. You guess. One hundred times you are wrong, but if you are right once, it pays for the trouble. I say the Englishman went to Todi. Now, Giovanni will come here upon the heads of his wolves and them from biting innocent folk. My guess is the Englishman comes with him. There is some bond betwixt this Peter Christoforo — he pronounced my name the English way — and this woman. It is a slender thread, yet I follow it hoping it being the best that offers."

AS HE finished speaking I heard a soft pad of hurried sandals upon flagstones, and a second monk, a lantern-jawed man, joined My Lord Piero and the fat one.

"At last," said he who boasted of being a hunting dog for the Pope. "Have you been diligent?"

"To a town where the Black Band camp," said the monk, "come strange women to pander to their lords."

"You have winnowed the chaff to the grain of corn?"

"There is one, Brother," said the emaciated monk.

"Why single you out this one?"

"Because of an oddity. In such a town where women be, it is an oddity indeed. She doth not ply her trade. She is from Florence, but since her arrival no man has passed her door. She cometh not to her house, and none has seen her. Also she is attended by a dwarf. A deformed, ill-tempered gnome, who can be persuaded to talk even with silver."

The Pope's hound grinned across his broad face and spread fat hands. "It seems," he said, "we have come to the end of the chase. Now remains but to set dogs upon the quarry. It will be my part, My Lord, to provide the pack."

"They await. Half a dozen fellows."

"It goes well. Let us to an inn, for my stomach clamors within me. Then, in the darkness covers the deeds of men who carry out the prank. Aye, wearing badges of the Black Band so the deprivation shall be laid at their door."

They moved away together, and Christoforo and I, giving them time to go some distance, followed at their heels.

"Now what is this affair?" Christoforo asked. "And how art thou concerned?"

"Oh—let's stay here tonight and play games"

it? I heard mention of an Englishman."

"I am concerned to thwart it," said I shortly. "We will follow them."

"I will get some of the companions," Christoforo said. "They will be glad of the frolic."

"Four will suffice," said I.

We followed Piero and the monks to an inn where I remained on watch whilst Christoforo went in search of reinforcements. In an hour he returned with four companions and we awaited the coming of nightfall.

AS NIGHT descended, half a dozen ruffians armed with swords came to the inn and joined Riario and the monks. I drew our little party together. "It is not enough," I warned them, "that no harm shall come to the lady. But none must see her face to recognize her."

Though it was my duty to hate and to fear her, I was strangely rejoiced that Betsy was near and that I was to see her once more—even though it was to be flouted again. I rejoiced that I was to fight for her, because it gives a sort of exaltation to a young man to know that he is going to draw blade for a lady. I did not say that I loved her, but she had put a charm upon me. I do not say that I could not have loved the girl Betsy as I saw her in the forest and in our farm kitchen, but I was afraid of her, and feared that my hankering after her came more from the devil than from heaven. Besides which her mind was too sharp and subtle for the wife of a merchant in woolen cloth. My mind buzzed with it all, and I was unhappy.

Before the moon rose, the party of our enemies arose from their food and wine and set off upon their errand. We followed as closely as we dared, concealing ourselves as well as we could manage. There was much roistering in the streets against which the good citizens had barred their doors and closed the shutters of their shops, but we passed through it without argument until we came to a part of the town where the houses were scattered.

I saw the gaunt monk pause before a house and point to it, and Piero Riario went to its door and pounded with the pommel of his sword. Whereupon I ordered my companions forward and I was put to it to keep ahead of them—they were eager for a brawl.

"What clamor is this?" I shouted, as we came up behind the party.

Riario turned and in the beginning did not recognize me. "Attend to your own concerns, my friends," he said. "This is a private matter."

"There be two minds about that, My Lord," I said. "Come away from the door."

"I will come to thy regret," he said between his teeth, "if thou dost not cease to meddle."

"Then I will have to endure it," I told him. "If thou dost not come to me I will come to thee."

He stared a moment. "The Englishman," he said to the monk, and he leaped from the door and came at me. He was no weakling, but a man able to wield sword with strength and skill. As he and I closed with each other, our followers plunged into a melee of clanking blades and panted curses and there was a fight of it, with the monks squalling on the fringe.

As our blades crossed, Riario cursed me for a meddler. "I'll split thy heart," he said between his teeth, "and then have thy woman."

"Save thy breath for the business," I told him. "Art like to need it."

I found I was like to need my own breath as well, for he was strong of wrist and skilled, and he fought with rage. We thrust and parried and slashed at each other, with neither having the best of it until his ruffians found themselves no match for the trained veterans of the Black Bands, and I was aware of feet

running in flight, and I saw hesitancy in his eyes.

"I have no desire to kill thee, him. Take to thy heels while time and learn to make war on stead of women."

He gave back two paces and beyond me. He was alone, for two men lay on the pavement, and had run for it.

"This is not the end of it, English," he said arrogantly, turning on his heel.

So I let him go, and to my eye regret: for, had I slain him my let him be slain that night, I and would have been spared much sorrow and heaviness of heart, and mo one good man now dead would I have mained alive.

The monks would have followed but I seized the fat one by his robe.

"Thy scent is too good, hunting I said. "Beware where thou dost sniffing hereafter, lest I cut off thy nose to stop thee from smelling at all."

He grinned at me impudently. "Englishman," he said, "either thou hast brains than I credit thee with, or hast luck. With brains I can deal who can cope with a man endowed with luck!" He paused and regarded me. I thought, without malice even though he had thwarted him so sorely. "F said he, "thou hast a very special gift for making powerful enemies. L thyself hereafter. Get thee back to thy land, Peter."

"There is nothing for which I thank thee more heartily," I said.

He passed away from us and I went to my companions. "Keep safe guard of them, while I complete my errand." So I went to the door and upon it. "Betsy," I called. "It is I, Carew. Let me in. I would have word with thee."

BOLTS were withdrawn, a chamber opened and then the door swung cautiously to disclose the mistress of the dwarf, John-Peter. He was very fierce, with a great sword and hands that were longer than himself.

"Let me in, John-Peter," I said. "I must speak with your mistress."

"Away with you," he growled. "Speech with my mistress is not for thee."

"Stand aside," I said impatiently. "I will take thy sword away from thee and belabor thy backside with it."

He glared at me malevolently, stood aside to let me pass, and bolted and barred the door behind him. Candles lighted a room ahead of me. I strode into it. There stood Betsy, princess now, nor a 'prentice, nor a maid—but garishly and seductively arrayed so that she might be mistaken for one of those women who gather about the campments of soldiers.

"I would see thee clad otherwise than this," I said shortly.

"The English," she said, "are so prudish."

"If," said I, "it be prudish to reveal chastity of woman and stupid to do it, then we be guilty," I answered.

"A lark," she said, "may wear feathers of a hawk and still be a hawk. Come to thine errand, if it be a purpose for maiden's ears."

I ceased to bandy words with her because she would always have the better of that sort of combat. "Didst hear sound of swordplay in the street?"

"I heard it, but deemed it but a brawl betwixt the Black Bands and the monks."

"It was My Lord Piero Riario and his ruffians, urged on to seize you by a certain monk who boasts of being a hound dog for His Holiness—the plannist which I did overhear by chance."

"And you flew to my defense like a knight of old," she jeered.

"I know not why you speak to me and flout me and strive to make me

as a figure of fun," I said. "For I have done thee no despite, but have even been some small service to thee."

"There be many things you do not understand," she said, "and the first of them woman." She pressed her lovely lips together and became grave and concerned. "How did My Lord Piero know I search for me here? How did this monk become aware of me? Did either speak my name or anything about me?" "Nay," said I. "Thy identity is hidden from them as it is hidden from me. But this monk is a dangerous man who doth put little things together to make a big thing. He knows not for certain that you are at all, but he has reasoned that there must be such a woman. He follows slender chances and faint hopes." And I told her of what I had overheard.

Her brows drew together. "A skillful and dangerous man, this monk," she said thoughtfully. "And so you collected me and came hither to save me."

"As I would have done for any woman," I said.

"I am sure of it," she said. "Oh, I am very sure of it. A most chivalrous and gentle—merchant."

"Why are you here?" I asked. "Why do you masquerade in Fano?"

She brushed aside my question. "Having come so close to me," she said, "they will return. Were you recognized?"

"I crossed swords with My Lord Piero's curio," said I. "He had reason to know me. We have a quarrel."

"Thou and Piero? Thou hast a quarrel with him? How arose this feud?"

I told her in brief about the maid, the cat and the dogs and the mountain men and she eyed me with her strange, lovely eyes and was silent; this time she did not jeer, as I feared she would.

"It seems," she said, "that I bring thee only danger and enemies."

"Aye," I said, "and prophecies, and the friendship of My Lord Giovanni and a lady which balances the scale. Now, whether you deal in magic and have cast the spell upon me, I do not know. But I do know that this spell, or fate, or the will of God has created something between you and me. We be bound together for some object. I know not what object, or if it shall bring joy or woe to us." I looked and peered at her, and then I fancied I understood why it was that she hated me so hardly and flouted me, which thought I put into words. "It is because you knew this before I knew it, and cannot escape from it, and fear the consequences of it, that your manner toward me is as it is. It makes thee ill at ease with me, and consequently thou art contemptuous toward me."

I saw the blood mount from her shoulders to her throat and make rosy her ears

and her cheeks. Whereat she was angry. So I knew I had guessed aright. Which gave me singular pride in my astuteness, which I had not greatly valued to this moment.

"You speak nonsense," she said. "There be more important matters to vex me than what may lie between thee and me."

"This monk," said I, "having once laid his nose to your trail, will not be easy to throw off. You must away from here, and speedily, before he returns."

She nodded briefly and left the room.

In a time so short that I was incredulous that a woman could change so quickly, she came back to me, and she was a lad in bonnet with white feather and long, black cloak, and a dagger to her belt and boots for riding.

"Saw you ever more lovely boy?" she asked, and smiled at me, which she had done rarely. "I am ready."

LOVELY boy she was, slender and lithe as a sword blade. There was no fear in her but a sort of gay excitement in face of danger. Never had I liked her so well since the day I found her, a scullery maid, in the forest; for she seemed more honest and human. It was as if she had laid mystery aside and had in reality become a wholesome lad, and I was less afraid of her and her wiles.

John-Peter scowled in the door and I said to her, "Thou art marked by this homunculus," I said. "It were best to rid thyself of him, for he has been seen and will not easily be forgotten."

She patted the scowling, misshapen gnome on his pate and smiled down at him. "Where I go, there shall go John-Peter," she said. "God cursed him with strange, unsightly shape, but in his breast He placed a faithful heart, and in his head such shrewdness as few normal men possess."

So I opened the door and we passed out to my companions and we strode rapidly toward our camp where I sought audience with my general.

"My Lord," I said, "I crave permission to go upon an errand, and Christoforo for companion. Also four good horses."

"What errand is this, Pietro?"

"To escort a woman to a place of safety," I said.

He smiled and his eyes lighted. "And I thought thee sober, and overgrave for such frolics. Fetch her to me, Pietro, that I may see what manner of woman can overturn thy virtue."

"My Lord," I said earnestly, "I pray thee excuse me. She most explicitly fears to have thee see her face."

"I can send men to fetch her," he said with no friendliness.

"So you can, My Lord," I said gently.

Scorching sun and drenching water leave hair dull and brittle!

Summer can be your hair's worst enemy. Precious scalp oils get baked out by sun, dried out by wind, washed out by your swim and shower. You wind up with dull, brittle, misbehaving hair. But not if you...

Use the Vitalis "60-Second Workout"

1. 50 seconds to massage Vitalis on your tight, dry scalp. As you rub briskly, depleted natural scalp oils get the extra, invigorating help of Vitalis' pure vegetable oils. You guard your hair against sun, wind, water. And... you prevent dandruff, root loose dandruff, help check excessive falling hair.

2. 10 seconds to comb. And man have your hair looked better! No greasy, "patent-leather" look, either—Vitalis contains no mineral oil. And that fresh, natural shine is only half the story. Your scalp feels refreshed, invigorated. What's more, you're set for summer sun. Get Vitalis today.

Keep hair handsome with

"but I pray you will not, for I am indebted to this maid. Also thou hast given me thy friendship, which is sweet to me. In this matter may we not behave to each other as friends and not as commander and subordinate?"

That softened him somewhat toward me, for never was such loyalty as that of Giovanni de' Medici to his friends. He was a sharp man and harsh, but underneath was kindness. Withal he was not one easily to be deceived.

"Pietro, is this the woman—the one who was witch and scullery maid and apprentice boy and great lady?"

"It is she," I answered.

"She rescued thee from Passerini and sent thee to me?"

"Aye."

HE WAS thoughtful, considering the matter doubtless from the point of view of war and politics. "Dost guarantee she is no enemy of mine?" he asked.

"I cannot so guarantee, My Lord," I said honestly. "But this I think: that she doth hate the name of Medici and all who bear it, excepting thee alone."

"In whose service is she?"

"I know not."

"Is she maid, or wife, or courtesan?"

"I cannot tell thee."

"Does she love thee, Pietro?"

"She holds me in contempt, My Lord."

"And yet you would serve her, risking even the loss of my friendship. Why?"

"I think, My Lord, she has cast a spell upon me."

Now he smiled broadly. "I think I can put a name to that spell," he said. Then, gravely: "Pietro, I have a fondness for thee, and my sweet wife holds thee in affection. Also I am beholden to thee for my life. But presume not too much upon it. But because of it I will take a middle ground with thee and with her."

"Yes, My Lord," I said.

"It is dark this night. I will go out to her and speak with her. She may stand in the shadows concealing her face. I will question her, but in the darkness."

It was better than I had dared to hope. He arose and threw cloak about his shoulders, and strode out into the night. "Lead me to this riddle," he said.

I conducted him to the spot where she waited with Christoforo, and as I approached I called out to her.

"Betsy," I said, "here is My Lord Giovanni, who would speak to you. But he

permits that you stand in the darkness, hiding your face from him."

"The word of a Medici!" she said scornfully.

"We deal with the word of Giovanni of the Black Bands," said My Lord sternly.

"I will trust the half of thee that is son of thy mother," she said.

"What purpose brings thee to Fano?"

"To watch," she said, "and to be ready."

"To spy upon me?" he demanded.

"I be no spy," she said. "A spy watches for others. I watch for myself. And as an enemy to thee, Giovanni de' Medici. It might even be as a friend if this fall out that way."

"You stole a letter in England."

"So I did," she admitted.

"Who wrote this letter?" he asked.

I was astonished when she answered frankly. "Your kinsman, the Pope."

"To whom was it addressed?" he demanded.

"To Cardinal Wolsey—who hopes to be Pope," she answered.

"To whom didst deliver this stolen letter?"

"To Venice," she answered.

"For what reason?" he asked.

"Because in the hands of Venice would cause the greatest trouble," she answered.

He considered that in silence. "Whom dost thou serve?"

"Myself," she replied. "In serving myself I must sometimes seem to serve others. As tonight I may do thee a service."

"Of what nature?" he asked.

"The Chevalier Bayard is dead," she said. "The siege of Marseilles will fail. The King of England withdraws his army from France. The French king will free to follow his ambition."

"Which is Milan," said My Lord.

"And more," she replied. "Messengers are on their way to thee, My Lord, from the Court of Francis. They will seek thee here. They will have important words to say to you, and upon your reply may hang the fate of Italy. When they come to thee, Giovanni de' Medici, recall thy dealings with the Pope and the Emperor and the Duke of Milan, and their conduct toward thee, and that at least one of them desires thy death. Keep in mind their broken promises, and their treacheries to thee. Keep them well in mind."

"Art sure of this, that Francis sends messengers to me?"

"Maybe it's okay. Maybe it's just that I don't feel Christmassy this morning"

COLLIER'S

GARDNER REA

My druggist took a prescription from me!

ED'S MY DRUGGIST . . . a good one, too! And since I've been his Doctor of Motors for years, I could talk to him like a Dutch uncle.

"Look, Ed," I said, "you're happy with the way your car runs now, but you have only had part of my prescription."

Then I told him what I'd done. Ground the valves, replaced the gaskets, installed a set of Perfect Circle Piston Rings to stop her oil pumping—and a lot of other things she'd needed for a long time.

"If you want to *keep* your car in tip-top shape," I said, "Here's the rest of my prescription—just bring it in regularly for periodic checkups. That way I can correct little troubles before they have a chance to become big ones—and save you a lot of worry and money."

Ed said he would follow that suggestion and that it sounded like a good prescription for every car owner.

He's right, too!

R_x FOR CAR OWNERS!

Permit No. 6

“I am certain of it,” she said.
“Were I like to some I know,” My Lord said, “I would have answers from thee. But I have given my word not to look upon thy face nor to interfere with thee.” He stood silent for a time, and then spoke in a different voice, not the voice of a commander surrounded by sore perplexities, but in the voice of a young man avid for life, and perhaps a little lonely, and not distant from his boyhood. “Madonna,” he said, “I have some friendship toward this overlarge Englishman. I will not deny him his adventure, which I envy him. But I charge you, whoever you be and whatever your purpose, to deal with him honestly and not treacherously. For he is as simple as he is huge, and hath no guile with which to defend himself against such as thee.”

“My Lord,” she said clearly, “I will deal with him as the future permits.” Her low, musical laugh sounded briefly. “There be times,” she said, “when I question if he doth not wear simplicity as a cloak covering what lurks beneath.”

“I fear I am conducting like a fool and should clap thee into a cell, Madonna,” said My Lord Giovanni. “Go, then, before reason returns to me; and fortune attend thee.”

CHRISTOFORO returned with horses for us all, and food for the journey. Betsy and I rode ahead, with the other two at our heels, and so left the camp for the darkness of the hills.

It is a strange and eerie feeling to ride forth into the night, in a strange land peopled by men of an alien tongue and to have no knowledge of your destination or plan for the future except flight alone. My life, until this journey to Italy, had been fixed and secure. My future stretched clear before me—to perfect myself in my father's business and to follow in his footsteps. But there was no clear future now, only an unfamiliar road leading into unknown perils and uncivil adventures. Yet, being young and curious as to what might happen next, and riding knee to knee with a most enigmatic maid, I was not cast down, but rather elated at the prospect.

“What plan have you?” Betsy asked, her figure beside me only a moving shape of black.

“I have no plan,” I said, “except thee safe away.”

“And hide me in a cave in the mountains,” she said jeeringly, “while ye at the mouth of it to fend off the wolves. There is more to think of than that.”

“Enumerate, then,” said I, “what thou must consider.”

“This monk,” she said, “came close by following a slender thread. Of all, that thread must be cut. No ment of it may remain to lead him to again.”

“We drove them off from thy door,” she said, “but you may depend upon it the monk did not go far.”

“He would follow us to the camp,” My Lord Giovanni—and would with our riding forth,” she said.

“A most persistent man,” I said, farsighted. He will have provided a suit.”

“Ample,” she said, “to overcome men, a woman and a dwarf.”

“Art afraid?” I asked.

“He who is not afraid when danger threatens,” she said, “is a fool. Fear created by God to urge men to measures for their safety.”

“We must not stay upon the path traveled road,” I said. “Yet I hesitate to leave it, for thou art a woman, and hills be rough and inclement.”

“For every hour of hardship I canst endure,” she said tartly, “I can fer three.”

“We shall put that to the test,” I said somewhat surlily.

I called a halt and we listened sounds of pursuit. The night was dark and the sky overcast and the wind toward us, so that it could carry sound to our ears.

“Horses at the gallop,” said Christoforo.

“Then,” said I, “we turn from road. Not at some easy spot where turning might be suspected, but at a point which fugitives will be thought avoid. I hope these horses be sure foot.”

We galloped on, sure that the soles of our horses' hoofs would not be heard backward to the ears of our pursuers and always I kept my eyes sharp for unlikely spot. We came to such a place steep and tumbled with rocks, and I

TIMMY

by HOWARD SPARBER

“See, Hanky, Mommy says, ‘Charge it,’ and this man sends us a letter for Daddy to tear up”

COLLIER'S

But, dear, I'm not supporting a herd of relatives!"

CRIED ELSIE, THE BORDEN COW

"If you're not supporting your kin-folks," bellowed Elmer, the bull, "where does the money go? What do you do with it—eat it?"

"That's not as funny as you seem to think," answered Elsie. "Food costs real money these days, dear."

"Can't be costing that much!" roared Elmer. "I say, there's a poor uncle in the pen."

And I say," smiled Elsie, "it takes a heap of sense to eat meals so that your family gets a full penny's worth of nourishment for every penny spent."

"Cents! Pennies!" roared Elmer. "Woman, I'm talking about dollars—husband's dollars—that wives spend recklessly."

"Sensible wives," corrected Elsie, "think in terms

of pennies, and weigh cost of foods against their food values. That's why so many of them are adding more and more of Borden's Milk to the family diet. You see, women have found out that, penny for penny, your best food buy is Milk! And naturally I mean Borden's."

"Borden's! Borden's! Borden's!" mimicked Elmer. "Milk! Milk! Can't you think of anything else?"

"Why certainly, dear!" said Elsie. "But milk is nature's most nearly perfect food. Look what it gives

you—vitamins, minerals, protective fats, proteins—and I do mean *complete* proteins—the kind you get from meat, and—"

"Complete, incomplete," argued Elmer, "no he-blooded husband wants to drink milk all day, every day."

"Then," giggled Elsie, "let husbands eat their milk!"

"That tears it!" exploded Elmer. "How in Cowdom Come can you eat milk?"

"Hundreds of ways," blithely answered Elsie. "In puddings, in sauces for fish and meat and vegetables, on cereals, in ice cream, in cream soups and pie fillings, in —"

"Pick up the marbles," sighed Elmer. "Maybe milk is wonderful. But I still say you get enough extra bucks from me to support someone. And I still say

further that someone is eating more than milk!"

"Now, darling," soothed Elsie, "I never even suggested that any one should live on milk and no other food. I merely mentioned that it's smart to get more

of the wonderful nourishment of milk into meals, because —"

"I know, I know," groaned Elmer, "because, penny for penny, your best food buy is Milk!"

"How terribly smart of you, Elmer!" flattered Elsie. "And it amazes me to think that anyone as brilliant as you can't figure out why a wife might need some extra shopping money."

"Save the soft soap!" ordered Elmer. "Here—take the money. It's worth it to me to hear the end of this."

"But you haven't heard the end," teased Elsie. "And that's always good—if it's Borden's, it's GOT to be good!"

IN 1906 — a train of 6 coaches
and locomotive cost
\$59,092

AFTER WORLD WAR I
9 steel coaches, a diner
and locomotive cost
\$257,000

TODAY — a Pennsylvania R. R.
overnight coach train, 14
cars, diner and steam
locomotive, costs
\$1,655,450

**\$59,092 ONCE BOUGHT AN ENTIRE TRAIN
... NOW A SINGLE COACH COSTS \$90,000**

Postwar passenger coaches now in service on the Pennsylvania Railroad's overnight, reserved-seat, coach-fare trains, *The Trail Blazer* and *The Jeffersonian*, cost \$90,000 each.

About 40 years ago, an entire train of six coaches and locomotive which then seemed to challenge further improvement, cost only \$59,092.

A 1922 all-steel train—a locomotive, 9 coaches and a diner—cost \$257,000.

But today's air-conditioned overnight coach train, with its modern, multi-cylinder steam locomotive, 14 cars and diner, costs \$1,655,450. That's 28 times the cost of the coach train of 1906. Furthermore, today's coach, built for spacious, reclining-seat comfort, is designed to accommodate 44 passengers as against 62 in the coach of 1906 and 88 in the coach of 1922.

A locomotive in the 1906 train cost \$13,936. An engine in the 1922 train cost \$43,600. Locomotives to haul these new coaches cost approximately \$282,450 each for the steam-powered model; \$320,000 each for the electric and, for the 6,000 horsepower Diesel, approximately \$625,000.

Many new features have been built into these postwar cars. They are more spacious, have fewer seats and much larger washrooms. The longer wheel base and improved trucks and springs assure smooth, easy riding at all speeds.

It adds up to more for your travel dollar than ever before in transportation history. For even though this postwar coach costs more than yesterday's entire train, you ride for less per mile than it cost to ride the train of 1906.

PENNSYLVANIA RAILROAD

Serving the Nation

at it, scrambling upward until I had an idea if I were going north or east or west, but hoping the clouds would come out in the sky that I might have some sign to ride by. There was nothing but the wind, which I was at last to keep upon our backs. So we waited hours with John-Peter uttering complaints and curses, and Betsy remained uncomplaining.

At last to a valley where there were no underfoot, and stunted trees.

"We rest," I directed, and, dismounting, helped Betsy from her horse. We secured our horses against their heads, and took off the saddles and bridles.

"I shall say a word for myself," I said, "I shall say a word before I sleep."

"Do you believe in the power of prayer?" Betsy asked.

"I believe at least," said I, "that it does no harm. It might even be that the angels are listening."

I knelt down upon my knees, and she looked at me, and I told God what I had suggested what He could do if He were in the mood. After a while we rolled in our cloaks, making a nest of what grass we could find; and I could rightly count a flock of sheep. Her sheep I slept dreamlessly. Betsy slept at my side within touch of me, but so tired was I that her breathing did not disturb me.

The first awake in the morning, I considered our plight and studying the map I had about it. As to where we were, that was a few miles to the west of Fano. I knew that Rimini lay a short distance up the coast of the Adriatic, and that Florence itself was far to the west, and Urbino was to the

east. That lay betwixt us and these cities I did not know, save that wherever we went we would traverse uneasy countrysides, harassed by bandits and homeless soldiers, and made more dangerous by wandering disbanded soldiers and the remnants of petty, predatory lordlings.

Peter snored in his wrappings, and Betsy slept, her cheek pillowed upon my arm. Christoforo stirred, and I motioned him to silence. Presumably the rays of sunlight touched Betsy's face, and they opened wide and stared at me, and in that moment of awakening they were as innocent and lovely as the eyes of a babe. Her face was the face of a sweet and timid and gentle girl. But then full awareness came to her eyes met mine and became startled, and her face lost its sweetness, though losing no whit of its beauty. She became again in a twinkling the woman I could not understand, nor could I tell whether she were pure or impure, good or bad. And I wondered which of the two was her real self.

"Tomorrow," she said. "Tomorrow, Betsy," I responded. "The lips bent in an ironic smile. "Well," she said, "you have solved the problems whilst I slept."

"There is one problem I never shall solve," I told her. "And mayhap it is that I never do. That is thyself."

"I shall apply myself to solving the problem of breakfast," she said shortly. Upon Christoforo arose and came to the food from our store, and John-Peter, aroused, we four ate silently until we had enough.

"I shall saddle the horses?" Christoforo asked.

"It will be safe here through the daylight," I said. "I deem it wiser to travel at night."

"Shall we sit here with folded hands and wait a dragging day?" asked Betsy. "No, in the free hills," I said, "than in the Cardinal's dungeon. Or the chamber of Piero Riario," I answered.

"I have allowed a day of laziness, though I

have been blessed with few. I shall sleep. I shall eat. And then, to amuse myself, I shall dig among the rocks for the jewels of Gian the Good."

When time hangs heavy on the hands, as it was like to do for us this day, it is good for tales to be told. If the mind be not occupied it is like to fall into evil mood.

"This be no likely spot to dig for diamonds and emeralds and rubies," I said. "As good as any, if accounts be true," he said.

"Who," I asked, "is this Gian the Good? And why buried he his jewels?"

"He came to his end," Christoforo said, "because the people called him good and because of his popularity with them. It was not safe to be popular in the days of Piero de' Medici, against whom we arose for his arrogance, and drove forth from Florence. Gian degli Albizzi, of ancient family in our city, fed the poor on saints' days, and raised his voice in defense of the rights of the people. So Piero hated him and feared his popularity and was jealous of him. He

to boast, but I did my best at it. But she ever held aloof, and when I sought to impress her with tales that made me appear better than I was, her face was faintly amused as if she watched the antics of playing colts in a pasture or puppies in a barnyard. In the end I gave it up and went off alone to sulk. She would answer no questions and when she talked at all, it was to say such things as only increased my doubts of her goodness. When I voiced these doubts, she laughed.

"Look, you, Englishman," she said. "God hath given me beauty of face and body. For what purpose? To use them to the greatest advantage to further my fortunes. What is a body, Messer Pietro, but skin and bone and flesh? What am I but one woman among millions? I am my own property. What, then, is it to thee or to any man, what I do with mine own? Where is the importance of it?" She was bitter.

It was a point I could not argue, and I was sore embarrassed.

I deemed it both safe and wise to ride southward in early afternoon. The Me-

She laughed once more. "Which wilt have?" she asked. "The Holy Cross and prayers to ward off evil ones; or magic charms granted to me for the sale of my soul to Beelzebub? They do not work together, Messer Pietro."

"Thou art a most uncanny maid," I said. "Would I knew if thou art good or evil."

"That thou wilt never know. For it may be I do not know myself."

"Then leave the matter alone," I said testily, "and I will attend to the praying myself, for I be a Christian man."

After that we rode in silence and I heard her sigh with weariness and the galling of the saddle, but because of my resentment against her I would not call a rest. She did not complain. It was Christoforo who voiced discomfort.

"Messire Pietro," he said, "as we come not soon to a resting place my backsides will be clean chafed away."

EVEN I, for all my size and strength, had had enough. So, when we rounded a shoulder of the hill and saw a rambling building, black of window and cheerless, but with a sign creaking at its entrance, I turned toward it. It was an inn, and on the sign was a much faded and weather-beaten griffin. So I dismounted and clamored upon the oaken door.

"Ho, landlord," I bellowed. "Here be weary travelers. Unbar the door."

A window opened, and through it was thrust a gaunt, bearded face under a nightcap.

"What hour is this to raise a devilish din?" the landlord demanded. "Stop thy racket or I loose the dogs upon ye."

"We have good money to pay," I called up to him.

He grumbled further, but came down to the door and unbarred it and gave us admission. He was a tall, gaunt man with but one eye, and that a villainous one, and on the stairs behind him lurked his woman, bony and gaunt as he, with wisps of hair about her face and more vacancies in her gums than teeth to fill them. Looking over her shoulder was a lout of a boy, who grimaced at us. The landlord shone his light in our faces, and his anger gave way to leering and cackling.

"Beds, my masters," he said. "Shalt have them. And breakfast in the morning. Aye. There be two rooms, and mattresses stuffed with feathers. Two of ye to each bed for warmth and comfort."

"Nay," said I, blushing somewhat at the thought. "A room for my young lord here," signifying Betsy. "For the rest of us, anything will suffice."

Behind me the landlord's wife tittered. "A most shapely and gallant lordling," she said, and tittered again. The lout behind her guffawed. I liked not the place. There were more rascals among innkeepers than honest men, and it was no unusual thing for guests to go to sleep in an inn never to awaken.

"Follow me, my masters," said the man, and lighted the way up the stairs. A little way from the top, he opened a door and there was a huge bed. There was a bar within the door to keep its occupants safe.

"For thee," I said to Betsy. "John-Peter shall sleep across the threshold."

So she went in and I heard the bar fall in place. The landlord conducted Christoforo and myself to another chamber, and we went in and closed the door upon his leering eyes. I stood just within, my ear against the oak, and knew that they stood without, mumbling and whispering. When I heard their feet slithering away and scuffling down the stairs, I opened the door softly and went to stand at the top of the stairway and listen, for I was suspicious of the place and the manners of those who conducted it.

The landlord, his death's-head wife and loutish son stood heads together and whispered. And then the half-wit went

sought and found pretext. So, charging treason he caused to be sacked the palace of the degli Albizzi and murdered Gian the Good and all his family. So that there was left alive not one to claim the farms and vineyards and estates and the great wealth that made Gian dangerous."

"But what," I asked, "of the jewels?"

"This Gian," said Christoforo, "was a great lover of precious gems, and it is said he collected them all over the world until his coffers bulged with them. But when the palace was sacked, there was not a jewel of them all. It is said he sent them away to be hidden in a safe place that the Medici might not enjoy them."

"A tale to be told to children at the bedtime hour," said Betsy scornfully.

"Yet a story believed by many," Christoforo said.

"Wealth," I said sapiently, "doth ever arouse envy. And it is a dangerous thing to be loved by the poor when a tyrant rules the state."

Most futilely that day, as a young man will in the company of a lovely maid, I endeavored to draw nearer to her, not to her body but to her mind; and, as young men also will do in their vanity, to make her think well of me. It is not easy for me

tauro River lay to the southward, and the road by which we could make our way inland. This would provide daylight hours for the harsh mountain miles that would lie between us and easier riding. It was sundown when we saw the river below us, and the narrow road. So we halted to rest our horses and to refresh ourselves with food, and then, when it was fully dark we descended to the highway, and alternately walking and galloping our horses, we set about the business of putting miles behind us.

AFTER a couple of hours the moon topped the hills. It was a great silvery moon that cast an eerie light and made the world a pallid, fearsome place, fit to be the abode of ghosts and witches and things that are abroad at night. I was discomfited. Even Betsy was touched by it, and rode closer to me so that, now and then, her knee touched mine. Which was a pleasurable thing and took my mind off goblins.

"Hast a cross about thee?" I asked. "Or mayhap thou have potent friends among magicians and warlocks. If so, I pray thee use thy influence in our favor."

Head of the Bourbon Family

100
Proof

The high place accorded Old Grand-Dad rests primarily on its gloriously mellow flavor and rich bouquet. But there is also much to be said about the high esteem in which Old Grand-Dad is held by those who prefer a smooth, satisfying Kentucky straight bourbon to any other whiskey on earth.

OLD GRAND-DAD

dismounted and trampled into I moved swiftly to the stairway. room downstairs their voices were I, but I heard the squeak of the

landlord's speech and the giggle of the idiot boy.

"They sleep like doves in a cote," said the landlord. "Ah, My Lord Piero Riario will reward you handsomely for your swiftness. There will be reward for all." I could see him in my imagination fumbling his hands together with evil eagerness.

A harsh voice in most revolting Italian interrupted him with questions:

"There be four of them, as My Lord informed me. The maid, dressed as a gallant, but most surely a maid, for all that. And her dwarf, and two men of the Black Bands. My Lord orders that you slay the men incontinently, but fetch the maid to him." He tittered. "His business with her is not political."

I crossed the hall, aroused Christoforo and we waited for them to mount. Presently they came, making small effort at silence. And when they were halfway up the stairs I showed myself and spoke to them. "The doves," I said, "have fluttered from the cote."

The leader, in whose tangled beard daws might have nested, rapped out a foreign oath, and unsheathing his sword, came at me, leaping upward on powerful legs. I pushed Christoforo aside to give me sword room, wishing I had my bow and half a dozen feathered arrows. I had the advantage of it, being above him, as my sword met his. They could come at me only one at a time, which did somewhat to equalize numbers. And so we hacked and hewed at each other, and the sound of it rang through the inn; I touched him upon the shoulder, whereat he uttered a bellow of rage and pressed me harder. But I was bigger than he, and stronger and I held him there until it entered even his dull, savage brain that I was not going to be an easy nut to crack.

Slowly he backed away, but I was not to be drawn into following him and so losing my advantage of position. It was the first time I ever had crossed swords with an enemy meaning him deadly harm and there was an excitement about it that warmed me and surprised me. It was a sensation, an elation, such as I never had known, and I liked it.

The leader retreated to the foot of the stairs, pushing his three followers behind him, and they backed away into the room below and parleyed. I could hear the bat's voice of the landlord offering advice.

"Leave to me the next turn," said Christoforo in my ear.

"Keep thy eye on Betsy's door," I said,

"My Sally is a Beautiful Gal!"

MR. SMITH POINTS OUT

FOR SAFETY! HE YELLS . . .

"Mr. Smith," I say, "I wish to marry Sally. I'm (ahem) I'm a fairly natty guy and . . ."

"My Sally is a beautiful gal!" Smith points out. "And I want her to *stay* that way. So, you will please to show me you're a good, safe driver!"

Then I remember—I haven't had my Ford safety-checked for months!

"I have a previous engagement!" I tell him, and dash off.

FORD SERVICE EXCELS . . .

Next morning I drive to my Ford Dealer's, telling him what I want.

"Good boy!" he cries. "Everyone should drive back 'home' for a safety check regularly. Now, we know your Ford best for any service. Here's why:

1. Ford-Trained Mechanics
2. Factory-Approved Methods
3. Special Ford Equipment
4. Genuine Ford Parts

"We'll do a *good, fast* job and check everything," he adds, "lights, brakes, steering, tires, wheel alignment!"

NOW HE HEARS WEDDING BELLS!

That night, my Ford safe as new again, I dash over to Sally's, and give Mr. S. the pitch on what I've done.

"By George, I'm going to get *my* Ford checked, too!" he tells me when we go for a ride . . . We let him off at the drug store.

"Don't bother to wait," he smiles. "You two look like you want to be alone . . . And you have my blessing!" Y'know, he's not a bad old guy, at that!

MARY GIBSON

Isn't this too high a price to pay?

33,500 KILLED
1,150,000 INJURED

An Ounce of Prevention is Worth a Pound of Cure

The casualties of peace — of motor accidents — were greater *in one year*, 1946, than the casualties of war from Pearl Harbor to V-J Day.

Unbelievable? Here are the facts: 1,183,500 auto casualties in 1946 in contrast to less than one million killed, missing and wounded in four years of war!

Too large a percentage of these motor accidents were caused by mechanical defects that regular PREVENTIVE SERVICE can forestall. When the critical time comes, and it can come at any moment, your car is only as good as its weakest part.

The cost of PREVENTIVE SERVICE is slight. But the cost in human misery and property damage of avoidable accidents is immeasurable. And every year the toll of life, limb and property damage increases in direct ratio to the number of cars driven.

There is no possible argument for neglecting the proper care for your car—and it is very definitely your responsibility. The five basic PREVENTIVE SERVICE steps suggested by COLLIER'S are essential to safe driving. TAKE THEM NOW.

For years the National Safety Council, the Highway Safety Council, and the Automotive Industry, through your neighborhood service man have urged regular car inspection. Since 1939, COLLIER'S has its P. S.—PREVENTIVE SERVICE—Campaign to impress the motorist by unbiased and authentic information, that the misery caused by accidents can to a very great degree be lessened by every driver assuming the responsibility of PREVENTIVE SERVICE for his own car.

RAKES

Brakes are the chief reason for accidents caused by mechanical failures, and modern hydraulic brake systems cannot operate without good brake linings or without good brake lines. A small, undetected leak in the lines can be the cause of sudden loss of brake power. Inspect brake linings and drums is not enough. The hydraulic lines also require frequent check.

STEERING

- 2 Worn bushings and pins, wheels out of balance and alignment, conditions causing loose control and shimmy—anything less than perfect control of steering can cause serious accidents. Inspect for all possible sources of trouble.

TIRES

- 3 Replacing old worn tires before they can cause trouble is much wiser than risking an accident. Furthermore, the low cost per mile of tire use makes it the poorest kind of economy to gamble for the last few miles.

LIGHTS

- 4 Lights out of focus, burned out bulbs, glare that blinds oncoming drivers, lustreless reflectors that give too little light—all are causes of accidents, and night accidents constitute 61% of total fatalities.

VISIBILITY

- 5 Keep driving vision clear night and day. Your windshield wiper should make perfect contact to insure even cleaning without smearing or scratching glass. Sticky stains from bugs and dust tire driver's eyes and blur vision. Equip your car with automatic windshield washer or carry cloth and glass cleaner. Small electric fan will eliminate clouding when windows must be closed.

Squirt* Quenches Quicker

It's a split-second refresher... that's for sure. What's more you'll revel in the taste thrill Squirt provides.

Squirt quenches thirst longer, too. For this new, different drink is made of winter-grown grapefruit. A sweet-tart of a drink, you'll say... the kind you'll want for every day.

Mrs. J. J. Fredericks, of New York City, N. Y., says: "I don't want a drink with a syrupy after flavor. That's why Squirt is my choice."

"lest there be some other way of getting at her."

I glanced down the hall. The dwarf no longer huddled before her door, nor did she open it to see what caused the clamor. Probably, I thought, she was terrified and had barred herself within.

Now I heard a shuffling of feet below as if men in concert carried a burden, and then they came into my sight and I saw that two of them carried a great oaken table, holding it before them as a shield. With this they advanced upon me, and I could see nothing of them but feet moving as they shoved upward the massive plank of wood. It was clear that I could not cope with this piece of siege machinery. There was nothing for the edge of my sword to strike but oak, and they, using it as a sort of ram, could push me from the stairhead and so come at me from the sides and from behind. There could be but one end to the matter.

"Would we had a spoonful of Greek fire," said Christoforo coolly.

They clumped up slowly, for the weight they carried taxed them. I looked behind me, up the hall, and there against the wall was a huge chest, iron-bound and of bulk so great that I doubted if my back could lift it. And in an ordinary moment or for the mere vanity of displaying my strength I doubt if I could have raised it from the floor. But there was nothing for it but to try.

"Hold thou the stairs," I said to Christoforo.

"Aye," he said, "I will carve a statue on this piece of oak."

I STEPPED quickly to the chest and got my fingers under it and bent my back and heaved with all my sinews, praying to God that they would suffice. Methought my spine would crack with it and my legs splinter. But with a great heave I raised it, and staggered under its weight to where Christoforo stood. And then, straining as I never had strained before until the veins nigh burst through my neck and forehead, I raised it, and somehow it seemed lighter. Christoforo must have lent aid, for I was able to raise it above my head.

"Now," I said to my companion, and together, using our backs as catapults, we heaved the massive thing downward. Nothing could have stood against that weight and the impetus we had given it. It crashed full in the center of their oaken shield, carrying all before it and hurling men and table backward so that they tumbled and rolled into a squirming, shrieking tangle on the flagstones below. Not waiting to find what damage had been wrought, I leaped down the stairs with Christoforo at my heels. One lay pinned beneath the chest, another strove to crawl with shattered legs. My sword split the skull of the leader, and Christoforo gave the point to the fourth, as bewildered and shaken, he strove to gain his feet. There was no more peril in them. I leaned against the wall panting after the exertion of it, for I was spent.

There was something of awe in Christoforo's voice as he leaned on dripping sword. "St. Hercules," he said, "and the holy Titans could not perform the duplicate of that feat."

I had not heard of the canonization of Hercules; nor had I been taught that the Titans were especially holy men, but I had not the breath to argue with him. Presently I stood erect, breathing more comfortably.

"Stand guard over these wounded," I said, "while I speak with Betsy."

So I climbed the stairs again and rapped upon her door. She did not answer.

"Betsy," I called through the oak, "open. There is no more to fear. It is Peter Carew. Open to me."

She did not reply, nor was there sound of movement within. I called again and then, in my impatience, pressed upon the door. It was not barred against me, but

opened freely. I stepped over the threshold and halted, amazed, for there was neither maiden nor dwarf within the room. The window was open and beneath it was some sort of sloping shed to whose roof she could have dropped, and thence to the ground.

I ran from the room and down the stairs and out to the place where our horses had been stabled. Two of them were gone.

I stood there, and my heart was heavy, and being young and so easily hurt by conduct in others which did not fulfill my ideals of them, I was the most miserable young man in all Italy. For it seemed an unkind and disloyal thing that Betsy should have deserted me when I fought for her, and had not remained even to learn the outcome of it, and whether I lived or died.

I went back into the inn, and nothing was to be seen of the landlord and his evil family, but Christoforo was content with a great bottle of wine and the carcass of some cooked bird.

"They have fled," I said heavily.

He raised his brows and clucked. "Now there is woman for you," he said. "I remember a girl named Famietta. She had at my ribs with a knife whilst I was kissing her most pleasurably. Their moods," he said with a sigh, "are a gift from the devil and there is no under-

standing of them. She is gone she is gone. But this very goose remains. No matter how tiny a maid may be, you can hungry stomach with her."

"We must follow her," I said.

"Nay. If she had desired thy she would have waited for it, and I knew he was right.

Whereupon we saddled our horses and turned our faces toward Fano ridden but a hundred yards. Christoforo halted and turned.

"Now what?" I asked.

"I bethought me of a slight," he said and galloped back to the inn.

I waited for many minutes. He reappeared and rode up to me with an expression of contentment. I was sorely vexed and unhappy to see him, but as we topped a rise beyond I turned face to look back at the inn, and all I could see was a cloud of smoke with flames issuing from its denseness.

"The inn's afire," I said.

"Can that be so?" he asked with an air of innocence. "Now what could have caused such evil fortune for the hospitable landlord and his lovely and princely son? I think, if I had with all my strength, I could have saved it."

SPORTING ODDS

In a game between New Orleans and Birmingham in 1936, Outfielder Eddie Rose hit a pop fly that struck and killed a pigeon. The Birmingham shortstop and second baseman both went after the pigeon, the shortstop fell to the ground, and Rose was credited with a base hit.

—Fred Russe
Nashville, Tennessee

JOHN RUGE

Larry MacPhail, Dan Topping and Tom Gallery of the New York Yankees were talking in the 21 Club a few years ago when Leo Durocher of the Brooklyn Dodgers joined the party. The conversation turned to the Dodger pennant-clinching celebration of 1941 and the festive train ride back from Boston.

Durocher laughingly began telling the now historic story how MacPhail, then Dodger president, waited to join the train at New York's 125th Street Station, but was left standing on the platform when Durocher talked the train crew into highballing it right through to Grand Central.

MacPhail interrupted, insisting that he could tell the story better. As he started to describe how he had been excluded from the party and left fuming at the station, he began to get hot again. As he reached the point where the train shot through 125th Street, he pushed back his chair, leaned across the table, shook his fist in Durocher's face and shouted: "You're fired right now you —!"

Durocher rose too, poked his face into his former boss' clothing enough to take a bite out of his nose, and shouted:

"I don't work for you any more, you —! How can you fire me?"

—David Eisenberg, New York, N. Y.

BEST IN NEW CARS! • BEST IN OLD CARS!

red sails on them. She hadn't known Norlee so well then, and she had tried to tell him how she had felt about seeing those red sails against the blue sea. Norlee had only laughed. And Becky had learned then, suddenly and shockingly, how laughter—the wrong kind of laughter—can hurt.

But that's the way Norlee was, Becky knew now. He didn't hold with nothing pretty, said prettiness was a waste of time, was vanity. He said the Good Lord didn't hold none with vanity. He wouldn't let her raise no flowers around the stoop, said the ground was for growing things to eat—not things to look at. Wouldn't let her hang no pretties on the wall, said pretties on the wall were for young'uns and old folks. Kept saying, until it was a raw and bitter thing between them, that there'd be time enough for pretties when the young'uns came.

Becky stared at the pictures, but now the pleasure was gone. The room was too much Norlee's: his soiled clothing, the weight-hollowed sag in his side of the bed, the musty field-working smell of him. Becky shook her head, trying to dislodge the sense of his presence. She failed. The scene of his recent departure stood vividly before her:

SHE was standing by the back steps, holding her breath, watching her husband bend to the broken tractor wheel. He'll never do it, she was thinking. He'll not . . .

She saw the muscles in his huge arms knot as he suddenly straightened and heaved the heavy wheel into the bed of the truck. He looked triumphantly at her. He slapped sweat from his forehead. "That's done," he said. "I'm gone. Now mind your chores and don't go to mooning."

"I'll do it," Becky said.

"See you do. And see you don't forget the springhouse. The springhouse ain't fitten."

Becky felt the hated trembling in her legs.

Norlee's voice was heavy. "See you clean the springhouse." He peered closely at her.

The springhouse! Becky saw, in her mind, the springhouse. The springhouse was squatting deep in the bayhead behind the house. The springhouse was laughing at her; laughing at her fears. Laughing and waiting.

"Mind what I'm saying!"

"Yes." *It's the fig, it's the fig! It ain't the springhouse, it's the strangler fig. . . .*

"Yes," she repeated.

Norlee laughed. His laugh was thick with scorn.

It's them roots, she was thinking. Them roots like arms! It's the way the strangler fig had crept its arms around the springhouse! It's the way it hugs the springhouse to its belly, like!

"Mind you look careful to the heifer," Norlee warned.

Becky glanced at her husband's face. She saw the heaviness gathering at his jowls. She stiffened her body against the hurt she knew was coming.

"See that old May's brood don't get the thumps. . . ."

Becky waited, feeling the loneliness within her.

"I thank the Good Lord my stock, at least, is natural!"

Call me to blame, Becky thought. Call me to blame, and rightly. It ain't that I've not prayed to birth, though. It ain't that I've not cried the night out for loneliness!

"Look for me when you see me coming," Norlee said.

He stepped toward her. He reached forward with a hand, as if to touch her shoulder. Becky, not wanting to, hating

herself for her weakness, shrank touch.

"Unnatural," he muttered. "unnatural."

He turned and walked to his tr. Becky, staring now at the Gl Fisherman, managed to drive the her husband from her mind. Sh the Gloucester Fisherman direc the cracked mirror in front of Niagara Falls went on one sid room. Grand Canyon went op She threw herself on the bed. S to concentrate on the Gloucester man, to imagine the smell of th hear the cries of the gulls that about the schooner's spars. Co tion became impossible. It was r Norlee's heavy body were fil room. It was as if his coarse vo echoing in the corners. "Moon he seemed to be saying. "A mo woman ain't natural!"

Becky clapped her hands to l The voice now was beside her. B her husband's breath on her che body was insistent. His voice v complaining: "A woman can't giv young'uns, then that woman's no man. . . ."

She felt his arms about her. Th smothering her. They were hol helpless in their strength. "Leave she shouted. Her thin, sensitive were contorted. Her eyes were h terror.

She struggled to her feet. She then that she was alone. Her ter way to the familiar, sickening loneliness—of emptiness and u ment. She thought dully of her chores, and of Norlee's repeate ings about her work. "Mind y your chores," he had said. A springhouse. "See you clean the house." Becky thought of the house and she shuddered. Do it told herself. Do it now, and it'll

She forced herself on dragg through the yard, to the edge of head and to the dark path thro bayhead. She moved slowly, upon slight excuses to delay her at the springhouse: stopping to and to wonder at the obvious ha of two brilliantly striped skink frolicking at the base of a mulbe; stopping to gather Spanish moss the limestone spring basin, then ing the moss, deciding that sh gather more by the springhou ping and starting, but never losi of the distressing chore before was as if the banyaned roots of th gler fig had thrust themselves i soul and were choking it with fea

BECKY stood before the sprin Magnolias, swamp maples a oaks joined arms above the st formed a glen dark with shadows water from the spring furrowed t floor of the glen and hurried aw its gloom. A grassy ledge formed ral, body-length shelf beside the front of the springhouse. Becky herself to sit upon this ledge. She herself to regard, with some ser of calm, the rotting timbers of the springhouse, and the weird ta groping arms that clung to its si roof. I ain't a young'un, she thou fully grew. The strangler fig ca me none. It's an evil thing, but hurt me none. My fearfulness i young'un's fearfulness of the dar come to this place times beyonc and I've got no call to be scairt.

She remembered how Norlee h culed her when she'd asked him the strangler fig away, to destroy i he'd filled the room with heavy l and had accused her of being

And Becky knew now as not the sound of the wind in . It was the voice, the low voice, obbing, half-singing, half-hum- vice of a man. She placed the con- ack in the pits. She waited in the

darkness, her nerves crying out for light. She waited, not daring to be seen.

The voice was now just outside the springhouse. The song was clear:

*Lonely days and lonesome nights,
Sing down, Riley . . .
'Gator barks and often bites,
Sing down, Riley . . .
Blacksnake climbs the mockernut tree,
Seeking a girl, like you and me.
Sing down, Riley . . .*

Becky was suddenly less fearful. She waited. There was a pause, then a deep-throated chord from a guitar. The song continued:

*Lonesome man ain't got a chance,
Sing down, Riley . . .
Ovenbird jumps, you can see him dance,
Sing down, Riley . . .
Peafowl struts round the sweet gum tree,
Seeking a girl, like you and me.
Sing down, Riley . . .*

Becky couldn't remember when, outside of church meeting, she had last heard a voice raised in song. Norlee, away from meeting, never sang. Once, in the second year of their marriage, Norlee had heard her singing over the clatter of dishes in the kitchen. "You'll save your songs for the young'uns!" he had commanded. "Singing's for the worship of the Lord and for young'uns! There'll be time for singing when the young'uns come. . . ."

THE lonesome sounds of the song filled the springhouse. Becky stood and walked cautiously to the doorway. The singer, whom Becky had never seen before, sat on the grassy ledge. He leaned against the trunk of the live oak and cradled a battered guitar in his lap. His face was lean; not young, though relaxed with the warmth and hopefulness of youth; not old, though deeply furrowed. He was dressed in faded jeans and a ragged denim shirt. He was hatless, and a shock of coal-black hair fell across his forehead. He looked at Becky. His face crinkled in a crooked smile.

"Howdy," he said. He waved a long hand lazily.

The voice was soft. Becky relaxed.

The stranger stroked a lazy chord from his guitar.

"What do you want here?" Becky asked.

"Don't want a thing," the man said.

"You're trespassing. You're on my husband's property. My husband don't hold with folks getting onto his property."

"He plant this tree I'm leaning on?"

"No—"

"He build this ledge I'm sitting on?"

"No."

The man laughed softly. "Then he's got no call to worry."

Becky thought it strange that she should suddenly consider this absurd reasoning completely logical.

"Come on out," the man said.

"Who are you?" Becky asked him.

"I'm Cull Bence, ma'am. I'm Cull Bence of the wandering Bences. Ain't a mother's son of us amounted to a hill of cow beans in three generations." He smiled, and the smile was accomplished with his entire furrowed, crinkling face. Becky found herself walking toward him.

This discovery flustered her, and she said, "There's spring water, cold, and a gourd. There's fresh milk aplenty—"

"I thank you kindly," Bence said. "I wouldn't care for none—not right now."

"Help yourself, if you're of a mind. I'll be going," Becky said this, knowing that she should go, yet hoping some logical reason for staying would present itself.

"See that hibiscus yonder!" the man said suddenly, pointing to a plant on the opposite bank of the creek. "You ever ponder on why them flowers is red, like blood? Why they last but a day?"

"No," Becky said.

"I'll tell you why. Them flowers is

blood red because blood red's the color of life. Them flowers must cram a heap of living into one day. Them flowers live but a day, for that much prettiness can't last."

Becky could visualize, could almost hear, her husband's ranting reaction to this kind of talk. She didn't care. She hoped that Cull Bence would go on talking. The knowledge she had gained of the hibiscus excited her. She wondered why she had never thought of that herself. The hibiscus had grown, the flowers had blossomed blood red and had died, and Becky had watched the process with complete indifference. She wondered why.

"Why must you hurry?" Cull Bence asked her.

"Work," she said uncertainly. "Work to be done—"

Cull Bence laughed.

Becky hesitated. "How come you're laughing?"

"I'm laughing at folks who study work on a morning like this."

"Don't you work?"

"Times. Sometimes I sing for my supper. Times I'll help a man with his harvest. Times I'll turn the earth in a field. I can plow as straight a furrow as any man in this section, if I'm a mind to do it. I ain't often of a mind."

"Where do you live?"

"Where nighttime finds me."

"You're strange."

"So they tell me." Becky experienced an unmistakable quickening of her pulse beat as Bence smiled, a trifle sadly. He bent his head to his guitar. He struck a lonely, minor chord. "Care for singing?"

"I like it."

"And your mister?"

Becky shook her head. She shuddered slightly as she thought of her husband. Norlee didn't hold none with her talking to men. Outside of a howdy or so to the men at meetings and the storekeepers in Fruitville, she'd barely spoken to a man, other than Norlee since they had been married. Becky knew that Norlee would throw a conniption fit if he even suspected she was passing the time of day with this man Cull Bence.

"What's your husband go by?"

"Mathis. Norlee Mathis."

Becky imagined that she had seen a fleeting glance of hardness come into the man's face. "You know my husband?"

"I know him."

THE new flatness in the man's voice caused Becky to rush loyally to Norlee's defense. Becky had never questioned her husband's right to dominate her. He was her husband. Her duty was to obey. She had obeyed him always to the best of her ability. Now she would defend him to the best of her ability.

"He's a good, Christian man!" she said hastily. "He pays the preacher regular. He pays cash money for his rations!"

"Yes," Cull Bence said.

"There ain't a harder-working man in the section!" Becky said defiantly. "There ain't a lazy bone in his body. He's made this clearing to pay. He keeps a good roof over my head. He don't drink none and he don't frolic!" Becky was almost hysterical.

Cull Bence looked slowly at her. "Are you fussing with me, or yourself?"

"He's a good man!" Becky repeated.

"I never said he wasn't."

"You know him. You know I'm saying it true! Say you know it, Bence!"

The man's eyes, soft, filled with hurt, were on the strangler fig. "That's a God-awful growth, that fig yonder—"

"Say you know it!" Becky shouted.

"How come you don't cut that fig away?"

Becky wondered at the man's understanding. "You—you've got to say it—about Norlee," she said uncertainly. "You can't come here, and him away, and throw off on my husband's name!"

"Look yonder, by the spring Bence said, almost dreamily. "Under where the trunk of the strainer raises straight up, thick, in a column. The shape of that column tells The seed of that fig come to rest you and me was born—on the bare straight young tree. The young magnolia, more likely—gave it. The young tree nursed it. The and was strong. The branches pushed upward, seeking light. T of the fig shoved downward, see earth. And them roots, like sto wrapped themselves around the tree. And they throttled her, choked her and she sickened died." He looked strangely at Be

BECKY could not meet his eyes. "The fig go!" she cried. "You said it, about my husband. I think you know my husband. You know him?"

"I've hunted the scrub with you band."

"Then say he's a good man!" voice was pleading.

"It ain't for me to call good for I've hunted with him. He's—he's man on a dog."

"He's—" Becky's voice broke, tears came.

"Good is how you look at it."

"Good is being strong," Becky

"Good is being hard-working.

The song was one with th warmth of trees and plants that g fast. The warmth entered Becky became languid and in her mi the song stirred.

... to lovely Lucinda, Oh, drink to lovely Lucinda.

A mocking bird sang in a clump, and Becky heard on Bence's song. His low voice care soothed her and cleansed her of d Oh, drink to lovely Lucinda.

The air was heavy. Heavy v busy cycle of living and growing

He was fearful of looking at her closed eyes. She could feel a compelling presence beside her, a darkness behind her closed lids, a larger empty darkness, because his face was there.

ely Lucinda,

He trembled across the glen. He struggled against the magic of the night. It was as if Cull Bence were a man, containing her futile, disarming struggles; holding her firmly yet gently. The chord throbbed away from him. The mockingbird flew from a clump. The song was ended. He angled his guitar against the trunk of the live oak. He leaned toward her. His fingers moved lightly across the strings and she felt them at the knot of drawn hair at the base of her neck. His touch was soft and compelling. Suddenly, she stiffened and leaned back. Her eyes pleaded with

him. He dropped his hands. "A moment, that hair—" he whispered. "It would be pretty. Mighty pretty." He struggled now to remember, to find fitness is vanity."

There was pity in Bence's face as he looked at her.

"I don't hold none with vanity," he said flatly, without feeling. "I hate him," Bence said quietly. "I hate him." After all these years, he thought. After all these years, and now comes, for the first time, that Bence! What was there about him that drew upon her innermost

and was over her own, on the night, thrilling at his touch, forced her to withdraw her hand from his imperious touch.

"Now what I am?" he asked her. She was silent.

"The man I told you about—the one who says that good ain't in him—who that man is?"

Becky said softly. "I faced a thing out in twenty

years. I realized suddenly that she had known sincerity, had never known before. She looked at him. There, in her face, there was softness in her eyes. She felt herself leaning toward him. "Now I'll be long gone before the

he nodded. "I know," she whispered.

He reached for his guitar. He looked at Becky. Becky thought that she had never before seen a face more cry-

ing-out with loneliness. She felt a compelling urge within her to touch that face, to smooth away the loneliness.

"I'll say so long." He stood.

The little stream that furrowed the glen became, to Becky, a tortured, twisting thing. The hibiscus on the opposite bank was stark and aching in its brilliance. "Bence!" she cried: "Cull Bence!" She suddenly and thoughtlessly loosened the knot of hair at the base of her neck. She shook her head, and fine blond hair cascaded about her shoulders. "I know what you are!" she said. "I know! You're good—you're kind!"

Cull Bence knelt slowly beside her. He took her in his arms. Becky closed her eyes. The mockingbird returned to the Carissa clump. The heavy air, the warmth rising steamily from the age-rich earth, the quick, imperative life urge of the growing things around her became part of her. For the first time she understood them.

Then she slept, deeply and naturally.

SHE stirred luxuriantly. She awakened by degrees. The shadows in the glen sprawled easterly and she knew that it was afternoon. Cull Bence had gone.

Becky sat at the edge of the ledge and plunged bare feet and ankles into the cold water of the creek. She stretched her arms. A mockingbird sang and Becky laughed and the laugh was easy and joyful. Cull Bence had gone, but he had gone as Becky had known he would go. She remembered what he had told her of the blood-red hibiscus. Cull Bence had come and he had gone as Becky knew now that good things and beautiful things should come and go; while they are still good and beautiful things; while the goodness and beauty are at the height of their power.

She stood. She walked to the door of the springhouse. She heard, from within, the flutter of the mother sparrow. Suddenly, and for the first time, she became aware of the firmness, the vitality, the new significance of her body. She realized instinctively that she no longer had reason for envy. She knew intuitively that she no longer had cause to be lonely. She knew that Norlee's strength, being strength without tenderness, could no longer intimidate her.

She looked at the strangler fig. She reached forward and touched a root. She was suddenly conscious of the futility of its sprawling strength. The fig was now an ugly, blustering thing: a thing to be pitied. Becky wondered that she had ever been fearful of such inadequacy.

REAMER KELLER

THE UNKNOWN

BY
GEORGES
SURDEZ

THE native looters scuttled away at the first burst of the Bren gun. The small armored car came to a brusque stop, like a green-brown bug hung at the end of the double track slashing the beach back toward the horizon. For a long moment, all was quiet; the Mediterranean Sea heaved itself placidly upon the gold sand in silky surges of incredible blue fringed with the lacery of foam.

Then two men alighted, a sergeant and a private. They walked slowly toward the body.

"One of yesterday's lot, I suppose," the private said.

"Right. What else?"

They halted five feet from the drowned man, looked down at him. The sergeant was twenty-eight or thirty, of medium height and sandy. The private still showed the lankiness of youth; boyish blue eyes in a freckled, bony face.

Somehow, these two appeared formidably alive—solid, muscular bodies in good garments, hung with belts, straps, equipment, their strong tanned legs showing between the shorts and the puttees. Brass ornaments, furnished to peacetime sparkle, glinted here and there with every move.

"Jew, right enough," the young one said, swallowing.

"Righto. What else?"

The dead man must have been one of a party of twenty or more that had tried for the Palestine shore in a small boat, from a refugee ship overhauled and seized the preceding night. Now, he sprawled in indecent disarray, for the prowlers had torn off some of his clothing, slashed the rest to find money belt or concealed valuables. His socks were of thick, coarse, dark wool, he wore only one shoe, cracked

and worn, with blackened strings for laces. A poor man; a poor man when alive and a poor man dead.

He had been thin, very thin, and old, fifty-eight or sixty. The head seemed heavy at the end of a wasted, corded neck; the skull, almost bald, shone flatly in the sunlight, like yellow wax. He had not shaved in several days, and the bristles on the lax chin, around the gaping mouth, were gray or white. His nose had been hooked and fleshy, a real Jewish nose.

"He ain't pretty," commented the boy.

"They generally ain't pretty, Dusty," the sergeant agreed.

They kept looking at the body with distaste. They were fine men, both of them, of a race generous and kind with deep layers of sentimentality and a carefully nurtured sense of fair play and sportsmanship. But they had seen too much suffering, too many dead men, including their own mates. Their souls had shrunk into a horny envelope and were very hard to reach.

They did not feel concerned in this dead man. They were not responsible for him, not more than the dead man had been responsible for himself. They were as blameless as the bullets they fired, as the metal fangs of a trap. *Things*—unnamed, vague things, too immense for them or for anyone to understand—had brought them here, and forced *them* to see *that*.

"Old bloke, wasn't he?"

"Right. Old bloke."

"What do we do, Sergeant?"

"Leave him be."

"What about identification?"

"The gyppos won't be back, they've already gone through him proper. The lorry'll be coming."

They turned and started toward the car. Then the young soldier swerved,

took a few steps along the line of footprints left by the fleeing scavengers, bent and picked up an object. It turned out to be a small leather wallet, water-soaked. He handled it gingerly as he returned toward the sergeant. It seemed empty; there was no money, no papers. He was about to toss it toward the corpse, but changed his mind.

"Something's inside," he said.

"Won't hurt to look."

The sergeant reached out for the wallet, took it and fingered it a moment. He nodded at his comrade. Then he flipped it open, examined the inside. Whatever the object was, it had been stitched safely in an inner compartment. The two looked at each other, and curiosity won out.

"Won't hurt to have a look-see," the sergeant said.

HE WORKED his finger into a gap, jerked a few times. The crumbling leather parted. He brought out a small packet of soaked tissue paper. A peculiar excitement took hold of the two soldiers, they stood close together, helmet brims touching. Under the sergeant's hard fingers, the tissue paper shredded and frittered as it was unfolded, dropped to the sand like flakes.

"Jewelry?" the private asked.

"No. Look."

The sergeant held out his palm.

"Poor bloke," the private said again.

"What else?" the sergeant muttered.

He closed his hand into a fist, turned to look at the body. He was thinking hard, trying to find the flippant words that would liberate his chest from the sudden oppression. The private licked his lips, shook his head and found a sickly smile.

"You never think of that, do you," he said, in wonder.

They looked down at the ugly shape and felt that they knew that a key had been handed to them, unlocked within themselves, as within him, a secret compartment locked by thoughts that all true men must think and seldom voice.

They knew that this man, the Jew, had not always been ugly, that he had been young and strong, with a brave heart. They knew that he had not always been a homeless fugitive, an exile, that he had been as themselves, a man of his country to love, a flag to follow, a young man with good comrades who would have died for him and whom he would have died for.

And they knew also why he had kept this key secret, hidden from those who shared his tribulations, his sufferings—perhaps from his wife and his children. They might have called it a badge of shame, a symbol of his youthful foolishness. And they thought of something they had never thought of, of the particular torment that this old man and many like him, must have experienced.

"Wouldn't hurt if I kept it?" the private wondered.

The sergeant hesitated, then shook his head.

"Can't," he snapped.

"Then what—"

"Give it back to him. It's his."

The British sergeant took a few steps forward, knelt beside the body. He carefully fastened his find over the bony chest. It was not much, a small piece of dark, faded, moist bit of black and white ribbon.

A German Iron Cross, bearing the date: 1914.

JOHNNY ON THE SPOT

The Ringmaster
Finds Out Why

PHILIP MORRIS

is so much better
to smoke!

The Ringmaster thought he had Johnny on the Spot. "Why," he asked, "is PHILIP MORRIS so much better to smoke?"

"Because PHILIP MORRIS is the ONLY leading cigarette scientifically proved far less irritating to the nose and throat," Johnny replied. "That's

why the PHILIP MORRIS smoker really gets what other smokers only hope to get . . . better taste, finer flavor, perfect smoking pleasure!"

Yes, it's true . . . if every smoker knew what PHILIP MORRIS smokers know—they'd all change to PHILIP MORRIS, America's finest cigarette.

**WHEN YOU
FILTER
MOTOR OIL
REMEMBER
IT'S THE CARTRIDGE WITH
THE MOST HOLES THAT
GOES TO WORK
QUICKEST**

The outer shell of this MULTI-SCREEN Oil Filter Cartridge gives you more than 20 times the area of filtrant immediately exposed to dirty oil . . . and here's where the vital sludge grabbing job is done that keeps trouble away from your motor. MULTI-SCREEN throws all the surface of its high capacity, depth-type packing into action *fast!* Naturally, faster flow through Champion's extra quality filtering medium cleans more oil quicker and better for you. You get this sludge-stopping, motor-saving efficiency in . . .

CHAMPLAB OIL FILTERS

Regardless of the type of oil filter on your car, you can put a quick action, long serving Champion Cartridge to work for you, and keep your motor safe from sludgy breakdown. There's a size and style in these precision perforated MULTI-SCREEN Cartridges for EVERY oil filter. Insist on one with your next oil change and get the improved clean oil mileage that keeps repair bills down and motor performance up.

**ASK YOUR
DEALER**

If your car does not have the protection of a motor oil filter, ask your serviceman about a Champion. There's one for your car, complete with bracket, fittings and oil lines for a swift, economical installation.

**CHAMPION LABORATORIES, INC.
MERIDEN, CONN.**

In two years the employees will own the company, which is now making a profit of about 5,000 yen a month, even though its product is turned over to the government for fixed-price rationing or for sale to souvenir-hungry soldiers at the Army PXs. Other industries, similarly organized, are doing likewise.

Of course there is a little dissatisfaction here and there with the way things are going on Okinawa, but it appears to be a healthy dissatisfaction, born of a natural desire to get along in the world. Like that expressed by Toyo-ko Hanagusuku, a serious-minded girl of twenty whose father was killed when American bombs wrecked the village of Gushikawa and destroyed the Hanagusuku home. Toyo-ko fled into the hills with her mother, two sisters and four brothers, and for months they lived in a cave.

Girl Works on Prefab Houses

The Hanagusukus have now returned to Gushikawa. The six younger children are in school, and help their mother till the family's half-acre patch of rice and sweet potatoes. All have sufficient clothing, and they are comfortably if not luxuriously housed in a well-thatched 12-by-15-foot house, floored with Navy lumber and sided with scrap tin and Army tentage. Toyo-ko runs a power saw in the government mill at Gushikawa, and works eight hours a day six days a week, helping build frames for prefabricated houses. She is paid the minimum wage of five yen 60 sen a day, and doesn't think it's enough.

"I ought to make more," she says, "because this is important work and I do it well. But with what my family makes from the farm it is enough to buy food and clothing. And I hope to get a better job soon."

To American eyes the wages paid Toyo-ko Hanagusuku and Gioga Shimabuku may seem wretchedly inadequate, but by Okinawa standards they are very good. The highest-salaried native on the island is the civil governor, or Chiji, who receives 1,000 yen, or \$20 a month. Every family on Okinawa can live on what it earns, because of the unique system of economy managed by the military government and bolstered by vast contributions from the United States. It is in process of switching, gradually, from a system of pure relief to one of controlled private enterprise in which all prices are to be regulated, as they are now, by what Okinawans can afford. As Brigadier General F. L. Hayden, island commander and military governor, put it:

"We blasted this island to bits, and now we're trying to put it together again. It will take years, but we're making progress. The quicker the Okinawans are self-sufficient, if they can ever be completely so, the quicker the American taxpayer will be relieved of the burden."

On paper this burden can run into hundreds of millions of dollars before the Okinawans become even approximately self-supporting. But there is such a lot of complicated bookkeeping involved that the final cost may be a great deal less than is expected.

At the moment it is impossible to make even a guess as to what it will cost to put the island back on its feet. Of course, it will cost plenty. The food we're turning over to the civil government of Okinawa is worth from \$19,000,000 to \$41,000,000 a year, according to the methods of accounting used, and the cost of the civil government runs to about 60,000,000 yen a year. Fuel, clothing and administration account for more millions.

But a vast percentage of the food, machinery and other supplies we've handed over to the Okinawans was already on

the island; it was war surplus, it had greatly depreciated in value, and was probably worth less than the cost of shipping it back to the United States. It is charged to the Okinawan government at full price—a two-and-one-half-ton truck, for example, goes on the books at \$2,650—and is then sold to the natives at realistic prices in order to keep the prevailing wage-price system intact. It is not likely that the civil government can ever pay for these supplies; if it doesn't the loss will not be great.

There are many things the Okinawans need that the military government cannot get for them. They badly need fertilizer, and there is a serious shortage of livestock. Before the war the islanders owned 20,000 horses; now they have 1,600. In 1944 each family owned from one to three pigs, a total of 100,000; now the pig population is not more than 2,000. The number of goats has also dwindled from 100,000 to about 2,000, and instead of 50,000 cows, the Okinawans have only 500. No animals are to be obtained elsewhere in the Orient, and no dollars are available for making shipments from the United States. The only livestock brought into Okinawa since the war is a shipment of 20,000 baby chicks, requisitioned from Japan.

The 90 officers and 350 men of the American military government, under the command of Colonel William Craig, are working with the Okinawans to solve these and other problems, to restore interisland trade, and to build up small private businesses and expert industries under a native government. The Okinawans have really never had a government of their own. In the old times the island was a kingdom, but paid tribute to both the Chinese and the Japanese. In 1871 the Japanese shipped the King of Okinawa to Tokyo, made him a Japanese nobleman and told an uninterested world that Okinawa and the rest of the Ryukyus had become a Japanese possession.

Today the Okinawans run their own affairs to a greater degree than ever before, and are gradually being trained for complete self-government. As yet no American-style elections have been held, but the farmers and villagers have elected their local chiefs, and have voted for most of the members of the advisory assembly, the others being appointed by the military government.

Meet the First Governor

The assembly named Koshin Shikiya, a small, round-shouldered man of sixty-three, with some reputation as an educator, as the island's first Chiji, or governor. Shikiya joined the Methodist church in Japan 42 years ago, when he was a college student, and is one of the 1,400 native Christians on the island. He runs a civil administration of about 20,000 employees.

Okinawa and the other islands of the Ryukyu chain have never been self-sufficient; they have depended largely upon money sent by repatriates who have now returned, and upon Japanese subsidies for the sugar crop, which the Americans are discouraging in favor of greater rice and potato production.

Some of the American experts believe that phosphate and sulphur mining, silk-worm culture, fishing, lily bulbs and other industries may someday provide sufficient exports to make the Ryukyus self-supporting. Of these, only phosphate mining has so far been developed. The tiny Daito Islands, 200 miles east of Okinawa, have an estimated 2,200,000 tons of phosphate rock, of which some 7,500 tons are being mined each month and sent to Japan for processing.

OUR FAR-FLUNG CRITICS

DEAR EDITOR: In your April 12th editorial To Whom It May Concern you call lies the anti-American propaganda, but in The Week's Mail yourself make a wrong American propaganda when saying that Graham Bell got the idea for the telephone and that in 1874 the human voice was first carried over a wire. As a matter of fact, the telephone was invented by Antonio Meucci, an Italian, in 1857.

ALBERTO DE AZEVEDO, Lisbon, Portugal

WALLACE IN WONDERLAND

DEAR EDITOR: Many dislike the Truman Doctrine, and the number is increasing daily. Now comes the Wallace Doctrine—"World Peace"—which more and more people are coming not only to believe, but to demand.

You may heap all the calumniation upon him you choose, but Henry Wallace will be remembered long after you are forgotten (Hollering Hefry, May 31st).

As a veteran of three wars, I have been sadly disillusioned. If Henry Wallace is the only one with the will and moral courage to attempt to lead us out of the mess we are now in, I am for him.

RICHARD ROWLES, Wollaston, Mass.

... High time this menace to America was put in his place. Give a dog rope enough and he'll hang himself and that is just what he has done.

ARTHUR WILLIAM ROW,
New York, N. Y.

DUMB BUNNIES

DEAR SIR: The story Come Into The Garden, Mrs. Broshotsky (May 24th) by Lester Atwell is expertly done, and according to my observation exactly to the situation. Now write one about the howl of schools and schoolteachers about shortages. There isn't any great shortage of teachers—just too many kids attending school over their heads mentally. My observation has been about 80 per cent of kids cannot take the teaching of the 8th grade. The children should be taken out of book schools and given manual and menial training.

PAT C. HERRINGTON, Little Rock, Ark.

UNTRUMANITE

DEAR EDITORS: Mr. Frank Gervasi's A President Grows Up (May 24th) places Mr. Truman on the 399th floor, way up in sky, where no adequate foundation is provided to sustain the illusion.

What has raised Truman's present rating is that he has read of the attributes of Coolidge, and has adopted the clamlike silence.

Mr. Truman has been playing ball with the Republicans since he took office. Roosevelt assumes greater stature each day. He bucked a disproportionate opposition with not much assistance.

R. A. LEITCH, Sherman, Texas

COO COO!

DEAR EDITOR: Doesn't Ed Lanham know that pigeons don't hop? See first paragraph of the new serial, Politics Is Murder (May 31st). If Ed doesn't know his bird life—I wonder if he knows his politics? For your information pigeons blop—not hop.

ROBERT GREENKER, New York, N. Y.

Mr. Lanham's pigeons, being mad, hopped. Ordinarily they grop, flop, snop, pop, scrop, phnop, and plopp—the latter should they be people-toed. We never heard of a pigeon blopping.

The Man Who Quit Too Soon

ONE hundred years ago an old gentleman resigned from the U. S. Patent Office because he felt his job had no future. He was sure everything had been invented.

But progress can never stop. That's why, year after year for almost fifty years, the sole purpose of our scientists, research laboratories, and test fleets has been to improve the quality of Quaker State Motor Oil.

From behind came the rattle of and Ren turned. Tula was be down on him with the speed of

Never before had a female ruled the flock in the primitive volcanic world

THE rain came suddenly and with hurricane fury. Whipped up out of the Pacific, it pounded across the dunes and lashed at the lava field, howling into the deepest craters. Pinecate's red serrated peak and glazed arroyos seemed to vanish before the onslaught.

North Crater's huge volcanic hollow was a banshee bowl, its fissured walls spewing countless waterfalls that cast a fitful phosphorescent glow in the abrupt gloom. The giant saguaros, their fluted spikes spilling pearls, swelled with quick greenness; the silver cholla became newly plated; the sparse creosote bushes lifted themselves against the hammering deluge fresh and clean. And with the driving storm came a penetrating cold.

Mul, the big ewe, shivered and emitted a mournful blat. Not forty feet away the cavern in the wall yawned dry and warm. Koka the leader, Ren the belligerent and the

other rams were standing shoulder to shoulder facing her. Behind them she could see the ewes, some lying down, complacently chewing their cuds while others suckled nervous lambs.

Mul's legs were spread wide over the gray form on the streaming alkali. The new lamb didn't move.

Koka snorted. Only one thing could come of it. The newborn, if it lived at all, would die. No four-footed creature was so susceptible to pneumonia as the desert bighorn lamb. Too many times had he seen this dread thing take toll of his flock. Little white bones that the buzzards had left still lay on the crater floor.

The leader of the flock stamped his splayed hoofs angrily. But Mul didn't move, except to look down at the sodden, still form curled under her. Never in the long years had she lost a lamb. Always before she had gone to the cavern in time. But the thick February shoots of Mexican salt grass

in the center of the crater had temptingly tender—and the storm struck without warning. She b herself now against a churning that brought a new wall of water.

Koka's bellow was lost in the His lead ewe standing out in the over a doomed if not already lamb! He tossed the great coil of horns. Ren, the belligerent one, scious of his future leadership, b Koka importantly. Already irri Koka turned and rammed him s against his lesser brothers and jaw-champing humility.

This reminder that he was leader had become more and necessary of late. Koka had not by his position lightly or held it ease. It had been a constant str to hold the flock and this grate craters in the north end of the flo

he saw summers on the Pinecate heights, held sway. Koka had never been to South Crater but his scarred frame and the size of his flock attested to his masterful reign of the north.

He wheeled back. Through the din of storm there came to his ears a quavering bleat.

And then the curled mass that was Tula stirred and Mul stepped aside. Slowly the lamb uncurled, looked half blindly about, bleated again and staggered to its feet. It stood without help, four hoofs wide, all legs and head, shivering in the brittle cold—the largest and strangest lamb Koka had ever seen. And then, as if the fact that it was alive and had got up was not enough, it took a step forward.

Step by step the old ewe was enticing the tottering thing toward the shelter. With infinite patience she brought it into the cavern and to the far wall where she took up the task of drying its strange bedraggled body with her coarse tongue.

Koka edged forward, his flat nose twitching. What he had seen was enough, but to watch the little creature already suckling was too much. For the moment the roar and the downpour milling through the crater was forgotten. Slowly, he stretched out his crinkled nose and sniffed the musky miracle.

AND Tula lived. The heretofore inexorable rule of things had been confounded. In three months she stood head above any of the other lambs. Where they were brown like the ancient lava flows, her slim body stood out gray against the blasted surroundings. Her knees were less bulky; her eyes milky instead of brown. And where the horns of the others were still negligible lumps hers had already broken through.

She kept the older members on constant guard against her unexpected attacks from some cactus or lava ambush. She led the young ones in such a whirlwind of gamboling that they staggered from exhaustion. The whole flock eyed her with bewilderment.

In May the sky grew daily more vivid and glassy. The four-hundred-foot walls of the crater seemed to imprison the heat. And as it danced in waves the little salt grass remaining turned brown and lifeless. The shrinking cactus became tough and woody, defying the shredding of hoof and horn. Shortly North Crater would be a sweltering caldron.

Outside, the high peaks were caressed by the gulf breeze. There the vegetation was succulent and the flies did not gather with irritating insistence.

Koka, growing increasingly more restless, lifted his huge head sharply as a sudden blast of hot air wheeled through the crater. With a bellow, he trotted to the wall where the trail began its zigzag course from ledge to ledge upward to the rim and the world beyond.

Ren raced forward quickly. In single file the rest followed—up and up, the ewes nosing their young against the wall away from the sheer drop.

Leaping lightly and surely over the spots from which the other lambs had to be boosted, Tula looked up and saw the line meandering far above. This was something new and the lambs ahead hindered progress. She ducked under Mul's restraining nose and bolted.

Recklessly she bounded ahead, Mul's blat of resentment only quickening her ambition to escape. The ewes planted themselves squarely in her path but, kicking, butting and bleating, she pushed by. And the more she was obstructed the more insistent she became. She had had her own way on the crater floor and she would have it here. There was no stopping her.

Not even the three lesser rams acted quickly enough to halt her. Only Ren made any worth-while bid. He struck suddenly, his sharp hoof sending her staggering back down the slanting shelf. She

stood a moment, trembling, stopped and was looking back over her head, she rushed him.

It was a glancing blow. Along his half-turned body ad wall. His rough horns raked pulled herself up to find Koka alone blocking the trail.

She glanced around. The b one was coming, his head th throat rumbling. Before she he hit her. Like a shot she forward, crashed between K legs and ended on her skinn der his belly.

Koka snorted and wheeled horns. Seeing only Ren, he ward and brought his forefe of the great flat head of the bell Sparks flew.

And so did Tula. Free now forward. Almost instantly th ished into a red jumble that r a ragged, shimmering horizon gained the rim of North Crater first time in Koka's reign an he had led the flock into the ce

Restraint was now useless made her way to the front, hold her back in the wide rea flow.

Koka soon gave up. It took his strength to curb Ren's g rogance. He was not so young and it was more important check the ambitious Ren than young Tula.

And thus Tula took her p Ren alone offering contest. Is ment at seeing a lamb out in fr cially a ewe—was undying. his crafty strategy worked her the flock where he bore savag upon her. Her escapes high on pings that defied hold for his and her triumphant bleats only incense him further. But fro tacks she learned ceaseless vigan reliance.

FORTY miles from North C Pinecates thrust their ragged against the hot sky. Here the e were festooned with green, sw and barrel cactus offered drir was shade under the scrub ced cooling wind from the gulf that its blue arm beyond the sand du west.

It was a mighty world, burn the sun and the smelting of cent when it flowed with molten fire impassable gorges, patched w swept glaciers—fused honeyco razor edges—its three-hundred- der was sauced with gigant- like black ice. Everywhere w marks of blowholes and cra largest of these at the upper e North Crater. The even great of South Crater, where Jutta h rose at the other end of the flow.

Jutta, too, was on the peaks his flock. Tula saw him one silhouetted on Pinecate's sum was greater than either Ren or something in his regal pose terr challenge within her. purpose in subduing her. Once she was overcome, her spirit would be broken.

It wasn't a simple task. Pounding in sudden pursuit across the crater floor, his heavy horns cut down his speed. Straight to the wall she would race, and retreating safely into a crevice, she would meet him with the ready spikes.

His perseverance, however, and her unnatural penchant for browsing in the rain, reached the inevitable climax.

It was a cold, drizzling afternoon and she was feeding near the west wall. Ren, slipping out of the cavern, was upon her before she knew it, battering her with a mighty lunge of his horns. She kicked with all her strength and her frantic blating echoed through the crater, but to no avail.

Her temper rose as she watched him trot back to the others with arched neck. Wheeling in quick circles, she made short rushes of defiance toward the cavern, ending her demonstrations with great slashes pawed in the wet earth.

For days she browsed at a distance and even Ren knew better than to approach. But he strutted endlessly, a source of maddening irritation. Coupled with the flock's docile manner of acceptance, it presaged disaster. And the symptoms developed quickly. With each strut Ren swung sharply toward Koka. Always the old leader managed to set himself in time, but his movements were growing slow and ponderous. Once Ren caught him unprepared, Koka was doomed. After that the belligerent one's arrogance would become unbearable. And there was nothing that could prevent it, short of a miracle.

THE miracle came just before dawn. At first a whirlpool of warm air churned through the hollow, cutting into the cold morning stillness. Behind it came a distant rumbling that grew steadily in volume. Leaping to her feet, Tula raced from the wall. The crater floor rolled like a heavy sea, and a bottomless fissure opened and closed before her as she slid to a paralyzed stop. The great heights swayed inward, sending tons of lava from the rim, and the air became suddenly thick and acrid with sulphur fumes.

Terror rocked the world, clutching at her, impeding her breathing—and spilled the flock from the cavern in aimless flight. Again and again the floor heaved, the din of tumbling rock and screaming air currents filling the crater. To this the flock added its blating of mortal fear, above which came Koka's commanding bellows and pounding hoofs. He dashed among them, butting and striking, driving the frantic, widespread band together.

Swinging herself into the old one's titanic effort, Tula saw Ren racing madly for the trail. Back and forth she galloped, turning the panic-stricken, ramming the petrified, until the last one had started up the reeling ledges. Ren and the lesser rams had already vanished over the rim.

She pulled up, waiting for weary and wheezing old Koka to begin the ascent. But he just stood there gasping the suffocating air and gazing at the climbing line. She nosed him impatiently to move on up. Instead, he turned and loped heavily back toward the cavern. And there, when they reached it, stood Mul with her forefeet crushed in the vise of a crevice that had opened and closed.

Moving in, Koka nuzzled his old mate. Sick with agony, Mul moaned and licked him in return with her coarse dry tongue. Again and again Tula trotted to the opening, blating back over her shoulder. But Koka did not notice. Bracing himself beside Mul he tried to pull her bleeding legs from the vise with the sweep of his horns.

And thus Koka died with his lead ewe in North Crater. Tula could feel the tremor coming. The floor began to undulate again, the walls leaned, starting

to crumble. She dashed into the open just as the roof of the cavern dropped in a cloud of nostril-stinging dust.

Up the trail she bounded, great slabs whistling past from above, the ledges shaling off beneath her flying feet. The last of the flock to make the exodus, she was also the last sheep ever to cross the gargantuan rim of North Crater. Barely had her trim legs carried her over it when the walls of the big pit leaned inward, hung for a moment at the tip of balance and then rushed with a mighty roar to the floor. The surrounding terrain pitched wildly, putting her to her knees. North Crater was no more.

Regaining her feet, she sped on through the quickening gloom. Great billows of flame-shot, smoke rolled from the cone of Pinecate. The morning sun went out behind the black curtain and in its place a ruddy glow lighted the slopes as though showing the way for a new flow. And it came—bubbling and flowing, a river of hissing liquid fire.

The air was that of a blast furnace and the sky rained stinging cinders. Only to the extreme south was there a semblance of clearness. But the trail to that region of safety led around the giant fissures straight toward the boiling cone. And so she swung west over the rumbling, tossing waste where the white dunes, now black with shadow, stretched away.

In less than a minute she came upon three of the flock ewes coughing and bleating in a huddle of stony fright. Nosing them roughly, she led on. By the time she reached the dunes she had gathered in her wake sixty-odd—strangers for the most and all heavy with lamb. Deserted by their unencumbered rams, they saw leadership in her strange gray form and positive action.

For two days they floundered through the lifeless sandy realm. With the eruptions diminishing and the towering billows receding, the sun came out, a terrible fire in itself. But with endless force she brought them, bleating with thirst, to the mesquite-bordered sloughs of the gulf.

Driven from their natural summer highlands, they foraged through the hot months at the gulf's edge. The breezes were even cooler than they had been on the peaks. And the feed was better. But Tula soon learned why the rams always led upward instead of down.

Here the coyotes howled through the night and made stealthy raids upon the flock. Her sleep broken continuously by blats of terror, she grew gaunt and jumpy. But she retained relentless reign. Not even Koka could have done better.

And no ram had shown up. First in flight, they had gained the craters of the south region and suffered the heat through. Drawn together at first by fear, with the return of familiar silence they once more resumed their tempers.

REN, his arrogance growing, was the first to assert himself. But finding he was no match for the massed front of the others, he moved off in rumbling rage on his own, wandering west to the wave of blocks heaped against the dunes.

It was here Tula met him one cloudy November noon as she led the flock back through the barrier.

Ren stared, motionless. There was no mistaking Tula's gray shape. And with her were some of the old band—and others, fat and strong—a flock greater than Koka himself had ever known! He stepped forward to take command.

Tula stopped, spraddle-legged, facing the ruthless renegade. It was inevitable that some ram should join them—but not this one! Great head or not, the hour had come. Spikes lowered, she shot forward.

It was like ramming one of the gigantic blocks. Her right horn split and snapped off at the middle. A terrible pain streaking through her neck, she folded up under his huge head. The next instant he had lifted her in the cradle of his horns

en suddenly, before any battle gnitude should have reached a e end came.

by Ren's vicious pile-driving a slipped and sagged to his

knees. In his anxiety to regain his feet he raised his head too high. Boring in, Ren rammed his horns in the old one's chest, pushed him back on his haunches and across the slick face of the lava toward the precipice.

The young rams instantly lost all desire to enter the fray. They snorted and plunged through the petrified ewes to safety.

Steadily, relentlessly, Ren drove the unfooted Jutta down the glassy, slanting rock. Body braced, leaning ever forward, he pushed on—one, two, three feet. And then, with Jutta's rump not six inches from the awful drop, he ceased his gruesome labors and threw up his head. From one side came the rattle of flying hoofs.

He turned, but too late. The battered head he had given Tula was bearing down on him with the speed of wind and the dire promise of a juggernaut. It caught him midriff, sending him floundering past Jutta's beaten body to the brink. For a breathless moment he pawed at the slick surface—and then plunged with a terrified bellow into space.

SILENCE, eerie and measureless, rushed through the flow. Jutta looked up with tired eyes at the gray form before him. Cautiously, Tula touched her crinkled nose to his and bleated. He rumbled in return but made no effort to rise and she struck out with a forefoot until he staggered up and limped to safety.

The three young rams working their way back through the flock she routed in a single snorting rush. She looked about then while the sun cast one last ray that reflected redly from her eyes. The next moment dusk fell, mantled heavily by the gathering storm. A cold gust whipped in from the west.

Jutta was moving lamely toward the first ledge of the descent. She turned, shouldered him to one side and took the lead.

Down, down she went into the great bowl, behind her Jutta and the long line of her flock, then the three rams and Jutta's flock. Her flock and Jutta's flock—all one now. The mightiest flock the lava world had ever known.

Reaching the floor she jogged along the well-defined trail to the mammoth cavern in the far wall. But she did not enter. Stepping to one side, with Jutta at her heels, she stood erect, nose up, proud, her eyes straight ahead while the long line filed past into the shelter. And Jutta, sensing the queenly in her battered, regal bearing, echoed her snort of victory with a bellow that rolled upward through South Crater and went winging off into the night.

THE END

Absorbine Jr. kills Athletes Foot "Bugs" on contact!

Before

This picture, magnified hundreds of times, of the parasitic growth which causes Athlete's Foot was made before contact with Absorbine Jr. This growth lives on stale perspiration products and dead skin . . . the real cause of the pain and misery of Athlete's Foot.

After

This is a picture, same magnification, of the Athlete's Foot organisms, after contact with Absorbine Jr. See how this parasitic growth has wilted and died. No longer can it irritate delicate nerve endings and cause that maddening "itchiness" and excruciating pain!

Cracks warn of danger

Warmth and excessive perspiration between your toes invite Athlete's Foot! This common summer condition irritates the tender skin often to the point where it cracks and flakes away in moist shreds. Then the ever-present organisms which are the cause of Athlete's Foot, multiply and attack the raw flesh through the open cracks! Every step is agony!

Drench those cracks

Apply Absorbine Jr., full strength, night and morning, at the first sign of cracked skin between the toes. It kills the Athlete's Foot organisms on contact. To guard against re-infection: Don't share towels or bath mats. Boil socks at least 15 minutes to kill the organisms. Disinfect your shoes. In advanced cases consult your physician.

Absorbine Jr. also benefits you four other important ways:

1. It dries the skin between the toes, discouraging future attacks of Athlete's Foot.
2. It dissolves the perspiration products on which Athlete's Foot organisms thrive.
3. It cleanses and helps heal broken tissue.
4. It relieves itching and pain of Athlete's Foot.

Daily hygiene! You can help ward off Athlete's Foot by applying Absorbine Jr. to your feet every day! Cooling and refreshing after bathing. Absorbine Jr. has also been famous for more than 50 years for relieving sore aching muscles. At all drugstores. \$1.25 a bottle.

W. F. Young, Inc., Springfield, Mass.

THE FEELING IS MUTUAL

Continued from page 15

There is a silence on the other end of the wire.

"Mabel?" I says.

"I heard you," she says, "and after hearin' you, I ain't made up my mind yet if I'm ever gonna speak to you again. But until I make up my mind, I can tell you it's like a fairy story, honest."

"The dream?" I says.

"The dream is a secret," she says, "only the interpretation is what counts. The future is me and Bud Simmons, with the dimples. I can hardly believe it."

"You mean they had his name in the book?" I says.

"They never use names," she says, "but it's clear enough. This is my destiny."

"But, baby!" I says. I'm beginnin' to wake up. "How about me?"

"You?" she says, with a dreamy sound in her voice. "I just made up my mind. I ain't talkin' to you." And she hangs up.

The rest of the night I don't sleep so good. I think about what she said, and the dreams, and any way I look at it, it looks like the end of a beautiful mutual interest between her and me.

YOU know what they say about salt. How it never rains but it pours? It starts pourin' salt right after this. For the next couple of days I keep callin' up Mabel to see if I can straighten it out with her, only she won't even come to the telephone. And on top of this, my favorite baseball team, the Dodgers, start losin'.

Every afternoon I got the Dodger game tuned in on the radio in my hack, and every afternoon it's the same thing. Sure, every team's gotta lose a couple, once in a while. Only the way the Dodgers are goin' at it is overdoin' the thing, if you know what I mean. They're in first place, all right, only the first thing I know they ain't in front by four games any more, it's only one game. And they're still losin'. If them bums the St. Looeys could win a couple of more games, they would be in first place instead of the Dodgers.

It's a bad week. My girl ain't talkin' to me, my baseball team is losin' its pants. I ain't even sure my girl friend is my girl friend. And it begins to look like my ball team ain't a ball team.

Then this one day I'm down at the hackstand in my hack, listenin' to the ball game on the radio and it ain't no different from the rest of the days. It's the top of the eighth, five to two favor the Chicagos, when a guy sticks his head out of the candy store and yells at me.

"Hey, Joe," he yells. "Somebody wants you on the telephone."

"All I get on the telephone is bad news," I says, but I go in and answer it anyway. When I hear who's on the phone, I practically forget about the Dodgers and everything.

"Mabel!" I says. That's who it is. "Are you talkin' to me?"

"But certainly," she says. "I was just wonderin' how you been lately."

"Wonderful," I says. "How are you?"

"Fine," she says.

The conversation pauses.

"Joey," she says.

"Yeah, baby? I'm glad you decided to forget about what I said," I says.

"Oh, that," she says. "I guess you can't help it if you ain't a perfect gentleman. I was just wonderin', Joey."

"Yeah?"

"Now that we're friends again, and all that, I was wonderin' how you feel about goin' to see a baseball game."

"A ball game?" I says. "Sure, any time! Are you really interested in baseball after all, Mabel?"

"But certainly," she says. "It's a mutual interest, ain't it? You know what

Stan Musial batted last sixty-five."

"Whadid you say?" I says.

"And Max Lanier was none," she says, "before Mexico."

I'm a baseball fan, and of averages, but I gotta admit to me. Comin' from Mabel, over it.

"How about tomorrow?"

"Okay," I says.

"That's fine, Joey," she yells. Kurowski .301 last year. I good, isn't it?"

"Fair," I says, "but I'm hangin' up, and I can't g like they say about it's a before daylight. One min than a snake's belly. Then Mabel calls up, and every again and she's a real ball night, givin' me the average thing."

I go back to the cab, and walkin' on a cloud. Then, on, and the announcer is st

"And there goes another record book for the Dodgers. Even that don't bother."

"Just wait'll tomorrow," I laugh when I think about h

couraged about a team like "And don't fail to be w row," the announcer says, hard-driving St. Louis Ca

out to Ebbets Field for a place. And say—if you're driving with your shaving, thing you—"

He goes ahead with the stuff, only I ain't listenin' n

cause suddenly the cloud c standin' lets go and I hit t with a bump.

Because that's when I ge Looeys are playin' the Dode

row. I suddenly remember players Mabel quoted me a

 the crowd yell farther down the
 I take a look and I can see a red-
 shin' through the crowd toward
 behind the St. Looley dugout.

The next thing I see is this figure emergin'
 on the field, on its way over to first.

"Mabel!" I yell. Everybody else is
 yellin' too, so she don't hear me. I get
 up and start out after her.

It ain't easy gettin' through the crowd,
 which is pushin' and shovin' like crazy.
 But, after takin' a beatin', I bust out in
 the clear, on the field. Halfway to first
 base I catch up with Mabel.

"Mabel," I says, "where are you
 goin'?"

She don't listen to me. She's got a
 look of determination on her face and
 she keeps goin' toward first base. A cou-
 ple of field police come runnin' over but
 she brushes them off and continues.

"Mabel," I says, "whatever you're
 doin', you can't do this." She does it.
 She arrives at first base and I'm right in
 back of her. Some Dodgers got their
 faces pushed right into this Bud Sim-
 mons', and they're goin' at it hot and
 heavy.

"Oh, yeah?" says a Dodger.

"Yeah!" Bud Simmons says.

"Stop pickin' on Buddy," Mabel says.

THIS stops them for a minute. They all
 turn around and look at Mabel. Out
 of the corner of my eye I can see some
 more St. Looley players, and some more
 Dodgers, runnin' up to the scene. Some
 of them got bats.

"Mabel," I says, "come on back to our
 seats."

"Tell them to leave Buddy alone," she
 says.

"Lady," says Bud Simmons, "why
 don't you stay out of this?"

I can hardly hear what happens next,
 with everybody yellin' and all the ball-
 players and everybody pushin' one an-
 other. But right up close I suddenly hear
 another woman's voice, yellin' like ev-
 erybody else.

The next minute this woman comes
 bustin' through all the players who are
 standin' around hollerin', and walks up
 to Bud Simmons. In one hand she's got
 a little boy, and in the other hand she's
 got a little girl.

"Bud Simmons!" she says. "Who is
 this woman?"

"Stop pickin' on Buddy," Mabel says.

Bud Simmons gets pale. He says to
 Mabel, "Lady, please!" Then he says to
 this other woman, "Fanny, keep calm. I
 never seen her before in my life."

"Oh, no?" Mabel says. "How about
 last month when you was in my lap?"

"Lady!" Bud Simmons hollers. He
 turns to the other one. "Fanny, so help

me. This is the first time I ever seen this screwy dame!"

"Now wait a minute," I says. Maybe she ain't actin' exactly ladylike at the moment, but nobody can say that about Mabel while I'm standin' there.

Bud Simmons got a kind of wild expression.

"You stay out of this!" he yells at me. "Whadid you call Mabel?" I says.

"I says she's a screwy dame!" he says. "Fanny," he says, "you gotta believe—" That's as far as he gets. I pull back my right, and let him have it. The punch bounces right offa his dimples, and it's a beauty. There's a roarin' in my ears, from the excitement. I watch this Bud Simmons cave in real slow, and just before he hits the dirt, he suddenly lights up, like in Technicolor. I look at Mabel, and she's lit up also. She starts dancin' around, then she stands on her head, and that's all I remember.

They tell me later one of the St. Looeys massaged me with a bat. I didn't know it at the time. . . .

When I wake up, the Technicolor is gone. Everything is plain white. I'm in the hospital. My head feels like a balloon. I look up, and in the middle of the white I see some red. Mabel's head.

"How do you feel, Joey?" she says. "Weren't those the cutest kids you ever saw in your life?"

"I feel terrible," I says. "My former girl friend is a St. Looey fan."

"Oh, that," she says. "That's ancient history." Ancient history, she says!

"I was talkin' about Bud Simmons' children," she says. "Gee, wouldn't you just give anything to have a couple of darlings like that, all your own?"

"They looked okay," I says. "Lemme get somethin' straight here," I says. My head is bangin' like a busted radiator pipe. "Ain't you a baseball fan no more, for the St. Looeys?"

"Baseball!" she says. "Baseball is only a game that kids play, and it doesn't seem to me that grown-up people should get excited about it, with the strikes and umpires and touchdowns and all that kid stuff."

I lean back on the pillows and think this over. For Mabel, it sounds more normal than before.

"Anyways, Bud Simmons is happily married," she says.

The picture clears up.

"I had a long talk with his wife," she says. "She doesn't know anything about baseball, but they got mutual interests anyways. One male and one female. Little ones."

She lets out a sigh, and I do likewise.

"So I guess that all the mutual interests a couple needs is children," she says, "although they oughta get married with-

out a lot of delay so that they get possible."

It sounds reasonable. I take Mabel's hand. She looks at her blue eyes shinin', and I feel her head ain't even poundin' now.

"Baby," I says, "I think you're thin' there."

"Do you?" she says in that way that makes me feel kinda weird. "That's nice, Joey."

I ask her who won the ball game. I got slugged, only she doesn't care cause she ain't interested anyway. I find out later the Dodgers were mentioned this so anybody, even the St. Looey fans, who thinks they're slipping will get straightened out.

I KNOW. The Dodgers are a year. I got modern science of me when I make this statement. I happened to look up this so I had in Mabel's book and the translation is that it means something wonderful is going to happen to my nearest and dearest to me.

The way I figure it, that's either the Dodgers, and since they're gettin' married for a while, it would be a wonderful thing. I figure it, then that leaves the

You see what I mean?

THE END

THE NUCLEAR FISSION OF EDWARD ANGUS GILMARTIN

Continued from page 21

"Right here."

Edward Angus looked up and there he was in front of the remembered address in the Fifties.

"Well, I'm pretty hot, so I think I would enjoy a lemonade or a glass of ginger ale," said the Professor.

"Ginger ale, hell!" said Private Gilmartin.

Today Angie's dress was light blue and the Professor thought the combination of it with her hair was worthy of Botticelli's personal attention, while Private Gilmartin noted with satisfaction that what filled the dress was definitely an unupholstered Angie. Both he and the Professor agreed that it was four freckles and not three.

"Well," said Angie, "couldn't you find the library? I didn't expect I'd see you here again so soon."

"I was just walking home and thought I'd drop in for a drink."

"You know where to get it." "Thank you, the first door on the left, I believe."

He walked hastily up to the bar and the Professor said quickly, "I'd like a glass of ginger ale, please."

"What'll you have with it?" said the bartender.

"Nothing."

The bartender gave him a long look and produced a bottle and a glass. "That'll be four bits, Mack," he said, testily.

BY THE time he had consumed two dollars' worth, Edward Angus felt like an overloaded trailer truck, and was sure the other patrons must hear him sloshing as he walked to the exit. To his horror, some other minion was behind the checkroom door.

"I gave my hat to the young lady," he protested.

"She's gone to supper," said the boy unfeelingly. "We gotta eat just like everybody else."

"Where'd she go?"

"How should I know? Mr. Lacy took her out. I don't ask him where he's going, you can bet."

"And who is Mr. Lacy?"

The boy looked up with a start to see if Edward Angus was joking.

"Just the guy that owns this joint and

about a dozen others. Where you been all your life?"

"I never heard of him."

"Well, don't be getting nosy about him. He's got connections and he don't like guys asking questions. Come on and give me your check." . . .

Edward Angus spent a very restless night. This may have been due to four bottles of ginger ale, but Angie and Mr. Lacy pre-empted most of his thoughts. Connections in New York had, he felt, a very different connotation than in Boston. He had connections in Boston and would have no objections to any inquiry into them.

Mr. Lacy was not at all the proper person for Angie to be dining with, he was sure.

Next day the work went a little better, but by the middle of the afternoon he could no longer stick it. A bus carried

him to the Fifties and he walked more than three blocks.

"Hi," said Angie, "you're good a regular customer." She was black and Edward Angus looked at her that to him she was beautiful thing, but far more beautiful. Instead, he said fatuously, "It's here. I like it."

"I guess it's as good as any other."

"Well, why do you work here if you don't like it?" he demanded.

"I didn't say I didn't like it. It means to an end, that's all."

This time Edward Angus limited himself to two bottles of ginger ale. When he came out, the same boy was in the coatroom. After a hasty change with his watch he went off to a turbulent night's rest. This time it wasn't ginger ale.

The third afternoon he arrived

Bringing out the finest flavor

Season your steak with
a skillful hand and a world of
flavor comes flooding forth.
But be timid with your touch
and the taste lacks fullness.
Be overly vigorous and you taste
the seasoning instead of the
flavor. It takes a gift of genius
to lure shy flavors from their

and as he gave his hat to Angie, he said, "I wonder if you'd have supper with me tonight?"

She gave him a long, slow look, fires blazing in the back of her eyes and her lovely curving mouth becoming straight and firm.

"You look like a nice sort of guy, so don't get me wrong. I just don't go for that kind of stuff," she said.

"What kind of stuff?"

"I don't go out to supper with customers. I work here and that's all."

"But you went out to supper with Mr. Lacy."

"That was different."

"How?"

"Look," she said as though she was explaining matters to a child, "I have to work for a living. I could probably get a job as a secretary, but it wouldn't pay one quarter of what I make here. I have to support my mother. She's crippled and this way I can spend most of the day with her and still pay the doctor's bills."

"That doesn't explain having supper with Lacy," he protested.

"It does, since he owns the place, and has connections with all the others that he doesn't own. What if he has a yen for me? I know how to handle people like him, and Mother has to have another—oh, this can't interest you—"

"It certainly does," he assured her. "Everything about you interests me. I got out of the Army with just one idea in the world. Then for some crazy reason I met you and I haven't been able to think about anything else since. I wanted to know something else very much and now all I want to know is about you."

"That's a fine line," said Angie. "You don't even know my last name and you try to pull that corny stuff on me."

"But it's not a line. I'm out of my head about you. I can't work, I can't think of anything except you. I just can't go on without knowing that you're taken care of. I—"

SHE smiled at him with the affectionate understanding of a mother listening to the child who tells her that someday he will make a million and dress her in silks and jewels beyond price.

"You're a good guy," she said, kindly, "so I guess you're talking about a ring and a minister and things like that, but tell me: Just what were you in the Army?"

"I was a private first class. What's that got to do with it?"

"Can't you see?"

"I am perfectly capable of supporting a wife and family," he assured her.

"Things cost a lot of money these days. The government has been giving you bed and board so long that you don't realize the kind of income that it takes. Okay, so you're a sober, industrious young man. That doesn't cut any ice with the landlord and the butcher."

"How do you know what my salary is?"

"You said you were a professor and I read the papers. I'm probably intellectually starved, but I look as though I ate regularly, don't I?"

"I think you look perfect," said Edward Angus feelingly.

"That's nice to hear," said Angie dreamily, "but it takes plenty of coconuts to provide the groceries and—"

"Hello, Angie," said the oily voice of Mr. Lacy. "Good evening, Professor. How about joining me and a couple of my friends in a drink? This is Angie's hour for supper. Come on, we'd like to have you. Maybe we're not up to you intellectually but we can add up the check and we can pay it, too."

"I can pay my own check," said Edward Angus defensively.

"Sure you can, but come in and have a couple with us." Mr. Lacy took him by the arm, the two friends closed up the rear and he found himself seated at a table against the wall in the bar.

"We'll have Scotch and so you have?" said Mr. Lacy, waiter came over.

"I'll have ginger ale."

Mr. Lacy and his two friends merrily. The two friends looked at Georgie Raft and Edward G. When they laughed they became tically kissing cousins to hyen "That's not a drink," Mr. tested. "What are you really have?"

"That's what I want."

"Well, how about a Hors That's mostly ginger ale."

"Okay."

HAD Mr. Lacy chosen to ant, a quality on which declined to rate himself highly, have noted that while he had a fessor Gilmartin to have a him, it was Private Gilmartin w the point of absorbing his Men who had served any co time in the Alaskan peninsula told him that Gilmartin had be to private nine times—and no cause he couldn't make out a He was known as a cheap dri good many PXs still bore the duced by his third drink.

"I see you were in the Ar Mr. Lacy, pleasantly.

"That's right," said Private sucking on his Horse's Neck.

"Where?"

"In the Aleutians."

"That must have been pretty

"It was."

"What part of the racket were

"It wasn't any racket and I Finance Corps."

"Oh, a noncombatant?"

"Exactly. How about having on me?"

Comrades who had served vate Gilmartin would have c this a good time to remember engagements. Mr. Lacy and h were only too happy to acquies

"I suppose you were drafted Mr. Lacy's friends inquired.

"I enlisted in September of forty-one," said Private Gilmar

"Sucker!" said Mr. Lacy's oth

"How do you figure that?"

"Well, all you got was grief f didn't go nowhere nor do noth

"Yes?"

"Why don't you be smart lik keep out of it, and we make pl besides."

Private Gilmartin began to c slow boil.

"There were some guys," nounced, "who—"

"Gentlemen," said Mr. Lacy, fessor is our guest. Each one reasons for his actions. How a other round of drinks?"

Edward Angus worked on Horse's Neck in silence. It had a year since he had held hey Bacchus, and the fires under l were beginning to raise a nice steam. He had not liked Mr. begin with and he felt a distinct toward his friends. He leaned a table to the last man who had s him and said slowly, "Where while the show was going on?"

"Right where I am now," said tleman with pride. "I got a de knows his stuff and no draft bo put the finger on me!"

"You should have been smart in the other friend. "Only dopes selves get dragged into that non

hen on, things happened very Mr. Lacy and his friends knew a about gutter fighting but as suspected, the shoulders of their ere padded. The whole group the appearance of animatedancers, except that only one seemed to catch and toss any-ivate Gilmartin gave Mr. Lacy ant swing into the middle of an ing waiter, dropped five dollars ole, and regarded the surround- is with complete satisfaction. lace looked a good deal like a oncluded as he walked out.

On the way to the library the next morning, Professor Gilmartin rubbed bruised knuckles against an aching head while he endeavored to read the mass of mail which had finally caught up with him. Long ago, he had decided to spend the remainder of his life in the halls of academic learning, but one of the letters he had just received contained an offer which was, he had to admit, beyond the dreams of avarice. Also that particular company possessed about as good facilities for research as those provided by the best universities. Still, he shrank from forsaking the safe backwaters for what he had always thought of as the marts of trade.

Angie was sitting on the library steps as he walked up.

"Are you all right?" she demanded.

"Why not be?" he said carelessly.

"But against those three hoods?"

"Aah—"

Angie started to cry.

"What's the matter now?" said Edward Angus, his self-satisfaction deserting him.

"I was so worried about you and I didn't know where you lived. I've been waiting here most of the night," she sobbed, "and I've lost my job."

"That's fine," said Professor Gilmartin. "My offer's still open and we'd better go and get you something to eat."

ANGIE'S head was on his shoulder and her tears were beginning to wet through his shirt. "Heaven knows what we'll live on," she wailed. "You can't make as much as I used to."

"Will you be willing to try it on twelve thousand a year to start with?"

She held him off at arm's length and searched his face through tearful eyes.

"Gilmartin," she whispered, "are you drunk?"

"Certainly not! I almost never touch the stuff."

"Who do you think you're kidding? The time you spent in that bar—"

"I was drinking ginger ale."

"You got an awful lot of power out of such a low octane."

"Enough of this nonsense," said Edward Angus. "Are you going to marry me or aren't you?"

"I don't know. I guess I love you," and then as he took a step toward her: "Oh, no! Not here where everybody can see us. Really, we ought to wait. You do need someone to take care of you; and you'd probably be the dickens to handle—though I'm sure I could do it—still—"

Edward Angus lifted Angie lightly until her eyes were level with his.

"You can start now," he said.

THE END

"As soon as he gets 'em all tuned up, he's going to play some songs for us—he thinks"

GEORGE HAMILTON GREEN

Boy, I'm in a BAD way!

You don't need a "funny mirror" to tell when you've had too much feasting. You have inside information... a sickish, upset stomach. Be gentle with these upsets—take soothing PEPTO-BISMOL.

NEVER UPSET AN UPSET STOMACH

Don't add to the upset of an upset stomach with overdoses of antacids or harsh physics. Take soothing PEPTO-BISMOL.

This pleasant-tasting preparation is non-alkaline, non-laxative, non-constipating. Its action is different. It spreads a soothing, protective coating on irritated stomach and intestinal walls, thus helping to calm and quiet common digestive upsets.

To relieve distress after over-indulgence; nervous indigestion; heartburn... and to retard intestinal fermentation; gas formation; simple diarrhea. Three sizes at druggists.

TELEVISION GETS A BOX OFFICE

BY HERBERT ASBURY

Scientists have solved the big problem in television—how to make programs pay for themselves. It'll cost extra on your phone bill, but it'll be worth it in finer entertainment

THE television set was in a suburban basement some ten miles from Chicago, and on the screen was a moving picture that was being broadcast by one of the two experimental television transmitters of the Zenith Radio Corporation. But the picture was blurred and jumpy; it would have been impossible to look at it long without eyestrain.

After a few minutes G. E. Gustaf-

son, a Zenith executive, picked up the telephone and called the transmitting station.

"Send the key," Mr. Gustafson ordered.

Instantly the screen steadied and the picture became clear and sharp.

"Stop the key," said Mr. Gustafson, and the picture again became a meaningless blur. He repeated the procedure several times. When he said,

"Send the key," the picture was clear and satisfactory; when he said, "Stop the key," the screen jumped and blurred.

What we were seeing was the first successful demonstration of wired television, the dream of the radio industry for more than 20 years. Scientists of the Bell Telephone Company, some 16 years ago, succeeded in sending images, experimentally and not

very satisfactorily, over a short length of telephone cable. Since then experiments in this field have been carried on by virtually every radio and television manufacturer, but little progress has been reported. The researchers were stopped by the fact that the wave band required for transmission of television is at least a thousand times as wide as that for the telephone, a complete

LIKE MAGIC

THIS PREMIUM OIL GIVES YOUR CAR MORE POWER!

Unlike the magic of walking on hot coals, the performance of *premium* Sinclair Opaline Motor Oil is readily explained. This improved 1947 Opaline gives your car more power because it contains special chemicals developed by Sinclair. These chemicals clean carbon, sludge and other power-stealing deposits from cylinders, piston rings and pistons. Opaline cleans as it lubricates.

Tests prove that Sinclair Opaline gives old cars more power by cleaning up the motor. In new cars, 1947 Opaline preserves that new car pep and power. Get more power from your car. Save on gasoline. Save on oil. Ask for 1947 *premium* Sinclair Opaline Motor Oil where you see the Sinclair H-C Gasoline sign.

pattern of frequencies which cannot be crowded onto a telephone wire.

A year or so ago the whole question of wired television was thrashed out at an important meeting of Zenith executives and scientists, among them E. F. McDonald, Jr., president of the corporation; J. E. Brown, the chief engineer; Mr. Gustafson, vice-president in charge of engineering, and Dr. Alexander Ellett, head of Zenith Research Laboratories.

Dr. Ellett, formerly of the U.S. Office of Scientific Research and Development in Washington, is a comparative newcomer to Zenith; during the war he was a member of the scientific brain trust headed by Dr. Vannevar Bush, and was one of the top men in the development of the proximity fuse. All of these men had been close to television developments for many years, and they had pretty well come to the conclusion that to get television into American homes by way of the telephone was probably impossible. One said: "Nobody'll ever get all those frequencies on a telephone wire."

"Well," said Dr. Ellett, "maybe we could send some of them by air, some by telephone."

These words proved to be the clue to the final solution of the problem. Included in the television wave band are several essential but very simple frequencies, and after long and intensive experimentation the Zenith scientists devised a way to separate these frequencies and send them over the telephone. The rest of the picture is broadcast by ordinary methods, but, of course, what goes out over the air is not a complete telecast. A set tuned to the transmitter thus broadcasting will show only a blurred and jumpy mixture of light and shadow, unless it also receives by telephone the key frequency that unscrambles the mess.

The unscrambling takes place in a device attached to the telephone and to the television set. All technical details of the device are being withheld by Zenith, but Mr. McDonald says that the device to be installed by the telephone company and connected to the line and television receiver will be small enough not to be in the way, that it should cost not more than five dollars, installed, and that mass production can begin within six months.

"There will be no monopolistic control of the new development," he said. "Licenses will be readily available to broadcasters and to manufacturers of television receivers."

Mr. McDonald proposes to call the new system "phone vision," a name which cannot be copyrighted or registered and which will belong to the industry as "radio" and "television" do. He emphasized that it is far beyond the experimental stage; it has been thoroughly tested over a long period of time and under varying conditions. At hours when they were not scheduled to broadcast, Zenith's two television stations have transmitted pictures in both black and white and full color, but without the key frequency. Incidentally, the new system works as well with one as with the other. Owners of television sets have telephoned to the company in some anxiety, puzzled by the meaningless blur they were receiving on their viewing screens.

Meanwhile, on test sets scattered throughout the Chicago area, perfect pictures were being received, as the key frequencies reached them by telephone. These frequencies were sent over dial phones, through city switchboards, and through the switchboards of suburban villages, without the telephone operators having any idea that they were handling other than routine calls. For the new system doesn't interfere with the normal use of the telephone.

Of course, many details must be worked out before television can actually be brought into your home by way of the telephone. Companies must be formed to produce the shows and work

out the proper charges for the service. Some of the radio broadcasting companies have expressed interest in this phase of the development, and so have motion-picture producers; several top movie men are considering the possibility of televising first-run movies.

The technical devices by means of which the new system will operate must be manufactured and installed, and a master antenna system must be developed. In several cities, notably New York, apartment-house owners and fire departments look with extreme disfavor upon roofs cluttered with a multitude of individual television antennas. Finally, an enormous number of television sets must be manufactured and sold. The sets now in use cannot be adapted to wired television, and will become obsolete; but, as Mr. McDonald pointed out, they will be useless anyway when the Federal Communications Commission allocates to television a higher position on the

wave band, as is proposed, and establishes standards now lacking.

Once wired television is ready, this is about the way it will work:

You will buy a television set from your dealer, who will install it. Then the telephone company will attach the device that connects the set with your telephone and permits you to receive the key frequency, or "unscrambler."

At regular intervals, say once a week, you will receive an announcement of forthcoming programs and the charge for seeing each. You will select the program you wish to see and notify the telephone operator, who will connect your phone so the key frequency can come in over the wire. If you have a dial phone, it probably will be possible simply to dial a number in order to get the program you want. Party lines will have a different key frequency for each subscriber.

Once the telephone operator has been notified, the broadcast will be received on your set in the usual manner, and charges for television service will appear on your monthly telephone bill.

It will not be possible yet to skip about on your television set as you do on the radio, seeing a little of this program and a little of that. When you order the phone operator to connect you with a certain television broadcast, you will be paying admission to a show of your own choosing; the difference is that you will see it in the comfort of your home rather than in a theater. You can't turn to another show, without paying, any more than you can walk out of one theater and into another and be admitted free.

The new sets, however, will provide for the reception of free television as well as

the pay-as-you-go variety. It is expected that free television will be there will always be public programs which will be broadcast on free sustaining shows.

In all the uproar about the coming of television to which the public has listened during fifteen years, Mr. McDonald is almost the lone dissenting voice. Besides operating two transmitters, manufactures of sets, but they have been used for experimental purposes. Not sold to the public. In magazine (Collier's, June 29, 1946) and Mr. McDonald has contended that the troubles of the television industry are not technical but economic.

In 1937, when a group of radio manufacturers met in New York, the television was ready for the launch. Mr. McDonald made plans to launch it with a fare of publicity at the New World's Fair, Mr. McDonald strenuously. "Gentlemen," he said, "are offering the public a pig. Television today is technically sound, but without a box office of good programming it is economically unsound that it will never succeed. You start television without first sure that there will be adequate programming, your whole campaign is a colossal flop."

Forecast of Failure Comes

The events justified Mr. McDonald's gloomy prediction. From 1937 to Pearl Harbor, civilian production stopped; only about 7,000 television sets were sold. Since V-J Day, sales have been larger, but they have not been anything to get excited about. Fewer than 7,000 sets were manufactured and today there are not more than 10,000 sets in use throughout the country. Meanwhile many complaints have been heard about the quality of television programs, and there has been much grumbling because Hollywood will not make its first-run movies for television. A movie producer said, "Some people think we should spend two million dollars on a movie and everybody see it for nothing!"

In his Collier's article Mr. McDonald made it clear that advertising to support television, which costs more to produce and broadcast than does radio. It has been estimated that a weekly one-hour television offering entertainment comparable to that provided by such radio stars as Jack Benny or Fred Allen, would cost at least \$10,000,000 a year. Very few advertisers, if any, can afford to make such expenditures. A soap opera is a good example of the difference between radio and television. On the radio performers simply stand about a microphone and read from scripts after maybe two rehearsals.

The same show broadcast by television would have to be a production of scenery, costumes, competent actors, memorized parts and everything else goes into a successful play.

"Three years ago," Mr. McDonald said, "I wrote that when television solved its economic problems it would become a great industry, and that when it came I would be down in the front row applauding. That's where I am now because I believe that the day has arrived. Our new development is possible for television to have a box office, through which will provide revenue that is necessary if television is to provide the sort of entertainment the American people want. Today radio manufacturers are fortunate if they can sell a few thousand television sets; tomorrow our annual sales will be in the millions."

THE END

BIRD OF PEACE

...that earns its own keep

The primary purpose of an air transportation system is a peaceful one . . . to provide a swifter, more efficient means of travel, of delivering the mail, of shipping cargo. But it is likewise a vital arm of defense in time of national emergency.

Air transportation is thus unique. It is largely maintained and expanded not by public taxation—as though it were an item in the budget for national defense—but through its day-to-day contribution to public convenience. In short, this nation keeps itself strong in the air—as she must—by *exercising* that strength in the pursuits of peace.

THE SCHEDULED AIRLINES OF THE UNITED STATES

Air Travel Strengthens America

You get there quickly, comfortably and economically when you go by *scheduled* Airline. Fares as well as express and freight tariffs are now lower than before the war. Air Mail is only 5¢. So, travel, mail and ship—by air! Call the nearest Airlines office or your travel agent for reservations. This advertisement is sponsored by the nation's *scheduled* Airlines and leading aviation manufacturers.

nk it would be a great mistake."

Well, you'll call Hague," he said in
hissal. "I meant to tell you about

this some time ago, but it just kept slip-
ping my mind. Get it in shape for next
week."

Hague agreed to nominate Edison for
governor if that was what the President
wanted. I called Roosevelt by phone and
reported this conversation. "But I wish
you wouldn't do it," I said. "I think you
should give the job to Edison. Hague is
a hard taskmaster and he might want
Charley to keep certain obligations that
Charley wouldn't want to fulfill."

"Well, we'll see," he said. Subse-
quently Roosevelt appointed Edison
Secretary of the Navy, which pleased me
very much.

Later, I had an interesting conversa-
tion with Cordell Hull. I told him it
might develop that he and Garner and I
would have most of the delegates in the
convention, no matter what the Presi-
dent did.

"Jim, I find myself in a most delicate
situation," he said. "I do not want it to
appear that I am capitalizing on my
achievements in the State Department.
I am content to let all credit go to the

After all the others had left, Jack came
over and patted me on the shoulder, ask-
ing, 'Are you going back to Hyde Park
after 1940?' I told him I was. Then Gar-
ner said he was glad because he was go-
ing back to Uvalde. Now in view of that,
you'd think he'd understand that I was
telling him, in so many words, that I was
not going to run. I have proceeded on
the theory that he would not run either,
in view of his words. I think he should
have accepted my assurance, providing
he was thinking clearly."

"Boss, I have known Garner a long
time," I protested, "and I have never seen
him when he was not thinking clearly,
even when he was having a good time."

I did not reveal that Garner had told
me the same story himself.

A few weeks later I had dinner at the
White House. The Boss was in high spir-
its.

"Jim, I have the grandest joke for
you," he confided. "I had Garner, Bark-
ley and Rayburn in this morning for a
conference on the antilynching bill.
You'll never guess what Jack said. Very

criticism until Ernest K. Lindley, the
President's official biographer, came out
with an article purporting to be the an-
swer to the third-term riddle.

The article said the President had de-
clared he would not run again unless
Britain were overrun by Nazis; that Hull
was his choice for successor; that the
Vice-Presidency lay between Jackson,
McNutt and Wheeler, and, finally, that I
was not a sound Vice-Presidential candi-
date because of my religion. Roosevelt
was supposed to have said that he owed
more to me politically than any other
person, not even excepting his wife, but
in the event of my nomination, people
might say "we were using Cordell Hull as
a stalking-horse for the Pope."

At his press conference the President
was asked to comment on the article. He
said he had not read it. Newspapermen
felt this was not true. But true or not, it
is hard to understand why he did not do
something about it, once the story came
out.

At first I was for an angry showdown
with the President, but as my mind
cooled I decided the proper course was
to keep my temper and bide my time. I
resolved, however, to let him know I was
annoyed.

About this time I made a speech at the
annual banquet of the Friendly Sons of
Saint Patrick. It was carried on a nation-
wide radio hookup. One of my sentences
was subsequently quoted from one end
of the country to the other. I said:

"We must never permit the ideals of
this Republic to sink to a point where
every American father and mother, re-
gardless of race, color or creed, cannot
look proudly into the cradle of their
newborn babe and see a future President
of the United States."

The following Monday, White House
Secretary Early called to give me the
President's congratulations on my re-
marks. He added that Roosevelt was
preparing to answer the Lindley article
at his next press conference.

I told him it was too late. Noneth-
less, Roosevelt belatedly told his press
conference that not one word of the
Lindley story was true. Lindley stood his
ground, knowing he voiced the senti-
ments, if not the actual words, of the
President.

It now became evident to me that
Roosevelt was going to run again. The
time had passed when he could have is-
sued a statement saying he would not be
a candidate.

Mrs. Farley Suggests a Solution

In this period Mrs. Farley happened
to be seated at the President's left at an
official White House dinner one night.
He remarked to her: "I'm having a ter-
rible time, Bess; they're trying to make
me run and I don't want to." He looked
at her with an engaging smile.

"Well," Mrs. Farley answered, "you're
the President, aren't you? All you have
to do is tell them you won't run." He
blinked surprise and turned to the lady
on his right.

From the time of the Lindley story, the
President virtually ignored me. I was
not invited to the White House except
when my position in the Cabinet made an
invitation imperative. One of the most
amazing evidences of the extent to which
I was cut off came from the State Depart-
ment. Some time back one of the As-
sistant Secretaries of State had promised
to help me in the preparation of a couple
of speeches on foreign affairs and did
assist on a speech I made in Boston.
Nothing was done about the second
speech, which I was to make in Fulton,
Mo., at the request of Senator Truman.
Finally Ambrose O'Connell, second as-

"It wasn't quite finished yet but he couldn't wait to get it into the water"

COLLIER'S

IRWIN CAPLAN

President. If he chooses to acknowledge
my services, that is another thing. So
far, he has shown no disposition to do
so."

"That is not surprising because that is
his way," I said.

I told Hull that I was sure he was
overly concerned about the possibility
that he would be labeled a glory-hunter.
Nevertheless, I have often felt that these
considerations moved Hull to turn down
a chance at the Presidency. I feel certain
that he could have secured the nomina-
tion hands down and that he could have
been elected in 1940. I am equally con-
vinced he would have made a great Presi-
dent.

A day or two later came real action
on the political front. Vice-President
Garner tossed his familiar Stetson in the
1940 ring from Uvalde, Texas.

The President asked me what I thought
of Garner's chances. "I don't think Jack
wants to be President," I answered. "I
am convinced he made his announce-
ment only because of his opposition to
the third term."

Roosevelt was thoughtful. Finally he
shook his head sadly.

"I just don't understand Jack," he said.
"Once at a White House luncheon with
Congressional leaders, we discussed
1940. Garner and I had a few drinks.

seriously he said that he felt the colored
vote in the Border states and in Northern
cities was so important that the legisla-
tion ought to be passed."

Roosevelt threw back his head and
laughed till tears came to his eyes. "Don't
you love it?" he asked. "Jack has done a
complete about-face now that he's out
looking for votes."

Later, when we were discussing the
convention, I looked him square in the
eyes and said, "There will be a new na-
tional chairman and he will want to set
up his own show."

The President made no comment on
my announcement that I did not expect
to remain at the helm of the party organi-
zation.

A few days later I told him that I was
going to enter my name in the Massa-
chusetts and New Hampshire primaries.
I fully explained to the President that I
was doing this at the request of the Dem-
ocratic organizations of both states.

"Go ahead, Jim," he laughed. "The
water's fine. I haven't an objection in the
world."

I did not regard this in any degree as
approval of my candidacy, but I did re-
gard it as in line with his statement that
he would not be a candidate.

My filing provoked quite a flurry in the
press. But I was unmoved by praise or

Windshield Washers

sistant postmaster general, went to see my friend in the State Department. The Assistant Secretary, in his usual frank manner, confided that he was under White House orders not to help me and asked that I should not embarrass him by calling on him for further assistance. I sent word that I would not.

On May 9, 1940, I had another long talk with Hull. We talked about the Gallup poll results which showed Hull stronger than Roosevelt. He disclosed that he had learned from sources within the White House that the President was not pleased over them.

"The President has never talked a word of politics to me," Hull said. "He may be assuring others that I am his choice, but I find it hard to believe."

"I am sure that he will accept you if he is not himself a candidate," I said. "Meantime, there is nothing for you to do but go along and see what happens. Of course, if you would announce yourself or let your friends announce you, you would get the nomination."

"Jim, I do not feel I should use my position to seek office," he said. "I can only put my trust in what the President is telling everyone, even if he does not see fit to confide that trust in me."

"There's no denying it; Roosevelt is a strange man," I said, somewhat sententiously. "He's the author of all my present troubles."

"God, Jim!" Hull exploded with feeling. "You don't know what troubles are. Roosevelt is going over my head to Welles and Berle. I was never even consulted on the Welles trip to Europe. He's even going over my head to ambassadors. He's in constant communication with British leaders and others. He doesn't consult with me or confide in me and I have to feel my way in the dark. Troubles! You don't know what they are."

On May 17th I remained after the Cabinet meeting for another discussion with the President. We talked about Speaker Bankhead for temporary chairman and Senate Majority Leader Bark-

ley for permanent chairman of the convention. "They are fine with me," I said, "because we will be taking the two top men in the party."

"What do you mean 'top men in the party'?" he snapped.

"The two top party men in the legislative branch of the government," I amended.

"That's better," he said.

In the weeks that remained before the convention, it became evident the President was going to run again. It is hard to say just when this realization dawned on me.

Jack Garner was sure of it, too. One day at lunch he told me: "I went along

with his assurances that he would. So did you and so did Cordell. We are all left high and dry. Al Smith never to rely on Roosevelt's word."

Henry Wallace felt different about it. "I want the President to run again," he told me, "but I am very discouraged the way the thing is being handled. Hopkins, Ben Cohen and Tom Coran are doing the contact work. Mayor Hague, Mayor Kelly and other bosses. They have a group working details in an office in the Interior Building."

I told Wallace I had not yet been into the President's confidence. I did not know his plans, but I had misgivings.

They were to be confirmed very soon.

Hyde Park Conference—1940

And now I come to the Hyde Park conference of 1940, which may well come an important chapter in the political history of the U.S. I arrived there for lunch. Afterward, the President went to his study. For fifteen or twenty minutes, conversation was general. It was apparent to me the President was having difficulty in approaching the subject of his candidacy. At last he plunged.

"Jim, last July when we canvassed the political situation," he began with a gaging smile, "I indicated definitely that I would not run for a third term. I believe we decided that on or about February 1st, I would write a letter to the states which has an early primary stating I would not be a candidate for election."

"Well, after that conversation when the war started and when it got along February 1st, I could not issue the statement. It would have destroyed effectiveness as the leader of the nation and would have handicapped the efforts of this country to be of constructive service in the war crisis."

"I must say that I am disappointed in my efforts have not accomplished what I hoped. In all probability it would have been just as well if I had made the announcement as planned. We put Mussolini in every way possible to get the influence of the Pope to get Italy out of the war, but Italy went on."

The President lighted another cigarette. He smiled through the smoke. "I still don't want to run for the Presidency. I want to come up here and swing his left arm in a half circle."

ottage retreat and library he had d and supervised. But he said that tter had been taken out of his by mounting demands that he ret the helm. "I don't want to run i going to tell the convention so," eluded, his eyes wide in apparent ss.

ou make it specific, the conven- ill not nominate you," were my rds.

I him that I felt he should leave no n the minds of the delegates or the as to the sincerity and the hon- the statement he issued; that it be so worded that the delegates be free to choose someone else, if desired. He seemed to agree. I elivered the Patrick Henry I had turning over in my mind for

gan with my views on the third ating I was against it in principle cause the Democratic party had opposed it. I acknowledged that ws could have no bearing on the tion because he had permitted, if couraged, a situation to develop which he would be nominated un- refused to run.

, what would you do if you were lace?" he asked helplessly.

anked him for the compliment. I m I would not have waited this declare my intentions to any per- o had been associated with him as s I had. I reminded him that he ade it impossible for anyone else nominated, because by refusing to himself, he had prevented dele- rom being elected for anyone ex- arner and myself. Many states, I ad declared for him because there o other course open; that leaders earful they might be punished if id not go along with him.

m going to answer your question," ned, "and you're not going to like your position I would do exactly General Sherman did many years ssue a statement saying I would to run if nominated and would not if elected."

n, if nominated and elected, I could these times refuse to take the inal oath, even if I knew I would be within thirty days," he said. I knew hat his mind was made up.

conversation drifted to Vice-Presi- l candidates. Among them I men- Speaker Bankhead, whom he sed as too old and not in good

"The man running with me must be in good health because there is no telling how long I can hold out," he declared. "You know, Jim, a man with paralysis can have a breakup any time. While my heart and lungs are good and the other organs functioning along okay . . . nothing in this life is certain."

With that he pulled up his shirt, un- buttoned it and showed me a lump of flesh and muscle under his left shoulder, which he said were misplaced because of his affliction. He noted that he must sit most of the time.

It was the first and last time in all the years I knew him that he ever discussed his physical condition with me.

Deadline Set for Resignation

At this time I brought up my own situation. When I proposed to submit my resignation as of August 15th, he begged me to remain a month longer. I told him that there was no sense in delay- ing things; that my resignation and return to private life would be construed by the public as an expression against the third term and correctly so. I said I would have to be consistent in my position, which I could not be by hanging on. I finally set September 1st as the deadline for my resignation as national chairman and as Postmaster General.

I was constantly baffled during the conversation by the way the President seemed to be saying first that he would not be a candidate, and then, by a slip of the tongue, that he was going to be a candidate.

Then came the final shock. We talked about convention procedure. "By the way, Jim, the family is not going to at- tend the convention," he volunteered. "Undoubtedly, I will accept the nomina- tion by radio and will arrange to talk to the delegates before they leave the con- vention hall after the nomination."

On the whole, I never had any doubt that he had made up his mind long be- fore. I am certain he had sold himself the idea that he was the only one qualified to serve during that particular period of the nation's history. He believed, I am sure, that the world was in a terrible plight and he hated to turn over the reins of govern- ment to someone else.

In the last article of this series, to be pub- lished next week, Mr. Farley recalls the 1940 Convention and the final break-up of his political partnership with the Presi- dent.

"The double-suspension, automatic-locking, triple-elastic garter is no longer an engineer's dream! It's an actuality! It's here! We have it!"

TORMENTED PALESTINE

THE WHOLE TRUTH, PLEASE

THE latest commission to investigate the Palestine question is now in the Holy Land—an 11-nation group of some 120 members, delegated by the United Nations General Assembly after Great Britain threw up its hands last February and asked the U.N. to take action.

A good deal of time and expense might have been saved if the U.N. had just studied last year's elaborate Palestine report of the joint Anglo-American Commission. However, this latest is a U.N. probe, which none of the previous ones has been—meaning that the U.N. will have a chance, after the commission reports next September 1st, to prove its prowess or otherwise as a settler of international frictions.

If the U.N. falls down on this job, our feeling is: Heaven help the U.N. This is both its biggest opportunity to date to do something constructive and its most serious challenge to show that it can deliver anything better than talk and pious resolutions.

At least four answers to the Palestine question have been offered: A U.N. trusteeship to replace the British mandate; immediate independence, with Palestine's 1,200,000 Arabs and 600,000 Jews to work out their own salvation from there on; extension of equal rights to Jews and Arabs in one Palestinian nation; or partition into two countries, one Arabian and the other Jewish.

Our earnest hope is that some solution will be worked out with reasonable speed, and that the nations involved will then go through with it, without stalling or evasions.

Palestine is a tragic and a tormented country, and a stirrer-up of passions and animosities throughout much of the rest of the world. The double-dealing and double-crossing which Great Britain, and latterly our own government, have given the Jews with regard to their ancient homeland, have been scandalous.

Can't we make one last, mighty effort to get this problem settled somehow, and thereby get it off the front pages and out of the main arena of people's emotions and prejudices? If that can be achieved, a major contribution will have been made to the stability of the world—which badly needs any such contributions it can come by just now.

AFTER long Congressional debate, the United States finally got started on the first phase of the so-called Truman Doctrine, via the decision to lend Greece and Turkey \$400,000,000 to starch up their resistance to Russian Communism. Maybe it will work, maybe not. We aren't discussing that aspect of the Truman Doctrine here.

What we want to discuss is the habit this Administration has, like the Roosevelt Administration before it, of breaking such news piecemeal to the American people, instead of all at once.

There seems to be a persistent conviction, centering chiefly in the middle levels of the State Department, that Americans are too dumb and childish to be trusted with the whole story in one sitting—or one message to Congress—when some important shift in foreign policy is contemplated.

At this time, it is being gossiped around that the Greek-Turkish loan is only the beginning; that the Administration plans to spend a total of 10 billions

or more in the next two or three years to bolster numerous countries against Russian Communist infiltration.

Well, is that the plan, or isn't it? Why not tell us now just how far this business is likely to go and how much it may cost?

The present piecemeal procedure keeps rumormongering around, people alarmed and resentful, world opinion in doubt as to what U.S. foreign policy is—assuming we have any such thing.

When Americans are convinced that they have some job to do, they do not shrink from it, no matter how big it may be. When they suspect that somebody is kidding them, they do not co-operate and why should they?

Let's have the whole truth, and nothing but the truth, about the Truman Doctrine and all its possible consequences as now envisioned; and let's have that whole truth soon, in plain English, from some authoritative Administration source.

ONE LAUGH—\$2

FOR the Most Stenchful News Story of 1947 award, if such an award there be, we hereby nominate the dispatch from Pawtucket, Rhode Island, the other week about a fellow being fined \$2 and costs for laughing.

The man's name was Samuel Hyder. He had a loud, long-range laugh, which he was in the habit of turning on in public places around Pawtucket whenever he felt like it. The local police chief, name of Leonard Mills, told Hyder to muffle his gaiety. Hyder didn't; so Chief Mills dragged him before Judge William M. Connell, and the judge soaked Hyder the aforementioned \$2 and costs.

"I warned him time and again," said Mills, "not to create disturbances when there was nothing funny to laugh about."

As editorial writers used to say, pfaugh and forsooth. In other and better words, what the hell!

Here we have a world that is saddened and made more so because of a recent great war and the melancholy consequences thereof. In at least one place on the map of that world, we have one man who is uninhibited enough and happy enough to be able to laugh like a horse or a hyena at will, and doesn't have to be tickled or joked or argued into laughing. So that man gets stepped on by a humorless police chief and a spoilsport judge.

We'd feel impelled to pull out another old literary cliché—the Whither Are We Drifting on—except that this story had a fairly happy ending after all.

The National Laugh Week Foundation of New York at once invited Hyder to come to New York and laugh all he pleased. Plenty to laugh at, too. This was of course the proper retort to the Pawtucket officials, and we hope it burned them pretty

Now at less than prewar prices...the tire that outwears prewar tires

HOW MANY THINGS we buy today cost *less than before the war*? Tires do! Not just ordinary but the best made—B. F. Goodrich Silver-

price reductions were announced a few weeks ago. All popular sizes are now less than before the war. You get an allowance for your old tires too. B. F. Goodrich Silvertowns outwear prewar tires. Several months this magazine and others have had advertisements with big pictures and stories about ordinary people—car owners—who kept records of their tire mileages. The new B. F.

Goodrich tires have been tested by taxicab fleets too, by state police departments and many others.

B. F. Goodrich has now done two things: (1) improved quality, (2) reduced prices. You get the benefit of both today!

B. F. Goodrich Silvertowns have the wider, flatter tread that puts more rubber on the road to share the wear. They have a stronger body and a double shock-absorbing breaker strip to protect against bruises and accidental damage.

Your B. F. Goodrich dealer has helped make these lower prices possible. He is taking less profit

per tire today, and yet he'll still make a good allowance for your old tires. If you need tires, see him now and talk it over. You can buy right from stock without waiting. Don't be satisfied with ordinary tires when you can easily get B. F. Goodrich; the tires that outwear prewar tires! *The B. F. Goodrich Company, Akron, Ohio.*

KEEP UP WITH THE WORLD

BY FRELING FOSTER

In a current night-club act, Bert Pichel, of Cincinnati, blows two smoke rings of the same size simultaneously from the sides of his mouth. He also blows a ring that floats down and settles on the floor instead of rising, and another that catches up with and passes through a larger one without changing the shape of either.

Violent explosions have been caused by some 25 kinds of dust, such as of grain, starch, soap and sugar, whose particles may be ignited by a spark when they are very fine and evenly distributed in the air. One blast, in the loading tunnel of a Chicago grain elevator not long ago, lifted and moved several feet 40 storage bins having a total weight of nearly 300,000 tons.

The New York Fire Department is installing 150 devices intended to discourage the sending of false alarms. The device is a siren that, when the box lever is pulled, begins a one-minute shriek which, by attracting the attention of everyone within a block, usually leads to the identification or apprehension of the prankster.

A secret of acoustics that died with the ancients is embodied in a 2,400-year-old amphitheater that still stands in excellent condition in Epidaurus, Greece. Although its stage is open and uncovered, a whisper spoken on it is heard distinctly in every one of the 14,000 seats.

Although 184 years old, the St. Cecilia Society of Charleston, South Carolina, retains its original social code, which includes a rule forbidding members to bring actors, actresses or divorced persons to its periodical balls. The society is so exclusive that newspapers cannot obtain any information about its activities.—By Anna Harwood, Stryker, Ohio.

Tarzan is the only motion-picture character who has towns named after him, two being Tarzan, Texas, and Tarzana, California.

Crime laboratory technicians usually determine, under ultra light, whether a tooth or a fragment of skin came from a white man or a Negro. When crushed to powder, a tooth of a white person glows white, while that of a Negro glows a red-orange; and the skin of a white man fluoresces only when it is not burned and that of a Negro only when it is sunburned.

The "City of London" occupies an area of only one square mile, but is the business center of the British Empire. It is on the site where it was founded by the Romans. Although an independent part of London, this little section is self-governed, has its laws and customs and maintains its own courts, schools, police force, etc. Even the King must have an invitation from the Lord Mayor in order to pay an official visit.

Having found there exists a genuine need for a telephone recording machine, the Federal Communications Commission expects to sanction the manufacture of such machines under a certain provision. When in use, the machine must automatically sound a warning that, after warning the called party that his conversation will be recorded, is repeated at short intervals, so as to remind him that the recording is being made.

A curious trick played by the human mind is the imaginary perception of real motion for a few seconds after the real motion has ceased. For example, a motorist who has been driving for several hours may think he sees, when stopping his car, the road and the landscape backing away from him; while standing on the rear platform of a train may imagine he sees, when the train stops, the landscape rushing toward him.

Powering above the field in speed, power, economy
 . . . that's **DIAMOND T** *reliability*

From Redding to Yreka and Alturas, then all the way down to
 Richmond—the roads of northern California are hilly and
 winding, as this view of Mt. Shasta suggests. Over these roads
 this extra-heavy-duty Diamond T has rolled up 280,000 miles
 in the last two years, hauling 5,000-gallon loads of gasoline.
 Owner E. B. Hinkle is very happy about the whole thing.

He stresses the economy and complete satisfaction of his Dia-
 mond T experience, and adds, "Your parts service has been
 exceptional. Never, even during the most critical times, have
 our Diamond T's been laid up for want of parts."

Today's Diamond T trucks are the finest we have ever built.
 The complete line includes 19 models from one ton upwards,
 and every model has the built-in reliability for which Diamond
 T has been famous since 1905. We sincerely believe that the
 new Diamond T Super-Service engines set an entirely new
 standard for performance and long life in hard service.

See your Diamond T dealer—he is an expert on motor trans-
 port. Let him recommend the Diamond T that will do *your* job
 best for you. See him for truck service, too.

DIAMOND T MOTOR CAR COMPANY CHICAGO

DIAMOND T TRUCKS

SURGING new power... LOWER driving costs

with this New Alemite Creation!

FAR MORE THAN A MERE MOTOR OIL It Contains a Patented Ingredient that . . .

- 1 Cleans out dirty, sluggish engines . . . and keeps them clean. Restores lost power and pep because power wasted by sticky valves and piston rings goes back to work.
- 2 Assures instant lubrication the year 'round. Flows fast at all operating temperatures. Gives quicker cold weather starts . . . saves your battery. Gives you a cooler engine in summer. Cuts repair bills.
- 3 Actually increases gas mileage in old cars—maintains new car gas economy thousands of miles longer. Makes any car cost less to run.

Proved in millions of miles of driving. Ask for it at your favorite dealer's. If he does not have it, he can easily get it for you

A PREMIUM-TYPE MOTOR OIL Created by ALEMITE
WORLD'S LEADING SPECIALIST IN LUBRICATION

Artist John Pike modeling a sidarah, Inspector Chafik's official headgear

THE WEEK'S WORK

CHARLES CHILD, who created our new snooper-sleuth, Inspector Chafik J. Chafik of the C.I.D., Iraq and Points East (Inspector Chafik Closes the Case, p. 11), should know his Arabs. A Londoner and now forty-four, Mr. Child spent two romantic years tagging Abd-el-Krim in North Africa in the twenties. Marriage to an American newspaper-woman brought him here first in 1930.

The war ended a writing idyl on the Côte d'Azur in France, and Mr. Child wound up in Iraq with Military Intelligence associated with the Criminal Investigation Department, British equivalent of our O.S.S. and F.B.I.

Patterned on Scotland Yard and headed by an Englishman, Child and Company did their work so well nary an Iraqi oil well was sabotaged. "Security was at such a high level the Allied Forces were reduced to a skeleton command when I left in 1944," says Mr. Child, happily.

When he got back to America in 1946, Mr. Child settled down in Westport, Connecticut, to catch up on his writing and life with his wife. In time the urge to write crime came to our ex-hawkshaw.

"I wondered what kind of detective would fit the tricks I had in mind," explains Mr. Child. "Naturally I thought of my friends, and so the character of Chafik J. Chafik was born. I take no credit. Chafik just arrived quietly complete with sidarah and cigarette and introduced me to Sergeant Abdullah. Chafik is a composite of old associates. Graceful manners mean more to the Arabs than to us. They love a witty phrase, but wrap it around a hard core of truth. Their minds are agile and wind through a complicated maze, but when adapted to the problem of crime this appears to be an asset."

Meanwhile Mr. Child declines to be mugged for this department's rogues' gallery. "Please excuse me," he says smoothly, "but my experience of handling other people's records has made me allergic to cameras and fingerprints."

There will be other Chafik stories.

CRACK water-colorist John Pike, who projects the philosophic Chafik in the flesh, is from Boston, thirty-six, and because he preferred to draw caricatures of his teachers, moder-

ately badly educated. "At left home and school," he became what romanticists call a child of fortune, suburban bum, and I called an artist."

At all three Pike insists on mild success. For a time he ink and coffee for the art department of a paper, then washed out, played an accordion for keep lessons at Provincetown, Cod. The accordion he squeezed walk-ons and walk-offs Provincetown Playhouse. He picked up a knowledge of lighting in Boston experimenting ultraviolet.

There are a couple of bays in Central Park, New York, Pike's heart and rear. During struggles for recognition he tried painting, commercial made jewelry; etched glassware designed.

It got so cold one Thursday in 1934, Pike worked his way to Jamaica, B.W.I., where he not only native, painted a thousand portraits, acquired a charming son, but also attained height.

He designed and decorated glamor bistros with rum-colored murals, did the décor for plays, and designed a half-dollar cinema for M-G-M. The palace, it had no corners, ultra-ultra. Pike also ran his club in Montego Bay.

During the war Pike served the OWI as an artist in the Pacific and Korea, and since, he's around Old Lyme, Connecticut, a 1,100-acre cotton-corn-tenant farm in Rutherford, North Carolina, and is right at home in art at Woodstock, New York, an artist without an ax to grind. Pike wants to be a better writer, he says.

This week's cover: Newhouse Pitching. When the Brothel came to take his picture, the recently youthful Newhouser posed only if a story on him went with it. The Peskins promptly Collier's editors, "No cover!" Meanwhile Kyle (The Newhouser Nuisance, having similar experiences another victory for Newhouse.

Pamper yourself for 45 seconds—

Let's imagine, for the next few seconds, that *you're* the one driving this big Nash "600."

Here's the first of tomorrow's cars . . . get ready for a wonderful new feeling!

It's lively. It's quick. It's eager to romp over the hills.

It goes—and goes—and *goes* on a gallon of gas. From 500 to 600 miles on a tankful, at moderate highway speed!

The old-time drag of dead weight—*that's* out. New ease of steering—*that's* in. And with Nash coil-springing on *all* four wheels the bumps disappear like magic!

Rattles and squeaks? They're old-fashioned,

too—engineered out by the same kind of welded, unitized body and frame that made the streamliner train famous.

And it's no illusion that the air is fresher. That's Nash Conditioned Air you're breathing . . . filtered of dust, rid of stuffiness, and warmed, when desired, by the famous Weather Eye.

Yes—it's *Tomorrow's* motoring—even to a Convertible Double Bed if you like.

But why read about it—when you can see for yourself why the nation-wide swing is to Nash! There's a new kind of automobile dealer in America today. That's where you'll find the new Nash "600" and the new Nash Ambassador.

You'll be ahead with

"Ahmed has ten years," the woman said. "He is a man." "Then I will talk to him as a man," Chafik said. "Who killed your father?"

INSPECTOR CHAFIK CLOSES THE CASE

BY CHARLES B. CHILDS

Sometimes compassion comes closer to Justice than the letter of the law

THE desert was an ocean of gravel and gray dust which lapped the struggling outskirts of the City of Baghdad. Spewed from sullen waves of dead earth were mounds built partly of baked mud and partly of flattened gasoline cans, relics of the war years and the British garrison. A few goats, tethered at the doors, stared listlessly at rinds of discarded bread, while potbellied children, dirt-covered and clad in rags, played in the brief shade of the way embankment.

The sky was the open door of a

furnace stoked with the Iraqi sun, and Inspector Chafik, stepping from his car and viewing the scene, said to the tall, gaunt man who followed him, "It is well we came at once. A body is always detestable, but in such heat it becomes an abomination."

Sergeant Abdullah said reprovingly, "Man's body is made by God."

"True," his superior replied, "but when the soul's breath has gone from it, the remains are only of interest to us of the police." Chafik smiled as he spoke, an unexpected softening of his dark, lean face, and a brightening of

his dun-colored eyes, which were as old as the ancient land of his birth. He was a little man, with well-shaped hands and feet and a thin, wiry body. He wore a white linen suit, well tailored by Western standards, and stepped daintily over the rubbish which littered the path, careful not to soil his shoes. He was aware he was watched by people who feared him because he was Chafik J. Chafik of the Criminal Investigation Department, but he felt no pride in their fear. If the poor were all criminals I would have half Baghdad on my records, he

thought, and stopped at the gate of a courtyard where two khaki-uniformed police were standing guard.

As he entered, his shadow went before him over a square of swept, clean ground. He looked at the round cakes of water-buffalo dung plastered against the walls of the hut to dry for fuel, and said, "Him we have come to see was blessed with an industrious wife. Poverty has not broken her spirit."

Sergeant Abdullah said, "Was she not always poor?"

CITY WITHOUT SECRETS

BY JOHN HORN KACHEMANN AND

E. D. McCLUSKEY

Police headquarters is jammed with reporters several times a day, and the cubs jot down every scrap of news Chief N. R. Hagan tosses them

Just a whisper of a story, and a pack of eager news hounds is hot on your trail. That's what to expect in Columbia, home of Missouri's School of Journalism, with a world-record population of reporters

YOU don't have to be famous to meet the press in Columbia, Missouri. All you have to do is step off a train or bus.

"Help you with your bags, sir?" The young man or pretty girl who greets you so helpfully is not a porter, you find, but a reporter from the Columbia Missourian.

A loud noise anywhere in town will bring two or three of them on the gallop. On Broadway, driving up to your hotel, your cab locks bumpers with a car backing out of a parking space. Before the dust has settled, two young

men have gotten your name, birthplace and business, and you've apologized for remaining intact.

"No damage," they report sadly to the girl colleague who has just trotted up carrying a pencil pirate-fashion between her teeth. But the girl doesn't give up so easily. Over soft drinks at a near-by snack bar, she sends down test drillings for fillers: What briefly is the story of your life? Who'll win the World Series? Is civilization doomed?

By the third lemon phosphate, you get in a few leading questions your-

self: How come this plethora of reporters? Who is paying their salaries? What do they substitute for news in this peaceful community where the broad, elm-lined streets end abruptly on somebody's farm, where the grocer still treats you to a bag of candy when you pay the bills, where . . . ?

"Who," interrupts the young lady, "is interviewing whom?" In a few crisp words she gives you what she refers to as the "deal."

To cover a town of 25,000, her paper, the Columbia Missourian, has a city desk twice as large as the New

York Times, more photographs than any six metropolitan dailies combined, a total staff that outnumber all the American correspondents required to cover Europe, Asia, Africa and the Near East. They are paid in cash but in credit at the University of Missouri's famous School of Journalism, whose entire student body of 525 is involved in getting out a local city newspaper in competition with the Tribune—"a paper," the young lady describes it, "that would be anyway."

Life in Columbia, you soon

is a three-ring, 24-hour press presence. It reminds you of the circus, where hands reach for the prize when the voice behind the gun says "Talk fast, bub." At the sight of a Missouriian reporter whipping out a pencil, God-fearing citizens fall in their tracks and wait for the classic 5 W's every good journalist learns to shoot fast: Who? What? Why? Where? Why?

Columbia has had almost 40 years ever since the late Dean Walter Williams started the paper as a laboratory for the first, and long the only, journalism school in the world. Since the school has expanded from three spare classrooms in ancient Jesse Hall to two large campus buildings of modern design. The Missouriian, keeping its circulation has climbed to 4,500 circulation and turned the school into a larger-life newspaper plant, complete with rotary press, photoengraving laboratory, the full leased wire service of United Press and more hustle and brawn per square yard than you'd find in any whole block of downtown Columbia.

Students entering journalism school have two years' college education at better than average grades, must work two more years for their degree—and that means "work." Teachers doubling as newspaper executives, all except the mechanical and accounting chores of getting a metropolitan daily are performed by students, who rotate from department to department. The idea, of course, is to help them take their own paying jobs later on; and in part of its methods, the school can boast an impressive proportion of 10,000 alumni who did just that in the fields.

For the school itself, the Missouriian hasn't done too badly, either. Posters to sidestep state ownership, it's privately owned by the University of Missouri Journalism Association, Incorporated, a nonprofit organization of old graduates. But the university provides and maintains the plant, and all profits are turned back to the School of Journalism for improvements. On a mechanical basis valued at \$80,000 the paper is presently grossing that sum yearly in circulation and advertising.

Goldfish Has More Privacy

For its effect on the town, the Missouriian has brought an unlooked-for blessing: no secrets. Explored, probed over, and scrutinized each day by a fresh batch of news-hungry townsfolk put no stock in concealment.

"Why try to hold anything back?" is a matron coming out of a local beauty parlor. "Everything is known now." She's just been interviewed by the drier by a team of society reporters who figure like this: If you're having your hair done, you must be going someplace. And if you're going someplace, why haven't you heard?

"They don't just cover fires," draws a fireman in Walden, who has headed the fire department since 1917, "they blanket them." Back when the fire wagons depended on horses for power, the cubs would usually get there first, and Walden would find them throwing furniture out of the windows and looking for maidens in distress. Firemen had to push their way through reporters to get out the blaze. "Modern firefighting equipment," says Walden, "has been a great help in bringing newspapermen under control."

In a courthouse, municipal building

and police station, reporters swarm around city and county officials in numbers that would flatter Presidents and Prime Ministers. With the Missouriian and the Tribune competing hotly on local news coverage, a city council meeting on the garbage-disposal problem gets a bigger play than the Council of Foreign Ministers debating the fate of Germany.

The cubs aren't satisfied with official handouts, either. The morning after a secret council meeting, the mayor came back to his office to find a student reporter seated at his desk with a portable typewriter, making a copy of the minutes. "Be through in a second, Your Honor," he said. "Don't want to misquote anybody."

Cubs Work on Murder-Suicide

Two or three times a day, police headquarters is jam-packed with reporters. "Time to feed the sea lions," mutters the desk sergeant as the cubs jot down every scrap of news Chief N. R. Hagan can toss them. Mostly it's routine traffic violations, petty larceny, or café brawls, only rarely sensational news like last year's case of Dr. Adolph Zeck, the university German teacher who killed himself after presumably poisoning his wife. Then the chief suddenly found his staff of fourteen augmented by scores of self-deputized detectives.

"The theories they turned up on that one would keep Ellery Queen in plots for the next 10 years," says Hagan, who listened patiently while the cubs explained the crime in terms of everything from psychoanalysis to the international situation. "They lose confidence in you if there isn't a murder once in a while," he wisecracks, "but we do the best we can." However, this doesn't include rides in the town's four police cars, something every cub yearns for. "We'd need a bus fleet to carry you all," the chief tells them. So they rush to the scene of the crime by foot, bicycle, car or motor scooter.

When official news runs thin, the enterprising Missouriian reporter finds ways of making it himself. Sy Weintraub from Chicago, who specializes in pulling stories out of loopholes, considerably flustered Stephens College last fall when he discovered there was no by-law against male students—and tried for story purposes to enroll with 3,000 girls and take classes in body conditioning, marriage, fly casting and child care.

Ruled out by the college welfare clause, Sy evened the score by digging up an 1887 city ordinance making it a misdemeanor for women to wear "overalls or men's attire of any description." Chief Hagan obligingly agreed to enforce the law, and Sy was able to report that half the girls in Stephens and the University were "flagrant and habitual law breakers subject to arrest on sight."

Another stickler for law and order, Brooks Honeycott of Louisville, Kentucky, cooked up a news assignment any motorist would envy. In a borrowed car, Brooks spent a whole day deliberately trying to get a ticket. He raced through red lights, U-turned on Broadway, parked in front of fire hydrants, finally turned his motor off and honked continuously for half an hour. On this story, too, the police co-operated beautifully. None of them paid any attention.

"A good reporter gets the stories he is sent after," says General Instruction No. 7 in the Missouriian rule

(Continued on page 65)

When a story breaks, there's a mad rush of reporters to cover it. When the breaks don't come, the students dig up their own news. Below, Guy B. Jackson explores the garbage of story material. Guy found one woman's shoe in good repair, eleven "Please remit" bills, and a note saying, "Darling, I'll try." It made a story.

DARK HORSE TO RIDE

BY ANDREW GEER

Where there's love, what chance has horse—or man?

POOLEY JONES, a soft-bellied man with jowls like turkey wattles, saw the horse and rider coming toward him. Pooley waited, his teeth in anticipation of the show he put on for the crowd. It would mean a drink from Harry Strange and the Teapot bunch, scheduled for a drink. Moving to the edge of the sidewalk he took a deep breath and the rider was directly in front of him he yelled as rough as file cuttings, "Hi ya, Slippers!" and his horse around so sharply its mane the rider marched the horse to the side, halted him with his forefeet on the wooden People as far away as Bell's Hotel veiled in mid-sentence to watch.

"Name is Benton—Jeff Benton." Ignoring the crowd, the rider leaned forward in the "So you won't forget next time, we'll re-little act you just put on."

Jones shifted his feet, and his wattle jowls dish brown. "An' if I don't?" he asked, voice had gone to seed.

"I risk it, Pooley; you'll never look the same you do." Benton swung his horse off the curb up the street, turned him and came back. "Jeff," said Pooley Jones, his voice sounding a dog choking on a chicken bone.

"Pooley—" straight ahead, Benton rode to the end of the street, past the open-air dance pavilion and out the chutes. Drop-tying his horse in the back of the grandstand, he entered the pennant tent.

"Mack," he greeted a large, porky man behind a makeshift desk of pine boards.

"Hi, Jeff. What can I do for you?"

"Entering the works—bronc riding, saddle

back, steer riding, calf roping and bull-

"I don't think you'd be riding this year."

"Wouldn't I be riding this year?"

Thomas lifted a bushy left eyebrow and glowered as though they were controlled by muscle. "From the things I've been hear-

His voice died out in a fog of uncertainty.

"You taking my entry or not?"

"Over fifty bucks," Thomas waved his hand

boxes on the end of the table, "and draw

afternoon show."

Thomas drew a folded paper from each box and

them read, "Poodle Dog in the saddle buck-

and Duster in the bareback." He tossed the

on the table. "Who're the judges?"

"Holly Green and Petey Wells."

"Wells here? At least there's one judge

score the ride and not the rider."

Thomas put his pencil down carefully and

red up his neck and into his face. "Insulting

or are you building an alibi?"

"I don't need an alibi."

"I'm hearing what that black harness horse of

Strange's did to you, I think you do."

settled back in his chair. "Regardless of

you say, you'll get every point you deserve

re. Maybe you'll win your entry money

but I doubt it."

"Fifty bucks says I finish one-two in the all-

championship."

"It's a sucker bet, but I'll take it just to teach

lesson."

Thomas pulled out his Indian sack, stripped off

his pants and two fives. "There's my entrance

money. I'll be in to pick up your fifty later on."

Thomas rode back to town and put his horse

away in the livery stable and grain-fed him;

he went to Morgan's bar.

The bar was gloomy and cool inside; the place was

filled with the smell of years and years of stale

smoke and staler beer. The bar was lined

with homesteaders and cattlemen; the green-top

seats were untenanted save for two old-timers in a

corner staking out a cribbage game.

Thomas paused in the entrance to let his eyes get

used to the gloom and felt the swinging door pad-

lock with rump with shorter and softer strokes un-

dermined entirely. The talk in the room died.

Pooley Jones was standing nearest the door, his back to the mahogany bar.

"Hi ya, Pooley," Benton said. One by one, faces turned his way until there was not a blank spot along the line.

Pooley Jones looked at him. His eyes narrowed to slits. "Howdy, Jeff," he said hoarsely.

Midway down the bar a stringy rider in snug-fitting black whipcords and yellow shirt stepped from the line. "What say, Slippers?" he asked in a high, jeering voice. "Got your plowing done and your cows milked?"

Benton moved away from the door, his face flaming at the titter of laughter that rose and died away.

"That's a funny rig for a plow jockey to be wearing."

"Your talk isn't funny, Tom—cut it!"

"And if I don't, Mr. Slippers?"

Jeff swung and felt the shock of the blow run from his knuckles up his arm to his shoulder. Tom Triplett went down, but bounced up roaring. Jeff slipped under a curling left, but Tom Triplett caught him with his right.

Both men straightened, breathing heavily, moved in and standing toe to toe began to slug it out with neither making an attempt to duck or evade a blow. Morgan yelled and vaulted the bar, and the circle closed in to pull the two apart.

"Break it up!" Morgan roared.

"Let 'em fight it out," snarled Pooley Jones.

Benton staggered a little as he made his way out the back door and into the alley. He went to the pump and his breath whistled through his hands as he scooped cold water to his face.

"What the hell's the matter with you, Jeff? You gone mean?"

Without looking around Jeff knew who it was. He shook his head. "I don't think so, Petey."

"I do. I saw that play you made against Pooley on the street this morning."

"He asked for it."

"But hell, Jeff. Why pick on a sorry old washed-up bronc rider like Pooley?"

"If he isn't a man, he shouldn't play around with men." The words came out right, but Jeff knew he was wrong. He was wrong about a lot of things. Holding up the bucket he ducked his head into it, threw the water out and dried his face. "Let's go to the Chinaman's for chow."

THEY found a booth in the rear and ordered. Petey Wells, redheaded and freckled, sitting askew in his chair from an old pelvis injury suffered at Pendleton, talked to the tabletop.

"I heard a gentle driving horse made you eat dirt, Jeff. And Harry Strange fired you off the Teapot, and you went to farming a homestead in Outlaw Canyon? All that true?"

"Excepting Harry firing me—I quit."

"What's back of all this ruckus?"

"I guess most of it started when Edith came out to teach school."

"There's a girl mixed up in it?"

Jeff nodded. "Edith Oliver. She was bedding down on the Teapot. You know what that's like?"

Petey nodded.

"Hell, there were cow-pokes from six townships around using the Teapot range for a short cut that only added twenty miles to their ride." Jeff waited while a young Chinese came through the curtains and handed plates of food around.

"Don't eat too much," Petey cautioned. "You've got a busy afternoon ahead of you."

"That's the truth, and one helluva lot depends on how I do the next three days." Jeff gulped his coffee and gagged against the heat of it. "Things sort of leveled out to competition between Tom Triplett and me. As far as I could see, it was even Stephen with us, even though I was getting help from Martha. D'you know Harry Strange's wife, Martha?"

"Sure."

"She owed me a favor and when-ever she could she saw to it that I

got the call when Edith had to go anywhere. One day she asked me to pick Edith up after school. I drove over in the phaeton with Zeke, the harness horse."

Jeff shoved back from the table and made a cigarette. "As we were coming up the lane toward the house, I got show-offy—jumped onto Zeke—I landed scratching and yelling, just skylarking around. I figured on making a dash entrance, but Zeke figured different. He broke the check rein, put his head between his legs and went to work. On the fifth jump he threw me half as high as the cottonwoods. From there he kicked his way out of the phaeton—Edith got dumped, of course."

Jeff lighted his smoke. "There was a helluva lot of milling around and yelling. As soon as Harry found out Edith wasn't hurt, he began yelling about wrecking his phaeton and making an outlaw of his best buggy horse. I knew I'd been a damn' fool and that didn't help any. I told Harry I'd pay for the phaeton, but he kept belling about ruining his driving horse. Then I really blew my top. I bet Harry a month's wages I could ride his damn' outlaw wagon horse. To pour it on I borrowed a pair of Martha's high-heeled slippers. She's a big woman and I could get into them, curling my toes."

TROMPING out his smoke, Jeff looked at the ceiling. "I stayed with him seven jumps. I don't think I could've stuck him with full rig and pulling leather. That was when Harry tagged me with the name Slippers. It spread like fire in dry brush."

Petey cleared his throat. "Why should Harry get so puckered?"

"That goes back a time. Harry'd been courting Martha for about five years. It didn't look like he'd ever get off the dime, so Martha and me cooked up a deal. I made it look like I was casting my loop her way. Harry jumped. Ever since then he's been thinking I'm his chief threat. That's the favor Martha owed me."

"Is this black the buck-jumper you say he is?"

"Do you remember the day Tom Three-Persons rode Strawberry?"

"I remember," answered Petey in the voice of a man talking in church.

"Did you think you'd never see a better bucking horse than Strawberry?"

"Not in this life."

"This black horse Zeke is, and not because he dumped me twice—"

"What about the girl?" Petey asked.

"She nearly got killed, but she held no grudges. Before I rode off the Teapot we chinned private, down by the ford. She let me know I was tops in her tally book, and she'd tell Tom Triplett likewise—that's why Tom was burning for a fight. Anyhow, Edith said she wasn't going to tie up with a broken-down bronc rider, meaning me. So, what do I do? I go to the bank and borrow five hundred and file a homestead in Outlaw Canyon; I build a house, a barn, four stalls and two stanchions. Two cows and a garden."

Jeff leaned back in his chair. "Did you ever do farm chores?"

Petey shook his head emphatically.

"That's all farming means, milking cows, weeding the garden, plowing for next year's crop and feeding chickens. Then it's time to milk again."

"You mean you got hens?"

Jeff nodded.

"How long's this been going on?"

"Over two months. That's why I rode into town today loaded for bear. I've (Continued on page 69)

"I'm coming out—" The gate swung open. Midnight erupted with a bawl. He caprioled so high it looked as if he were walking the top rail of the chutes

THE NEWHOUSER NUISANCE

BY KYLE CRICHTON

Time was when I

IN PAST years Master Harold Detroit southpaw, was a nuisance preceded malignancy that only intervention saved him from lethal belab hands of his playmates. Now considered critics the greatest pitcher in baseball, time when he not only failed to influence succeeded admirably in alienating friends. "Let us observe merely that he is a the Dutchman," they used to say elegantly in the Detroit dugout, stroking a bat to wishing the laws on assault were less Michigan.

This ordinarily followed a scene in which Hal welcomed a teammate's error by taking glove, putting his hands on his hips and murdering at the offender. He would to the mound in a white rage and start to ball toward the plate with insane fury. Brains and temper had left him simple there was nothing on the ball but anger, result was invariably disastrous. The hal Hal threw them up, the faster they came back and it soon became a question not ing the game but of preserving Newhouse.

"I will not say that Newhouser was d marks a teammate who now finds him "but it is a happy chance that there is this club now serving a term for homicide.

Newhouser gives credit for his reform wife but this must be less than strictly cause the marriage was in 1941 and he playing Dracula in 1942 and 1943. came in 1944 when he won twenty-nine and almost pitched Detroit into For that chore he won the American League valuable player award and took it again when he won twenty-five and lost the Last year he won twenty-six and lost nine piled an earned-run average of 1.94. In been 1.81, the first time in twenty-se pitcher had allowed an average of few runs a game two years in succession.

"The triumph of matter over mind," his ill-wishers, but this is vigorously reb Detroit sports writers and most close the game. "This young man will never sche as a thinker," says Harry Salsinger troit News, "but he will outpitch Felle Ferriss or anybody in our league. I thi pitch anybody in any league."

At twenty-six Newhouser is probable as any man who ever dominated hi He is still a big blond kid and will possi way. gan Childe Harold's battle against the y had given him a great fast ball, a good a nice change of pace. But in a spirit of hey kept back one thing: victories. If d a two-hitter, the other guy pitched a . In the first twenty-one innings of the sh Detroit got him only one run. Any time

things got to looking too good for his cause, his teammates began playing a little game of their own called you-kick-this-one-I'll-kick-the-next. Soon Harold was talking to nobody but himself on the club.

He lost fourteen in 1942 and seventeen in 1943. This was the final straw and he went to Steve O'Neill, the new manager, and asked to be traded. "Traded, my eye," said Steve. "You're going to be one of my starting pitchers this year." Newhouser now gives O'Neill credit for straightening him out and utters most laudatory words about the Christian spirit Steve utilized in this venture, but the truth seems to be that Harold almost drove Steve mad before the turn came. At one point he came to O'Neill and said:

"Steve, you're ridin' me too hard."

"And I'm going to keep on ridin' you," bellowed Steve, "till you stop being so damned dumb out there."

Newhouser lists four factors in his reformation: (a) his marriage, (b) the birth of his little girl in 1943, (c) O'Neill and (d) Paul Richards, the Detroit catcher. Although we have said his wife's influence was late in catching on, it is true that she has had a great deal to do with his success. She is widely admired around the Detroit club and Newhouser is literally wild about her and the baby. He is a boy with the finest instincts and much of his progress is due to his happy home life.

How He Finally Learned What Was Wrong

Paul Richards had been around a long time when he gave up the job of managing Atlanta to come back to Detroit, and the one thing he has learned in a busy life is never to give advice until it is asked for. Newhouser finally got around to asking Richards what he was doing wrong. They went out on the field.

"Listen," said Richards. "Try one outside, try one inside, one up here, one down here; throw the curve overhand, sidearm, natural. You can't do any worse, can you?"

Newhouser is now a pitcher with everything. He has three speeds for both his curve and fast one. Several years ago he picked up a slider. Birdie Tebbetts says the overhand curve is the best of all.

But even with his new stuff and confidence, Newhouser still had to get started right. There was always the feeling that the gods were going to cross him again. What changed him was a game in Cleveland.

"We're two runs behind and it doesn't look as if we're ever going to catch up," says Hal. "A young catcher named Hack Miller is up for us and there are two on. It's his first time at bat in the big leagues and what does he do? He hits the first ball for a home run against the railing in the big stadium. It bounces around out there till he gets over. That puts us ahead and that's the turning point for me. It's been good ever since."

The turnover in temperament didn't come all at once. Even then he couldn't stand to lose. He was losing in a game of hearts one night when he grabbed the cards, tore them up and slammed them around the hotel room.

"That's why I'm a great competitor," he yelled. "I hate to lose."

It is true that this is one of his great assets. He is in the class with Burleigh Grimes and Johnny Allen, who would cut your (Continued on page 87)

STAY EAST, YOUNG MAN, STAY EAST

BY ANDREW ROBERTS

THERE were angry, muffled voices and a loud shuffling of feet in the corridor at the Veterans Service Center in Los Angeles.

The secretary came in hastily with a frightened look and said, "There's a lot of people out there to see you, Mr. Tryon."

Arthur Tryon, executive director of the center, was about to get up from his desk when the door burst open and a mass of bulky men crowded in. There were fourteen of them and they looked tense and wrought up.

"Mr. Tryon," blurted out the man who seemed to be the leader, "you've been doing all you can for us but we're still not getting anywhere. Last night I slept in the car again with my wife and the two kids . . . Joe, here, he was in an all-night movie. You know Smith; he's been coming in here till he's almost worn the floors out. He's finally had to leave that cellar because

of the water and the rats. . . . That right, Smith?"

Smith, a thin, wiry man, nodded.

"Well, Mr. Tryon, it's just got too much for us. We can't find places to live, we can't get jobs and nobody seems to give a damn whether we get along or not. You do and the people here at the center do, but the landlords don't and the bosses don't. They all say they can't do anything about it. Well, by God, we can. We're not going to have our women and kids sleeping in cars and garages and vacant lots. . . ."

He paused and then looked Mr. Tryon full in the eye.

"Mr. Tryon," he said quietly, "these fellows have asked me to tell you that if something isn't done today we're going down and break every window on Broadway. We'll get pinched; we want to get pinched—maybe then somebody will listen to us and do something about us. You

mustn't think we're joking or bluffing. We've talked about it and we're going to do it. You can ask anybody here."

It required the most strenuous arguments and pleas from Tryon to talk them out of their plan. Only their faith in his fairness finally won them over, but he knew and they knew that nothing he could say or promise altered the seriousness of their situation. They knew they were trapped and they feared that nobody in Los Angeles could do anything about it.

The Los Angeles area is jammed and people keep pouring in.

It was bad during the war; it is terrifying now; rather soon it may become tragic. Every soldier who went through the state during the war and said, "This is for me, brother," wants to come back. The State Employment office estimates that 12,000 new veterans are coming into Los Angeles County every month. The Veterans Administration reports that 5,000 a

month are having their records transferred to Los Angeles, meaning they have come to stay.

The wave of civilians is even greater. They have read about this paper and nothing but a series of defunct road blocks could keep them out. In April of this year, 99,548 people from out of state came into southern California by automobile; 36,600 by bus. No check is made on rail or planes. There is no way of determining how many of these are tourists or on business bent.

The All-Year Club estimates approximately 15 per cent of the newcomers decide to settle permanently. The Veterans Center maintains that at least 80 per cent of out-of-state veterans intend to stay. You can see the long lines of cars in Arizona headed for Needles or Yuma, the eyes of the drivers fixed, pitifully hopeful, on the promised land.

"We want to plead with you,

Los Angeles has veterans living in some of the worst slums in the world, and overcrowding is so bad that more are being created daily. Unemployment is rising, too. But veterans and others still flood in, and the county edges nearer to tragedy

Sign on this housing development adds up to bitter irony for Los Angeles veterans, jammed into chicken coops, sheds and garages. For prices are much too high for majority of G.I.s

"to help us head these people off before we're all in the flood." Long ago as last November, the city's advisory committee of the Los Angeles Housing Authority, headed by Al Wineberg, stopped applications for housing places. The list was then at 15,000 and has taken six months to whittle down to 2,200; nothing is handled but the most desperate cases. The new Young Village in Griffith Park is filled; the John Basilone home in San Fernando Valley is half completed because federal money gave out and building was stopped. There should be 1,648 additional family units at Basilone, but there are barracks with lighting between the walls, either a monument to the zeal for economy or a pool of bureaucratic stupidity. Other parts of town crowding is a new news.

"There are only six or seven in a room we consider it normal," said a city official. "Ten or twelve get in the emergency class—and had lots of them." Let's not be too general about the situation. Have you ever seen a man living in a garage, a ramshackle affair with four walls, a door hanging half off and a dirt floor? It was a pleasant-looking young man standing by the door and young children were playing inside. Within was a stove, a single toilet, no toilet or water. It was a man's family and their application for a new house had been in for months without luck. "So, the children sleep in the bed," the young woman told us. "My husband and I throw a mattress down by the door."

New American Way of Life

In Los Angeles County, families are in chicken coops and basements, woodsheds and tents; Quonset trailers, motels and garages. A survey shows that three hundred unattached homeless women get out every night in Los Angeles at Union Station, the Greyhound Bus terminal, the all-night cafes or the charity missions. And now the greatest blow of all has fallen: unemployment. Shipbuilding, which once accounted for 100,000 workers, is down to around 10,000; aircraft workers in the county declined from 262,000 to 75,000; garment industry has been severely hit by the buyers' strike, and employment in some shops runs as low as 50 per cent. Retail trade has slowed, and the fish-canning season is off.

As a result there are 50,000 unemployed veterans in Los Angeles County; 36,000 are still getting \$2-\$20 a week for a year for ex-servicemen, and the L.A. County relief for civilian unemployed have above 39,000. Until the first of the year the Veterans Service Center was managing to place 45 per cent of veterans in jobs. In February they were placing only 19 per cent, and though in May it was back to 25 per cent, signs of panic were apparent.

"The figures don't mean a thing," were told in Los Angeles. "A man lays off five hundred men a week and hires five hundred at lower wages. Another large employer makes a practice of taking on

Four children and two adults call this one room home. It contains three cribs, double bed, dresser, baby buggy. At that, it's far better than some "homes" for veterans

This tiny shanty contains one room, no closet. In it are a double bed, a two-burner gas grill, a sink that empties into a bucket. This is why L.A. says, "Stay away!"

PHOTOGRAPHS FOR COLLIER'S BY HARRIET ARNOLD

This is the home that a much-decorated sergeant came back to. It is a tent with a dirt floor. In it live a father and mother, a working son, a daughter and her husband and their two small children. Water must be carried a distance of 200 feet

Continuing the exciting story of romance and high adventure

MERCHANT OF VALOR

BY CLARENCE BUDINGTON KELLAND

The Story:

The events narrated take place in sixteen-century Italy. A Medici Pope sits at Rome; the country is turbulent with internal strife.

PETER CAREW, young son of an English wool merchant, is sent to Florence on business by his father. Just before leaving England he visits a country fair, where he is given a charm by a beautiful Italian girl disguised as a fortuneteller.

Upon his arrival in Italy, Peter saves the life of a Florentine nobleman, GIOVANNI DE' MEDICI, leader of a free-lance army, the Black Bands. The next day Peter encounters the fortunetelling girl he had met in England, and BETSY, for so he calls her, takes the charm back from him. The charm is actually a letter of critical interest to the Pope, and Peter is arrested by agents of the Cardinal of Florence. Escaping through Betsy's timely intervention, Peter flees Florence and joins Giovanni's Black Bands—after making another enemy: PIERO RIARIO, an arrogant nobleman, who has designs on Betsy.

In the company of a cheerfully unscrupulous monk who is an agent of the Pope, Riario follows Peter, hoping he will lead them to the mysterious girl.

Encountering Betsy disguised as a camp follower of the Black Bands, Peter saves her from being kidnaped, whereupon Peter, Betsy and their two servants set out on horseback to escape the persistent pursuit of Riario and the monk.

Putting up for the night at a lonely inn, the four wayfarers are attacked by ruffians in the pay of Riario. Peter and his servant CHRISTOFORO beat them off. But when he goes into Betsy's room, Peter finds she and her hunchbacked servant JOHN-PETER have disappeared during the fight. Sadly Peter rides off to rejoin the Black Bands, his pride wounded but his love for this clever, domineering beauty more compelling than ever.

III

AT ONCE, upon our arrival in Fano, I reported to My Lord Giovanni, who was surprised that I had returned so soon.

"What!" he exclaimed gaily. "Hast disposed thy lady in safety so promptly?"

"My lady," I replied wryly, "disposed of me. She flitted, leaving me to make the best of it."

"No adventures to relate?" he asked eagerly.

"There was a slight bickering," I said, "in an inn—during which the maid vanished."

"Slight bickering!" said My Lord. "You English are a tongue-tied race with no gift of narrative." He turned to Christoforo who stood behind me and addressed him by name.

"Christoforo," he asked, "what was this slight bickering of which we hear?"

Now there was nothing of the tongue-tied about Christoforo, for you had but to nod your head and he inundated you with a spate of words.

"It befell thus, My Lord," he said forwardly. "We did hide in the hills through a night and a day. But at nightfall we rode again till we came to this inn and its most villainous and traitorous landlord. He did recognize us from description and sent away his half-wit son to betray us. But Messer Pietro kept strict watch, and just before dawn there arrived four *Lanzenknechts* bent upon our slaughter and the capture of the maid."

"Splendid fighting men, these Germans."

"Aye, and they fought splendidly," said Christoforo, "coming at us up the stairs. Whereupon Messer Pietro shouldered me aside and engaged

with them mightily so that they were driven back pell-mell. Then they came again, holding before them as a shield a great oaken table."

"Ah," said My Lord, his eyes shining.

"To me it seemed the end," said Christoforo, "for no sword could penetrate it."

"And what then?" asked My Lord impatiently.

"Then," said Christoforo, "Messer Pietro lifted with his own strength a monstrous oaken chest that three common men could not have raised. It was a miracle, My Lord, for no single man could have lifted the weight. He carried it to the stairhead and, raising it above his head, hurled it down upon them. Nothing human could stand against it. It hurled them down, pinning one beneath and shattering the legs of another. Whereupon we leaped upon them, each slaying one and there was an end of it."

My Lord looked at my height and the breadth of my shoulders and smiled. "Aye," he said, "a slight bickering. Thou, Pietro, are more sententious than Julius Caesar with his *Veni, vidi, vici*. And then?"

"We came back to report for duty."

"Away with thee," he said. "Go learn to fight. And hereafter," he said, smiling into my eyes so that my heart went out to him, "deafen not mine ears with thy garrulity." . . .

Not many days later My Lord summoned me him again, and there stood in the room three strange gentlemen most gorgeously appareled, but the fourth was My Lord Piero Riario who eyed me balefully. I returned his gaze for I had come to hold him in hatred.

"Englishman," said My Lord Giovanni severely, "these gentlemen come with grievous complaints against thee."

"Of what nature, My Lord?" I asked.

"That thou didst murder unfairly three servants of the Duke of Urbino, setting upon them treacherously, and sorely maim a fourth. And thereafter did maliciously burn the inn of an innocent landlord. Hast thou defense against these charges?"

"It is true that certain foreign soldiers were damaged," said I, "but the treachery was upon the other foot. As to the burning, I know naught of it save that as I looked backward there were flames and smoke."

"My Lord Duke," said Riario harshly, "demands that this knave be turned over to him for proper punishment."

I saw the glint in My Lord's eye, for he liketh not that any make peremptory demands of him.

"I have heard the tale otherwise than thou dost relate it, My Lord Riario, and, mayhap, from a more trustworthy tongue. So the Duke of Urbino doth demand one of my men of me! Showing straitly that he hath more arrogance than discretion. I am the mother and father of my soldiers, and their quarrels are my quarrels. Say to your Duke that if he desireth this man it were well to send an army to take him. Also say to him that if it be his wish to make a personal matter of this he shall put on his armor and take lance and appoint a day."

"I am to bear this ungracious refusal to the Duke?" asked Riario.

"Aye," said My Lord, "and if its meaning be not clear to him, add words of thy own devising to increase its strength."

They went out angrily and My Lord stared after them with level brows. He turned, and his face was grave.

"Thou hast added one more to the number of enemies," he said.

"If it be your will," I said, "I will surrender to the Duke."

"Rather," he said, "would I add ten dukes to list of my enemies than have it known to my that I surrendered one of their number. Get away, Pietro, and practice with weapons diligently. For it is in my mind you will need all the skill thou canst master."

So for weeks I did practice assiduously with sword, and learned to wear armor and was instructed in the art of war as it had been improved by My Lord's genius. For it was he who perceived the utility of foot soldiers; also he was master of business of surprise and of striking where he was not expected to strike. Against My Lord no opponent dared sleep, nor could guess when or from what direction a blow might fall. Also in another thing he was superior, and that was in his solicitude for his men, having always their safety and comfort in mind. Yet he himself was reckless to the point of madness.

MY LORD went to Rome to negotiate with the Pope for money wherewith to pay his troops and also to seek as reward for his services some state with a decent revenue to maintain his family respectably. He was ever in need of money.

My Lord spoke of these matters with me. "Riario makes vague promises," he said, "which they do not mean to perform. I ask no more than is my due, but I weary of being cheated."

The month of September was all but spent when news came to Fano that the Emperor had been forced to raise the siege of Marseilles, thus giving free hand to Francis of France to bring his army into Italy. And then came word to me from My Lord to join him at Trebbio, which I obeyed, leaving Christoforo for companion.

My heart was softened to see My Lady once more and the little boy Cosimo. My Lord took me to his chamber and closed fast the door.

"Pietro," he said seriously, "thy maid brought true tidings, though there has been some delay. Messengers from His Majesty of France are on their way to transact with me. There is to be a meeting at an inn called Piccolo Cavallo. Wherefore I have sent for thee, my Pietro, for thou art merchant-trader and a shrewd bargainer."

"What is forward, My Lord?"

"It would seem," he said, "that the French need a soldier."

"In a sense," said I, "thou art unemployed. The Black Bands rust in idleness. But there is much to think on. On the one side thou art a Medici; on the other a Sforza. Thy relative is Pope; another relative is Duke of Milan. Sometimes, My Lord, it is doubt where honor lies and what be its demands. It is a point that should be considered."

"Consider it, then, Pietro. You have my leave."

"Thy Bands," said I, "belong to thee. They are thy business which thou dost own as my father owns his business in woolen cloths. It is thy undoubted right to hire thyself and thy Bands to the best advantage. Yet thou art a Florentine, and King Francis is French. It is true you Italians do not regard country as we in England do, being divided into a multitude of jealous and warring states. Were one land as England is one (Continued on page 21)

There were six, but in my rage I would have charged them had there been fifty. . . . With Christoforo at my side, I was fighting for my life and for Betsy and for my revenge against My Lord

PLASTIC AGE

BY RUTH CARSON

Don't look for too many miracles yet from plastic products. They may be on the way, but right now the industry is trying to overcome its growing pains

WHEN the late Henry Ford seized a fire ax a few years ago, and had his picture taken attacking the plastic rear end of a car, he cemented a notion in the public mind. Plastics, we were convinced, were unbreakable. Banking on this, we whammed plastic dishes around in the kitchen sink. Infants stamped with glee on their plastic toys. Disillusion mounted with the breakage until we discovered that some plastics are breakable.

We have other convictions about plastics, too: that they are made out of coal, soybeans, corncocks and anything else you have around; that they will melt at the touch of boiling water, or burst into flames from a spark; that, depending on our temperament, they will create a whole new magic world.

None of these things is literally so. But it's no wonder we are confused. So are the people in this gangling industry, which has grown so fast in the past twenty years that no one person can keep up with it. In the good old celluloid-collar days life was simpler in a lot of ways. For one thing, celluloid was the only plastic the public had to deal with. It was used for making billiard balls, as well as collars, shirt fronts and denture plates.

Today there are twenty-odd basic groups of plastics, depending on what you call basic, and hundreds of uses for each of them. A plastic is tough or brittle, elastic or firm, able to resist acid, fire, boiling water—or not, depending on how it's made. Each plastic is tailor-made by the chemist to meet special needs. He is constantly discovering new things he can do with plastics,

but he hasn't yet been able to create one plastic that can do everything. Small, obviously plastic items like dishes and toys are all mainstay when we say plastic. Actually they are only a drop in the caldron. Plastics have thousands of uses in industry. Some, like the movies with their plastic film, couldn't exist without them. Hundreds of ways all around us, many of them unseen, plastics are making our life easier, safer and more varied. All this started the dream-world talk because plastics make anything seem possible. It's not magic that has made production figures mount from 27 million pounds in 1921, to over a billion pounds in 1946, with demand exceeding supply.

Consider the safety glass in your car. You probably take for granted that the windshield and side windows of your car are not ordinary glass. But did you know that a plastic makes this possible? Two plates of glass is a sandwich filling of elastic plastic film, so bonded to the glass that no matter how badly shattered the glass is, it will stick to that film instead of flying at you. What's more, you should be so unlucky as to sail head-first into the windshield, there are you will at least be lucky enough that it will yield and that the film will stretch instead of break.

Safety glass didn't always provide so much safety. When it was first used around 1927, the film was made of cellulose nitrate, the same as celluloid. This made a safer window than plate glass alone, which shatters into long, jagged pieces; and safer than tempered glass, which shatters into thousands of rough, honeycomb sections. But it yellowed from the ultraviolet rays of the sun, and it got brittle at high temperatures. So in 1932, a cellulose acetate film replaced it; the new film was clear and yellow but it still got brittle.

More work, and by 1938, the film we have today, elastic at high temperatures. Just goes to show you what chemists can do with plastics, given a problem and some time. The basic resin of this film is also good, in another form, for treating slip-cover material so that it can be sponged off. In plastics, one thing generally leads to another.

It will be a while, though, and maybe never, before we have a plastic like Plexiglas for windshields and windows. The simple reason is that plastic stuff scratches too easily. Like Lucite, it is crystal clear, light in

TENNESSEE EASTMAN CORPORATION

This football helmet made of plastic absorbs shocks, is lightweight and cool. It is molded in two transparent halves and joined by an extruded strip. The school colors sprayed on the inside show through clearly

Plastic is also used to make toy cowboys and Indians with the figures molded in fine detail. This material is fire-resistant and can be painted with lacquers which, having a special affinity with it, won't chip

heat and nonshattering, making it ideal for the curving

e the particles in grinding wheels. This resinoid-bonded wheel
ay cut through steel so hard it can't be penetrated by a saw

Salmon fishermen in Oregon use plastic floats on their nets because they are tough, permanently buoyant and will withstand exposure to weather and water. These floats will never need a refinishing job to restore color

Bob waited for Jean to answer. "My father ran away when we were children." Her face felt stiff. "Is there anything else you want to know?" she

SHE saw the man as soon as she stepped out of the kitchen. He was lying belly down on the beach, the barrel of Willie's BB gun steadied on the log of driftwood before him.

Ping! The shot struck the tomato can sitting on the rock beyond the high-tide mark. When he raised his cheek from the gunstock and turned to Willie, she saw his profile, Indian red in the late California sun. He was nobody she knew.

Smoothing her skirt, she stepped

from the screened porch and walked toward them. When she was still some yards away Willie glanced up. He gave her the peculiar half-smile that made him look older than thirteen. It was a family smile, a secret smile of the blood and it said all the understanding, comradely things he never put into words.

Now he merely propped himself on one thin elbow and nodded at the man beside him.

"This is Bob," he said. "He used to be a Marine."

She stood above them, her foot almost touching the stranger. She saw that he was in his middle twenties. He wore jeans, and a white cotton T-shirt lay on the sand with his loafers. His body had the set of a man's body. His shoulders were heavy and he was thick-chested and, as he rolled over, he shielded his eyes with his hand and his gray eyes moved across her face. She felt as if she were being picked out of the darkness by a searchlight.

She sat down on the sand beside him and pushed her skirt down between

her knees. "Willie," she said. "May says to set the table. We'll be on the back porch."

"This is Jean. My sister," Willie said. "She goes to College."

Again his gaze moved over her. He felt it linger on her blond hair, the color of her eyes and the nose which was like Willie's.

"City College?" he said. "What are you taking?"

She knew he didn't care actually what she was asking because she expected

TWO KINDS OF PEOPLE

BY RAMONA STEWART

ILLUSTRATED BY HARRY FREDMAN

She smiled a practiced smile of amusement, knowing it made her look like Aunt May and being pleased by that too. "I'm taking Library Science," she said. "I'm studying to be an old maid." She watched the curiosity come into his eyes. All right, she thought, now I'm a little odd. But I told you before you found it out yourself. "Library Science," he said. "Is that what you want to do?" His tone held no mockery, merely

the casual interest of someone wondering why the snow fell or what made the sea deep.

She hesitated, then from habit ridiculed herself, "Old maids run in the family. I want to study and do it right." Before he could speak again, she turned to Willie. With Willie she could be brisk and certain. There was no twilight area of wanting something you pretended not to want.

"Go set the table, Willie. And wash your hands first," she said. "Dinner's nearly ready."

Under her aunt's guidance she was studying, alas, for a degree in spinsterhood. Fortunately, she flunked the course

Willie took the BB gun from the log beside the Marine's head and picked up his can of shot. As he knelt there in the sand, he paused.

"Look," he told the man. "Why don't you stay and eat with us?"

"Oh, Willie!" Her reproval was automatic, and immediately she was blushing. But really, what had got into Willie? He knew what Aunt May would say if they brought in an absolute stranger, somebody he had picked up on the beach.

"I mean, I'm sure, Mr.—"

"Bob," the Marine said.

"I'm sure Bob has another engagement, Willie. You can't just ask people for dinner at the last minute."

Willie's eyes met hers calmly. During all the years she had spent battering herself against the stiff code of conduct Aunt May threw about them, he had merely watched, making his secret judgments in silence. The few times he wanted something, he went after it and returned, quiet and satisfied, to take his punishment.

Right now, he was going to be stubborn. "Bob, have you got anything else to do?" he asked.

The man shook his head; he lay smiling in the warm, salty sunshine.

"Well," she said helplessly, "would you like to stay?"

He grinned. "Sure. Thanks."

"I'll go tell Aunt May," Willie said.

As Willie's thin shoulders swung away toward the house, the Marine moved nearer to her, closing the space the boy had left. It was a natural gesture, but she jerked as if he had laid hands on her.

"There's salad and hamburger," she said quickly.

"Who's Aunt May?" he asked.

"My mother's sister. She's our guardian."

"Your parents dead?" he asked.

She drew an arc in the sand. "My mother is. My father ran away when we were children." Her face felt stiff and her voice was rough against her throat. "Is there anything else you want to know?" she asked.

"Tough," he said placidly.

She got up and brushed the sand from her pale legs. "If you want dinner, you'd better come along."

He rose slowly and looked down at her. He stood close to her and she caught the smell of sweat.

"You can wash up inside," she said.

THEY sat at the table on the screened porch, Aunt May at the head, Jean facing her, Bob and Willie on either side. Jean concentrated on the familiar beach noises outside—the evening gnats, the surf, the screech of brakes above them on the highway—trying to escape the smile fastened to Aunt May's downy face, trying not to listen to her voice.

"I'm sorry there wasn't more," she was saying politely. "I wasn't expecting a guest."

He glanced at her across his plate. "I don't eat much," he said. His voice was pleasantly matter-of-fact. He broke a piece of bread and pushed it through the gravy with his fork.

"At least there's plenty of salad." Aunt May rose with the wooden bowl and put the last of it on his plate. For a moment she watched him eat, then said, "Do you live down here?"

"Los Angeles," he said. "I share a flat with a guy I knew in the war."

"Do you work at the beach?"

"No. I just drove out."

Aunt May said "Oh," and Jean wanted to warn him about Aunt May and work. She wanted to say, "Go on—tell her anything—tell her a lie—but don't let her think you were loafing on a weekday."

But he just ate the last of the watercress and said, "I don't have a job. I saved money; I'm looking around."

All the lines in Aunt May's face moved to touch other lines and her smile was acrid. "You must join our Order of the Lilies," she said.

"Yeah? What's that?"

Aunt May turned slightly and nodded at a framed sampler on the wall, stitched in green and black thread.

LILIES OF THE FIELD

"They toil not,
Neither do they spin."

Beneath the legend, four lilies were exquisitely embroidered. This was Aunt May's quiet joke. Whenever Jean or Willie forgot the dishes or slacked on repainting the house, whenever they sat idle at all, they were made members of the Order.

NOTHING was ever said about their mother who had died, or their father who had run away, but the sampler was always there to remind them that Aunt May had worked hard to support them. Even now the scent of lilies made Jean a little sick.

Bob got up from the table and teetered on the heels of his bare feet, his large hands on his hips, staring at the sampler.

"You did this yourself?" he asked Aunt May.

She frowned, the faintest gathering between her brows. "Yes. Why?"

"Good needlework." He turned, dismissing the sampler. "I've got nothing against work. But I can't see taking a job just to have a job."

She said, "You have something special in mind?"

"No," he said. "But on the islands I learned patience. There'll be something come along I want to do." He pulled out a cigarette. "Smoke?"

"No." This coldly. And then as he moved toward Jean: "And neither does my niece."

There was a short silence while Bob lighted a cigarette and looked around for an ash tray. Finally, he opened the screen door and flung the match outside.

"The paper said there'd be a grunion run tonight," he announced. "That's the reason I drove down."

"Grunion?" Aunt May said, as if she had not heard properly.

"Fish. I hear they come by thousands. They swarm up on the sand to lay their eggs."

"Oh!" Aunt May's tone questioned

(Continued on page 58)

SHERIDAN' RIDE

BY JIM MARSHALL

Wild, free and Texan, Miss Ann Sheridan continues to gallop through the Hollywood scenery

SHE was born in Denton, Texas, on February 21, 1915, and christened Clara Lou, for her aunt and mother. Her father was George Sheridan, a prosperous mechanic. She has a brother, George, and three sisters, Kitty, Mabel and Pauline. Her father's great-uncle was General Sheridan; her mother's family were the Warrens of Virginia. One of her ancestors was a Cherokee, whether a chief or a princess is not recorded.

In Denton, a small town northwest of Dallas, the Sheridans lived at 304 South Elm Street. Clara started her education at the Robert E. Lee School, being known as Lou-dee. Later she went to the Denton High School and sang with the band, mainly torch songs. After this she enrolled at North Texas State Teachers College, also in Denton, but never graduated. The legend has it, she was never a teacher. The story that she was started by a press agent and had school teachers coming to Hollywood in droves for some time.

She is one of the very few beauty-contest winners ever to be heard from again after arriving in Hollywood. She got into the contest by the back door when her sister Kitty sent a studio portrait and a snapshot of her in a bathing suit to John Rosenfield, dramatic editor of the Dallas News. Mr. Rosenfield sent the pictures along to Paramount, which was operating a "Search for Beauty." This occurred in the middle of Annie's sophomore year, when she was about to become resigned to a future as a schoolma'am.

"You are making a fool of me!" Annie wrote Kitty, when she found out about it.

Later she cooled down and had forgotten all about the whole grim episode when Mr. Rosenfield phoned her and said Hollywood was calling. She signed a one-picture contract at \$50 a week and hopped to the rattle. This was in 1933, a depression year. At the picture was made most of the beauty-contest winners were packed off home, but Annie stayed—because she could ride a horse. She made Westerns with Randy Scott and had her name changed to Ann.

Two years of this seemed to be getting her nowhere and she quit Paramount to free-lance. She worked a while at Universal, got odd jobs here and there and was threatening again to go back to Denton when she got a break at Warner's.

She played a nurse in a string of pictures and was not kissed for the screen until Fred MacMurray tackled the assignment in a picture called *Can't Buy an Airplane*. It turned out okay and she has been kissed in every picture since, often with extreme vehemence.

Her first big part was that of a schoolma'am in *The Great O'Malley* with Pat O'Brien and Humphrey Bogart. She went on into *Black Legion*, *A Girl Without a Soul*, *San Quentin* and twenty others.

But still Annie was Number 27 on the fan-list at Warner's and a plenum of press agents called to get her out of this cellar of celebrity. After talking over several dozen sobriquets which may be applied to Miss Sheridan, (Continued on page 19)

PARTNER TO FAMILY FUN!

THE PARTING OF THE WAYS

WHY I BROKE WITH ROOSEVELT—V

BY JAMES A. FARLEY

THE WHITE HOUSE
WASHINGTON

Aboard Presidential Special
December 3, 1940.

Dear Jim:-

Thank you for yours of the twenty-third. You know I am a funny fellow in that unlike many, many people I do not get excited by what you call an "unprecedented honor". The reason is that I am perhaps a little "queer" in never having sought public office for "honor".

To put it another way, I would have been just as content in my own heart and conscience to give service to the country as a private citizen as I would to give service to the country as a first term or a third term President.

I am off for an attempt to get two weeks of sunshine -- and I do hope you will run in and see me when I get back. I would really love to talk with you quietly about a lot of things that intimately relate today to the future generations of America.

Is it true you are going to South America? Let me know if I can help.

My best to you all,

As ever,

F. D. R.

The 1940 Democratic Convention proved that the President was "a master of political rough-and-tumble with no holds barred." But Farley and Jack Garner stood their ground and emerged beaten but unbowed. Here is the story of the conclusion of formal relations between Mr. Roosevelt and his party chief

The President's unsigned reply to Farley's letter of congratulation

Conclusion

I WENT to Chicago and the 1940 National Convention, fully aware of the strains and stresses awaiting me. It was to have my name presented to the convention if it was the last thing I ever did. There was no other course before me, because I had to stand for the Presidential nomination and to live up to that promise. I felt I would respect of everyone who knew of me.

Furthermore, this was only one way I could fairly and clearly express my opposition to a third term. No one knew better than I the chance of winning, but I could not go back on my word.

I arrived in Chicago Tuesday morning. I first to my office suite in the Stevens Hotel and then to my living quarters in the Blackstone.

Wednesday all the leaders in the convention were trekking into the unofficial headquarters. Harry Hopkins and Jimmy Byrnes had in a suite. Many never came in to see me. The Hopkins-Byrnes strategy became clear. Every effort was being directed at winning the nomination for President Roosevelt by applying an effort to convince the country there was a draft. That was the reason for all the pressure brought on me to get out of the race.

What I did not like was the hypocrisy of the effort put forth to make it appear that the President was being drafted, when ever it was a "forced draft" fired from the White House itself.

In the next few days nearly every party leader urged me to step aside. Finally Ed Flynn saw me. Flynn decided on a direct approach.

"Jim, this isn't going to be easy to say," he said, "but for the sake of party harmony, for the interests of the country and in the interest of peace, you should pull out of the convention and continue as party chairman."

"Now, Ed," I replied, "I am not going to be drafted out of the race. I am not to blame for the present situation. It was none of my making. I would like to believe by the President that he would not be a candidate. Not until last week when I saw him in Hyde Park, did he indicate otherwise."

Flynn started to speak, but I waved him off.

"I'm not through yet," I said. "Some people may be one of them, have the false impression that I am running for the Presidency. I am not. The President has the votes. Everyone knows he has eight or nine hundred votes pledged to me."

"Now, what they want is the few votes that have been pledged to me, so that the outside world can think this is a unanimous 'draft.'"

"What I am trying to let the people understand is that I am opposed to a third term. I have never said so, because I did not want to give the Republicans ammunition."

"The only way I can publicly show my opposition without misunderstanding and with dignity is to permit my name to go before the convention. This is exactly where I stand and I am doing exactly what I am going to do."

The following Monday, Elliott Roosevelt came in and I explained my position.

"You are all right," he declared, "but there is a lot of damned guttersnipes in the hotel and on the street."

Young Joe Kennedy, of the Massachusetts delegation, dropped by to report that he would be in line for me despite all the pressure that had been brought to bear. He told me how the Blackstone Hotel crowd had called Ambassador Kennedy to London to get him to persuade his son to run and Kennedy had refused to make the attempt.

Just before I went out to the Chicago Convention for the opening of the convention, I received a phone call from the White House.

"How are you, Jim?" the President greeted me. "Everything going along all right?"

"Everything is okay with me, so far," I conceded. There was a brief silence which I broke. "I'm just on my way to the convention hall. Have you got your statement ready?"

"Good thing you brought that up, Jim. I'm back from my week-end trip and am going to make it this afternoon. I may have it ready for you tonight."

"I'll be right here if you want me." There was another brief pause, which I broke.

"By the way, Jim, there are a lot of stories in the papers. They are writing (Continued on

land, I would urge thee against renting your arms to a foreigner."

"Florence is my city and Tuscany my state," he said. "I am bound to think of their welfare. But will good come to her from Pope, from Emperor or from King? I must serve one of the three. Which one will best serve Florence?"

"The Pope," said I, "walks the tight-rope betwixt the horns of dilemma, knowing not in which direction to turn. He is a devious man. He is not a strong man. He doth not serve the church with single mind, but doth consider always the advantage of the Medici. Great things were hoped of him, but he hath not fulfilled his promise. I have talked with many. I have sought to guess which way that cat will jump."

"And thy conclusion, Pietro?"

"That he would turn against the Emperor and Milan if he dared, and that neither may depend upon him. I believe that, secretly, he swings toward France, hoping for the destruction of the power of Milan. I believe that, wert thou to hire thyself to Francis, he would approve, though he would do so secretly, and might even reproach thee publicly."

"Thou hast read my relative shrewdly, Pietro."

"The Pope rules Florence," I said, "using therefor the hand of Cardinal Passerini. If he believes the victory of Francis would profit Florence, it makes thy decision more simple."

"Consequently?" he asked tersely.

"Consequently," said I, "before you meet these agents of France thou must communicate by trusted messenger with the Pope, laying all before him, and requiring his answer and advice. To be in writing over his signature, so he never can deny."

"It is wise counsel," he said. "I shall follow it." He considered in silence. "I shall send my wife, who hath influence with her kinsman the Cardinal Salviati." Whereupon he dismissed me and sent me back to Fano with written orders to his captains to make ready to march at the word for a concentration of the Black Bands at some rendezvous not distant from Pavia.

It was done in this manner, and although Clement VII never affixed his name to writing approving of the step My Lord Giovanni contemplated, nevertheless through the influence of Cardinal Salviati there did arrive a communication from Giberti, the papal datary, congratulating My Lord upon having left the service of the ungrateful Imperials.

ON a day, with the chill of autumn in the air My Lord and I, and certain of his trusted captains, rode forth from Trebbio to keep appointment at the inn called Piccolo Cavallo. My Lord saw to it that guards were placed about it to secure the safety of the French agents.

Here was a secret meeting that was no secret. His Holiness knew of it and hence Florence would have been informed, and Cardinal Salviati. Venice, which had her spies everywhere, would not lack information. The two French gentlemen with their retainers would not have passed through the country unobserved by adherents of the Emperor. I did not like it. I did not believe that Venice, or Charles, who ruled Spain and Germany, would suffer this setback to their plans without interference, and right earnestly did I urge My Lord to caution. But care for his own safety was not in him.

So we met, the emissaries of Francis and My Lord, with me at his elbow to assist in the chaffering, and right earnestly did we bargain. For once, My Lord was determined that his interests should be well protected, and that he should get out of this matter all that was

due to him of pay and rations for his men and of reward for himself.

None was allowed to enter the room save servants of the inn who came at call to replenish our glasses, for arguing over money matters is a most thirsty occupation. There was the innkeeper himself, a pompous, portly man and self-important to be serving such great lords, and there was a lank, sallow fellow who carried with ceremony the salver and goblets of silver which My Lord had brought in his baggage to do honor to his guests, and there was a most outlandish woman who followed, bearing the great tankard of wine. Her skin was so swarthy as almost to be black, and her hair, done up in a strange way, was also black, and her garb was such as I had never seen, being neither Italian nor Spanish nor French. Now My Lord hath an avid curiosity and likewise a sharp eye for women, so he took notice of this serving maid.

"Art a Moor?" he asked.

"I be a maid from Sardinia," she said, "and no Moor."

"Yet," he said, "thou art dark of skin and thy hair hath a Moorish kink to it." "We of Sardinia," she said, "many of us, be descendants of the ancient Carthaginians of Africa, and of the armies of that city that once did harry Sicily and make war upon Rome."

"I have never seen thy country."

"It is mountainous and inclement," she said, "and Your Lordship would find no pleasure there."

Now, because My Lord spoke to her, I, who had given her scant notice before, fixed my attention upon her, and thought upon Hannibal, that great warrior, and the false god Moloch and the casting of little children into his fiery maw. One could not guess her age nor know if under her uncouth, gaudy garments she were fat or thin. But she reached out with the hand that held the tankard to fill My Lord's goblet, and I saw that hand with its slenderness and its gently tapering fingers and its skin of the color of the juice of walnuts. I think my jaw must have dropped open like a yokel's seeing some marvel at a village fair. For, in spite of dusky skin it was a hand well-remembered.

I peered most attentively at her face, but the eyes alone seemed eyes that I had seen, though I could not take my oath upon it. I was bemused. For the hands were the hands of Betsy though none of the rest of her seemed to belong to that strange maid. Of one thing I was certain

—that I must make sure of it, I could not give an honest account of her presence, not to spare her.

So, waiting a clement moment from my place and left that she strode back into the kitchen.

"Where," I asked the landlady, "Sardinian lass?"

"She hath gone to fetch the wine," said with a grudging motion of the door. "But she is not to be seen with by young gallants."

I WENT out into the courtyard. The fowls scratched; she was waiting for me with a bundle of sticks on her shoulder. She did not seek to hide but came straight toward me, but had passed without a word, to her sternly.

"Betsy!" I said.

She came to a halt and looked at my face most unfriendly. "I have never seen thee," she said, "never to set eyes on thee, hulkling self again." But her woman's curiosity, "How dost thou?" she asked.

"There is a point by which thou mayest know thee," I answered. "I am dressed as a Chinaman. Why art thou in this outlandish dress with black skin? Answer me straightly or it will be worse for thee."

"I answer what I please and suits me to answer," she said.

"Then," I told her, "come and we will inquire into it."

"Dolt," she said sharply. "but this—to be seen in talk to betray me to the monk. He will find me is to follow the ways, stubborn one, and let me mine."

"Thou art here to spy upon me," I accused.

"I came not here to harm thee, Giovanni either by spying or by love," she said. "If I do not make thee thou wilt spoil all with thy talk. Therefore I tell thee that thou art unlikely to leave this inn alive without me, he most certainly will leave it dead."

"How is he threatened?" she asked.

"By the poisoned cup, paid for by the gold of Venice. Disbursed by the Cardinal Passerini. And the blessing of the Pope. These be overjoyed to see him, to the King of France?"

"Upon thy soul," said I, "truth?"

"The Count Piero Riario lives in that neighborhood," she said. "Thou art with him. Keep me not from thee, for my eye must be sharp. I will poison to be dropped into the tankard, halted and considered. 'It is well that thou art here and art not use thee.'"

"As is thy wont," I said bitterly. "little you recked if I were sitting in that morning, so long as thou escape through the window."

"I use what I needs must use, what I needs must do," she said in a different voice and somewhat softer. "I heard that tale," she measured me with her eye. "I had no need to worry about thee."

"Didst worry?" I asked earnestly.

"Why should I? What art thou? Now mind thee, Englishman, I know. I think, when the wine is passed, it will be a great scandal and a thing if Lord Giovanni and the man drink that common drink. Be thou constant in thy drink. When the evil wine is passed the tankard of it, I will sign the spillings a drop upon the cloth, but not disclose myself, but leave

and swords most valiantly, but we turned them back through the gates, they closed in our faces and so we were in the front of it, scorning any protection for himself. Then, suddenly, the gates opened and the Spaniards rushed out upon us, seeing that we were in the front. Our men were driven back and My Lord, being in advance, was surrounded.

There we were, back to back, with the host of them, hacking and hewing. It was a day when I thanked God for my size and my strength, for it was by my strength that our men came to us to our aid. But so skillful and valiant was My Lord and so furiously did he fight that we held them at bay. In which I was of some slight assistance. I held them until our men clove a path through the gates, which they did not close, for we pressed them too close. We entered after them, clearing the defenses to the slaughter of great fury that in an hour not a defender was left alive.

WE MADE secure our capture and My Lord, torn, disheveled, and bleeding, but to my eyes a very god of war, turned to the place where the King sat on his horse, watching the fight. My Lord bent his knee and gazed sidewise at the King's officers with a look of scorn at the King's officers.

"Your Majesty," he said, "this is done."

Francis, his long face alight, drew a great red ruby from his hat. "Lord Giovanni," he said, "wear this as a token of my love which you have won. Gentlemen, in all my life I have never seen, nor in history read of such fighting as I have seen today." Then he turned to me and smiled, and frowned.

"Who is this, who stood at thy back when thou were surrounded?" he asked.

"Englishman," said My Lord, "I volunteered with me, and who is my true friend."

The King drew a light sword which he held in his side.

"Worthy of it?" he asked.

"All ways, Your Majesty," answered My Lord.

"Name?" said the King.

"Peter Carew, is the English of it."

The King dismounted from his horse, and, "I command, which order I give, not knowing what was going to

happen to me. Then he touched me lightly on the shoulder with his blade.

"Rise, Sir Peter Carew," he said, "and be always worthy of thy knighthood as this day thou were worthy to receive it."

I arose, stammering, and my ears burned with the red blood that rushed upward. I knew not what to say and was sore embarrassed. And then I managed to speak. "Your Majesty," I said, "I am beholden to you. But now that I have it, what in the world am I to do with it?"

Whereat the King laughed and My Lord laughed and the captains and generals laughed with them, and I wished I were well away from there, drinking a cup of milk in our dairy at home.

So now, without in the least wishing it, I was Sir Peter and a gentleman and I wondered how it would go with good woolen cloths, and what my neighbors would think of it. But my mother would like it, being a woman, and would lord it over the other goodwives and fetch it into her talk unnecessarily.

I knew not what to do with my feet or my hands or my eyes, and wished people would not stare at me; and looking this way and that in my distress, my troubled gaze fell upon certain churchmen who stood in a group at one side, among whom was a French cardinal and a bevy of bishops. In the background was a lowly monk in his rough brown robe and he was grinning at me most impudently with his little eyes and full, thick lips. Amidst all that high company he closed his eye at me in a most unchurchly wink. It was, indeed, that monk who had searched my belongings in Livorno, who had followed Betsy to Fano, and who boasted of being the hunting hound of the Pope.

I felt My Lord tug gently at my sleeve, and I had the sense to bow low to King Francis before I was led away in a maze. When we were at a distance I said to him uncomfortably, "Couldst not thou have stopped this nonsense?"

"Nay, Pietro mio," he said. "It was well thought of, and no more than thy deserts. Thy knightly sword and steed and armor shall be at my expense, and right cheerfully given."

"My Lord," said I, "the monk is here. I saw him stand grinning."

He shrugged as if it were of no moment. "The spies of my kinsman the Pope are everywhere," he said lightly.

I was grateful for the shelter of my tent, and for wine and food, because fighting is hungry business; and then I sat me down to write my mother a letter about it, hoping that in some way it could

be sent to her. I was in the midst of it when a voice called to me.

"Sir Peter, art alone?"

"Aye," I answered. "Come in."

Through the entrance waddled the monk, most unctuous and friendly, and he rubbed together his fat hands and eyed the bottle of wine thirstily.

"Hast risen in the world, my friend," he said.

"I did not want it," I said shortly.

"There be times," he said, "when such gauds and gewgaws come in right handily. As for me I would like well to attract the favor of the King so he would make a bishop or an abbot of me."

"What dost want of me?" I asked. "I trust thee not."

THE monk said cheerfully, "And rightly, for I am a sinful, treacherous man. It is my trade. I have an indulgence for it from the highest source. But I can be most honest when there is a profit to be derived from it."

"I doubt," I said, "if I could ever derive profit from thee."

"You can derive this much profit," he said. "My Lord Piero Riario hath come to this encampment in the train of a cardinal. He doth hate thee poisonously, and means to do thee an ill turn."

"Thy news is good," I said. "I would like well to meet him."

"Thy ribs are more like to meet his dagger," said the monk. "Not that he is not capable of swordsmanship, but his bent is toward stabbing in the back."

"You came not here to tell me this?"

"Thou art a new knight," he said. "I would be a new abbot. Were I to lay hands upon a maid of whom thou dost wot, I could have it for the asking. She is a most troublesome wench, and cunning, with a strange spite against all Medici, and chiefly against His Holiness. She is a very miracle of elusiveness, and a marplot."

"Dost hope I will betray her to thee?"

"Nay. Thou art tainted with the disease called chivalry. Also thou art a most ingrained honest lout, for all thou art a knight. And thy simplicity and candor is like a child, not yet old enough to appreciate the benefits of duplicity." He paused and eyed me shrewdly. "Wealth," he said, "is a most lovable attribute."

"I do not covet it," I told him.

"With wealth," he said, "thy knight-hood might grow into a barony, or even an earldom. It might help thee to wed above thy station."

"I have no desire to wed."

"In which thou art wise," he said, "but in the stating of which thou art a most arrant liar. Now, Sir Peter, if I could show thee the way to wealth and to the marriage bed, and even to getting thy bride out of Italy with a whole skin for thee to caress, what wouldst thou say?"

"I would say," I answered, "that I would not trust thee if thou camest with a letter from the Angel Michael recommending thy honesty. What knavery is in thy mind?"

"A most profitable knavery," he said, "which would enrich thee, and enable me to lay aside this uncouth robe and become a layman, with the freedom of one not bound to virtue by churchly vows."

"At least," said I, "thou art an honest rogue, in that you admit freely your roguery."

"Look you," he said, "money is needed to debauch and to hold and to rule a city. The Medici are not so rich as in Lorenzo's day though they be far from poor. But to bribe the whole citizenry of a city requires a bottomless purse."

"What is that to me?"

"I am the Pope's hunting dog," said the monk. "What I said might be considerable to thy Lord Giovanni. Now look you: Not the least of my missions," he said with some vanity, "hath to do with treasure. And treasure is vital to the Pope's plots."

"What treasure is this?" I asked.

"A most adroitly hidden treasure," said. "Enough to ransom a king or in submission a turbulent city. I have heard of the jewels of the Degli Al-

"I have heard of them," said I.

"Now, now!" he exclaimed. "A fishman and a foreigner—and the this knowledge. From whose lips?"

"From the lips of gossip and I told him."

"As cautious an answer as a man give," he said. "It has been my ferret out this treasure, this jewels spirited out of the Degli Al-palace when its owner was murdered and it was sacked by the mob."

"What has all this to do with I?"

"It is because I have a super about thee," the monk said. "Thou mus, thou hast the luck of the That, secundus, thou hast certain mation, useful in the search." He his hand to halt me when I wou spoken. "Oh, without question yo not what knowledge thou hast lastly, if thou will join heartily hunt it will end in success."

I was amused by his knavery. should we find it?"

"We will divide it honestly and each shall go his way," he sa

"Which would involve some sl trayal of thy employers," I said.

"Treasure," he said soberly, "to him who finds it." He grinned. I would resign from my present ment to enter the employment of A man has the right to change Thy Lord Giovanni hath but no an example of it."

"Not," said I, "involving theft."

"A profitable theft," he said more to a man's possessions than profitable good deed. Shall we partnership, Sir Peter? Its term observed strictly. I, on my part, over the hunt for this maid; and canst win her consent, to help her safely to England. Thou, second part, to aid in the search divide with me the treasure where Are we in concord?"

"Thou dost propose to cheat th and to cheat the Medici, and t Passerini and Ippolito. In the e wouldst also bilk myself."

"May I drown unshriven in a wine if I be not true to mine agr with thee," he said solemnly. "O thy hand on the bargain."

"Thou," said I, "art a monk servant of Holy Church, and are inviolate. So I do not ki soundly on thy overfed back have listened until my ears are p with thy villainy. Now get the before I forget the reverence d office, or I be converted to the t of Martin Luther and the toe of foot turn heretic. My patience but it comes to an end."

He got to his feet, sighing. He at me amiably, and not with eit cor or disappointment.

"Be not abrupt of decision," "Sleep upon it. And when thou thy maid again, give to her wishes and blessings."

Then, before I could get to and reach for his collar, he slipped the tent and vanished into the n

KING FRANCIS made war My Lord enjoyed the magics of the encampment, and its luxur light living when his military d him time for it—because My I young and lusty and as irrespo his private living as he was e efficient in warfare. Taking moving pictures of human vocal cords

SAY "AH-H-H" TO THE BIRDIE . . . This Bell Telephone Laboratories scientist is taking moving pictures of the young woman's vocal cords, to get new knowledge about the voice. Such knowledge is useful in telephone transmitter design.

He is using a Fastax camera, developed by the Laboratories. This camera, the same kind that was used to photograph atom-bomb tests at Bikini, can operate up to the rate of 8000 pictures a second.

Bell Telephone Laboratories learned some interesting things about speech from high-speed pictures of vocal cords.

THE job of Bell Laboratories is to devise and develop facilities which will enable two human beings anywhere in the world to talk to each other as clearly as if they were face to face—and to do this economically as well as efficiently. To this end, Bell Laboratories study every-

thing from the most fundamental matters, such as the mechanism of speech and hearing and the molecular structure of copper wire and rubber insulation, to the detailed design of equipment. The result is better service, at lower cost, for everyone who uses the telephone.

BELL TELEPHONE SYSTEM

Don't laugh off bleeding gums

YOU MAY BE GETTING

GINGIVITIS

4 out of 5

May Have This Sly Enemy of Firm Gums and Handsome Teeth!

When people brush their teeth and their gums bleed—too many of them pay no attention. Now don't *you* be so foolish—

Because tender, bleeding gums are often some of the first signs of Gingivitis—a mild gum inflammation but a wicked foe of firm gums and healthy, handsome teeth.

Neglect of Gingivitis often leads to dreaded Pyorrhea, which only your Dentist can help. See him every 3 months. Then at home to—

Help Gums Be Firmer—Teeth Naturally Bright

Massage your gums and brush your teeth twice a day with Forhan's Toothpaste—the famous formula of Dr. R. J. Forhan for BOTH massaging gums to be firmer—more able to ward off infection and for cleaning teeth to their lovely natural sparkle.

Notice the *difference* even after the first time you use Forhan's. Your gums feel *so invigorated*. Your teeth look *so clean*. You'll like its refreshing tangy taste, too!

Used and recommended by many dentists for over 30 years. Buy a tube at any drug, dept. or 10¢ store.

NO HARSH ABRASIVES IN FORHAN'S!

Forhan's
with massage

FOR FIRMER GUMS—CLEANER TEETH

Maiesty, saw to it that there was merry-making enough at headquarters—while the soldiers starved in their dugouts.

The difference between this young King of France, and my master the Lord Giovanni was this: that though both delighted in revelry and in beautiful women and the voices of minstrels, and though each loved warfare for the glamor he saw in it, my master would leave a woman for a skirmish, and rush from a banquet to a battle eagerly. The King hated the drudgery and discipline, and yawned over the labors of planning a war.

Now I, being but a knight, and a newly made one at that, was not admitted to these revels, except those that were in the nature of pageants and were open for all to see. And so it befell that on a day when the sun shone brightly to blunt the edge of the bitter cold, I stood with Christoforo and watched a cavalcade of our betters ride by, scarce one of them under the station of a duke or at least a marquis, and each accompanied by a lady so robed and bedizened, so young and shapely, so beautiful of face that each might have been a queen. There was His Majesty and Bonnivet and My Lord Giovanni. There was the Cardinal Salviati, his brother-in-law and Aretino, greatest wit of the age. Great names with great lineages trailing behind them like plumes, rode past us—more than a score of them—so that we were bedazzled by so much noble birth. And then, toward the rear, I saw the handsome face of Piero Riario, and knew that my enemy was indeed in camp as the monk had told me.

Christoforo jogged my ribs rudely, for he had not yet grown used to my new dignity as a knight.

"Art blinded by overmuch flaunting color?" he asked. "Is the sun in your eyes? Art akin to the bat that is sightless by daylight?"

"I see Riario," I said grimly.

"Nay," he said impudently. "The Sieur de Bonnivet hath found himself a new light-o'-love. Aye, and My Lord Giovanni is drawn to the flame of her candle. See how he doth urge his horse to her side!" He nudged me again, careless of my knightly dignity. "Now where—oh, where?—have I seen that nosegay of loveliness before?"

MY EYES followed his pointing finger and a coldness not of the air settled tightly about my heart; I heard the sudden gritting of my own teeth. For there, riding with splendid ease, erect, laughing, desirable beyond words, was Betsy! There she rode, carefree, wonderfully gay, between the two men, of all the men in the world, the most dangerous to the virtue of a woman. There she rode in that company of gallants and light women as if she were the queen of them, and loved it. And, alas, as if it were her natural place and her accustomed employment. Never did I love her so poignantly, nor hate her so bitterly. And never did the world seem to me so black and evil as it did in that moment.

Christoforo was grinning slantwise. "If the sheets be silken and the bedfellow a duke she is a courtesan and a great lady. Good friend, in the affair of the inn we did overmuch fighting to preserve a thing that was lost already."

Rage tore at me as it seldom had done before, and I had him by the throat and was shaking him so that his teeth rattled and his eyes bulged. But then I set him again upon his feet and loosed him and was ashamed, for he had but uttered aloud the thoughts that had been mine own. Christoforo rubbed his neck and was nigh to tossing up his breakfast before he could speak.

"So that is the way of it!" he said without resentment. Then, philosophically: "Well, Messer Pietro, it is better to come by the knowledge beforehand than to come home from a journey and find a better man's head upon thy pillow."

I walked away from him because I could not bear to hear Betsy spoken of in this manner; yet I had not wherewith to defend her, for her conduct, or so it seemed to me, was flagrant and notorious. I wished mightily that this was a day for fighting instead of carousing, so that I might turn my rage against Spaniards or German *Lanzenknechts*. But there was naught to do save let the matter smolder inside me. So I sat sullen in my tent, shivering in the cold. Nor did I come out of it again, even for food, until the next morning, when My Lord sent for me to come to him.

He was holding in his hand a small casket, cunningly carved, and he smiled at me boyishly as I entered.

"My Pietro," he said, "I have an embassy for thee. Not that thou art a model of diplomacy, or a fit messenger of love. But thou hast a gift of languages, and the lady speaks only with the tongue of France."

"I know more of war and woollens than of women, My Lord."

"Nevertheless thou wilt carry this to her and place it in her hands and in words

I found the place and was as an errand by a servingman.

"I come," said I, "with a message from the Demoiselle Suzanne d'Amboise, my lord and master Giovanni dei, General of the Black Bands."

He went away, but returned presently to usher me into a low room, well by the logs in the fireplace, and I stood awkwardly waiting to see what should see.

BEFORE waiting became burdensome, a hanging concealing a door thrust aside and the object of My infatuation stepped into the room. I think I uttered some strangled cry and all but dropped the casket upon the floor, for it was the girl Betsy who came up into my eyes.

"I came," I said hoarsely, "on an errand to the Demoiselle Suzanne d'Amboise."

"As good a name as any," she said, "and it is suitable to the day."

"Betsy!" I exclaimed.

"What brings you hither?" she asked. I was bitter. "I come afoot

SPORTING ODDS

It doesn't happen often, but there's one case on record of a batter getting a home run on a fly that the fielder caught. In 1936 a Portland player hit a long fly to Outfielder Jimmy Graves of San Francisco. Graves caught it, but as he did he backed into the outfield fence. The fence gave way and fielder and ball disappeared from the park. The ball having been deflected over—or through—the fence by the fielder, the batter was given a home run.

more graceful than I can form them—for thou art a scholar—describe to her the unworthiness of the gift, but that it is given out of my devotion; for her beauty hath smitten me. I pray thee acquit thyself eloquently."

"She speaks no Italian?" I asked hopefully.

"No word of it," he replied. He opened the box and displayed to me a gold button with a gleaming jewel in it. "The handiwork," he said, "of Benvenuto Cellini. Will it please her?"

"It would please an empress," I said, startled by the prodigality of the gift. "Where, My Lord, and to whom, shall I bear it?"

"The Demoiselle Suzanne d'Amboise," he said, and informed me with exactness where she was to be found. "Remember," he said, laughing aloud, "thou art not charging a bastion, but wooing a lady as my representative and proxy." He placed the casket in my fingers and bade me fetch back a hopeful answer.

It lifted the heaviness somewhat from my heart to hear that the woman was French and not Italian, and so I went about the errand, albeit reluctantly, with good courage.

My Lord Giovanni," I said, "it seems, would buy thee away from the Sieur de Bonnivet. I have come for the transfer of thy affection, bringing a jewel of value to bind thee to me."

A flush, commencing at her shoulders, crept upward until it suffused her face. Her lips compressed and then opened, something dark and deep and terrible in her eyes that I could not understand. "Which went to my heart even then."

"Am I at fault that men should love me?" she asked.

"Beauty," I answered, "comes from God or Satan. It is no sin to be beautiful. The evil lies in surrendering to the temptation. I blame no man for loving thee, Betsy, for I be sore stricken with that love myself."

"If I loved a woman," she said, "I would not go to her in behalf of another."

"I did not know," I said. "My Lord told me thou wert a girl of France speaking only the French tongue."

Her eyes, which had been so dark and stricken, now flashed with anger. "If thy Lord desire to buy the Sieur de Bonnivet, why dost thou make the bargain with that gentleman?"

Ford's out Front with a High I.Q.

Scene: Doctor's Office

Doctor: Park right here, if you don't mind.

Ford: You ought to do the parking, Doctor, and inside, . . . you'll just love my roomy two-tone interior!

Doctor: H-m-m! No inferiority complex here!

Ford: Well, it's like this Doc, I've got a lot to offer. Your choice of two great engines, for instance, V-8 or Six.

Doctor: I get it—a dual personality!

Ford: No no. Just dual carburetion, dual down-draft carburetion, sir! You pick the engine you want.

Doctor: How are your reflexes?

Ford: Step on my "king-sized" brakes and find out—they're about the smoothest, quickest reflexes you ever saw!

Doctor: So I've heard!

Ford: And speaking of reflexes I've got "Rest Ride" springs, too—they reflex so nicely there's not a bump in your life.

Doctor: You're not bad looking either.

Ford: I get around—and oh, Doctor, did you notice my complexion? Baked-enamel finish, you know. Won't come off in the rain or anything. And my body! It's a "Life Guard" body with an all-steel physique!

Doctor: Well, you strike me as being a precocious extravert and that's good!

Ford: Thanks Doc, hop in sometime. There may be a Ford in your suture, I mean future!

Doctor: Okay! You've got me all sewed up!

There's a *Ford* in your future

There's
no better

If I be for sale why doth he not chaffer with my owner? I am, it would seem, but a commodity. Doth a bale of thy woolen cloth decide who shall be its purchaser?"

"I would," I said, "that thou wert so below me in station—a scullery maid—that I might lift thee up and better thy condition. To the end that thou shouldst be grateful to me, perhaps, and come to love me truly and honestly, and be content to be a merchant's wife."

"To be snug and happy," she said softly, and for a moment she seemed to be unaware of my presence and lost in her own thoughts. "To be content and purring with comfort like a cat before a warm fire! To love gently and to hate not at all! To know no obligation save to cook a hearty meal and obey thy husband! That would be sweet, Peter Carew, and wonderful with dull and unexciting happiness. I would choose that if the right of choice had been given me."

I HAD never seen her so before this moment—soft and tender and yearning. But the second passed and she lifted her head upon a proud neck, and was a great lady scorning what any might think of her and the road she chose to travel.

"Proceed with thy embassy," she said. I held out the casket toward her, and her manner changed once more so that she was kind and sorry for me and gentle.

"Nay," she said. "This is an evil thing that has befallen thee by chance, and I will not have thee go forward with it. Toward me, Peter Carew, thou hast from the beginning been most kind and gentle and courteous, and I would not hurt thee further. I have used thee because it was necessary; and because of me thou hast come to grief. Return yon casket to thy Lord Giovanni and tell him that my mood is not for change. And for thy own private ear, I would as soon give myself to a hyena of the desert as to any man who bears the name of Medici."

I would have gone then, hastily, because I could bear no more of it; but I bethought myself to warn her.

"The monk is here seeking thee," I said; "and Count Piero Riario."

"I have seen the count," she said.

"Because the monk is here," I said, "I would not have sought thee out, no matter how keenly I desired to see thee. Because he doth connect us two in his devious mind, and through me he might identify thee. I am slow of thought, and he is too much for me. He came to my tent and offered to share a treasure with me if I would help him to find it. There was some evil purpose in that offer, but what it is I could not guess."

"What treasure is this?" she asked.

"There was a family in Florence," I said, "murdered one and all by the Medici. Or so it is said. This family owned a great treasure of precious jewels. But they were spirited away so that they never have been found. The monk offered to betray his master, the Pope, if I would aid him to search for it. Why he deemed I could be of help I know not."

"The name of this murdered family?" she asked.

"According to his telling," I said, "it was Degli Albizzi."

She stood very still and there was no expression upon her face. "This monk," she said through stiff lips, "is a peril to thee and me."

"I have told thee," I said. "Perhaps thy mind will be a match for his. Now, fare thee well, Betsy." I used that name because it pleased me—because of what it meant to me. "Though it will be hard to bear. I pray I may never see thee again."

She peered at me and stretched out a little, lovely hand, and drew it back again without touching me. "There be people," she said in a small voice, "men and women, who be tied together by fate. Such ones as these, no matter how they may desire it should be otherwise, nor strive against it, cannot be kept apart

until their destiny is fulfilled. I do not know, Peter Carew. I have a superstitious feeling, that thou art to meet again and again and again—again. For what, I do not know.

"If," said I gently, "it be for thy peace, I am full willing."

And then I would have gone, stayed me. "Thou art sympathetic," she said. "The pictures come for I have known them to come other."

These strange words I did not stand, but they gave me an odd feeling of premonition. "What picture for me?" I asked.

"In the crystal ball," she said. "with me. We shall see."

"I want no traffic with magic, tested, for I did not like it at all."

"Nevertheless thou shall look crystal," she said imperiously.

She led me out of the room and into another and it was a dim room as I entered. From a cabinet she took a round, polished ball of crystal and set it upon a table and sat down before it, and I sat on the other side.

"Now," she said in soft, low voice, "clear thy mind of vexing and peer into the ball."

There was a chill at the nape of my neck, and my hair seemed to rise. I obeyed her, and a feeling of quietness came upon me. The room seemed no longer a room, and nothing existed upon earth but a round, glowing globe of glass in my hands. And then a spot of light appeared in its center and spread and it became a cloud, and the cloud rated into portions and became a castle atop a low hill, and there were walls about it, and a drawbridge, and cannon belched fire from battlements, and I saw the steel-clad defenders. But those who wore neither steel caps nor armor were dreadful, bearded fellows with wild hair and in rags and tatters; their faces were savage and full of rage. Then, behind a great rock I saw a man in armor, and his armor was as is the armor of captains of olden times. Bands. And, strangely, instead of a lance, he held in his hands a long bow and over his shoulder was a quiver of arrows.

He turned toward me to speak, and his face was familiar to me, but for a minute I did not recognize it, which was not strange, for a man may be forgiven for not recognizing his own head on other shoulders. Then I knew myself.

THEN the picture rearranged itself. Smoke and flames engulfed the castle, and I stood beside the great door and a score of tatterdemalions lifted a great stone and rushed upon the door to batter them down. Then the darkness and I was in a small chamber and there lay one at the foot of the bed, white and bleeding, and I lifted my arms, and it seemed to me that the man was dead, and despair came upon me. So I kissed her cold lips and lay down upon a bed and knelt beside her in an agony of grief.

That was all. The picture faded, the cloud and the cloud became a spot, and the spot vanished so that the crystal gleamed untarnished before me.

"Did the pictures come?" she asked.

"They came," said I, determined to tell her what I had seen.

"Was death in the ball?" she asked.

"Death for many," I said.

"For thou and for me?" she asked.

"I do not know," I said, "but I know: that we shall meet again. I got to my feet, and my boots were water and I was afraid, for it was some thing to look through a narrow window into the future, and to see happen that have not yet come to pass."

now not why. "Thou wouldst
aid I, "another four inches to
and somewhat to the breadth

of thy shoulders before thou couldst in-
crease my education," I said. And added
for good measure, "Thou popinjay who
chases little girls up trees with dogs."

He made as if he would ride me down,
but I grasped the reins of his horse and
twisted it sidewise and held it quiet. Now
if any man had done so to me I would
have argued the matter with him, but My
Lord Piero did not even have at me with
his dagger. He merely cursed me skill-
fully. But for all that, I knew he was not
afraid of me. I could see it in his narrow
eyes that crowded his nose too closely.
Whatever guilts rested upon his soul the
guilt of cowardice was not one of them.

"Today I may not pleasure myself by
spitting thy gizzard," he said. "But be
not impatient."

HE THREW his silken leg over the
saddle and alighted, and even turned
his back to me, which, I think, he would
not have done to one of his own coun-
trymen in like circumstances. He walked
past me with no other word toward Bet-
sy's door, but there he turned, his face
puckered with curiosity.

"What dost thou here?" he demanded.
He sneered at me. "To woo one of her
serving maids, no doubt."

"Aye," said I, thinking back to our
English farm. "A dairy maid. Hast thou
selected one from the scullery?"

I do not know why that should have
pricked his pride, but so it did. "I come,"
he said arrogantly, "to pay my respects
to the lovely Demoiselle d'Amboise."

"Her household is complete," I said.
"She hath no need of a servant to clean
her shoes." Which was doing nobly for
one so slow of wits as myself, and I was
proud of it. "Or," I asked, "dost venture
to compete with thy betters for the lady's
favor?"

"The Riarios know no betters." He
looked at me, being very still, and then
he shrugged his shoulders. "Upon one
hand," he said, "thou hast enough fingers
to count the dawns that thou shalt see."

Whereupon he faced the door and beat
upon it with his gloved knuckles; and I
strode away to make report to My Lord.

So I strode along, pitying myself as the
most miserable of men, when a voice
spoke sleekly in my ear and I became
aware of the obese, slyly smiling monk.

"Was the lady compliant?" he asked,

by LARRY REYNOLDS

"Is that right, Clancy? Did the victim really describe one
of the burglars as being 'tall an' rather handsome'? Gosh!"

hat," he said, "is not the point under
ssion. Now, if there be the profit in
me that I guess, I will save thee

and I will save her, and get both safe out
of Italy. Is it a bargain?"

"A bargain," said I, "implies honesty
on both sides."

"I saw the Count Piero hold up the
five fingers of his hand at you," he said.
"A shrewd guess at the meaning of that
would be that he gives thee five days to
live. I will ponder upon it. It may be to
my advantage to keep thee alive."

"I am somewhat skilled at keeping my-
self alive," I said.

"There is news and gossip that might
fit into the ear of the Lord Giovanni,"
he said musingly. "A part will become
known; the rest will appear only when
it comes to pass. First, the Pope hath
made secret treaty of alliance with Ven-
ice—which is to everybody's disadvan-
tage, including his own. Secondly, His
Holiness means to pass over young Ippo-
lito de' Medici, and in the end give him a
cardinal's hat instead of the rule of Flo-
rence."

"To put whom in his place?" I asked,
for here indeed was news.

"The dusky-cheeked Alessandro," said
the monk sourly. "Now your Floren-
tines might, under some duress, have
submitted to Ippolito. But with Ales-
sandro will come trouble. They will not
tolerate him, for he hath none of the
graces of the family and is a dull and
brutish creature. Yet Clement loves
him." He shrugged his shoulders. "The
day approaches on which thy master will
have but to hold out his hand and the
dukedom of Florence and all Tuscany
will drop ripely into his palm."

"Why do you tell me this?" I asked.

"Because," he said slyly, "the friend-
ship of a Duke of Tuscany will not be an
ill thing for a man to possess. Most espe-
cially one of the force and strength of
My Lord Giovanni. He hath the milita-
ry genius for it. But the scheming
brain to help him worm his way through
the politics of it, he lacketh."

"And such a brain," I said in wonder
at the reach of his ambition, "houses in-
side thy skull?"

"It would serve the purpose," he an-
swered.

"You aim high," I told him.

"My son," he said, "I aim high, and I
aim low and I aim in the middle ground.
A man who shoots at many targets is
sure to hit one of them in the gold."

"I shall warn my master against thee,"
I said, for I was still not far from boy-
hood and could not yet deal leniently
with the weaknesses of mankind. "I shall
say to him that of all living men thou
art least to be trusted and most treacher-
ous. Be on thy way," I said harshly.
"Thou hast a most foul odor."

"Words!" he said. "Young and ig-
norant words! In spite of them I would
be thy friend."

He turned then, and gathered his robe
up from his great ankles and waddled
away—a gross, fat man who thought to

"For once I'm getting the screens up in time"

NED HILTON

Radiator rusted- Vacation busted

Clean out rust with DU PONT Cooling System CLEANSER

Before your engine is ruined by overheating, clean out rust and scum in the radiator. Just pour in a can of DU PONT COOLING SYSTEM CLEANSER, run the engine 30 minutes or more, then drain. No reverse flushing is necessary. It dissolves rust—cleans thoroughly, quickly, and safely.

Then keep out rust with DU PONT Acid and Rust INHIBITOR

After cleaning out the radiator, you can keep it free from rust all season by pouring in a can of DU PONT ACID AND RUST INHIBITOR. This neutralizes the acid and prevents damaging rust from forming.

Avoid radiator leaks with DU PONT Cooling System SEALER

You can stop leaks quickly and securely—and make cooling system LEAK-PROOF—by pouring in DU PONT COOLING SYSTEM SEALER. It will not clog the radiator.

ST. LOUIS, MISSOURI

conquer a star by bombarding it with mud.

So I came to My Lord Giovanni and stood before him awkwardly with his spurned gift in my hands. He looked at it, and hot fire lighted in his black eyes.

"What is that?" he demanded, though he knew well what it was.

"The lady," said I, "rejected thy gift."

"And myself with it," he said through his teeth.

"She bade me say to thee, My Lord," I told him, "that she was not in the mood for change."

"Doth she so! Doth she dare! By St. Hector and St. Ajax and St. Hercules! The wench shall learn knowledge. I'll have her and enjoy her and toss her away like a drained goblet. I'll snatch her from Bonnivet by force. I'll take her were she mistress to the King himself."

IT HAD been a bitter day and my endurance was outworn. "My Lord," said I, "I do love thee, and thou art most dear to me of all men. But this thing shall not be. If thou dost so much as touch her with thy finger without her consent and desire I will kill thee if I have to hack my way to thee through the total of the Black Bands."

He sprang to his feet, splendid and fearsome in his rage at me, and drew his dagger half from its sheath.

"Nay, My Lord," I said gently. "Let it not come to this betwixt us. Even though I love thee, if thou dost come at me to strike me, I will handle thee roughly."

He halted, not from fear but from surprise—and something else than surprise. And then he did and said what was ever characteristic of him, and of his great heart and his heroic mold.

"You dare to stand up to me!" he said harshly. And then: "By St. Achilles, thou hast right rare courage! Thou art indeed a man! And I do love and respect thee, Pietro. First, because thou art not afraid; and, secondly, because thou hast stopped a most foolish thing which I would have done in my anger. From this day thou art a captain in the Bands." He snatched the casket from my hands and took from it the begemmed Cellini button, and he pinned it upon my shoulder. "Thou art worthier to wear it than this woman. It is a token of my increased love for thee."

It is always thus that he was, as I recall him: wild, tempestuous, reckless, generous, true in friendship, and incalculable in his actions. But for all his sweetness toward me, he smoldered with resentment and the shame of rejection. And I feared what he might do to quench the fire.

He looked at me with puckered brow. "There is more here than is written on the page," he said slowly. "What is this lady to thee, Pietro, that thou dost stand her shield and buckler?" His fine brows lifted. "Is it she? Is it the maid of Fano? The serving lass of Piccolo Cavallo? Is it she, my Pietro, in a new and lovelier guise?"

"My Lord," said I, for I could not answer otherwise, "it is she. But if the secret becomes known, her peril will be deadly. That monk is here, sniffing."

He nodded. "Her secret is my secret," he said. "Have no fear."

Nevertheless I had fear, not that he would betray her, but because I could see that she was enhanced in his eyes by the mystery that veiled her. And he had given no promise that he would halt his pursuit of her, which, in fact, he could not have done if he wished, for that was his nature. . . .

General de Levra, who defended Pavia, was a stubborn man. He barred the road to Francis, and his detestable artillery thundered by day and by night. Pescara, that grim soldier of the Emperor, threatened our besieging army from the rear. My master did not like the look of it, and counseled withdrawal. But Francis was too proud for that, for

he had taken a great oath to have Pavia or die in the attempt.

So we sat there and froze and skir-mished, and the army made up of men of many tongues lost what discipline it possessed in the beginning. Therefore, daily, more labor and fighting and responsibility rested upon My Lord and the Black Bands. Chivalry and love of glory are all very well, and King Francis had more than his share of them, but they are more desirable attributes in a knight-errant than in a King and the leader of a great army. It was all disturbing to me, I who am a practical man at heart and fond of businesslike ways of doing things.

But what the King and his rash advisers such as Bonnivet decided upon was none of my affair, except that I might die of it. There were things that touched me more closely and filled my mind with worries.

I lay wrapped against the cold of the night in such coverings as I had been able to amass or that Christoforo, most solicitous for my comfort, had been clever knave enough to steal for me. Christoforo snored in his corner. I was wakeful. The hour was well past midnight,

and at such a time the ears are unnaturally sharp. So it was that I heard soft, slithering movements outside which paused, and then a whisper that was more like the squeak of a rat came to me.

"Englishman!" it said. "Art awake?"

"Who speaks?" I asked.

"One who would have speech with thee."

"What one?" I demanded, turning and reaching out my hand for my sword which was close by me in case of need.

"Giovannipietro," came the squeak through the darkness.

"John-Peter!" I exclaimed. "Come in before thou art seen by spying eyes."

The cloth of the tent rustled, and I sat suddenly erect, weapon in hand, lest there should be some deceit. And I heard Christoforo stirring in his swaddlings. "I am awake," he said.

"A light," I ordered.

In a moment there was flicker enough to let me see the misshapen figure of Betsy's homunculus, teetering upon bandy legs and hissing like an angry cat.

"What dost thou here?" I demanded of him. "Wouldst lead the monk to her? Art such a fool as to think that such as thou can pass unnoticed?"

"He hath gone to Binasco upon an errand," John-Peter snarled, "and for all thy bigness I am, inch for inch, a better man than thou. Especially between the ears."

"You come from Betsy?" I asked. "Nay. I dare not approach her. Doth trust thee. Why it should be so, less as thou art, I know not. Hast sought a madman, Englishman? whose brains are addled, and who wander the land like a wild beast, knowing not where he goes nor why?"

"Why should I?"

"For years I have searched. In places where the smells would curdle thy nose. In thieves' dens and reeking cellars, none may guess where a madman take to earth."

"Why is this bedlamite valuable to thee?" I asked. "And what have I with it?"

"His madness is not of God," John-Peter said, "but of human devils tore at his flesh and stretched his body upon the rack and put him to the torture until his brain burst like a bubble. For he was once a true man and born."

"This mad man hath a secret?"

"Encased in the shell of his madness," John-Peter said. "If, indeed, this that I have found be he." His voice came the squeak of a bat. "And

have it out of him and I must have the devil's aid to do it."

"Why tell this tale to me?" I asked.

"Because I must not be seen. Be he must be taken to my lady. Be he must be fed and sheltered and trustful and at ease until I and she delve amidst the ruins of his mind."

"Where is this man?" I asked.

John-Peter leered at me. "I have I have led him like a beast to pasture have him without, soundly tied by foot to a tree. With your permission if need be without it, I will drag him for thee to see."

He shuffled, bandy-legged, out of the tent, and disappeared. Christoforo muttered prayers because he was a suspicious man, who liked not madness.

JOHN-PETER came in once dragging after him by a cord a man that once may have been a man, but there was good reason to doubt it. neither arm nor leg was straight and shapely, but like the gnarled limbs of some stunted and distorted tree. neck was awry, and one foot dragged a dreadful way, and his back was a line. He seemed rather a horrid growth out of some dark pit than a human. His hair was white and matted, and his beard was black, which was a strange thing. And his eyes gleamed with natural fire like the eyes of a fright-

New York's "S.R.O." sign is coming down

Giant, bustling New York City was in a jam
— a subway jam . . .

With its 7,800,000 population growing by leaps and bounds—with vital transportation facilities saturated—with many subway cars in need of replacement, New York needed *action*.

"To get the most out of post-war dream equipment," said New York's Board of Transportation. "We need proven cars with the latest improvements in them—*fast!*"

For that job, the Board of Transportation

turned—logically—to the American Car and Foundry Company. For ever since tiny steam engines hauled Old Manhattan's first elevated trains, A.C.F. has been continuously supplying New York's vast transportation network—overhead, surface or underground—with dependable equipment.

500 new cars were ordered. 500 cars of advanced engineering . . . smoother . . . faster . . . quieter . . . with fluorescent lighting and improved ventila-

tion. Bright, cheerful cars that are forerunners of a new era in underground transportation.

They'll be joining the thousands of other A.C.F. cars New York already operates . . . giving a comfortable daily ride to another half million citizens.

Yes, the "S.R.O." sign is coming down in New York. And A.C.F. is proud to be helping her set the pace for the nation's other great cities.

cat at night. When John-Peter loosed him he cowered at my feet and gibbered. I knew not whether to pity him or fear him.

"Who is this poor mortal?" I asked.

"If he be, indeed, the man I have searched for," John-Peter said, "his head was once crammed with learning. For which I do not care. He may keep his knowledge pent up inside his madness if he will but give up one little fact."

The madman cringed and gibbered in his terror of us so that I melted toward him and felt compassion for one so miserable; and at the same time I wondered that any could be so cruel as to do to him what had been done. I bent over him, and he cried out and groveled, but I touched him gently, albeit reluctantly, and said to soothe his fears, "We be friends, meaning thee no harm, but only kindness. See. Thou art like to freeze. Christoforo, pour a cup of wine to warm his bones."

HE LOOKED up at me like a beaten dog who finds unexpected kindness and snatched with his claws at my hand and pressed it to his lips—still scarcely believing we meant him no ill. But he gulped the wine, and it drove out the chill, and he smiled like a child. For the first time he spoke, very halting at first, but his voice strengthened and the tone of it was like the ringing of a sweet bell. It was not his own words that came from his lips, but lines from the great Dante which he rolled out sonorously. And when he was done he looked up at me shyly for approval like some child who has well recited his lesson.

"It is he!" John-Peter said in his bat's squeak. "It is he. There is none other who could speak in that voice of a seraph, nor roll out words of poetry so nobly." In his eagerness he grasped the man's shoulder roughly so that the poor fellow cried out again and relapsed into mute terror. "Tell me!" John-Peter said urgently. "Answer me! Answer me the question I have put to thee a hundred times."

"That is an ill manner of doing," I said. "If thou wouldst question him, thou must first gain his love and confidence. Who is this one, and what does he know that is of such moment to thee?"

John-Peter scowled at me and hissed like a cat. "I will tear it out of him with my nails," he said in a fury.

"Christoforo," I said, "give him bread and meat."

The creature clawed at the food and would have gnawed it like a wolf, but of a sudden there came brief light of reason into his eyes and he stood and bowed in what would have been a courtly way had it not been for his misshapen body and his filthy rags.

"I give thee thanks, sweet sir," he said in his silver voice, "and right gladly do I partake of thy hospitality." And then he cited lines from the poet Abélard which amplified his gratitude. "I do not know thee nor thy face," he said gravely, "but thou wilt find warm welcome in my patron's house. Aye, and good conversation and discussion to feed the hunger of thy mind." But then he became bewildered, and touched his sorry garments and shook his head in sorrow. "Nay," he said. "I do give invitation without warrant. I forget. Some fatal thing hath befallen that escapes my memory." Again he fingered his rags. "These be not fitting clothes, nor such as I am accustomed to wear." He looked at me piteously. "What evil hath fallen upon me, Messire? Where is my patron? Where am I? I have wandered long in some vast wilderness. Canst guide me to the palace of my patron, Messire? He will reward thee richly, for he sets great store by me."

"If thou wilt give me the name of thy patron," I said, "I will guide thee to him."

But his mind wandered away and he would name no names, but only spoke in

a confused and terrified way of slaughter and the sacking of a place and then of dungeons—and shrill torture and agony, begging his torments most heart-rendingly to cease from business and leave him to die. "I know nothing," he cried. "Torture wrest it from me. I know not where the child is hid. I know nothing. The child stolen them. Ask questions of the mob, my masters, not of me." And until his words were mere gibberish.

"Niccolo Gozzoli," John-Peter said urgently, "compose thy mind. Be Reach into thy memory. Thou art Niccolo Gozzoli."

At sound of that name the unfortunate man cocked his head and listened. Niccolo Gozzoli. There was such a name I knew him well. A handsome man I learned. Then he cried out again in terror. "I will tell thee nothing. Thou dost flay the skin from off my bones and break my bones to splinters. I know nothing." And then he was wholly a thing of rags and madness, no light of reason in him, but only terror and mouthings.

John-Peter would have questioned more, but it was useless. "The dim light," I said, "hath flickered out. Here is no more requiring patience and much need of rest. It is not for a day nor an hour. What we saw and heard was but a vision and darkness hath fallen again. We will bestow him where he would be safe and in comfort, eating and drinking and basking in the sun. These flashes of reason might come to glow with sunlight, and in the end, John-Peter might learn what you desire. But by prying and prodding and questioning, the problem is thine. What wilt thou do with the man? He cannot remain here. He is so important to thee, find a place for him."

"I brought him to thee, Ser Peter," John-Peter said, "because I durst not take him to my mistress. It would betray her. I may not go near her scowled at me ferociously. "I like not, Ser Englishman, but thou art bound to her as I am bound to her. So she needs use thee as she hath used me. Therefore the task is thine. Carry the madman at once and secretly to my Lady. Name his name to her, and she will take him under her charge."

"At this hour of the night?" "An I go battering upon a lady's door betwixt midnight and morning I am like to have a knife in my ribs for welcome."

"It is thy risk," he said, "which thou must take."

In the end I was persuaded, though I liked it not, nor have I ever liked the clear and understandable, like a kept set of ledgers where everything is set down in order and without error. If this unfortunate man was so important part of Betsy's mystery, I saw that I must take him to her where I wanted to or not. Because the things no man may avoid if they are in the line of business or duty. All which, it might let me see her though even briefly, and earn a crumb of her gratitude.

JOHN-PETER scrambled away short, bandy legs, and I aroused Niccolo Gozzoli from his stupor with him betwixt us, Christoforo set out through the waning night to Betsy's lodgings.

The camp was in darkness now the great army asleep save for a distant voice raised now and again in song. We made our way in silence dragging, half carrying the madman who seemed to care not what we did with or where we led him. Even the voice of De Levra's cannon was silent, and the stars shivered in a heaven that seemed a sheet of ice. Our feet crunched the

as we trudged. It was an eerie and funny sight—this vast army of men who slept so sound but to arise and fight and die on the morrow.

Christoforo trudged along, clucking to himself like some disapproving hen, and muttering curses upon any who haled him from their comfortable beds to go on crack-brained errands in the frigid night.

For me, I thought upon the strangeness of my lot, which had turned me from a peaceful merchant's son into a knight and a captain of the Black Bands. I considered the perversity of things and how I was doing what I was not meant to do, all by accident; and of how I longed for a girl who would not be welcomed by my mother, and of how I was bound to the greatest soldier of the age—all because this maid had chosen to use me as a cat's-paw in her schemings. I was, like to come to my death in a foreign land in a war in which I had no concern.

But for all that, I found that I was in a strange way glad of it, and taking pleasure in it—even in this strange land, and the mystery of it. The upshot of the thinking was that I perceived no man grows acquainted with himself so long as he travels along an accustomed road in safety and dull comfort, but only commences to find out what he is made of when he is jerked suddenly from all that is calm and familiar and pitched into the midst of unfamiliar happenings and alien persons. At a sudden Christoforo reached for his cross Niccolo Gozzoli and gripped my arm.

"Others are afoot, Pietro," he said.

I halted and crouched in a black shadow to make certain nothing threatened before we proceeded, and it was as I, because six men came out of the darkness, one riding a horse and leading the other horse behind him. And they wore long cloaks, and as they came east of us I saw that their faces were covered with black. Now men do not ask themselves if they are upon an errand. But, as Christoforo said, we had our own fish to fry; and so we went on their way, which was also our way, until they were well ahead of us.

When we followed, not to meddle with them, but because it happened to be the way we must go ourselves.

Presently they passed out of earshot, and we were forced to move slowly by Niccolo Gozzoli's dragging steps.

"It were well we went cautiously, also," Christoforo said, "and I am glad we

fastened on our swords. Men who go masked are like to resent intruders."

"We will be at pains not to vex them," I said shortly.

"Aye, Pietro, but didst note the dappled horse?"

"Nay," I said. "What of it?"

"The Count Piero Riario rides such a nag," he said.

I shrugged, for whatever these men were doing, it did not concern me. "His face fits a mask as well or better than any," I said.

We continued on our way, only increasing our care to move soundlessly, until we were close to our destination. There was now no sound of movement ahead of us, and Betsy's lodgings were visible. Nevertheless we halted to make certain that none observed us. It is well we did, for men moved there in the night, appearing as if by magic, and they clustered about Betsy's door and I could hear clear through the still night the batter of knuckles upon its panel. Then a voice spoke roughly.

"Open!" it said. "Open up or we burst in the door."

THEN it seemed that a voice within asked who demanded entrance, and the voice of the leader of the six men answered: "It is Giovanni de' Medici. Open up or it will be the worse for all inside."

Never have I felt so hot a surge of rage. Never before, and I hope never again, will love so instantly be turned into hatred. Giovanni de' Medici. My friend and My Lord! Traitor to me and to my friendship. Come in the night forcibly to seize what he could not win! Knowing well how things stood with me, who had saved his life more than once, he was here masked to snatch from her bed and carry away for his pleasure this maid whom I so unwillingly loved!

It seemed to me that the night was suddenly tinted with red, and I believed that I bellowed with rage, and loosed my hold upon Niccolo Gozzoli, and snatched out my blade. There were six, but in my rage I would have charged against them had there been fifty.

I shouted as I ran, calling My Lord such names as came to my mind. False friend! Traitorous master! Treacherous hound of a Medici! These and many more I shouted. And then I was upon them and they scattered before my sword. And then, my back against Betsy's door, and Christoforo at my side, I was fighting for my life and for Betsy and for my revenge against My Lord, fighting as I had never fought before.

(To be continued next week)

BETTER THINGS FOR BETTER LIVING... THROUGH CHEMISTRY

Corking good wine!

Captured by this cork is the world-famous wine of California's historic Italian Swiss Colony—wine grown with rare skill handed down through three generations—bright and clear in color, inviting in bouquet, wonderful in flavor!

Tonight, for real delight, take home one of the superb dinner wines from the Colony—say, for example, a ruby-red California Burgundy or a golden California Sauterne. Take, too, an outstanding Italian Swiss Colony dessert wine, such as California Sherry or Port. Open it—look at its brilliance—catch its bouquet—savor its flavor. You'll agree it's "corking good wine!"

Enjoy **GOLD MEDAL LABEL WINES**, truly superb dinner and dessert wines from the Colony's world-renowned cellars. Also try Italian Swiss Colony's de luxe *Private Stock* dinner and dessert wines, as well as *Tipo Red* and *Tipo White*, the Colony's finest table wines.

PLASTIC AGE

Continued from page 23

ers in Detroit is now turning out the laminated interior panels for a deluxe cars, drawing on their experience gained in molding ammunition during the war. Taxicabs are using more and more laminated panels. It's a good idea, the one Henry Ford was put to the test with his fire ax, and we're glad to see more of it.

In the meantime we are getting laminated plastic ice buckets, that also prove insulation value of the material, and which can stand considerable rock spalling, and are light enough for easy use. Laminated luggage is a natural idea, tough, and easy to keep clean, in and out. An excited president of a plastics company has even taken to going up and down on test pieces of the luggage, to prove it can take it.

For the most part, however, plastics people wish you would pay more attention to the marvels they have already formed instead of pressing them on the ones that are in the making. There are plenty of them around you, in your own house.

Adding to Telephone Comfort

Your telephone, of course, has been around for a long time, meaning it is light, weight, nonchipping, warm and pleasant to the touch. Incidentally, the dial on which more and more phones operate depends, they tell us, on plastics twenty-six strategic points. Once or twice for new phones are caught up, telephone companies will relax and let you use your phone in any of half a dozen ways, a Hollywood touch to match your car. The color goes all through, so there's no danger of its coming off like paint or enamel. You won't have to worry about the bell box bumping out on the weather. Plastics being so light, we've worked it out so that everything incorporated in the base of the instrument itself.

One of the greatest properties of some plastics is electrical insulation, making it a boon to all your electrical equipment and wiring. The molded hard rubber we had before had its limitations of weight, and of the voltages it could carry. In fact, before radar and television were possible it was necessary to develop superplastic insulators that could carry the high frequencies involved.

There are rigid insulating plastics, like bakelite, used for all your switches and plugs, and there are flexible insulations to cover the cords. These vinyl resin coatings are approved by the National Fire Underwriters' Laboratory. In fact, during the war their use was specified by the Navy to cover all the many cables that ran through a ship, since a vinyl coating does not support combustion whereas the rubber coating formerly used acts like a fuse, carrying fire where the cables go.

The Navy requirements for vinyl coating stepped up production so that we now have ample output to take care of our insulation needs and to provide plenty of shower curtains, handbags and other covering ingredients besides.

These floor coverings look like linoleum or rubber tile. They are resilient, stain-resistant, colorful, hard to scuff, and they are part of the plastics campaign to make housekeeping easier. You have probably read about rooms you can practically hose down, with a plastic hose attached. But though this is a slight exaggeration, there are windows and lamp shades, curtains, upholstery and slip-cover materials, wall coverings and tablecloths in which you can wipe clean with a damp cloth.

They have come a long way in appearance from the old oilcloth days, allowing

you to see the weave of the fabric in spite of the impregnation or thin coating of plastic. Lovers of leather, too, can have a good-looking, leather-like covering that is pliable and durable. It comes in fine colors, and in unbroken lengths such as no animal could provide.

The things we have today, anyway, are only a beginning of the possibilities. We'll see more and more plastics as beautiful as they are practical. Plastic webbing and woven bands of plasticized glass cloth for outdoor furniture are indications. So is some of the lamp-shade material we've seen: some of it paper, treated with plastic resin to be firm for a drum shade or soft for a pleated one. Some of it is glass fibers laminated with plastic, and all of it of a dull finish that is beautiful as well as washable, that diffuses the light and won't turn brown from the heat of the lamp.

Plastic tiles that are cheaper and lighter in weight than ceramic ones, a little more costly but more durable than enameled metal ones, are now being made for bathrooms and kitchens. These are direct copies of the tiles they aim to replace.

Things we can see and feel are bound to intrigue us the most: the plastic clothesline that won't sag, weather or stain our clothes, the colorful plastic clothespins that can't stain either; the plastic flowerpots that certainly don't break like clay ones, or grow moldy; the more durable phonograph records, and the phonograph needle with the flexible, nylon knee; the plastic screening that doesn't suffer from the weather, and can spring back into place after the baby has poked a pencil through it.

All these and countless more are intriguing ideas, and real too. We even yearn for plastic pipes in our houses, though the manufacturers of plastic piping are the first to tell us that, while it is becoming indispensable in industry because it is flexible and can carry corrosive materials, it still isn't the answer in our houses. One reason: Being thermoplastic (i. e., malleable with heat and pressure), it is likely to change shape more than we want with hot water going through it under pressure.

But what intrigues people in the industry much more are the behind-the-scenes jobs that plastics do. Take glue. Where, they want to know, would plywood be without synthetic resin glues? The first plywood we knew was stuck together with an animal glue that was fine so long as it didn't get wet, or nosed out by insects which liked the good animal taste of the stuff.

Properties of Resin Glues

Now along come resin glues that insects don't like, and that stay stuck through all weathers. This allows houses, inside and out, to be made of plywood, not to mention all sorts of other outdoor uses, even to boats. It also allows the stressed-skin construction of modern building, a system of gluing panels to a framework that gives a stronger wall, per unit of weight, than conventional hammer-and-nail, piece-by-piece construction—a big help to prefabrication.

There is still plywood made with natural glues, which are cheaper for interior use. But the booming of the plywood industry dates from the use of synthetic resin glues, and the makers of the glues modestly take all the credit. While the public may get starry-eyed over the idea of an all-plastics building shining in the sun, they point even more happily to a piece of plywood measuring ten feet by thirty, and call it plastics' literally, biggest contribution to building, and a much more practicable one.

People in the plastics industry see

"But I didn't say tissues . . .

I said KLEENEX!"

It's not the same thing at all—brilliant Mother. Look. This is the only face I have—and I intend to take care of it. With a soft tissue. A Kleenex Tissue. Good heavens—how many times do I have to tell you that Kleenex isn't another name for tissues?

Your Mother's right—for once! Pop chimed in. Kleenex is different. Take this box. Does it say Kleenex? No! Does it serve up tissues one at a time—so you don't have to fumble for 'em? No! So? Before you mistake other tissues for Kleenex—think twice, son!

I've got my NOSE to think off! Blurred Sis. Talk about a raw deal! Jeepers—all day I've been quietly dying for some dreamy, soft Kleenex for these sniffls. And what happens? Smelly-pants, here, hands me ordinary tissues—when my nose knows there's no other tissue just like heavenly Kleenex!

I'll learn you! winked Uncle Joe. Hold this gen-u-vine Kleenex Tissue to a light. See any bumps, or weak spots? Never. You see Kleenex quality come shining through—always the same—so you can bet Kleenex is plumper, softer, and husky! Your nose tell you there is only one Kleenex.

Now I know... There is only one KLEENEX

McQUAY-NORRIS MFG. CO., ST. LOUIS

nothing wrong with conventional materials. They think steel, concrete and such are fine, though they admit a slight admixture of plastic might help them along for certain uses. They're working on that now.

At one big chemical company we saw a small and valuable rod of metal mixed with plastic that could resist fire and chemicals, even boiling hydrochloric acid and even fluorine, which attacks glass. It is used now for gaskets and washers and chemical tubings, and certainly at the price, \$15 a pound, it isn't going to get into very common use. But the price was \$40 a pound just a year ago, and you never know what may develop from such beginnings.

In the same place we saw a foamy core of plastic, lighter in weight than cork, bonded between two thin sheets of metal. Intense heat on one side of this sandwich, they told us, makes the other side only slightly warm. The core also insulates against sound. Its first use will be in fire doors in airplanes, and it may never reach your house. Or it might. It's expensive. But the new plant that is to make the main ingredient for it, which is cellular cellulose acetate, in case you want to know, was enlarged five times before the roof was put on, and mass production has already brought other plastic materials within easy reach.

Plastics are already being used in other ways for heat insulation. The enameled, prefabricated houses being manufactured by boatbuilder Andrew Higgins have a concrete core insulation that depends on an admixture of plastic resin to make it fizz up when poured, filling all the wall space with light, foamy stuff that does a heat and sound insulating job. Plastic resin sprayed on fibrous glass mats makes them stay put permanently for house and refrigerator insulation.

It's these countless ways of making other materials (from paper and cloth to wood and steel) do a new or a more versatile job, that offer the biggest and perhaps the most dramatic field for plastics.

Possibilities in Home-Building

Just the lightness in weight, with strength, that plastics can accomplish could revolutionize building codes—once all the possibilities are accepted. It's even possible, one man told us, to fabricate strong partitions out of paper laminated with plastic resins. Lighter furniture is already here, made of plywood that can not only be bonded with synthetic resins but curved under heat and pressure at the same time, forming chairs and tables all of a piece, that are light yet strong.

But we won't go overboard in a hurry with the davenport and the grand pianos you've read about, that you can hoist with your little finger. Even if they're desirable in every way, which hasn't been proved, we have to get used to these ideas a few at a time. There's a new test model refrigerator, for example, with an interior capacity equal to that of the mammoth in your kitchen. It's so small, however, it takes up much less room and is so light you can easily push it around; thanks, as you have guessed, to strategic use of plastics, especially in minimizing the thickness of insulation necessary.

We have been using words like plastic and resin here without trying to define them, because even people in the business have arguments about just what they mean. If you want to go into that, and get bogged down in chemistry besides, you can go and take a course. There is an imposing list of universities that now give courses in plastics.

There are a dozen trade publications devoted to the subject, and three national organizations working to develop standards and to spread sound information. One of them launched last spring a widespread movement for informative labeling, to steer us through the maze of plas-

tic items and advise us on their care. Then, for one thing, we'll know most plastic dishes can't stand high temperatures. (One company, just to confuse matters, has recently announced a colorful plastic that can withstand boiling water. Heretofore only so-called thermoset plastics, which don't come in the giddy colors we like in the kitchen, could withstand such heat.) And we'll stop, they hope, scrubbing any plastic things with scouring powder. They need the same care we give our glass and china, even though they're not so breakable.

Another national organization is sponsoring a project at the Massachusetts Institute of Technology to develop methods for testing plastic performance, just as we have methods for testing metals. The use of metals grew so gradually that standards evolved naturally, but plastics have become so big so fast that one of their severest growing pains is establishing exactly what each can and cannot do.

Admittedly there have been plenty of misuses of plastics. Some of them are natural mistakes in a new and complicated field. Many of them are due to ignorance on the part of manufacturers,

like a great hunk of suet or raw fish anything. It's tough and rubbery, smells to the high factory ceiling camphor. A workman attacks a block this with a knife, carving off hunks he feeds into the maw of a machine with heat and pressure, puts it through a strainer and two layers of fine linen.

The stuff that oozes in spaghetti machines out the bottom of the machine on another floor, is carted off to the mammoth machines where it is to be between rollers that treat it like do-

At one stage, especially if the plastic is going to end up with the mottled tortoise shell, it looks almost appetizingly diagonally in a container in brown strips mixed with strips that resemble candied orange peel. But the machines take over again, press this collection into one solid, molten hunk, knifing it off in layers, etc., etc.

Even in a small factory, where familiar, friendly gadgets like red yellow plastic cups pop out of the machine, you'd feel overwhelmed at the chances if you didn't have to laugh their Rube Goldberg aspects, with colorful granules going into a hopper at

COLLIER'S

"Do I look like a friend of the bride?"

DAVE GERHART

who think plastic is plastic. They don't bother to check with the makers of the plastic materials they use, though each of these big chemical companies has a board of experts ready and eager to give advice, even to advising against the use of any plastic at all in many cases.

What about soybeans and the coal? Well, Henry Ford, who started it, gave up on the soybean idea. Coffee beans and pine knots have been tried, too, and abandoned. Coal is a source for some plastics, but so far back. It's coal tar, a by-product from burning coal, that contains benzol which, when extracted and combined with some other things, becomes phenol, which eventually turns up in the handle of your iron. See how that is? Cotton, wood pulp and other natural things are also plastic sources. But the witchery the chemist performs turns them first into something unearthly, that gives you the creeps. You feel, when you go into a chemical plant where plastics are made, that maybe man has something quite unruly by the tail.

Take one of the simplest and oldest plastics made, which is celluloid, though called by other and fancier names today. It's essentially a blend of guncotton, camphor (man-made) and alcohol. Brew these together, and you get an inert mass of stuff that looks as much

end of a giant machine and, a moment later, cups popping out at the other

It's a relief to realize, after going through a few factories, that man is in charge. He's the brains of the chemist and the creator of the machines. It's the skill of the workman, and of the designer who designs the mold so it can do a precise job well. He's the designer of the plastic articles, which can be efficient and beautiful if he's smart.

He even works in the same fantastic places, from big factories to backstreet setups. In an old town like Leominster, Massachusetts, which has the big concentration of plastics industries in the town in the country, they're still making combs and knitting needles in the rambling wooden buildings where things were made a hundred years ago. It's just that, instead of using animal bone and ivory, they're using plastic today.

It's nice to know, too, that the tradition of the celluloid collar carried through now in the form of the fronts of nuns' habits. They look as neat and crisp as though they still depended on starch instead of plastic. But that's keep is nothing like it.

It looks as though plastics had found their place. Only it's a thousand places with more coming up every day.

WHY I BROKE WITH ROOSEVELT

Continued from page 28

stories about there being no need for a ballot."

"That's perfectly silly," I answered. "There has to be a ballot. Any effort to prevent a ballot or a roll call will be the one thing that's needed to wreck the Democratic party in November. It's just too ridiculous to discuss."

"Of course, of course," he said slowly and, I thought, somewhat regretfully. "I agree with you on the situation, but the papers are talking."

"Once again, I want to say to you that I will do everything possible to conduct a dignified convention. Some people are trying to bully the situation and roll over everyone, and if that happens it will be just too bad . . ."

"Good," he cut me short. "Good."

I left for the convention.

I raised my gavel, almost at the stroke of noon, and the convention was launched into history.

After my opening address, which was well received, the stadium organ was to have played *When Irish Eyes Are Smiling*, by way of a musical tribute, but the power mysteriously failed. Well-wishers of mine later taxed Mayor Kelly of Chicago with deliberately arranging the failure, an allegation which he denied.

The fireworks started Tuesday. That night the permanent chairman, Senator Alben W. Barkley, was to speak. There was no indication that the address would offer anything unusual until the President told his White House press conference, in response to a probing question on politics, that Barkley would read the convention a message from the White House. Within two hours Jimmy Byrnes called me with the news. His voice was charged with suppressed excitement.

"The President has released his delegates," he said.

"Finally?" I asked.

"He has authorized Barkley to tell the convention he has no desire to run again and never had."

"Oh," I said as noncommittally as I might. "That's a brick of another color, as my father used to say."

Byrnes hung up, somewhat annoyed by my unenthusiastic reaction, I think. Soon after, Herbert Bayard Swope was on the phone with an entirely different version of the coming statement. His story was that the delegates had *not* been released.

A little later Frances Perkins marched

in to see me. She asked my opinion of the President's statement.

"Frances, to tell you the truth, I'm familiar with it," I replied.

"Jim," she said at length, "the President talked to you about it?"

"No," was my emphatic reply.

"It sounds incredible," she said to herself. Tears welled in her eyes and she went purposefully through the door.

About twenty minutes after midnight I was preparing to head for the stairs to the White House called.

"Jim, I've been trying to get you this afternoon," the President began. "I haven't been able to catch up to you. What are you up to out there?"

"Oh, I'm a pretty busy fellow, I sponded somewhat perfunctorily, I'm afraid. Just for the record I made a call later and found that there had been a White House call during the afternoon."

"Jim, I wanted to tell you that we had decided that it would be best to release the permanent organization after the set up. It's best to do it that way."

He did not read the statement. I did not know what it was until I got to the convention hall.

Mystery of a Phone Call Solved

At the hall I ran into Miss Frances Perkins. As we were being swept along through the crowd below the platform, she smiled at me.

"Did you get a call from the White House?" she asked archly.

"Yes," I acknowledged. "And I made a good guess as to who was responsible for it."

"You'd be right," she said as we went up to the head of the stairs.

I confidently expected that the President's statement would be the signal for a demonstration. I was surprised, therefore, when one broke out at Barkley's mention of the President's name.

In no time, banners were dancing in the aisles. Here and there, there was a tussle over a state banner. I saw a man, Tydings, standing with outthrust arms, grimly hanging on to Maryland's banner and stoutly resisting every effort to wrest it from him. The Garretts hung on to one Texas banner, the Massachusetts delegation on to another held by my crowd.

Barkley began pounding for me early in the demonstration, so I

FRITZ WILSON

Who is the No. 1 man in your life?

(WHOEVER HE IS, YOU'LL BE HIS NO. 1 GIRL IF YOU GIVE HIM THE GIFT HE'S ALWAYS WANTED—A FINE HAMILTON WATCH)

AND. Remember the day you married the master of the house? He'll love you even more on your anniversary if you remember him with a Hamilton. The **WESLEY**, 19 jewels, 14K gold case, with Hamilton's finest movement . . . **\$180.**

BROTHER. Is he getting married soon? For generations the most prized of all wedding gifts has been a handsome, faithfully accurate Hamilton—the fine American watch—such as the good-looking **DODSON**, shown below. 17 jewels, 10K natural gold-filled case . . . **\$52.25.**

DAD. How old will he be on his next birthday? Whatever his age, he'll be as excited as a small boy when you fasten that distinguished-looking, dependable Hamilton on his wrist. The **EMERSON** (shown below) has 17 jewels, 10K natural gold-filled case . . . **\$55.**

SON. There's no boy quite like him of course. So when he graduates, on his birthday, or for Christmas, why not give him the gift he'll wear proudly for a lifetime—a fine Hamilton? The 19 jeweled, 14K natural gold-filled **NORMAN**, shown below, is a suggestion. Price . . . **\$66.**

When in love: Make a wish come true for the girl who loves you best. Give her an exquisite lady's Hamilton. The **FL-3** (top)—17 jewels, 14K natural gold case. The **CLARA** (bottom)—17 jewels, 14K natural or 10K gold-filled case and bracelet, **\$64.**

The hairspring ever developed! It's the exclusive **Hamilton Elinvar Extra**—non-magnetic, rust-proof and true at all temperatures. First used in Hamilton Railroad Watches, then in Hamilton navigational watches, this spring now assures greatest possible accuracy in every Hamilton made. At better jewelers everywhere. All prices include Federal Tax. Send for FREE booklet. Hamilton Watch Co., Dept. D-4, Lancaster, Penna.

People are saying —

**“You get more — save more —
when you buy Chevrolet!”**

Yes, you get more beauty, comfort and all-round performance with economy in this new Chevrolet than in any other car in its field . . . and you also save money on purchase price, operation and upkeep . . . for Chevrolet alone gives BIG-CAR QUALITY AT LOWEST COST!

Whenever and wherever people talk motor cars—and almost everybody's doing it these days—you'll find the tide of favor running more and more strongly toward this *bigger-looking, better-looking* new Chevrolet for 1947.

That is true because men and women are convinced that this car gives **BIG-CAR QUALITY AT LOWEST COST**—takes extra-good care of their desires as well as their dollars . . . and your own tests will tell you they're right.

CHEVROLET MOTOR DIVISION, GENERAL MOTORS CORPORATION, DETROIT 2, MICHIGAN

Look at the new Chevrolet and you'll see it's the only car in its field with the luxurious *Big-Car beauty* of a Body by Drive it and you'll know it's the only car in its field giving *Big-Car performance and dependability* of the famous V-8 Head Thrift-Master Engine. Ride in it and you'll realize it's the only car in its field combining the *Big-Car comfort and safety* of Unitized Knee-Action Ride and Positive-Action Hydraulic Brakes.

And yet this beautifully balanced line of Chevrolet cars is the *lowest-priced* line in its field, and owners will find it has the lowest operating and upkeep costs as well!

You get more, and you save more, when you buy Chevrolet . . . the only car giving **BIG-CAR QUALITY AT LOWEST COST** . . . and the wisest investment for you.

Yes, people are saying —

“IT'S THE NEW

CHEVROLET

for BIG-CAR QUALITY AT LOWEST COST!”

first was entirely genuine. Once restored Barkley droned on in speech.

Obviously "prepared" demon-gan to shape up. Gradually filled with strangers carrying cardboard banners. They lifting from foot to foot as the audiences rolled on.

With he produced what I was r—the statement:

President has never had, and today, any desire or purpose to in the office of President, to indicate for that office, or to be l by the convention for that

shes in all earnestness and sin-make it clear that all of the to this convention are free to any candidate."

Statement That Fell Flat

gave the statement to the full onant lungs. Then he turned await the roar of applause. s no applause! The delegates

man Barkley introduced Senator o began to speak in a rather ping voice.

first words there were a few ich swelled into a chorus. For time in that convention, I be-fitting mad clear through. Here of the greatest Democrats in the a man who had made a reputa-long and successful public can-ging booed by Democrats because he courage to stand before a etic gathering and present my consideration. He was entitled atful attention because of his

years, position and services and he was being booed by a lot of political riffraff, who had no right to the convention floor, and perhaps a few misguided zealots.

Quite abruptly his whisper surged into a fighting snarl. He continued with his speech, referring at one point to Thomas Jefferson, "who less than three years before his death appealed to the party which he established never to nominate a man for the third term for the Presidency." He concluded by placing my name in nomination.

A short ovation followed. I remember it was short, but at least it was genuine. Everyone in that vast hall who cheered for Farley meant it. Not a single one was paid and not a single one did it to keep a job. Mayor Kelly's organist was silent; the band forgot to play, and in a few moments my "parade" was over.

After the seconding speeches, I started for the platform. Edward J. Colgan, Jr., of Baltimore, was nominating Tydings. Booing had by this time become a habit. Then silver-haired Wright Morrow was at the rostrum nominating Garner. The booers lost none of their ill manners.

"There's Whitley, blowing it all in on women and horses"

COLLIER'S

SCOTT BROWN

The Texas delegation bravely trooped around the hall to the tune of The Eyes of Texas Are Upon You, and "Cactus Jack" had demonstrated his courage to stand for his convictions.

"The roll call is concluded," Barkley announced in stentorian accents.

One hour and ten minutes later the third-term tradition was broken. The vote was: Roosevelt 946½, Farley 72½, Garner 61, Tydings 9½.

Before my nomination I had gone to Barkley and Byrnes and told them I wished to move that the nomination of Roosevelt be made unanimous after the roll call.

When I was introduced by Barkley, I was greeted by a standing ovation from the delegates. The galleries displayed enthusiasm for almost the only time during the convention. I accepted this as vindication of my stand.

"Senator Barkley and fellow Democrats," I said. "I have pursued a course here that has been dictated by the deepest convictions. I wanted this convention to proceed as Democrats should proceed, to nominate its standard-bearers in keeping with the high traditions of our party. That is the only Democratic method and that has been observed."

"My name was placed in nomination for the Presidency of the United States by a great and noble American. I am grateful to those delegates who voted for me and to those who would have voted

for me had they not been otherwise pledged.

"It is, therefore, a great pleasure for me, Senator Barkley, to move to suspend the rules and declare President Franklin D. Roosevelt nominated for President of the United States by acclamation."

There was a tremendous roar from the convention. The organ, Mayor Kelly's organ, had no trouble this time with When Irish Eyes Are Smiling. I acknowledged the salute and turned away from the rostrum. I regard that moment as the one in which I turned my back on active politics.

Thursday morning, July 18th, the President called me early. He was as gay and bright as he had been after the 1932 and 1936 nominations. If he had any regret at being drafted or if he preferred to retire to Hyde Park, it did not show in his voice. His manner was as warm as it had ever been.

He told me that he had decided on Henry Wallace as his running mate. I protested: "Mr. President, there is no use kidding yourself. The nomination of Wallace won't help the ticket in any

"Dead in the room, Jesse, if the President did not want me, I wouldn't run."

"He doesn't want me because he thinks I'm not well."

"Jesse, that's not the real reason. He just doesn't want you, and you might as well face it. Now, I'm for you. If you change your mind and stay in the race you have my vote and support. I think you can be nominated with my support."

"No, Jim, I guess I'll let this statement go. I won't change my mind."

During the afternoon I could not resist calling up Ickes and congratulating him on Wallace's coming nomination. Ickes was feuding with Wallace and had long been at odds with Hopkins.

"Wallace's nomination is a damned outrage," Ickes sputtered.

"Seriously," I said, "what do you think of things?"

"What do I think of them," he roared. "Who cares what I think? Here I led the whole third-term movement while Hopkins was in the hospital and they thought he was going to die. Then he comes to the convention and I'm not consulted at all. I knew nothing about the program."

Elliott Roosevelt came in to say he thought it would be a great mistake to nominate Wallace. I told him I was for Jones. He met this with, "If you nominate Jesse, I'll second it." I told him that was all right with me and that we would talk it over when his mother arrived in Chicago.

I drove out to meet Mrs. Roosevelt at the airport. She was accompanied by Franklin, Jr. When we discussed the Vice-Presidency, she and Franklin, Jr. agreed that it was a mistake to nominate Wallace.

At the hotel, Mrs. Roosevelt put in a call to the White House.

"Franklin," she plunged to the point, "I've been talking to Jim Farley and I agree with him Henry Wallace won't do. I know, Franklin, but Jesse Jones would bolster the ticket, win it business support and get the party contributions."

Finally the President asked that I be put on the phone. "I've given my word to Wallace, Jim," he told me. "What do you do when you give your word?"

"I keep it," I answered quickly—perhaps too quickly and too sharply.

Mrs. Roosevelt and I went out to the convention together.

One by one the field of some seventeen Vice-Presidential candidates was narrowed to three men. Only Speaker Bankhead, Wallace and McNutt were left in the race. McNutt could have been nominated, but he withdrew his name at the request of the President. The delegates were ugly. They did not want Wallace.

A Protest Against Bossism

Not all their resentment was personal, however. They were showing their resentment against "bossism." But they were trapped by the President's adroit maneuvering. No one who studies this convention can deny that the President showed himself to be a master of political rough-and-tumble, with no holds barred.

The final vote brought Wallace only 627 votes out of 1,100. There is no doubt in my mind that Mrs. Roosevelt's appearance and her speech about the burdens of the Presidency in critical times saved the day for the President. He knew what he was doing when he sent her.

The next morning, when the Democratic National Committee gathered at the hotel, my statement of resignation was read before the committee men and women—about 110 in all. It concluded with this pledge:

"I shall co-operate to the fullest extent with my successor as national chairman in setting up the machinery for the coming campaign. I have said repeatedly that the American people want the Democratic party to remain in power. My opinion has not changed, and again

That Julep in July!

This novel julep set, a Kentucky Tavern Creation, is available in its entirety at better stores everywhere.

KENTUCKY MINT JULEP (here's how!): Chill julep or 12 oz. glasses in refrigerator. Muddle 3 or 4 leaves of (not stems) with teaspoon of powdered sugar and teaspoon water. Fill cup with finely crushed ice, pour in one Kentucky Tavern. Stir briskly until frost appears and is dropped 1 or 2 inches. Fill remainder with crushed ice pour in another jigger of Kentucky Tavern. Decorate with mint and insert straws through sprigs. Clip straws off near of mint (so you get your nose right in it while sipping); in icebox for half an hour (if you can wait that long), serve, sip and smile!

Glenmore Distilleries Company

THE ARISTOCRAT OF BONDS

pledge my full support to the Roosevelt Wallace ticket."

"I was glad to get that on the record to clear off any accusations of my being a seceder. But I was sad as member of the committee stood up and gave impromptu expressions on my resignation."

"I did not see the President after the convention until July 26th."

"Loysius, everything came out all right in the convention," he said. "Now, it is a general sentiment on all sides—it's unanimous—that you participated in the campaign. Everybody's for Jim. Me, most of all. You could have someone else be appointed campaign manager and still hold the chairmanship of me, while actually you would be doing for your family. It's as simple as that, Jim. It would mean a great deal of party."

"Mr. President, that just can't be," I answered. "You can't have absolute authority around a campaign headquarters. And I don't want to be directly connected with the national committee in any way."

"All you have to do, Jim, is have your name on the letterheads as chairman and you will be helpful," he suggested.

"That just can't be," I said. "My mind is made up."

Hague Is Curious About Wallace

"I changed the subject by telling him a story relayed to me by a newspaperman, after the Vice-Presidential nomination Hague was asking what kind of a man Wallace was. He urged one of Wallace's friends to get word to Henry Wallace that he should have some practical political advice and the best place to get it would be from Kelly and Hague."

"Frank is muscling right in as usual," I laughed.

"I talked briefly about the coming convention. 'Jim,' he confided, 'I've told my family I want them to vote for me. I also told them I wanted them to know I will be defeated.'"

"That is the best thing that could happen to you," I said seriously, "and I'm certain it won't happen. If anyone considers this one a walkaway he is crazy."

A short time later Mrs. Roosevelt invited me to lunch with her. Over our lunch she added her voice to the President's, urging me to remain as national chairman. I declined, giving my reasons, adding: "I don't know whether you know it or not, but the President never discussed his candidacy with me until Sunday I saw him at Hyde Park."

"I never knew it either, believe me, until that afternoon," she cut in. "After you and Franklin told me he assumed he would have to run."

Thursday, August 1st, I went down to Washington for a meeting of national committee members who were to pick my successor. We met in the President's office at the White House.

The President was in his best form. He was charming, disarming, persuasive and a mate. His smile flashed on all, but his warmest smiles were directed at me. "Sentiment has developed in every corner of the country for you to retain the chairmanship," he said. "Everybody in the party knows you, Jim. And to know you is to love you. The party expects you to do your duty, Jim. The party needs you. The success of the party in the coming election and campaign would be assured with you at the helm, Jim."

"This was the only time since 1930 he had acknowledged my services and then a acknowledgment came only because he wanted to persuade me to his will. But I had made up my mind."

"We could go on talking here for hours about the necessity of my carrying on, but we just aren't going to get anywhere," I answered. "I appreciate the confidence"

expressed in me. But I have made my decision."

The meeting closed with the appointment of Ed Flynn as my successor.

I shook hands with Flynn, remarking, "I don't know whether to congratulate you or to commiserate with you."

"My wife will kill me for this," he said ruefully.

On August 7, 1940, I wrote my letter of resignation. My association with private industry was announced two days later. My only comment was, "I am going to be very happy," and I was never more right, even when I predicted in 1936 that we Democrats would carry everything but Maine and Vermont.

The end of that month I attended my last Cabinet meeting. After it was over, I said my farewells to the other Cabinet members with whom I had worked.

Just before I left I said goodbye to the President.

"Take care of things in my absence," I said. "And protect my interests."

"It's not goodbye, Jim, because I want you to see me whenever you pass through the city. Give my regards to Bess."

We shook hands.

I carried his words to Bess the next day. She was not impressed.

Before I left Washington, I talked with Cordell Hull about the convention. "I think I was treated unfairly by that fellow," he said, "in his not letting my name go before the convention. That is not so bad as the fact that I have received no recognition for what I have done as Secretary of State in a most trying and most vital period of this country's history."

"What about the Vice-Presidency?"

"Oh, that!" He leaned back in his chair and smiled. "He tried everything he could think of to get me to take it. He argued and smiled. Then he smiled and argued. I said, 'No, by God!' and 'By God, no!' and that's all there was to it. I felt he was trying to kick me upstairs. I'd rather go."

Congratulations—and the Reply

Three months later, after the election, I wrote the President a letter of congratulation. It read in part:

"I want you to know I have a deep and sincere interest in the success of your new Administration. In electing you for a third term, the American people gave you an unprecedented honor and I am sure you are determined that they shall never regret it. There were some who used the third-term issue as a convenient front to oppose you and there were some honestly concerned about the breaking of this tradition, and I happened to be in the latter group. Nothing would make me happier than that your accomplishments during the new term will confound the first group and reassure the second."

I received a reply written aboard the Presidential Special as Roosevelt was heading for Warm Springs. The President wrote:

"You know I am a funny fellow in that unlike many, many people I do not get excited by what you call an 'unprecedented honor.' The reason is that I am perhaps a little 'queer' in never having sought public office for 'honor.'"

"To put it another way, I would have been just as content in my own heart and conscience to give service to the country as a private citizen as I would to give service to the country as a first-term or a third-term President."

The letter was unsigned. It bore nothing but the typewritten initials, "F.D.R." Later I learned that the President had deliberately chosen to let it go unsigned.

THE END

This article and the four which preceded it are selections from a book by James A. Farley, to be published early in 1948 by Whittlesey House.

Enjoy Life!

DRINKS HAVE *More Life* WITH PIN-POINT CARBONATION

Like the gleam of summer moonlight...the goodness of sparkling Canada Dry Water can't be imitated. This world-famous mixer costs no more than most ordinary club sodas...carbonated tap waters. Here's why you'll want to insist on Canada Dry Water—always:

1. *Pin-Point Carbonation* — means longer-lasting sparkle.
2. *Exclusive Formula* — makes your drinks taste better.
3. *Special Processing* — assures purity, balance, clarity.
4. *Superior Quality* — uniform the world over.

P. S. It's enjoyable as a table water, too. Try it.

Where there's LIFE there's

that such things were a subject for mixed company.

As if he heard the reproof, Willie put down his glass of milk. So long as he was going to be stubborn, Jean saw, he was going to be stubborn all the way.

"It's too early for them," he said. "They never run till after dark when they do run. And then you never know what part of the coast they'll pick."

Bob nodded, and looked at Jean. His eyes slid over her face and down the open throat of her white blouse and he seemed to make some pleasant inner decision.

"Tell you what," he said to her. "While we're waiting, let's ride up to Malibu." He glanced at Aunt May. "I'll have her home by nine."

HIS audacity hung above the table like smoke. It was a moment before Aunt May found her voice. "Unfortunately," she said dryly, "it's Jean's week to do the dishes."

"Yeah?" He looked back at Jean. Then his broad tan face spread in a smile. "Okay," he said. "I'll dry."

He looked even bigger in the tiny blue and chrome kitchen. As he balanced the dishes casually in his large hands, he whistled, following the melody of the record Willie was playing on the phonograph in the living room.

When they were almost finished, he stopped whistling. "What do you do with your free time?" he asked.

Jean groped in the soapy water for the silverware, trying to think when Aunt May left her any free time and what she did with it.

"I don't know—" she began slowly. "We go to the movies. And Willie and I play tennis on the public courts." That wasn't what he meant, of course, so she said, "Sometimes I go dancing."

"That's a gay program for an old maid," he said.

He was laughing at her, and after what she'd said on the beach, who could blame him? She finished the silverware, pulled the rubber stopper from the sink and dried her hands on a dish towel.

"Thanks for helping," she said. "I'll put the glasses away."

She was standing on tiptoe, fitting Willie's milk glass into its proper place on the third shelf, when she felt him behind her. He reached up and slid the glass easily into place. Then his hand fell on her shoulder.

For an instant, she stood quite still. The chemistry of her blood seemed to change, to grow thinner in substance, and all her perceptions sharpened. The living-room phonograph seemed to blare.

This can't actually be happening, she thought—I must be exaggerating it. Probably he doesn't even realize he's touching me. He turned her around and smoothed her hair gently with his palm. Then, very slowly, he bent down and kissed her.

Aunt May's voice crackled from the living room: "Jean, aren't you through yet?"

She drew back from him in confusion and rearranged her hair as if she were rubbing away his touch.

"Yes, Aunt May," she called. "We're finished."

Without looking at him she walked quickly into the other room.

Precisely at eight o'clock, Aunt May put the last stitch in Jean's new middy blouse and lifted Willie's socks from her straw sewing basket. "You read too quickly to be retentive," she told Bob reprovingly.

He glanced up from the 1926 movie magazine. "I'm just looking at the pictures," he said. "You know, these ought to be in a museum. I never saw magazines this old before."

"They were here when we bought the house," Aunt May said crisply. "Jean, as long as you're just sitting there, why don't you roll the edges on the handkerchiefs you promised to make for me?"

Jean looked up from Willie who was lying at her feet tinkering with the radio he had made last winter. Actually, she had not been seeing Willie. She had been wondering how many women Bob had met as he had met her—ambling into their lives, making love to them and wandering away as easily as he had come.

She said, "Yes, Aunt May," and went to the bedroom to get the handkerchiefs. I'll have to stop this, she told herself. It's silly; he's just a man Willie picked up and invited to dinner. I'll never see him again.

When she came back, Bob yawned and tossed his magazine to the stack beside the chair.

"I wonder if the run has started yet," he said.

Willie looked up from his radio. "You'll hear people yelling on the beach if they come."

"It's a mystery to me," Aunt May said,

breath was short as if she had been running. "I'll get the flashlight."

As she turned toward the kitchen, Aunt May put a finger on her arm. "Willie, show him the way, Jean," she said.

Jean paused, looking into the dry, lifeless face before her. She knew what Aunt May was really saying—that neither of them knew who Bob was or what he was. She was saying that he was a man whose men were untrustworthy. They were dangerous. Aunt May was reminding her of her father.

And Aunt May was right, Jean told herself. Bob was no one. A stranger, an idler, a man who kissed her lightly in the kitchen as he would kiss a hundred girls. She stopped and stared at him.

"Never mind," he said from the doorway. "I'll make out by myself."

He disappeared into the darkness. She stood there watching after him. The beach noises fell on her ear, the waves and the cars above, but she did not notice. She did not even notice the new noise Willie shouted.

"Hey! Hey, listen! People yelling." Jean looked at her brother. He stood

"why a young man should drive all the way from town to see a swarm of fish."

"They say it's like watching silver waves roll in," Bob said evenly. "I guess it's pretty wonderful."

Aunt May thrust her needle into Willie's sock. "You're most poetic," she said dryly. "How long do you intend to keep up this vigil?"

"I don't know," Bob said. "All night, if I have to."

Right then Jean knew Aunt May had had enough. "Young man," she said, "there are two kinds of people in this world. Those who work and shoulder the burdens, and those who waste their time playing. If you wish to wait for these—these fish, it would be kind of you to do it someplace else. I have to iron the children's clothes now. And after that we are all going to bed."

Aunt May got up from the rocking chair, dropped the sock into her sewing basket and replaced the lid. Her face beneath her neat hair was cold. She stood waiting.

Slowly Bob rose. "Okay."

Willie pushed his radio against the wall with a clatter. "Try Santa Monica, Bob," he said warmly. "They run better down there anyway."

"I'll take you up to your car," Jean said. Her voice sounded low to her ears and her lips felt stiff.

Bob looked at her. There was tenderness in his eyes and something else which frightened her a little. "It's just up on the highway," he said.

"I know. But the steps are bad." Her

with his head tilted a little to one side a second, then ran out to the beach. The screen door banged behind him, the door banged again and he was back. His face glistened with triumph.

"The run is on—listen!"

And now she could hear the distant voices and laughter, piercing the thick constant noise of the surf. "Bob—" stopped, looking at Aunt May.

"I'll get him," Willie said. "He has started yet."

AS HE put his hand on the front door knob, Aunt May said, "No." Her voice was jagged against Jean's ears. "him go."

Yes, let him go, Jean thought. Let him go away and never come back. They be safe.

Of course, she thought. I'll be as safe as Aunt May.

Before they could stop her, she had run out into the night. It was fresh there was a cool wind blowing. She felt the steps, wobbly slate slabs set in the steep hill, and in the darkness they took all her attention. Even so she tripped and would have fallen if Bob had not caught her.

He laughed and pulled her down beside him on the stone.

"They're running," she said. "the fish."

He smiled. "So were you, little c."

"Don't you want to see them?"

"We've got time," he said, "lots of time."

Call Me Anytime

PERHAPS we've already talked over the 'phone. If not, chances are we shall—sooner or later—because more and more people are calling me these days—people who want to enjoy the advantages that only air travel provides.

I'm "Reservations"—the person who answers when you call American Airlines to reserve a seat aboard a Flagship. I hear from all kinds of people...

A voice asks for a reservation to a place halfway around the globe—perhaps the voice of a diplomat who tomorrow will sit at an international meeting... Again, an eager young voice comes through, asking about seats to Niagara Falls—or maybe Mexico. A honeymoon trip! The young, the old, the famous and people from

all walks of life—going places, near and far.

I get a lot of satisfaction out of helping so many different people, traveling to so many different places. So do all the other young men and women who, like myself, are reservations agents. We form a person-to-person link between you and American Airlines.

We're on duty all along American's routes at home and abroad—twenty-four hours a day, every day. People call us for reservations to more than 1,500 places in the United States, Canada, Mexico and Europe—in fact, all around the world. Among us, incidentally, we speak twelve languages. We've been carefully selected and trained to give alert and friendly service. We're proud to have been chosen because we're proud

of American's reputation for personalized, courteous service.

The new thousands of people who are becoming air travelers get their first impression of American's standard of service when they call me. They judge American by my attitude and efficiency. So, when they call, that's my opportunity to show American's interest in people and respect for the dignity and well-being of the individual. The problems of each individual traveler receive personalized attention—whether it be for a commuter flight, a transcontinental flight or a transatlantic flight.

That's as it should be, isn't it? That's why it's such a pleasure to help make American's service available to more and more people.

SHERIDAN'S RIDE

Continued from page 26

agent, a Mr. Bernie Williams, and made a low, passionate sound which, he said, represented Sheridan's aura. This sound once translated into "oomph." They were stopped everywhere and carried the news that Annie was the "Oomph Girl." The studio set a 60 dinner for a few influential to publicize this great decision. A few weeks Annie was Number 1 on fan-mail list. The word went around the world. On October 16, 1946, Sir Raymond Evershed ruled in that it might be admitted to Britain and Northern Ireland as a mark.

During her tough years in Hollywood Sheridan often issued bitter statements saying she wished she were back in London, (b) Dallas and (c) Texas. In moments she also deprecated use of the word "oomph" in connection with her and personality. She decided "oomph!" as "what a fat man when he leans over to tie his shoe in a telephone booth."

One of the greatest triumphs of Sheridan was recorded March 25, 1943, when the respected Milwaukee Sentinel named her the alcalde of Parangaricutiro, Chihuahua, Mexico, as attributing a volcanic explosion to her presence in the neighborhood. "Volcano Shakes as Annie Sheridan's Headline Said," the headline said. A move was made to name the new volcano Mount Sheridan, but no one, including the Mexicans, wanted it.

At the time, North Hollywood, where Sheridan was advertised on billboards as the "Oomph Girl."

Figure and Acting Criticized

On a few occasions her figure has been severely criticized she has come to its defense. "My only physical defense," she insists, "is that I'm pigeon-toed." She also defends her acting, which few critics frequently find less than satisfactory. "I'm just not the Academy type," she admits. "I don't pre-empt. I just want to do a good job of my story. If I can be a quarter as good as Bette Davis, I'll be happy."

Taking no chances on a lack of artistic recognition, shortly after her first great success she presented herself with a gold bracelet, inscribed: "From Clara Lou to Ann: You continue to amaze me, kid!"

She married first S. Edward Norris, a stage actor, in Hollywood, in August, 1936; they were divorced in October, 1937, having separated after just 375 days of marriage. Mr. Norris said the affair was a "mistake."

She was engaged to George Brent, another actor, twice before she married him in Palm Beach, Florida, on January 5, 1942. The first engagement happened soon after Mr. Brent saw her on the Warner lot, wearing a smock. Someone asked her what she had on under it and she let it fall open, revealing a bathing suit. This turned out to be a flimsy reason for a betrothal, and the deal was called off. It was on again later when Mr. Brent gave Annie a sterling silver service, initialed B. After some thought, she decided this meant she was to become Mrs. B.

Before she married Mr. Brent she gave out a statement saying the man she married might be 45, but his spirit would have to be 21. Mr. Brent was 38 at the time and announced he would "rather marry a screwball from Texas than something solid from Pasadena." Despite the merging of a spirit of 21 and a screwball, the marriage lasted only 263 days, despite an elaborate set of rules for the general deportment of both parties. The rules were thought up by a press agent, and neither Mr. nor Mrs. knew anything about them until they read them in the paper.

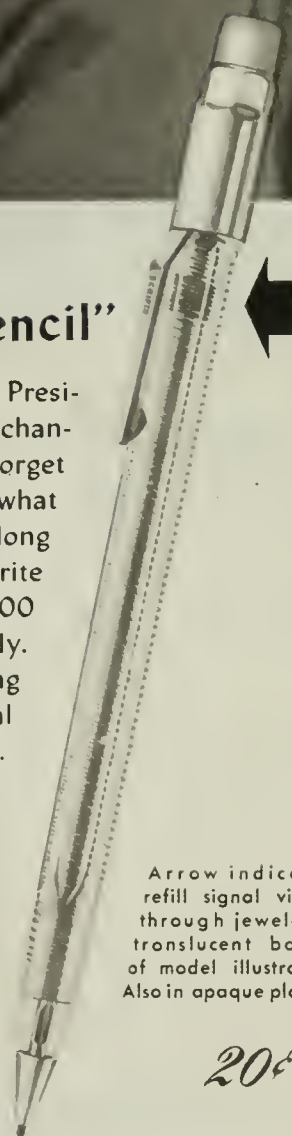

After the divorce there followed a bleak period in which her name was "linked" mainly for publicity purposes with various Hollywood characters. But true love failed to appear, although on April 2, 1940, Richard Brunnenkamp, a 19-year-old UCLA junior, handcuffed himself to Miss Sheridan in a theater lobby and swallowed the key. It just happened that cameramen were there to get pictures, and a further amazing coincidence was that a preview of Annie's new film was just starting. Some cynics have since doubted the essential purity of the

C. E. WOOLMAN — pioneer in commercial aviation whose successful career has carried him to the presidency of Delta Air Lines—says:

"Words take wings with a Scripto pencil"

Like people at the top in every field, President Woolman of Delta uses Scripto mechanical pencils. With a Scripto, he can forget pencil performance and think only of what he wants to say. And so can you. The long 4-inch Scripto lead is always ready to write when you are. Each one averages 22,000 words... can be replaced quickly and easily. Give wings to the words you write by starting today to use Scripto pencils. Take several home and enjoy their convenience there, too. In their brilliant colors, they make exciting gifts for school children... make writing, figuring and drawing fun. They can be imprinted for company identification or for advertising.

Arrow indicates refill signal visible through jewel-like translucent barrel of model illustrated. Also in opaque plastic.

Scripto
REG. U.S. PAT. OFF.

LONG-LEAD MECHANICAL PENCIL

You can renew the lead and eraser in a Scripto pencil in a few seconds with long, strong Scripto refill leads and snap-in erasers. Keep a pack of each within your reach.

Master Brewer, son and grandson of Master Brewers

Blatz

BREWER OF BETTER BEER . . .

man's motives. He said he did it for the bet. In any case, it turned out that Mr. Sheridan was not exactly the type of man Annie honed for and her continued. During this period she grew mildly philosophical and gave out with long descriptions of her ideal man, who seemed to be a combination of Hercules, a scientist and two Texas Rangers. She once said: "I would rather go out evening with a young man who would give me \$5 to spend than with a man who would throw away \$500 for entertainment."

She added that her ideal man sometimes appeared to her as a blond and at other times as a brunet, but always men- tioned being physically active and willing to listen to her talk. "Does anyone," she asked in 1944, "know where I can find my man? Up to the spring of 1947 there was no definite answer."

Telling Off a Brass Hat

During the war she flew thousands of miles with camp shows and acquired the nickname "G.I. Annie" following an episode on the China-Burma-India front. After being knocked herself out entertaining troops all day, a general sent two men to get her to entertain him privately, telling the soldiers with court-martialed they returned without her. Her anger on this bit of effrontery melted on Mount Everest, more than 200 miles away, and endeared her forever to the troops and file.

She also voiced opinions about Special Service officers who, to please their girlfriends, promised them she would visit them on certain dates. When she failed to show up—the tours having been canceled in Washington and out of her life—she was criticized by the same Special Service officers, trying to cover up her failures to make good. Her anger on generals and their aides are depicted in barracks and mess halls, with approval.

On March 12, 1942, Private Henry David of the United States Army requested for the American Red Cross, for a transfusion of Miss Sheridan's blood. He said he didn't feel well. Red Cross replied that Annie's blood was mixed up with that of millions of people's. Sorry.

Years she carried on a running feud with Harvard University, starting the time when The Lampoon, a satirical paper, titled her The Most Likely to Succeed of all movie stars. For a long time she hurled insults at the paper and the college.

"I heard," she said once, "is the home of adulterated heel—and you may believe."

Harvard maintained a dignified silence under all this provocation, but Sheridan is always glad when the college gets thoroughly trounced at football. She hopes someday to be there when it is licked, 109 to 0, by Texas.

One of the official biographies describing Miss Sheridan's private life says that her closet is filled with pretty nightgowns she never wears. . . . Before going to bed she climbs into bed with a cigarette and a book—preferably one by Somerset Maugham—and reads until she is doozy. This is usually after two or three pages.

Maugham has very handsomely paid to retort to this bit of sly literary criticism. Miss Sheridan, refuting her opponent, says she often reads Mr. Maugham for two or three hours without falling asleep.

Whatever happens to her screen career is assured of her picture in seed catalogs for twenty years, accompanying the photograph of the Ann Sheridan Rose. The Germaine Plant and Seed Company, makers of this bloom, describe it as "a

vibrant pink." Annie is quite a gardener, and speaks learnedly about the right way to get more potash into the soil and allied lore.

A Mexican real-estate firm once gave her a tract of land at Nautla, on the Gulf Coast north of Veracruz, and she plans to keep up the taxes and maybe someday build a home down there. She likes Mexico and the Mexicans and attends bullfights, when available.

Occasionally, she is presented with the tail of the deceased bull as a trophy—a gift she always accepts with considerable aplomb.

Some years ago she endorsed a canary food and lately received a gift canary from the food concern. This talented bird is slowly driving everyone insane on the Sheridan ranch. It trills during telephone calls, accompanies the radio and the phonograph and takes a shrill part in all conversations. It is only a question of time until someone gets around to wringing its little neck.

Although she conforms to few conventions she followed standard Hollywood practice by having a battle with Warner Brothers. Nearly every player in the film plant has had a battle with Warner's. The fighting is pretty bloody and often goes on for months, after which the parties kiss and make up and go back to making pictures again. Annie's battle started when Warner's wanted her to do another musical and she refused. That put her on the shelf for eighteen months. Both sides toughed it out until the studio offered her the starring role in Nora Prentiss. She accepted, scored a hit and went on to make The Unfaithful with Lew Ayres.

At times Annie is mistaken by autograph fans for Rita Hayworth, Ann Sothorn, Anne Baxter and various other movie Anns. When someone comes up to her and says: "Miss Hayworth, could I have your autograph, please?" she always obliges with "Rita Hayworth" in flowing Spencerian. Saves argument.

Even Beauticians Like Her

She is almost unique in Hollywood in that practically everyone who knows her likes her. She is liked even by beauty parlor operatives, who are notoriously bitter about movie stars. She takes advice easily from people she trusts and gets along with directors better than many temperamental players.

She won't fly unless she has to, and when she goes East likes to hole up in a drawing room aboard the City of Los Angeles and catch up on her sleep, and her reading. On vacation trips to Sun Valley she trains up, although most stars fly the route.

Annie is no night-clubber. In the evenings she likes to lie around in slacks reading, and playing records and drinking Coke. She drinks Coke from unbreakable tumblers, being a girl of occasional wild free gestures that sweep glasses from tables.

She also drops trays of biscuits, cartons of eggs and other things around the kitchen and thinks sometimes of acquiring a set of unbreakable glass utensils. She can cook chicken passably well, but sniffs at the usual Hollywood star pose of being able to whip up a seven-course dinner unaided in twenty minutes.

She is a natural redhead, ranging from copper to crimson according to the demands of her directors. Five feet six, she weighs in normally around 115 pounds. Her eyes are hazel. She likes inordinately long red fingernails and very little make-up, being a soap-and-water girl from way back. She eats like a horse, but a fairly strenuous physical life keeps her in trim.

She goes to few parties, but when she does she likes to dress up; she has been on several "best-dressed-women" lists in the past few years.

CITY WITHOUT SECRETS

Continued from page 13

out a first-class reporter gets stonewalled. "By this definition, the best Missouriian reporters are ones who can top Martha Ann Turner's coverage last year of Winston Churchill's visit to near-by Westminster of Fulton.

ton without a press pass, against opposition from half the Missouriian staff. The relatively few but illustrious reporters from the world press, Martha Ann included her best bet was to observe the things that tell you so much about a person." With many guards out, she was surprised how easy it was to go around the hill in back and enter the kitchen.

Maids there were too busy cleaning after luncheon to remember "the things" about Mr. Churchill or about Truman, and Martha Ann was finally shoed into the dining room where she stood in the doorway and watched the two statesmen putting on coats to leave for the auditorium.

President gave me the smile," says Martha Ann. But Churchill didn't smile. "Probably nervous about having me," she thinks. When she was the only thing to do was go upstairs and look at Mr. Churchill's bed—was a disappointment. The room was neatly packed with things bearing the simple "W.C."—everything, except the Churchill box on the chest of drawers. The cigars were "huge," according to Martha Ann, who was looking at the little things. She was one of them just in case of a paper questioner story.

After, the F.B.I. men rumbled on the house, decorated the mattress on which Churchill slept and

part most of the bedroom furniture. Evidence had turned up that someone had been in his room while he made hairbrushes, mirrors, books and chairs as they chased the intruder from attic to basement. No names were mentioned—yet the day after the story, a dozen landladies stormed into the city room demanding a retraction. The mouse, incidentally, got away.

Not all Missouriian representatives are looking for news. Success in obtaining advertising, the students learn, is also important in running a newspaper. Against the rival Tribune's six paid solicitors, the Missouriian throws an army of over a hundred in the siege of local business firms. "At least my store is never empty," one local merchant comments.

But over at the Tribune, Publisher H. J. Waters (himself a graduate of the journalism school) makes no bones about it. "It's unfair competition anyway you look at it," he tells you. "They don't have to pay their staff, and whenever they run into a tough account they hire a professional ad man to get the business." Even at the Missouriian they admit their setup is hard to beat. With none of the usual worries about overhead, the paper's educational charter also exempts them from income tax, Social Security and the provisions of the State Compensation Act.

But the Tribune, with a circulation of 7,400 against the Missouriian's 4,500 manages to do all right. Its solicitors, though few, are experienced and there to stay, while the student shock troops change two or three times a year. This can be a real disadvantage, as one girl

A few days later, though, the cub had his story—in reverse. One of the heftiest of the local doctors, summoned to a delivery case in one of the trailers, had trouble getting through the door.

"Tripod," the 3-legged mongrel the Missouriian staff rescued from the gas chamber, is good for a feature now and then, in thanks for which the reporters deposit his daily half pound of hamburger in a dish outside the office of Dean Frank Luther Mott, Ph.D., A.M., Ph.D., Litt.D., L.H.D.

But in a town with a girl population of 9,000 from Stephens Christian College and the university, the best news source in the animal world is the common mouse. On the feature side, Jane Caruthers wrote the definitive piece on the rodent entitled What Makes a Good Mouse. In England, Jane noted with interest, mouse Derbies are gaining a popular following that rivals horse racing.

In the spot news field, honors this year go to the mouse that disrupted and al-

found out when she tackled her first account, a men's clothing store named after the university's tiger symbol.

"Is Mr. Tiger in?" she inquired sweetly.

"I am Mr. Tiger," said the manager and gave a loud roar. The girl fled.

Beginners who set out to learn by experience are bound to make a few mistakes and one of them, which crops out far less often now than before the war, is the Hollywood notion that the reporter is a very tough egg. Last semester, one cub spent his first morning in the city room wearing his hat on the back of his head and dangling a cigarette from his lips—unlighted, of course, since smoking in campus buildings isn't permitted.

"Columbia Missouriian, go ahead!" he answered the phone in an ominous monotone. A Ladies Aid secretary calling to report a sociable was so startled she couldn't speak for an instant. "What's the pitch, lady?" growled the cub. An assignment to cover the sociable soon brought him face to face with the stark realities of practical journalism.

Writing, too, the cub soon discovers, is a lot harder than it looks in the movies. "The bullet," he pecks out eagerly after a visit to police headquarters, "hit the girl he was engaged to's brother." Headlines have to tell the gist of a story in so many lines of so many characters; and even when the cub has accomplished this feat, some kill-joy can always find fault with a masterpiece like:

MARRIAGE OFTEN UNNECESSARY, DECLARES PASTOR COUNSELING YOUTH TO "WAIT AND BE SURE"

The first weeks, though, smooth off most of the rough edges and every class has its quota of "naturals"—cubs who could hold down paying jobs on any newspaper. What with the G.I. Bill of Rights enabling veterans to complete their college education, the Missouriian also gets students with more actual newspaper experience than some of their faculty bosses, who have to decide what gets into print.

Since newsprint is limited, this poses a real problem: how to select from its enormous news and editorial output the small fraction the Missouriian has space to publish.

"I believe," wrote founder Walter Williams in the famous Journalist's Creed inscribed in bronze in the Missouriian headquarters, "that suppression of the news, for any consideration other than the welfare of society, is indefensible . . . that individual responsibility may not be escaped by pleading another's instructions or another's dividends."

Students and faculty members alike will tell you it's hard to live up to that standard against the Missouriian's editorial policy, which they define as "Stay out of trouble"—not only with state legislators always ready to cry "Red" but with the local community, a Middle Western town with a strong Southern exposure to "white supremacy."

But restrictions bother Missouriian reporters far less than you'd think. Spread throughout the town in concentration of two to every city block, they boast a word-of-mouth circulation bigger than their paper. So long as they go on reporting out loud, Columbia will remain a peculiarly vivid example of an American phenomenon—a city without secrets.

THE END

PORTRAIT OF A HOUSEWIFE TALKING TO HERSELF AS SHE PACKS FOR THE FAMILY'S SUMMER VACATION

We'll load up the car, and get started by ten,

And not six A.M. as we planned.

We've done it before and we'll do it again.

We'll load up the car, and get started by ten.

This schedule is very much frowned on by men—

It's something they can't understand.

We'll load up the car, and get started by ten,

And not six A.M. as we planned.

—Margaret Fishback

most wrecked a girls' rooming house. The Missouriian reporter described how a nightgowned posse of roomers hurled hairbrushes, mirrors, books and chairs as they chased the intruder from attic to basement. No names were mentioned—yet the day after the story, a dozen landladies stormed into the city room demanding a retraction. The mouse, incidentally, got away.

Not all Missouriian representatives are looking for news. Success in obtaining advertising, the students learn, is also important in running a newspaper. Against the rival Tribune's six paid solicitors, the Missouriian throws an army of over a hundred in the siege of local business firms. "At least my store is never empty," one local merchant comments.

But over at the Tribune, Publisher H. J. Waters (himself a graduate of the journalism school) makes no bones about it. "It's unfair competition anyway you look at it," he tells you. "They don't have to pay their staff, and whenever they run into a tough account they hire a professional ad man to get the business." Even at the Missouriian they admit their setup is hard to beat. With none of the usual worries about overhead, the paper's educational charter also exempts them from income tax, Social Security and the provisions of the State Compensation Act.

But the Tribune, with a circulation of 7,400 against the Missouriian's 4,500 manages to do all right. Its solicitors, though few, are experienced and there to stay, while the student shock troops change two or three times a year. This can be a real disadvantage, as one girl

TOO LATE FOR LOVE

BY THOMAS W. PHIPPS

—but for Cass it was never too late for deception

As if sensing her thoughts, Cass touched her fingers. Marjorie, it's always too late, isn't it?" It's mad, she thought quickly, but I wonder—I wonder if it is

MARJORIE stopped the taxi a block from the hotel. It had been drizzling all day and now the late afternoon sun had broken through and there was an inviting freshness in the air. As she paid the driver, a young boy with sparkling black eyes touched her on the arm and held out a basket stacked high with violets.

"What do you say, lady? A bunch of these and you can't lose—"

"No, thank you," she said, with a smile.

The boy shrugged and turned away. Marjorie walked on. When she reached the entrance to the hotel she

hesitated. She slipped her fur over her arm and lightly touched the fringes of her soft, brown hair; then she turned resolutely and went into the lobby.

She had been waiting only a few minutes when Cass pushed through the revolving doors. He was wearing an old riding jacket of his father's; in one hand he had a thick hawthorn stick, and in the other a small bunch of violets. He stood just inside the doorway, acclimating himself to the heat and smoke of the crowded lobby, his long, thin face more poetic than ever, and then he saw her.

She was sitting in a big leather chair, her head, as always, a little on

one side as if she were listening to some private music, her white-gloved hands folded in her lap. For a moment Cass stared at her, then he waved the violets and started over.

Marjorie sat quite still. This was the first time she had seen Cass in three months. After fifteen years of marriage they had had a trial separation and now, here they were, coming face to face to turn in the results.

All the way on the train coming East, Marjorie had been rehearsing this meeting; exactly what she was going to say and how she was going to say it. But now, with Cass only a few yards away, her mind went into

a total blackout and, like a school about to play To a Wild R school concert and forgetting opening bars, she felt a sudden. It didn't really surprise her. Cass had always affected her. Alone, she was articulate and but under the cold scrutiny of dark eyes she became confused and tongue-tied. She reached for a ladies' room; she needed a few minutes' reprieve, but it was too late. Cass was already at her side.

"Hello, Marge," he said in a low voice.

Help yourself to *Some Super Driving*

GO AHEAD—take the wheel of a Hudson, first chance you get. And as you press the starter button, look around you!

Catch the gleam of color that smiles up at you from the hood. Glance at luxurious upholstery, in an unusual fabric-leathergrain combination. Then relax into your favorite driving position on Airfoam cushions. You're about to find out why the word "Super" has always been identified with Hudson.

As you move out, listen for that Hudson Super-Six or Super-Eight engine. You won't hear a thing, for it is smooth power,

perfectly balanced, that has won for Hudson 149 *official* records—more than are held by any other stock car in the world.

Pick out a sharp turn. Hudson rounds it with less turning of the steering wheel than you'd expect. The little steering you do is *completely effortless*, and you'll notice there's no swing or sway. Then have a go at a rough road . . . you'll wonder who *smoothed it out* since you last drove it!

Yes, help yourself to some *Super* driving. Your Hudson dealer, one of a nationwide group of 3,000, is ready—the sooner you see him, the quicker you can enjoy *Super* driving every day!

HUDSON

HUDSON MOTOR CAR COMPANY, DETROIT 14, MICHIGAN

Two famous lines—the Super Series and distinguished Commodore Series—in popular body styles. Your choice, in either series, of 102-h.p. Super-Six and 128-h.p. Super-Eight engines. Your choice, too, in both series, of nine fresh new colors and four 2-tone combinations; with a wide optional selection of equipment and accessories.

What every bride shouldn't know:

WHAT it feels like to be poor . . .

What it feels like when your first-born needs an expensive doctor—and you can't afford it . . .

What it's like wanting a home of your own . . . and never quite getting it . . .

What it's like having your kids grow up not knowing whether they'll ever get to college . . .

What it's like to see the Joneses and the Does and the Smiths able to travel abroad—but never you . . .

What it's like to have to keep telling yourself, "He may not have money, but he's my Joe."

There is no cure-all for all these things.

But the closest thing to it for most of us is something so

easy and so simple that you almost forget it's there.

It is the Payroll Savings Plan. Or—for people not on payrolls—the new Bond-a-Month Plan at your bank.

Each is a plan for buying U. S. Savings Bonds automatically.

Either one of these plans helps you—as does no other system we know of—to save money regularly, automatically, and surely—and to hang on to that money till you need it.

So if you're a groom—or a bride—or if you know one, here's a bit of friendly advice to take or to give:

Get on the Payroll Savings Plan where you work or the Bond-a-Month Plan where you have a checking account.

It's one of the finest things that a young couple can do to start married life right.

Save the easy, automatic way...with U. S. Savings Bonds

DARK HORSE TO RIDE

Continued from page 15

lyful of this Slippers business." "I know. Your brain's chewing a lot digesting much. You figured the answer—it isn't." Petey to the waiter for more coffee. "I'd gotten it and tasted it, he said, 'after you're married, you can lead out into a little ranching, an' while slink outa the farming.' 'What I figure.' 'Must be something, to whip you this way.'"

"Jeff put his elbows on the dining forward. 'You know the blue lupine in May?'"

"her eyes. You've seen a black lined up for a fair?" "Nodded. 'Slide the butter closer.' 'oved the butter plate. 'That's You've seen a yearling filly? A ? An Arab? That's her figure. 'around her makes me—' 'oughed a delicate little cough 's hand. 'What does she think of 'ng today?'"

"doesn't know. Hell! I haven't but twice in six weeks. It's even miles from my place to the Jeff looked as if he wanted to an't get over there and back be- likings. It's only once in a long get Hoe-Handle Jake to come up with the cows."

"d you figure she'll say?" Petey

"understand, maybe." Then, as e with himself: "I've got to make money to pay back the bank." He thumb nail along the blue oilcloth. "ack Thomas fifty I'd finish one- e all-around championship." "snorted and pretended he was with a fit of coughing. "That mart. You're sore at Mack be- wouldn't give you a re-ride last Miles City." Petey shook his "ou've got your work cut out for Pete Day's down from Calgary last season Tom Triplett ran you Sphen—and he's getting better. I now how much that horse Zeke et of you. I felt that when you didn't think you could ride him nd pulling leather. The Jeff Ben- ew would o' cut his throat before gnat."

"shoved back his chair and stood y. 'It's time we go to the chutes.'"

7 ILE waiting for the calf roping, Jeff let his Pronto horse sashay to get warmed up. He picked ut in the grandstand; he had at ce friend in the crowd. From the ars he felt the chill of hostility— with Pooley had brought that on. r riders he was a maverick, and he their good-natured ragging that nd the sharp edge of nerves. r Loomis, in the judges' stand, s megaphone. "Chicken Farmer e coming out," he bellowed. f face went red at the cackling it that rolled across the arena. ically he straightened Pronto— a broke and the flag dropped. He calf in fourteen seconds. It stood m Triplett did thirteen eight, and ay thirteen and two-tenths sec- through the rest of the events he himself just short of tops. h it was over he went to the pen- aped tent to draw for the next day elect his daily money. His lone vs bulldogging, and he knew that he'd drawn was a weak-necked, y critter. a Thomas grinned as he paid him. ouldn't like to pay that fifty now, ou?" "just getting warmed up, Mack." "de the words sound confident, but

he didn't have the old fire. Something was gone. . . .

When the orchestra from Great Falls opened the first dance, Jeff was standing before Edith and Martha. Harry Strange came from nowhere out of the crowd, and taking his wife by the arm led her onto the dance floor.

"Harry still puckered?" Jeff asked Edith.

She made a little face. "He's jealous of you."

JEFF held out his arms and she came to him—lovely, slim and tanned—and he wondered if there really was as much lupine on the prairie that spring as he thought there was, or was he just remembering her eyes?

He tried to make easy talk, but the response he got was restrained, cool. When the number was done, he said, "Let's take a walk."

They edged through the crowd and walked toward the chutes and the de-

"I can't keep up with you. Let's go back." He saw Edith to Martha's side and turning on his heel, left the pavilion.

As Jeff turned his back on her, Edith Oliver had an idea. She turned to Martha. "Do you know Petey Wells?"

"Yes."

"I want to meet him—right away."

Martha waved toward the stag line. A half-dozen riders broke toward her. Gently waving her hand and shaking her head, she cut them down, one by one, until Petey came across the floor in his peculiar hitching stride.

"Petey," Martha said. "Meet Edith Oliver—and she wants to meet you."

"Mr. Wells, will you dance with me?"

"Why, sure, if you can get used to my gait. It's something like a Percheron with stringhalts."

Edith rose and went into Petey's arms and they moved slowly around the floor. "You're a good friend of Jeff Benton's, aren't you?" she asked.

"Win, lose or draw, he's my boy."

bar alongside the man and waved to Morgan. "Two glasses and a bottle."

Pouring the drinks carefully as though it were a rite and a privilege, Jeff slid one near the old rider's elbow. "I'm sorry about this morning."

Pooley turned to the bar. He looked at the drink and looked at Jeff. "I was out o' line, way out."

"I wish you'd forget the whole deal," Jeff said.

The corners of Pooley's heavy mouth turned up and his jowls flushed pink. He hooked two fingers around the glass. "Mud in your eye, Jeff." Throwing back his head he tossed the drink down in one motion.

They cemented the good feeling built on the first with two more.

"I never saw you ride, Pooley."

"Little before your time."

"Were you out today?" Jeff nodded in the direction of the chutes.

"Yup."

"What's wrong with me, Pooley? My riding?"

"You're not sure any more, Jeff. You go through the motions all right, but it appears to me like you're looking for a soft place to land." Pooley pulled his shoulders up in a shrug. "It's a funny thing about that. One day I was a top bronc rider, the next day I wasn't. It was a funny thing," he repeated softly.

Jeff slid two silver dollars across the bar to Morgan. "Eight drinks out of this." Pocketing his change he went to the door. "Take care of yourself, Pooley."

"Same to you, son."

Returning to the dance pavilion, he stood in the circle of stags and watched Edith dance three straight with Petey Wells. Petey was cantering through the steps with a small hitch in his hips as though he needed a spread of axle grease in his joints.

Flipping his cigarette over the rail, Jeff went to his room over the Chinaman's and went to bed.

WHEN Jeff was through his last event the next afternoon he went to the barbershop and had the zinc tub filled with hot water. He climbed in, bone-tired and sore, letting the hot water ease the aching fatigue from his body. "You're washed up, cow-poke," he told himself, "in more than one way."

He was late getting to the headquarters tent and the place was empty save for Petey Wells. "Here's your daily money, Jeff."

"How'd I do?"

"You won the bulldogging and bare-back ride; second in the calf roping, third in th' rest." Petey shuffled his feet and studied the shine on his boots. "I drew for you. You drew Midnight in the saddle-bucking finals."

"Never heard of him. He's probably a sleepwalker."

"They say he's a hell-roarer."

"How do I stack up on all-around points?"

"Third. It's a Mexican stand-off between Pete Day and Tom Triplett. You ride this Midnight horse tomorrow, and you've still got a chance to make Mack Thomas pay off." Petey made a cigarette and lighted it. "I met your girl."

"She's not my girl."

"That ruckus you two had, it'll straighten out."

Jeff shook his head. "Not a chance, Petey. We don't think alike."

He knew he was shadow-jumping with his pride, but he didn't go near the dance. He moped around Morgan's, and Pooley Jones came in—Pooley was drunk.

"Been looking for you," he said thickly. "They're fixin' to frame you."

"Who's going to frame me, Pooley?"

"I suppose I'd better get home and make a pretense of eatin' supper"

COLLIER'S

ROLAND COE

serted grandstand. A steer in the corral back of the chutes was bawling to the world, and a rising moon lighted a halo over the eastern hills.

"Like the show today?" Jeff asked.

"It was thrilling—and brutal."

"Are you huffy because I'm riding?"

"No, it isn't that."

"What is it, then?"

"The trouble you made when you rode into town today—Pooley." She looked up at him. "That was mean, Jeff, just plain mean."

"He asked for it."

"By calling you Slippers?" she asked sharply. "Where's your sense of humor?"

"I guess I lost that when Zeke dumped me."

"You lost more than that. You've changed a great deal in the past week."

Jeff dug his heels into the ground and stopped short. "I've changed my way of living—tried to change my thinking because of you; now you don't like it!"

"We're not talking about the same thing."

"What are we talking about?"

"You—"

"I thought so. He's told me a lot about you." She smiled. "I want you to do something for him—and me."

"What?"

Quickly, a bit breathlessly, Edith told him of their quarrel, of her plan and what she wanted.

Petey shook his head. "Can't do it! It'd be plumb dishonest."

"Not even for Jeff?"

"Not for my own mother."

"It's the only thing that will straighten Jeff out—and I won't marry him the way he is now."

"I'm sorry, Edith honey, but it's no dice." Petey ground his teeth when he saw the tears in her eyes. Jeff was right about the lupine. "I'm sorry."

"It's all right, Petey." Edith tossed her head back and looked up at him and the tears were gone. "Let's just dance and have fun."

When Jeff entered Morgan's, the bar was deserted save for Pooley Jones. Jeff wondered if he had left the place at all during the day.

"Hi ya, Pooley?"

Pooley grunted. Jeff edged up to the

Pomp and circumstance keynote changing of The Guard

Londoners flock daily to marvel at the machine-like precision of The Guard, resplendent in towering bearskin shakos. This distinctive ceremony is an essential part of the panorama that is London—as, indeed, is a deserved reputation for famous dry gins.

Barclay's London Dry Gin

Made in America
with costlier imported flavors

TWO HUNDRED years ago, a formula for a distinguished dry gin was devised in London. This ancient and honored formula is now the basis for Barclay's Gin, made in America with costlier imported flavors. Barclay's grain spirits are re-distilled with choice imported botanicals. You'll welcome Barclay's Gin (full 90 proof) at its few cents extra cost. Next time, enjoy this London tradition.

JAS. BARCLAY & CO., LIMITED, PEORIA, ILL. • DISTILLED FROM 100% AMERICAN GRAIN • 90 PROOF

"Some wise jazzbos who don't like you."

"How?"

"You jus' keep your peepers open," Pooley said mysteriously and would say no more.

Jeff shrugged. He bought Pooley a drink he didn't need and went to bed.

The next day as he made ready to go into the hole for the calf roping, he searched the stands for Edith but couldn't spot her. He drew a long breath. Win or lose, frame-up or no frame-up, he'd shoot the works and give them something to remember him by!

Pronto broke after the calf, tiptoeing. Jeff made his throw with a short rope, tied fast and was swinging down the rope before the calf tail-snapped around.

"Eleven seconds even!" Jerry Loomis bawled through the megaphone and there was a roar from the crowd. Jeff whistled through his teeth as he rode away.

The steer he drew for bulldogging was too big, too strong and too mean. He was on him four jumps from the hole, but lost time stopping him and more time throwing him. He limped away from the animal with strings of red-hot fire streaming through his groin. Pete Day won the event, with Tom Triplett second. The seesaw fight continued.

Breaking from the chute on Monkey-shines in the bareback event, Jeff rode him high, wide and handsome, but he thought he was going to keel over after the pickup. He walked stiff-legged to the rail and leaned against it. Finding a place in the shade, he lay down. He was fagged and the fire in his groin was burning into his stomach. He closed his eyes and didn't get up until he heard Jerry Loomis over the megaphone: "Slippers coming out o' Chute Three on Midnight."

CLIMBING the rail to the chute top, he looked down on the horse. Something hit him a wallop in the solar plexus. Beneath him, ready to go, was Zeke. Swinging around, he glared at Petey Wells in the judges' stand.

"You dirty, double-crossing dog!" he yelled. Pooley had been right, after all. Petey made vague motions with his hands.

"Now we'll weed out the chicken farmers from the bronc riders," Tom Triplett shouted.

"Are you coming out, or do I disqualify you?" Mack Thomas shouted at him. "I'm coming out—" Jeff settled into the saddle and the gate swung open.

Midnight erupted with a bawl. He caprioled so high it looked as though he were walking the top rail of the chutes. When he came down, his nose was between his front legs and flirting with his tail. He sunfished as he reached for the sky again. On the third jump he hit the

center of the arena and when he came down his legs were four rigid granite. For one blinding moment he thought he was gone. His was jammed against the horn and he went weak from the pain in his side but he recovered, and in that moment came to love the horse under his hand. He swept him from ears to tail, but he left no mark. Midnight was giving him a ride that would clear up a lot of and would get no spur from him.

He knew now what Edith had been talking about, and it had nothing to do with riding broncs or chicken farmers.

Jeff heard the pistol shot that marked the end of the ride and the pickup came in. He slid off the far side of the snubbing horse and went to his feet. Getting to his feet he walked straight to the fence; if he bent his knee he would cave on him. With the crowd beating wildly, he tried a cigarette, but his fingers would not hold it, and he ground the tobacco under his heel.

Loosening his belt from a throbbing stomach muscles, he went for the judges' stand; he had a chance. Petey. All along the way, he had been from the gang that put kinks in the line. It was like the day Tom Three rode Strawberry!

"Great ride, Slippers!"

He cocked his hat and grinned. Going to the trough by the judges' stand, he washed his face and waited. The last event was over, Petey Wells was down from the stand and stood in the crowd.

"Did Harry Strange and Tom get you to draw Zeke for me?" Petey.

"Nope, Harry don't own Zeke no more."

"Edith buy him?" Jeff felt he was on the right track now.

"Night before last, after your last event, how'd you settle on a name for him?"

Petey smiled. "Well, he's a black horse, an' it took till midnight for Edith to make me into making the draw. I had to wait with three people first—Mack Thomas, Tom Triplett an' Pete Day. Mack was willing, I might say eager, fifth place. Tom jumped, figuring he would throw you right out o' the chute. Pete Day said he didn't care who you rode; that's the kind of a name it is."

"I didn't see Edith in the stand," Jeff said. "She figured she couldn't talk to me if you was interested, she'd be coming at the ford."

Jeff tried to be casual about the whole thing. "Thanks, Petey," he said. Pronto was full of go as he headed for the trail to the Teapot Ford.

THE END

Bendix Brakes

STANDARD OF SAFETY WHEREVER WHEELS TURN

Bendix Hydravac* power braking is the largest selling hydraulic-vacuum unit ever built.

The Bendix Rator Brake for all planes gives maximum braking with minimum weight.

The Bendix Coaster brake for bicycles stops faster, coasts further, lasts longer.

Bendix-Westinghouse air brakes—the world's most widely used automotive air brakes.

Bendix Eclipse brake linings are standard equipment on America's leading cars.

Bendix is the world's largest builder of hydraulic and mechanical automotive brakes.

When man took to traveling on wheels the problem of safe, sure stopping has been as vital as dependable starting. In fact, without constant improvement in transportation, advancements in faster transportation would have been immeasurably handicapped. Bendix, for years, has kept brake development in step with modern needs. The Bendix duo-servo principle which makes brakes so easy to apply . . . the four-wheel brakes that more than doubled braking ability . . . the hydraulic brakes that stop smoothly and positively . . . the power brakes that make trucks and buses

as safe and effortless to stop as passenger cars . . . longer-lived, weather-proofed brake blocks and linings—all these were essential to automotive progress and all have come from Bendix. Today, advanced Bendix brakes stop transport and personal planes with the same certainty, and keep millions of bicyclists safer on highways everywhere. Because brakes are plainly so important, and because Bendix, on its record, is the greatest name in braking, wouldn't it be wise—if you buy, build or sell planes, bicycles or automotive equipment—to be sure you're braked by Bendix?

EVER YOU GO YOU'LL STOP BETTER BECAUSE OF

BEYOND ALL DOUBT

BY BILLY ROSE

Henri Volpin was reading his paper when the strange girl came in and sat down at his table. Volpin ordered a bottle of cognac and the pair began

THEY'RE bringing Volpin in now," said the man from the London Express.

Most of the village of Villeroi was squeezed into the courtroom. The accused man sat down in the prisoner's box and rested his fat little hands on the rail. When he noticed people staring at them he tried to hide them in his lap.

"What could twelve women have seen in such a man?" the correspondent of the Paris Press wondered aloud.

Then the judge spoke: "The prosecution rested its case last night. The attorney for the defense may now proceed."

As Philippe Durand got to his feet, even the judge leaned forward. Every eye fixed itself on the man who had come down from the Belgian capital to defend Henri Volpin. This was the legendary criminal lawyer who had cheated the gallows seventy-one times in seventy-three murder trials—this baldish, paunchy little man, whose suit could have used a pressing!

"Not much to look at," said the bailiff to the clerk.

"Notice the suit he's wearing," whispered the Brussels reporter to a friend. "Back home he's one of our best-dressed men."

"Gentlemen of the jury," Durand began quietly. "Henri Volpin is accused of the murder of twelve women. For a week, I have listened as the prosecutor of this court tightened the noose around my client's neck.

"You may have wondered why I did not cross-examine the witnesses. You may have wondered why I did not try to confuse the woman who was so positive Volpin was the man she saw twenty meters away on a dark night. I passed up these tempting opportunities, gentlemen, because a lifetime in the courts has taught me that the character of the accused and the character of the evidence are more important than whether a certain clock is five minutes fast or slow.

"And now I ask you to remember that no eyewitness to any of the murders has been produced. No one has found so much as a fingernail of the missing girls. Your prosecutor has built his case on what we lawyers call

circumstantial evidence—some half-remembered words, a button here, a few high-heeled shoes.

"At this moment, if you were polled, I know what your verdict would be. Some of you might even be glad to lend a hand with the rope."

"With pleasure," muttered the clerk.

Durand heard him and smiled in his direction. "It is clear Henri Volpin's time is running out," the lawyer went on. "Since this is so, perhaps we might use a few minutes of that time to review his life.

"I know something about such a life. Except for the name, the village I was born in is this village. My father, who was a judge in that village, in many ways resembled the honored judge who presides over this court. I remember a bookkeeper in my village who was a great deal like Henri Volpin. He was a quiet little man—no one ever gave him a second look.

"From the evidence I've heard this week, I gather that in the forty-one years Volpin has lived in Villeroi, scarcely anyone has given him a second look. And in a village such as Villeroi, that is not the usual thing. A necktie with a Brussels label, an extra glass of cognac, a walk with a girl is enough to get a man talked about.

"My client came as close to anonymity as is possible in Villeroi. On occasion, you discussed him. But we of the villages discuss everybody.

"ACCORDING to the testimony, here is what happened to this obscure bookkeeper: One evening a car drove up to your only hotel. An expensively dressed man and a girl wearing no stockings demanded and got the best room. The hotelkeeper's wife testified she heard loud talk in their room next morning. She told you the man drove away and left the girl behind. That afternoon, the strange girl walked into the little café where Henri was reading the Liège paper over a beer. She sat down with him.

"The waiter has told you Henri bought a bottle of cognac, and the pair discussed going to the bookkeeper's house. The strange girl was never seen again. The learned prosecutor has produced no one who actually

saw them enter Volpin's house, but he introduced as evidence a high-heeled shoe found in Volpin's bedroom. The hotelkeeper's wife recognized it as the strange girl's.

"A week later, the attendant at the cinema saw Volpin sit down next to the Molreaux girl with the painted lips. The widow Préjean, Volpin's next-door neighbor, says she heard a woman laughing in Henri's house that night. She swears it was the laughter of the Molreaux girl. The Molreaux girl has not been seen since and the prosecution lays great stress on a green suede pump found in my client's bureau drawer.

"Next, you heard the testimony about Louise Rhon, the schoolmistress from Saint-Vith. The head of the school told you Mlle. Rhon resigned her position to come to Villeroi and marry a bookkeeper named Volpin. The cartman swore he deposited the lady and her baggage at the defendant's door. The prosecutor showed you a brown walking shoe discovered in M. Volpin's cellar, and Mlle. Rhon's sister came from Saint-Vith and positively identified it.

"You have heard the detailed testimony regarding the disappearance of eight other girls under more or less similar circumstances.

"When Moya, the fifteen-year-old daughter of Dr. Benois, vanished, the police arrested Henri Volpin. The bookkeeper had been seen buying her a bottle of perfume at the apothecary shop. A later search of Volpin's lodgings uncovered the assortment of high-heeled shoes.

"This is the case against Henri Volpin. M. Volpin may not be the kind of person you would choose as a friend, but you are not here to pass on his qualifications as a dinner guest. You are here to decide whether he lives or dies.

"Remember that under the laws of Belgium, it is not a capital offense to collect high-heeled shoes. Under the laws of Belgium, you must not send Henri Volpin to his death unless you are convinced—beyond a reasonable doubt—that he committed murder!"

The father of fifteen-year-old Moya jumped up. "There is no doubt!"

"Gentlemen of the jury," he went on, "if there is a doubt in your minds, you must acquit." He looked at each juror in turn. "If you do doubt," he whispered, "though you don't know it yourself."

"There is no doubt! There is no doubt!" shouted the sister of the young schoolteacher.

The judge quieted the court, the paunchy little lawyer in the room. The suit continued. "If one of the twelve women you are so sure is dead were brought into this courtroom, what would you say? Would you then be so sure the other eleven are dead? Would you still be sure there is no doubt?"

He slowly raised his arm and pointed to the green-curtained window at the back of the court. "Gentlemen of the jury," he commanded, "you to direct your eyes to that window."

THERE was a sharp intake of breath as heads throughout the courtroom turned. The stenographer stopped writing. A small boy in the front row stood up. Almost everyone in the courtroom was related to one of the twelve girls. A draft from an open window fluttered the curtain in the doorway.

After what seemed like an eternity when the silence was pounding everyone's head, the attorney from Brussels spoke:

"Forgive me for building up false hopes. Forgive me for this little trick. No one is going to come through that door. But I was told that one in this courtroom who was related to that! Everybody else is related to somebody might. In every mind there was a doubt. And, gentlemen of the jury, if there was doubt in your minds a minute ago, how can you send a man to his death a minute later?"

Philippe Durand sat down. "Your man from Brussels is saying something," whispered the Paris correspondent to his Belgian friend. "Volpin will walk out of this courtroom a free man."

But Volpin didn't. The verdict was guilty. The sentence was death by hanging. One of the jurors had noticed the bookkeeper had never once turned toward the door.

nt to the cot and looked care-
the first time at the body. Ga-
been a big man, but he was so
y disease that he now looked
brittle as a mummy. He lay on

his back on a clean, patched sheet, his
shoulders cradled by pillows. His only
garment was a shirt of Egyptian cotton,
fine as lawn. The comfortable appear-
ance of the corpse was spoiled by a terri-
ble bruise in the center of the forehead
made by a heavy, blunt object which had
crushed the skull. Some blood had oozed
from the wound, but the main hemor-
rhage was inward and death must have
been instantaneous.

On the floor was a towel folded three
times like a bandage. There was blood
on it, and Chafik, having looked from the
pattern to the dead man, said to the alert
sergeant, "Fetch me the policeman who
was first called."

WHEN he was alone, Chafik com-
pleted a quick search of the hut
and bent to examine a heavy stone which
was hollowed to form a crude mortar.
The pestle, also of stone, had a wooden
handle bound with cloth. There was a
small sack of grain, almost empty, near
by, and as the policeman who had found
the body came in, the Inspector said,
"For grinding grain to make *khobis*."

He looked up with surprise when the
policeman respectfully answered, "Yes,
sir. It is so used."

"So I speak my thoughts aloud?"
smiled Chafik. "It is indeed a bad habit.
May I now hear your report?"

"Sir, I am of the suburban mounted
patrol. As I rode along the railway em-
bankment I heard shouting and came
down. There were many people about
this hut and I ordered them away. In-
side was the dead man as you see him.
He had been discovered by a woman who
cares for him when his wife is away—"

"Why does she go away?"
"Sir, she washes clothes for the effendis
of Baghdad—"

"Hardly a living," said Chafik. "Soap
has the value of gold, and customers are
few now the British have gone. The hus-
band, of course, could not work?"

"I have been two years on this patrol,"
the officer answered. "He has always
been too ill to leave his hut." The picture
of tragic poverty was getting clearer, but
at the same time it became less and less
clear why Yusif Galani should have died
violently.

Once again the Inspector looked at the
folded towel he had found on the floor,
and holding it up he asked, "Where was
this when you viewed the body?"

"I touched nothing, sir—but the
woman who found him said there was a

are *YOU* in
this frame of mind?

If you're thinking of building you'll be
happiness ahead to make this the corner
stone of your plans: You're not merely
buying so much land, material, shelter. You're laying a founda-
tion for a life rich with all the dreams you've ever had.

Make the most of it. Employ an architect's professional skill to
guide your ideas. Select a dealer and a builder who think in
terms of homes, not houses. And... specify building materials
whose quality will contribute to the years of pleasure you'll enjoy
under your own roof.

Of course, it takes specialized knowledge to evaluate building
materials accurately. But *CAREY* name is a reliable general
standard by which to measure this quality. And the *CAREY* name
is backed by 74 years of manufacturing experience... by count-
less hours of research.

So, if you're in a frame of mind that goes with home building
or remodeling, remember this: *CAREY* manufactures Asphalt
Shingles, Asbestos Shingles and Sidings... Asbestos Wallboard
... Rock Wool Insulation... Miami-Carey Bathroom Cabinets and
Accessories. See your *CAREY* dealer for more specific information.

USE THE BUILDING HELP AND GUIDANCE OF YOUR LOCAL
CAREY DEALER

Practically, every *CAREY* dealer offers special help to simplify
many or all of the following new construction or remodeling
problems. Ask your *CAREY* dealer about...

cloth over his face, which she lifted."

Chafik said in a worried voice, "If the towel had been wetted to cool his brow the thing would be understandable. But it was not wetted. This is grotesque." He gently placed the cloth on the crushed head of Yusif Galani and added, "It covered his eyes." Turning to Sergeant Abdullah he said in an explanatory voice, "Obviously the pestle used for grinding grain was the weapon. It was replaced in the mortar afterward and is unstained because of the towel. You will find no fingerprints because the cloth binding of the handle presents a broken surface. I am undecided whether this is an exceptionally clever crime, or one of extreme stupidity."

"In either case you will solve it—"

"If God wills. I have no powers myself." Inspector Chafik took a final look around the room and going to the door said, "I leave you to receive the doctor, Abdullah. Medical evidence is often unintelligible to the lay mind and confuses thinking. But check on the nature of Galani's illness and ask about the drugs you will find by the bedside. It is possible that some drug made him sleep, and that he was killed when sleeping. The autopsy will give us the facts on those points."

He left, saying in a clear voice, "A comfortable corpse. A very fine shirt. Such cleanliness." Sergeant Abdullah watched him go, with affectionate amusement because he knew Inspector Chafik was unaware he was speaking thoughts.

OUTSIDE the hut in the shade of the courtyard wall a number of women were crouching, their black veils drawn to hide their faces. They wailed incessantly, hennaed finger tips fluttering against their lips to produce a high, bubbling cry. Chafik stopped and said, "Is the woman of Yusif Galani here?"

One who sat silently apart from the noisy wake, nursing a small child, answered, "I am the wife."

The Inspector said to the others, "It would be better to think of the living. Go back to your cooking pots." The women fled, their black garments fluttering in the hot wind like the ragged wings of crows.

The little man lighted a cigarette. He could see only the eyes and part of the forehead of Galani's wife, for the folds of her outer robe were modestly drawn. He noted the cleanliness of the child and was pleased with the mother's dignity. Here, he thought, is one with courage, but her suffering is too great to be relieved by tears. He moved awkwardly because he did not wish to intrude on grief, but questions had to be asked and he was glad when the woman opened the conversation by saying, "My man is dead."

"He is with God."

She answered in a voice husky with tears, "He was a good man. Why does God strike a good man with sickness and leave him helpless? Is there a God?"

Chafik said, shocked, "There is a God, or you and I would not be here. What name have you?"

"Zenobia—"

"I see only one child. There should be two."

"The other has gone for water," the Widow Zenobia said, and then lifting her head and with pride in her eyes, added, "He comes now. Truly as good a boy as his father was a good man." She was silent as a boy came up the path carrying a gourd of water, which he presently handed to her. He was a tall, thin lad, his only garment a cotton gown held at the waist with a strap. His head was wound with a ragged, but clean turban cloth and he looked at Chafik with the restless, searching look of one who, even at his age, lived by his wits. "Ahmed has ten years," the woman said. "He is a man."

Chafik said, "Then I will talk to him as a man," and turning to the son of Yusif Galani he asked, "Who killed your father?"

Ahmed answered, "I do not know, but when I find him I will take his life."

His mother clutched his hand, moaning, "Such words should not be in your mouth." To Chafik she said pleadingly, "He knows nothing, because he went early to the bazaars to earn money by carrying parcels."

"I made twenty fils," the boy said proudly.

"Good!" Chafik suddenly smiled. Turning to the woman he asked, "Who killed your husband?"

"I know not." A hand still slender although work-hardened reached outward and upward and then fell listlessly to the ground. "I know not," the Widow Zenobia said again. "I went to the city with wash for a customer, taking my other child with me. There was some trouble and I was late back."

"And the name of the customer?" Chafik prompted.

The woman gave the name of an English resident of Baghdad, and when the Inspector asked, "What was the trouble?" she answered, hesitatingly, "A garment was missing." Hurriedly she

gone, he said to Yusif Galani's wife, "He is very bright."

"There was never a better son. If his uncle would help so that he could have learning—"

Chafik said, "The law will make him help. You are now a destitute widow with children. Hassan Galani, as next of kin, must help. Such is the law."

The woman answered slowly, "I have heard of that law. My man spoke of it and said he wished he could die so that such a claim could be made on his brother." She repeated the hopeless gesture of her hand and finished, "Now death has come to him. Death has come to him."

The Inspector threw away his cigarette and watched the neighborhood children fight for the smoldering butt. He cleared his throat loudly and said in a harsh, rasping voice to hide his emotion, "So he wished to die? Well, it was a pity he had to leave us with so much mystery." He took a thin billfold from his pocket and found three dinars, which he dropped by the woman's side. "Go with God, Widow Zenobia. I will speak to Hassan Galani

cle!" and shaking himself free into the gray, burning wilderness the huts, leaving Inspector Chafik motionless by the car.

Chafik drove back to his head on Al-Rashid Street and the police had to touch his arm to rouse him from his thoughts. The little man saw evil that men create returns a highest, and went up the narrow stairs the driver confused. At the top the stairs was a door boldly H. J. ELLSWORTH, and the Inspector passed it on tiptoe because he had to report to his superior, the liverish Englishman appointed Iraqi government to head the Investigation Department.

When he was safely in his office Chafik telephoned the home of Hassan Galani. A woman's voice answered, "My husband is at the Ministry," and said, "You are sure, Madame?" maced at the instrument as the plied, shrill with complaint, "At telephoned to say he was there, but does not ask questions when a stays away from home. Are we tals?"

Chafik said, "Madame, madam only an acquaintance of Mr. Galani and hung up quickly, thinking pity the growing emancipation of in Iraq had the Western wear emancipated tongues.

"There is danger in this," he said as he lifted the receiver again to the Ministry of Finance.

Hassan Galani was not in the office and the Inspector left a message to come to headquarters. Then he took a new packet of *Ghazi* cigarettes at his desk staring at nothing and thinking aloud the rambling words of the design. "—It is almost woven. I do the design." And hearing the echo of his own voice he smiled a little fool was glad when Sergeant Abdullah entered the room.

Marshaling details like a police sergeant, the sergeant made his report to the police surgeon's examination man was dying of cancer. He was perhaps have lived another six months if drugs at the bedside were to relieve him. He had taken a sleeping draught and he was killed and there were traces of a bowl of sour milk at his side. It was he was killed with the pestle of the mortar. Two blows were struck, but they were sufficient. He knew nothing of the matter.

"And saw nothing," said Chafik, the cloth spread over his face is a detail."

He was silent with his thoughts, roused himself when an orderly entered and said, "Hassan Galani is here."

The Inspector rose to receive the visitor, saying to Abdullah, "This is private, but look at the man as a detail. There is the shadow of death around his neck—"

HASSAN GALANI was a middle-aged man whose dignity was weighed down by the weight of his swollen paunch. His position in the Finance Ministry was important, and he said harshly to Chafik's office, "What is the meaning of leaving a message for me to you? I am disagreeably surprised." Chafik said, "The visitor killed my father?" Ahmed asked.

The little man answered, bowing his sleek head and smiling ingratiatingly, "I do apologize, but the matter was of importance and I feared you had left the office because you were not here last night." He did not miss the quality which darkened the visitor's handsome face, nor the anxious expression. "Were you away from Baghdad?"

Hassan Galani removed his black peakless hat of the Iraqi, and mopping his almost bald head he said, "I spent the night at my garden. Yes, at my garden up the Tigris such a hot night. I have a small room there and often sleep—" Abruptly

"Do you realize that if you were silly enough to run for Congress, you might be elected?"

added, "And afterward I sat by the river and bathed the child. My man wished to be alone."

"And the reason?"

"He said he expected a visitor—"

Inspector Chafik hid his surprise. His eyes, which matched the desert, were suddenly alive. "A visitor? A man?" he asked. "What man?" But he foresaw the answer.

"A wife does not question her husband," the woman said, and repeated wearily, "He expected a man."

"Had he friends?" Chafik said. "What of his brother?"

There was a flash of fire in the reply, "Hassan Galani left him to die. He would not give one fil to help him."

"May God destroy my uncle," said the boy, Ahmed, in a flat, dead voice. "When I went to him and begged for help for Baba, he beat me. He is cruel. He—" Ahmed was silent, digging nervously at the gray dust with his bare toes. Then he asked, "Did the visitor kill my father?"

Chafik parried with a question, "Did your father tell you of the visitor?" and when the boy shook his head the Inspector beckoned one of the uniformed officers from the door and told him to inquire if a strange man had been seen. He realized the chances were slight because the hut was at the outskirts of the slum and hidden by the curve of the railway embankment. "Go with the policeman," he commanded Ahmed. "Perhaps you can help him." When the boy had

about his duties." Abruptly Chafik turned away and walked to his car.

He was stopped by the policeman he had asked to inquire about the dead man's visitor. As he expected, there was no witness, and he said, "The English have a proverb about a needle and a bundle of hay. To find a man in a desert is equally as difficult." Chafik looked back at the miserable hovels crouching breathlessly under the merciless sun and was closing the door of his car when the boy, Ahmed, who had been standing behind the policeman, darted forward. "Effendi—" the boy began, and stopped with his thin, brown hands clasped and the interlaced fingers working nervously.

"What is it, Ahmed born of Yusif?" Chafik said to him.

"The visitor killed my father?" Ahmed asked.

"The unknown man," Chafik said gently, "is a dark thread drawn through an unfinished pattern. Until the weave is complete I cannot answer."

"There was a man near the hut when I left this morning—"

The Inspector caught the boy by his thin shoulders. "What? Why did you not tell me?"

"I did not wish to speak in front of my mother—"

"Good! It is right that as a man you should not talk of these matters before women. Who was the one you saw?"

The boy said breathlessly, "My un-

recovered his dignity and with it anger. "This is an outrage, Inspector! Why should you ask where I spent the night?"

Chafik, spreading his hands with the curved palms upward, said, "I talked innuendoes to find courage to break sad news. Your brother is dead."

"The only brother I had disgraced me with his poverty. As far as I am concerned he died long ago—"

"Poverty is not a crime, Mr. Hassan Galani."

"A man in my position must think of his reputation—but I do not care to discuss family matters with you." Hassan Galani rose heavily to his feet with the intention of leaving, but turned to ask, "How did Yusif die?"

"He was murdered," answered Chafik casually, and then in his most silky voice: "A witness has stated you were near the hut when your brother died early this morning."

"What an abominable lie!" shouted the man. "I was—" He stopped with a look of horror.

"You were at your pavilion on the river?" Chafik prompted. "Please do not trouble yourself over this foolish witness. It will, of course, be necessary to check with the servants of your *bayt*, a little matter which I will do most discreetly." He watched his visitor fumble blindly for the chair. "You see," Inspector Chafik went on, "if you could not prove your alibi—excuse the word, Mr. Galani—it would be very awkward. This witness hates you. He would swear before God you were there, and it might almost appear you had motive to kill your brother, because, as you told me, his poverty disgraced you."

Hassan Galani said with a pitiful attempt at dignity, "I forbid you to question the servants at the pavilion."

"Perhaps," Inspector Chafik said, "you were not there?" And leaping to his feet with a tiger's spring he shouted, "Where were you?"

"I—" "Circumstantial evidence can hang a man. Where were you last night? Where were you this morning? Why were you so late at your office? Why have you not been home?"

"I—" and, his face glistening with sweat, the man whispered, "I was with a woman."

"Yes," Chafik said. "You were with a woman. I thought the perfume which still clings to you did not come from the flowers of your river garden. Oh, Mr. Galani! Mr. Galani! Your dignity almost brought you to the scaffold!" He opened a drawer of the cabinet behind him and extracted a card. "My index cards are very complete. There is much on this one to interest the Minister of Finance. You appear to have expensive tastes, dangerous in a man who helps handle the nation's exchequer. There are the names of many women on this card. What name shall I now add?"

WHISPERING, Hassan Galani said, "Khurrem—" The name was drawn from him like a tooth from an abscessed mouth.

"Khurrem," the Inspector repeated thoughtfully. "Turkish. 'Joyous,' a notorious dancing girl at a certain cabaret in Baghdad who has already ruined several men." He wrote on the card and then said curtly to the man who was huddled on the other side of the desk, "You may go now. But remember that your brother's widow and his children are destitute, and by the law of Iraq you must support them. Be generous, Mr. Hassan Galani, particularly with the boy, Ahmed. And do not forget my records."

When the man had gone stumbling out, Sergeant Abdullah came from the other room where he had been taking down the conversation. He said with disappointment, "You have removed the shadow of the noose from Hassan Galani's neck, sir."

Chafik answered, "I have taken away that shadow, but he still lives under the shadow of my index cards."

"Both are uncomfortable, sir." Abdullah hesitated, troubled by the dead look in the eyes of his superior. He asked, in the hope of rousing Chafik from his thoughts, "Who was the witness who lied?"

"The nephew. The boy, Ahmed. His uncle planted hatred in his heart and it came back with interest. When he heard his mother say Yusif Galani expected a visitor, he saw his chance—" Inspector Chafik groped on his desk for the folder containing the reports of the case. He said, "There is medical evidence that the man took a sleeping draught. Does one do that if one expects a visitor?"

"By God, no!" "Abdullah, it is not for you to support an opinion with the name of God—but the woman, Zenobia, she also lied, like her son lied. Obviously if she gave her man a drug to make him sleep he did not expect a visitor. Please to consider the facts. They are all there to read, and the design is complete now the false thread

said. He drummed the desk for moment and then went on, "Why does honest woman steal to dress her in such a beautiful shirt? Have you here pride, decency? Is it not the duty to bury the dead in the finest garment? The sergeant did not reply, but his moved in a protesting gesture towards ears. Inspector Chafik continued, pering now, "And so we come to the spread over the face of a man who drugged by a draught introduced in morning milk. Hiding his eyes. T his eyes."

Sergeant Abdullah said, "All-m God! How could one look upon the face of one who was loved, and strike the fatal blow? Sir—"

INSPECTOR CHAFIK rose to his feet. He said harshly, "You will please be silent. I do not know what you think Yusif Galani would in any case do, died, and in agony. Furthermore, had lived, perhaps his sons would have lived. Those who live in poverty must deny their children food when their man is sick." He reached for a cigarette.

of Hassan has been drawn out." When Abdullah continued to look at him, his swarthy face paling, the Inspector went on, "What did we see in the hut? What was our strongest impression?"

"Cleanliness and tidiness. Exceptional cleanliness and tidiness, as if preparations had been made for a visitor—"

"Or visitors with curiosity, such as ourselves. The Widow Zenobia has great pride. We will now check on her pride." And reaching for the telephone he rang the number of the English resident for whom the Widow Zenobia did washing.

Sergeant Abdullah heard him say in his precise English, "Mr. Williamson? This is Inspector Chafik of the C.I.D. I understand you give your laundry to a poor woman and have a complaint about a missing garment—" He chuckled into the mouthpiece and said, "Oh, yes, even lost laundry concerns us! Surprising things come out in the wash. . . . Thank you, Mr. Williamson. Thank you." And putting back the instrument he said to Abdullah, "It was a shirt. A shirt of fine Egyptian cotton."

"The corpse—" began Sergeant Abdullah.

"The corpse wore such a shirt," Chafik

found one, but was blind to the note on his desk. "The Widow Zenobia said, 'can now make a legal claim support of the children, and her wise law obliges Hassan, as next of kin, to do his duty. That is sufficient, Sergeant Abdullah!'"

He went to the window and looked down at busy Al-Rashid Street, where taxis and horse carriages were mixed in a crazy tangle. When he turned back he was smiling faintly. "Don't you think," he said, "that some passing nomad came to the hut and struck the unfortunate because he moved and was possible to cry out?"

Standing at attention, worshipping the sergeant's look, the sergeant answered, "That appears to be the solution."

Inspector Chafik said, "Yes, it appears to be the solution, and the man, without motive, would be hard to find." He picked up the folder and went to the door, saying over his shoulder, "Obviously we close such a case. I make my recommendation to our Chief Inspector Ellsworth. I doubt he will tell me I am a very good man—"

THE END

SHEPHERD

Scene from the Samuel Goldwyn Production, "The Best Years of Our Lives"

"Your Unseen Friend" helps bring you "The Best Years of Our Lives"

All the beauty, talent and skill of Hollywood are at the mercy of a slender strip of film.

And Nickel is the *Unseen Friend* that helps make the picture clear and easy on the eyes.

For every foot of film must be processed with great care. Any contamination from corrosion of the metal equipment would make the picture "foggy," or otherwise impair the quality of the film.

The smooth, clean surfaces of famous Nickel alloys, like Stainless Steel and Inconel, protect the precious film from effects of corrosion and impurities. Thus Nickel plays an important role in bringing you the full enjoyment of movies, whether from Hollywood or your own camera.

Just one more way Nickel is *Your Unseen Friend*. It's

"Unseen" because Nickel is usually combined with other metals and you seldom see it in its pure state. It's your "Friend" because it serves you often and well.

For cool refreshmint in July...
Kinsey juleps you should try!

July's just the month to enjoy these delightful Mint Juleps made with superbly smooth, flavorful Kinsey Whiskey. Here's how:

Bruise mint in bottom of tall glass. Add teaspoon of powdered sugar, two ounces of rich, full-bodied Kinsey. Fill glass with shaved ice, stir until frosted. Decorate with mint.

Man, that's really refreshing! But *whatever* your favorite summer drink, try it with Kinsey, the unhurried whiskey for unhurried moments. You'll enjoy its fine flavor and bouquet immensely... *most folks do!*

MED HILTON

Planes shrink at a 40,000-foot altitude . . .

SKY LIMIT

As A. Fraser, one of the nation's leading high-altitude airmen, has flown 40,000 feet more often than any other pilot. Here is his story of some obstacles to be overcome before flying at or beyond eight miles in an aircraft as we know them today. (Told to Louis R. Huber.)

THE toughest frontier in history is only eight miles away but it's straight up. Which is why air travel at very high altitude, heralded as "to be commonplace, won't be," is an engineering research pilot, I am the last person to deny that, finally, you'll step into a space ship, and a short time later arrive at a station anywhere on earth; perhaps on another planet. Such flight probably will be achieved someday but, stick-figures and the best aircraft we have—either in operation or in prospect—I predict it will be years before any air liner will fly higher than 30,000 feet as a procedure.

Problems increase and become difficult the higher an airplane flies. At 30,000 and 40,000 feet they fly at a much faster rate and each hour is a hundred times harder to fly. We at Boeing have spent more time above 40,000 feet than any group of airmen, and as a result, 25,000 feet is now safer than at 40,000. We've been above 40,000 feet 10 times, yet the longest we ever stayed at that high was three hours and 44 minutes. This approaches the practical limit, for a vast amount of knowledge remains to be gained and understood before commercial aircraft can achieve satisfactory performance at much in excess of 35,000 feet.

See what the problems are eight miles up, let's make a flight in Noah's Ark. The former B-29 Superfortress bomber was modified for high-altitude research. The plane's name, by the way, is a double pun: Two of every electrical component carried in it, and electrical arcs are the chief form of electrical misbehavior we find in the upper air. Already we have made two high-altitude flights for the Army Air Forces, the objective being routine operation

of heavy aircraft above 40,000 feet. This flight is the third in a similar program.

It's a clear day as we walk out to the ship in the warm sun on Boeing Field in Seattle. Our crew consists of Copilot Bob Robbins, Flight Engineer Ben Werner, Aerial Engineer Ben Head, Photo-recorder Operator B. A. Smith, Temperature-recorder Operator Bill Deason and Electrical Engineer Charlie Rehkopf.

We climb straight for Mount Rainier, fly over the northern side of the mountain, begin a right turn and head back toward Seattle. Soon we're climbing across the invisible sky frontier. The stratosphere begins in this region where the air continues to grow thinner but maintains a constant temperature. Through our headphones the voice of the flight engineer says we are at 41,000 feet. That's nearly eight miles.

WE LEVEL off for our tests. You look down and feel a powerful sense of unreality. From horizon to horizon, at this height, is nearly 600 miles. You can look far out on the Pacific Ocean in one direction and over into Idaho in the other. The Pacific Northwest's precipitous mountain ranges are a schoolboy's papier-mâché relief map.

Some scattered clouds have clustered around Mount Rainier, off to our right. Its peak is at 14,408 feet, but from where

we are, the mountain resembles a heap of vanilla ice cream. Seattle, almost directly beneath us, isn't a city, it's a map. Its hills don't show; it is flat and lifeless. The water-front piers are threads on a frayed trouser cuff, lying at the edge of a puddle—Elliott Bay. You can move your toe and blot out half the city.

Navy aircraft carriers, anchored in rows behind Bainbridge Island, are matchboxes on a sheet of glass. The mile-and-a-quarter-long floating bridge, reaching from the edge of Seattle across Lake Washington to Mercer Island, is a gray needle. It is complete with an eye, too—the slip into which the movable span recesses when boats must pass. At Point Wells, an oil depot a few miles north of Seattle, huge round tanks are a cluster of insect eggs.

One of the first high-altitude problems discovered was airplane shrinkage. The wings seem the same as at take-off; actually they're several inches shorter. So is the fuselage. Although we're snug and warm inside, the outside air temperature is now around 67 degrees below zero, Fahrenheit. That shortens the whole airplane. In early high-altitude flights it caused control cables to go slack. It froze ordinary greases so thoroughly they resembled hard rubber; whatever they were supposed to lubricate was gripped tight.

Those difficulties were eliminated long

before we first got to 40,000 feet. Airplanes still shrink, of course; but we have developed new mechanisms, anti-freeze greases and other ways of keeping cables and pulleys in good working order despite the cold.

With breathing for the engines provided by superchargers and for us by cabin pressurization (See Wing Talk for April 5, 1947), these problems have been met. However, we found others at 40,000 feet. Cylinder-head temperatures, for example, were normal on our flight up until we reached 35,000 feet. Then they soared. The outside air at 40,000 feet, although very cold, is too thin to absorb and carry away the heat.

In the electrical field, high altitude raises particular Cain. Various electrical devices often go haywire; their insulation breaks down, they heat up and burn out. And a B-29 depends very much on 157 electric motors and generators.

AIR is an insulator but at 40,000 feet it is so thin that it loses much of its value in that particular. Moisture, too, normally serves as a lubricant, and its scarcity at those heights contributes to excessive wear.

Our high-altitude electrical troubles would vanish if we could place all the plane's electrical equipment inside the cabin, for there the vital cushion of insulating air would be provided by pressurization. Unfortunately, however, electric motors and other devices run by them must go where they are needed, in the unpressurized engine nacelles, wings and tail. If we could pressurize those areas it would also solve the problem; but pressurizing them would be expensive—maybe too expensive to be practical.

Better, perhaps, to stick to lower altitudes of 25,000 and 30,000 feet where air travel is just as good and the electrical and other difficulties can be overcome. That's why Boeing Aircraft is recommending 25,000 feet as the best flight level for its 80-passenger Stratocruisers scheduled for service on six world air lines upon completion of government tests now under way.

High altitude is great stuff but only when you go so high and no higher with the equipment we have now. Meanwhile let's be satisfied with the fact that when we're to fly regularly at 25,000 feet, that level will represent a sudden rise to twice the height our best aircraft have, until very recently, flown. ★★★

(EDITOR'S NOTE: Since Mr. Fraser's story was prepared, Westinghouse has announced the development of a high-voltage alternating current system for large aircraft, which will "eliminate or alleviate problems now encountered with electrical systems at high altitudes," according to J. D. Miner, manager of the Aviation Engineering Department. The new system has been installed on the AAF's two Very Heavy Bombers, the Convair B-36 and the Northrop B-35 Flying Wing for tests.)

Their peaks 33 miles apart, Mt. St. Helens (9,671 feet) and Mt. Adams (12,307) look like this from nearly eight miles up

"DE LUXE" YOUR CAR IN 5 MINUTES!

... Snap on curb-proof metal

Lyon
WHITEWALLS*
*TRADE MARK

It's OK lady—

you can't scuff **Lyon** Whitewalls

7 BIG FEATURES OF LYON WHITEWALLS

SCUFF-PROOF ... can't touch curbs!

EASY TO CLEAN ... a few swishes with a wet cloth restore their beauty!

LOW INITIAL COST ... less than half the price of a single white sidewall tire!

NO UPKEEP EXPENSE ... cleaned free of charge when the car is washed!

FADE-PROOF ... they stay white! The white enamel is baked on honderized (rust-proofed) metal.

QUICK INSTALLATION ... can be snapped on all four wheels in less than five minutes!

BETTER APPEARANCE ... make wheels look smaller and tires look larger to give cars a longer, lower look—the appearance car designers have always sought!

The search for a better looking and more practical whitewall is over! You no longer be afraid of spoiling the wheel appearance of your car every time you park. The new, metal *Lyon* Whitewall is the perfect answer ... it is the *only* whitewall that cannot damage! In all, it has seven distinct advantages. And the cost of *Lyon* Whitewalls, by comparison, is *remarkably* small. You can buy an entire set of four for less than half the price of a single white sidewall tire! And you can get them now from your car, tire or gasoline dealer.

Prices: Standard Steel Model (16" wheels) \$6.95 Per Set of Four. De Luxe Steel Model (15" and 16" wheels) \$9.95 Per Set of Four. Sets of Five Priced Higher. A Fair Trade Product Sold Under Applicable Fair Trade Laws.

They soon get into the ke whatever they're offered." ou look at it from another an- ing doesn't seem to add up, be-

Angeles is actually having a boom. Sixteen per cent of all housing in May was in the Los area. New developments can on practically every outlying ere are 40,000 units available,

new houses on money like that; you have a bad time with the rent. And what hits L.A. hardest is the realization that 67 per cent of veterans applying for public housing have lived in California less than a year.

"We thought we had reached the saturation point a year ago," says Tryon, "but they keep coming. At first the veterans had a little money saved up from the war or they could cash their bonds, but now they land here with no resources and can't get a job. It's heartbreaking, it's an impossible situation, and it's rapidly driving all of us distracted."

The effect on the veterans is even more serious. The pressure has become so great that many are cracking up. When things were normal for them they were able to forget their war experiences, but without homes or jobs and not much hope for the future, the strain becomes too great for them. The veterans' hospitals are jammed, and in May the Veterans Service Center was forced to place

the end of the war and the return of the Japanese, tension mounted to a point which has the authorities walking the floor nights. All of it stems from terrible conditions of overcrowding and unemployment.

The growth of Los Angeles during the war was fabulous; the city now claims 3,630,883 in its metropolitan area. This meant an increase of 30 per cent in the city and as much as 2,000 per cent in near-by San Fernando Valley. Out of the total population 600,000 are veterans and 51 per cent of them come from outside California.

Los Angeles alone has 65,000 veterans in college and junior college and another 40,000 in trade and high schools. Classes run from early morning till late at night. It is a common sight to see students drifting away through the darkness after their last classes around eleven at night.

When the newcomers don't want jobs they want educational facilities. It is difficult to say which is harder to come by and the lack of college space is affecting not only the out-of-state veterans but the high-school graduates of California. It's getting so they can't get into their own colleges and they're becoming bitter about it. We talked with the mother of a California boy who was also a veteran. Because he got back late from service he had to take extension instead of regular courses at the University of California at Los Angeles.

Going to College the Hard Way

"He gets up at seven every morning and starts work at seven thirty. He studies till noon, has lunch and is back at it till five. He goes to his first class then and has another at seven. He gets through around ten and then comes home and studies some more. He knows if he falls behind they'll be only too happy to get him out and make room for somebody else."

But of all these ills, housing remains the worst. Recently an attempt was made to promote co-operation between landlords and veterans by radio. There was a daily program in which pleas were made on behalf of incoming families. "I have the families right here with me," said the announcer. "Now, will somebody call in and offer them a place? They can pay; they're eager to pay."

There was great excitement over one phone call, which offered room for four families. The four families were waiting tensely when the prospective landlord showed up and took them to his property.

There were accommodations for four, all right—in four chicken coops that still needed cleaning.

Another big-hearted man had a bed for rent but it had to be for two people. Price: \$10 a week each. In brief, \$100 a month for the rent of one room.

The Veterans Service Center's files has reports of this kind:

(a) Family of thirteen people; living in two rooms.

(b) Family of twelve in two rooms; four grown people to each bed.

(c) Thirteen in family, father killed in explosion; family moved to abandoned mortuary.

(d) Family with eight children living in one room, the children literally sleeping in shifts.

(e) Young veteran couple had been living in chicken coop until January rains washed them out. Started living under railroad bridge but stopped by police. Saved by woman who allowed them to wall off end of her back porch.

(f) Family of nine living in tent in San Fernando Valley—mother and father,

mpleted or near completion. veterans are living in hen roosts. er is simple: money.

168 psychiatric cases every night in the Norwalk State Hospital, where they were grateful to find room to sleep in the hall- ways.

"And the jails are full of men who should be in hospitals," a physician told us bitterly.

But if conditions are tough for the veteran it is nothing to what they are for the Negroes and Mexicans. Before the war there were 60,000 Negroes jammed into the colored quarter around Central Avenue. The population has now grown to 180,000, and the Negroes have had almost no opportunity to spread. The Veterans Center has done a backbreaking job in keeping unemployment of ex-soldiers down to 50,000 in the county, but there is nobody to fight for the unskilled Negro or Mexican.

Fear of racial troubles is so great that for several years the Los Angeles police and sheriff's office have had complete plans worked out for quelling a riot before it could get started. Little Tokyo in the heart of the city is a source of apprehension now. When the Japanese-Americans were forced out after Pearl Harbor, the Negroes took over. With

sexamples could be duplicated
of times and the crisis they
Los Angeles in a difficult po-
the first place all loyal An-
and there are few others) are
their fairy city will soon be
st in the world. They would
ge everybody to join them in
so, and suddenly they are para-
h fear. It can be understood
l-searching goes on when the
eles City Council adopted a
resolution begging veterans to
from the city.

y has done a wonderful job
the Veterans Service Center,
upies three floors of a building
and Broadway and shelters un-

der this roof all groups interested in the
veteran's problem. (These include among
others the American Legion, American
Federation of Labor, American Red
Cross, C.I.O., United States Employ-
ment Service, Veterans Administration—
eighteen groups in all.) They operate un-
der a total budget of around \$750,000
and have been going for three years, car-
ing for approximately 500 cases a day.

"But finally it has swamped us," says
Tryon. "We can't cope with it and if un-
employment grows it will become a prob-
lem not only for the city and state but for
the federal government. We can care for
our own but unfortunately we can't han-
dle every out-of-stater who wants to
come."

This, then, is Los Angeles' dilemma.
The city council has said it; Mayor Bow-

ron went on a national radio hookup
earlier in the year and said it; the veteran
authorities say it with tears. According
to the L.A. Housing Authority they now
have 370,000 substandard dwellings.
Within earshot of City Hall, there are
slum areas among the worst in the world.
Other sections are rapidly being made
into slums by overcrowding. Sixty-five
per cent of the families can afford no
more than \$40 a month for rent; the new
homes being built rent from \$70 to \$100
a month.

This is the advice Los Angeles has to
give: (a) Don't come unless you are as-
sured in advance of a place to live. (b)
don't come unless you have a job lined
up. (c) don't come unless you have some
money saved. (d) don't come.

THE END

or years he was one of the heav-
ys in baseball. Dizzy Trout, who
is the Newhouser Boswell, reports
sion when the string bean won a
i Dick Bartell by mangling four-
s sandwiches, three barbecued
sandwiches and two quarts of ice
at a single sitting.

is for July 19, 1947

"How about a nice hunk of that roast
beef?" suggested Trout.

"Shucks," said Hal modestly. "I don't
want to make a hog of myself."

Newhouser says he never had a model
as a pitcher and picked up his original
style by monkeying with it. At the be-
ginning of his career when he was eager
to get all his strength into his pitches, he
pulled his leg up so high his knee came
between his hands on the windup. It was
much like pitching out of a barrel and
he has dropped that for the benefit of
occasionally seeing his catcher. He had
a knot in his shoulder for several years
but seems to have grown out of it, just as
he has the heart condition that kept him
out of the service and for a time threat-
ened to end his career. He has never had
a sore arm in his life.

It can be said for him that he is not a
prima donna when it comes to working.
In 1944 and 1945 when the pennant was
at stake he was in the bull pen steadily.
He opened the present season in St. Louis
on a day better fitted for arctic maneu-
vers than baseball. The game was halted
once for thirty minutes and a second time
for forty minutes by rain. This meant
that Newhouser warmed up three times.
He shut out the Browns, 7-0, with four
hits. "Three games I pitched; that's all,"
he said proudly.

The Browns spent little time in ad-
miration of the feat. With this game,
Newhouser had beaten them thirteen
times in a row and they were beginning
to suspect that he had something they
couldn't fathom.

It is possible to get a fight in any bar
or poolroom over the respective merits
of Newhouser and Feller. Last year Bill
Veeck rigged up a "Pitching Battle of
the Century" or something in Cleveland
between the two giants, and Newhouser
blew Cleveland out of the park. He
fanned nine, shut them out 4-0 and al-
lowed only two men to reach first! Early
this year the boys hitched up again and
Feller had his fun. He beat Newhouser,

6-0, and allowed Detroit only three hits.
So what does it all prove?

On the personal side, Newhouser is a
strange contradiction. He is city-reared
and yet he is as suspicious of strangers
and as uncertain in life as any hillbilly.
Once when a magazine writer wrote him
for an interview and suggested that he
was nuts not to take advantage of the
opportunity, Newhouser considered that
he was being called crazy and was greatly
hurt. He now has an attorney friend in
Detroit who handles his affairs and helps
him with the Hal Newhouser Fan clubs,
which do a good work in keeping young-
sters occupied and out of trouble.

A Saga of Boyhood Calamities

Perhaps some of his self-consciousness
comes from a scar under his right eye
which was due to an infected pimple as a
baby. If one catches him only from that
side his face takes on an evil look which
is not warranted by his blond hair and
pleasant ways. According to accounts by
Leo Macdonell of the Detroit Times,
Hal is lucky to be alive. At the age of
seven he fell off a woodpile onto a board
full of spikes and punctured his stomach.
At nine a playful companion opened his
head with a brickbat: while playing bas-
ketball he got a floor burn which even-
tually turned into blood poisoning; in
football he busted a few blood vessels.

Newhouser has the greatest respect for
Vern Stephens, the St. Louis Browns' shortstop, considering him the best all-around player in the league. This is be-
cause Stephens pulverizes him when they
meet. He has the usual trouble with Joe
DiMaggio and Ted Williams but thinks
Lou Boudreau of Cleveland is the smart-
est hitter of them all.

Joe Gordon has always given him
trouble, but his headache for years was
Bob Johnson, old left fielder for the
Athletics and Red Sox.

"He used to murder me," says New-
houser. "Batted .500 against me."

Newhouser is something of a Ring
Lardner you-know-me-Al character with
Boy Scout attachments. Like all players
who have acquired the modern lore of
the game, he finds Steve O'Neill the best
manager in baseball, Mr. Briggs the fin-
est owner in baseball and Detroit the
greatest town to play in. He says he has
never dickered over salary or held out
for a better contract, but the Detroit
writers lift a questioning brow at this.

In any event, Detroit has treated him
well and he has treated Detroit well. He
is said to have been paid \$45,000 in 1946
and to have signed for \$50,000 this year.
In addition there have been bonuses.

"He's not the gentlest character out
there," says Tebbetts, who used to catch
for him, "but he wants to win. I know a
lot of pleasant guys who never win."

TOO LATE FOR LOVE

Continued from page 66

Marjorie jumped up, feeling a little ashamed for it. "Hello, Cass."

They stood side by side, but not together, then he lightly touched her arm and held out the violets. "Last bunch in New York," he said dramatically; "or so the old man on the corner told me."

Marjorie took them and held them against her cheek. They were cold and damp and full of perfume. She remembered the young boy with the full basket. Still painting pictures, she thought quickly, telling half-truths for romantic effect. She gave a little sigh. "Thank you, Cass," she said, in a level voice. "They're lovely."

Cass ran his fingers through his thinning hair. "How about a drink?"

"Fine."

THEY crossed the lobby and went into the bar. It was a dark room and they found a table in the corner.

He ordered, then he sat back. "You're looking quite enchanting. You must have had lots of sun."

"Yes," she said, ignoring his extravagance. "Arizona's full of it."

"The Cape was wretched," he said. "Nothing but fog and rain."

"I wasn't sure you'd get here," Marjorie said. "You know how you are about dates!"

"This was a very special one, Marge."

"Yes," she said. "I know. Three months to the day."

They looked at each other and smiled. They were being almost painfully gentle, treating each other like invalids.

"Did you get my wire on your birthday?" Cass said, as the waiter brought the drinks.

"Yes. It was sweet of you."

"Not so sweet," he said. "After all, my dear, you are my wife." He raised his glass in a gallant gesture.

She nodded and sipped her drink. He looks tired, she thought, and his color is bad. A wave of protectiveness swept over her, but she quickly pushed it away. "Did you get any work done?" she asked.

"A couple of landscapes," he said. "Getting that Cape dampness on canvas is slow work."

"Yes," she said, automatically falling back into the habit of accepting his alibis for laziness. "It must be."

"Every one has trouble with it," he said, authoritatively.

"Do they?" she said, quietly, remembering that last year "every one" had trouble with "the Cape sunlight," and the year before, "the curious texture of the Cape sand."

They were silent again. Cass had started idly sketching with a match on a napkin. "What did you do?" he asked. "Oh," she said, "I fell off an enormous gray horse and I burned my fingers in a camp fire."

"You!"

"Yes," she said, lightly. "I've changed my type."

He gave a little laugh. She noticed that his hair hung untidily over his collar and that there was a button off his shirt. She reached for her drink and, this time, took a big gulp.

"This is pleasant, Cass," she said, "but it isn't what we're here for."

Cass stopped his sketching and glanced up. "No," he said, after a moment, "it isn't what we're here for."

"Do you want to start," she said, "or shall I?"

"You start," he said, in a low voice.

All right, she thought, taking a deep breath, I'll start. She rubbed her cheek with the violets, then she put them down and folded her hands in her lap. "Cass," she said, "how much did you miss me?"

Cass hesitated, but when he spoke there was a sudden softness in his voice.

"I missed you a lot, Marjorie," he said, after a pause. "I missed you a lot, Marjorie," he said, after a pause.

She swallowed hard. "Yes, I missed you, but that doesn't thing to do with anything."

"No?"

"No," she said, "that's just habit."

"Oh," he said, fingering his glass. "Yes," she said, "the important thing is that although I miss you, I was happier than I have been."

"Oh," he said quietly, "were you?"

Marjorie nodded. Lord, she should never have come. I'm hurt him this way. A letter would have been much kinder. "You see, really such a very different kind of son from you. You live so much in dreams and private thoughts."

unintentionally, you cut any part of your life. I'm the—opposite of you. You have many dreams, but those I want to share."

Cass moved uncomfortably in his chair. "What are you trying to say, Marjorie?"

She reached for the violets and held them up to her nose. "I don't want to go on, Cass. I think we'd be happier living like this."

"Apart?"

"Yes," she said, "apart."

"You want a divorce?"

"Yes," she said, gently.

Cass raised his glass and said, "I'm sorry, Cass, with all my heart. I'd do anything not to hurt you."

"Yes," he said, slowly, "I would."

"Can I have another drink, please?"

He beckoned to the waiter, gave the order, then he sat back. He glanced at him. His eyes were drawn tight. I'd never take it so badly, she thought.

to put out her hand, then she drew back. I mustn't give way now, she thought. I mustn't give way now, she thought. I mustn't give way now, she thought.

to be painful for a while, but it was worth it for both of us.

The waiter brought the drinks. "Is there anyone else?" he asked, opening his eyes and looking at Marjorie.

Marjorie shook her head. "No, not Cass, you know that."

"What is it, then?" he said.

SHE put her head back against the cushioned seat. Oh, she thought, many, many things, my dear thoughtlessness, your conc sharp, bitter tongue that always one thing that will hurt the baby—the baby who have—and all the tenderness never shown me—so many things.

"You know as much about Cass."

He sipped his drink. "You have a short memory, Marjorie."

"What do you mean?"

He put down his glass. "We'd had a pretty good life together. He half closed his eyes. "Remember the house we had our first summer in Cape—the one near the playground?"

"Yes, I remember. You wanted only cool room for your study."

He gave a little laugh. "I remember other things, Marjorie, midnight with red wine—the time I took Hyannis to the dance—and your red slacks. I painted you in against a dune—remember?"

"Yes," Marjorie said, "I remember those days so bad."

"No, Cass," she said, "there were wonderful moments, but—"

"But what?"

"There were other moments. Whole days at a time when I hardly say a word, when you

completely out of your life I might have existed. And then, sometimes I did speak, it was worse still. I said, I was ugly, I was common—everything you didn't like." She said, "It's no use going back over all

he said, "I guess not." There was a silence. Cass' shoulders slumped and he sat quite still staring into his glass. Marjorie looked at the violets and all of a sudden an ache in her throat. We've had much time, she thought, and in the end, all I'm doing is hurting you. What else is there to do? I've tried to live again. I saw her expression. "No," he said, "there's no use going back to anything." He brushed his hand over his forehead. "But the thing I want you to know, to always, anything I've ever been worth doing has come

Cass said, "you've shown me that inside people and that's the important thing an artist has to

Cass—I haven't touched your face never let me."

He gave an ironic little laugh. "I have done anything without Marjorie."

She turned slowly. Was it possible, all that she really had been important to him—was important to him, of all the quarreling and bitterness was a solid basis for their marriage?

Sensing her thoughts, Cass put his hand and touched her fingers. "Dear Marjorie, it's always too late. Everything's always too

She sat quite still and up from the bottom of her mind an idea stirred. She thought quickly, but I—I wonder if it is too late. If at last, you understand yourself, there's a chance you'll understand Cass—if only there were a

It takes a long time to grow up," Cass said in a quiet voice.

Marjorie watched him, and into her

heart, hesitantly, at first, then with a rush, came a wonderful lightness. He has changed, she thought quickly, he really has changed. Cass, dear, if it's true we could start all over again—

She looked down and suddenly she saw the violets. For a moment she stared at them; then, as if a cold wind had hit her in the face, she drew back.

"Last bunch in New York—or so the old man on the corner told me."

SLOWLY, the words came up and echoed in her brain. She glanced quickly at Cass, then back to the violets, and as the implications of the childish lie broke through to her—the incorrigible faking that would go on and on as long as he lived—the hope faded from her eyes and they filled with tears.

She turned. You're right, Cass, she thought—it is too late. There's no magic left.

She got up and pushed back her chair, a heavy sadness weighing her down so that she moved slowly.

He had watched her expression change. For an instant, the lines around his mouth drew down. Then, as if he understood, he gave a deep sigh. He put out his hand and laid it gently over hers. She could feel a warmth in his fingers that had not been there for years.

She reached down for his handkerchief. This is the end, she thought, wiping her tears, it's run its course for both of us.

Their eyes met, and for the first time in their lives, they were two people completely together, completely peaceful.

"Goodby, Cass," she said. He looked at her, then he picked up the violets. He held them lightly to his lips, then he gave them to her. She took them and without a word, turned and walked away.

Cass watched her across the room. When she reached the door she stopped and glanced back over her shoulder. He blew her a kiss. For a moment she stood still, her head a little on one side. Slowly, she smiled. She waved his handkerchief, then she went out.

As she started down the street she saw the boy with the violets. He was tugging at the arm of an old lady and his basket was still stacked high.

CARS RIDE ON AIR

Yes, compressed air actually supports your car. But it's not just how much air you put in your tires, it's *how much stays in* that counts.

The Standard Tire Valve plays a mighty important part in the life of your tires.

Notice the two sealing units. (1) The Core that holds the air in the

Valve. (2) The doubly reinforced brass and rubber seal *inside* the Cap that guarantees an air-tight, dirt-proof Valve up to 250 lbs. pressure.

The next time you look at your tires—check these two sealing points. You can replace the parts yourself, or ask your dealer to do it for you.

CAN WE INSURE AGAINST WAR?

THE answer to the above question is: Of course we can't. There isn't any absolute insurance against anything, because this world is a most uncertain place.

However, we can, if we will, take out fairly thorough coverage in an effort to save ourselves from having to fight any more wars, atomic or otherwise, and to make reasonably sure of winning if we do have to fight.

President Truman late last year appointed a nine-member committee, called the President's Advisory Commission on Universal Training, to look into these possibilities from all angles.

The commission was a distinguished one, comprising M.I.T. President Karl T. Compton (chairman); Joseph E. Davies, former ambassador to Russia; Princeton President Harold W. Dodds; Attorney Truman K. Gibson, Jr.; the Reverend Dr. Daniel A. Poling of the Christian Herald; Mrs. Anna M. Rosenberg of industrial relations fame; Judge Samuel I. Rosenman, onetime adviser to President Roosevelt; the Reverend Edmund A. Walsh, vice-president of Georgetown University; and General Electric President Charles E. Wilson.

It investigated and deliberated, and recently came through with a long, detailed and possibly frightening report on what we can do to keep wars away from our door in future or win them if they succeed in kicking the door down. The report is now being discussed far and wide by American lawmakers and military men, and no doubt by the leaders of potential enemy nations.

Much of the emphasis is placed by the President's commission on universal military training for American young men. It is recommended that each of our boys start a year's hitch at age 18 (or 17 with parents' consent), and spend the first six months in basic training in camp or aboard ship.

Under this proposal, he would then pass the other six months in one of several optional forms of train-

ing. Or, if qualified and ambitious to do so, he could make the Army, Navy or Air Force his career.

The object would be to provide this country with large numbers of men who would know what to do when and if an air-borne attack by atom bombers, followed up with air-borne infantry, were to surprise us some morning in a super-Pearl Harbor and blast a lot of our cities' gizzards out.

What we are chiefly afraid of is that if the American people consent to such a system of universal military training they may be lulled into a feeling of smug, false security.

To do that, it seems to us, would be to commit as suicidal a mistake as the French people did before World War II, when most of them concluded that the Maginot line was a 100 per cent insurance policy against any more invasions by the Germans.

The President's commission also wants this country to have an adequate Regular Army, Navy and Air Force, "capable of dislodging enemy forces from bases near this country" and of establishing new bases "anywhere in the world for new hammer blows against the enemy homeland."

We are also strongly advised by the commission to build and maintain a powerful mobile force of long-range bombers, their avowed job being, in case of necessity, to carry atom bombs to any point or points on the globe, for swift and merciless retaliation against any attack on us.

Needless to say, we would maintain a large and growing stock pile of the newest in atom bombs for these planes to carry.

Almost as important as the fighting services, according to the President's commission, is an efficient and thousand-eyed Intelligence service—in plain English, a spy system—to counteract the efficient spy systems of various other countries, and "to discover war plans of a potential aggressor or extension of his sphere of influence to replace the cushion

of time which the United States no longer has as a result of the speed of atomic attack."

Along with all these recommendations, the commission warns that our monopoly of the atomic technique probably will not last beyond 1955, and that by 1955 a large-scale, all-out atomic war will be possible.

This would be a grim and costly program. We tried several easier and seemingly more realistic alternatives between World Wars I and II. The United States led the disarmament parade, promoted the Kellogg-Briand Anti-War Treaty in 1928; adopted stringent neutrality legislation in 1936, and clung to it till after World War I ended in 1939.

All these things were expressions of American abhorrence of war and desire for peace. But all that they accomplished was to give the rest of the world the impression that the United States for some reason would never fight. In the end, we got into the worst fight in world history.

It may be that the United Nations—the expression of American abhorrence of war—will become a powerful agency for war prevention. Perhaps U.N. may make big national armaments unnecessary. But that time is not even in sight.

Until that time arrives, we can see nothing the United States to do, alas, but to concert its efforts along pretty much the lines mapped by the President's commission. The plan isn't perfect, but at least a carefully considered basis for discussion and action.

Whatever we do, it seems to us the most important thing of all is to avoid, persistently, the Maginot line state of mind—never to kid ourselves that we can go to war safely because of some slick weapon. It must be universal training or the atom bomb or other. France did that once.

EXPERIENCE IS THE BEST TEACHER!

THE WARTIME
CIGARETTE SHORTAGE
WAS A REAL **EXPERIENCE**
I LEARNED THAT **CAMELS**
SUIT ME BEST!

Elaine Decker

WELL-KNOWN FENCER

More people are smoking **CAMELS** than ever before

*"The shortage taught me the big differences
in cigarette quality," says Miss Decker*

SMOKERS everywhere shared your experience with cigarettes, Miss Decker. They too smoked many different brands . . . and compared.

And millions found that experience is the best teacher . . . that for day-in and day-out smoking pleasure you just can't beat the rich, full flavor and the cool mildness of Camels. That's why today more people are smoking Camels than ever before. But, no matter how great the demand for Camels, this you can be sure of:

We don't tamper with Camel quality. Only choice tobaccos, properly aged, and blended in the time-honored Camel way, are used in Camels.

Getting cigarettes is a hard way! It wasn't much fun, standing in line taking any brand you could get. But that's what millions learned when a cigarette suited them best — Camels!

R. J. Reynolds Tobacco Company, Winston-Salem, N.C.

**YOUR "T-ZONE"
WILL TELL YOU...**

T for Taste...

T for Throat...

That's your proving ground for any cigarette. See if Camels don't suit your "T-Zone" to a "T"

*According to a recent
Nationwide survey*

MORE DOCTORS SMOKE **CAMELS** *than any other cigarette*

Three nationally known independent research organizations surveyed 113,597 doctors — in every branch of medicine — to name the cigarette they smoked. More doctors named Camel than any other.

He wants to be Italy's Duce

By BARRETT MCGURN PAGE 28

Fathers and sons are a common sight in the busy Studebaker plants—As a result, there's a consistent continuity of high quality construction in Studebaker cars and trucks. Peter and Floyd Dreibels, pictured here, work in different departments although they've been photographed together. In many of the Studebaker father-and-son combinations, however, the son is an apprentice—the father his instructor.

Men of conscience as well as competence build long life into your Studebaker

A thrilling eyeful at anyone's doorway! Sweet and low—a melody in metal—that's how delighted motorists describe the far-advanced 1947 Studebaker. Whether your preference is a Champion, a Commander, or a special Land Cruiser, each 1947 Studebaker is a real postwar car in performance as well as styling—luxurious—amazingly roomy—with such unique Studebaker advancements as non-glare "black light" instrument dials and safety brakes that automatically adjust themselves.

*This painstaking care began
back in 1852... it's worth more
than ever now in 1947*

IT'S certainly sound sense to put your new-car money into a distinctive postwar Studebaker.

You get far-advanced styling and engineering—a really modern 1947 automobile. This up-to-dateness gives you the finest kind of motoring now. It's sure to make your Studebaker a much demanded car when the time comes to trade it in.

But your best reason for buying a 1947 Studebaker is the trustworthy quality of its workmanship. It stands up remarkably because the men who build it put pride into their work as well as skill.

These men come largely from families whose names have long been part of Studebaker's history. It's in their blood to believe that good workmanship goes hand in hand with good will.

That's why the surviving soundness of your Studebaker is the constant eye of your neighbors. A Studebaker never wears out.

It represents more than the source of a paycheck to Studebaker craftsmen. It represents a reputation that they and their kinsmen and fellow townsmen have been upholding for more than 95 years.

STUDEBAKER

*The postwar leader in
motor car style*

Don't expect a Royal Welcome
if you bring
INFECTIOUS DANDRUFF!

Get after it quick with **LISTERINE ANTISEPTIC!**

The look on her face says more than a thousand words—nice to just don't care to mix with the of infectious dandruff!

Don't think for a minute you laugh off this troublesome condition. Infectious dandruff is easy to catch, but *hard* to get rid of. So don't fool around. At the first sign of objectionable flakes and scales start with Listerine Antiseptic and massage.

Antiseptic action is important

where germs are present, and Listerine Antiseptic kills germs on the scalp by the million, including *Pityrosporum ovale*, the "bottle bacillus" which many authorities recognize as a causative agent in infectious dandruff.

Scalp and hair are given an invigorating antiseptic bath. Almost at once excess flakes and scales begin to disappear. Your scalp feels delightfully fresh.

In a series of tests 76% of dan-

dandruff patients showed complete disappearance of, or marked improvement in, the symptoms of dandruff at the end of 4 weeks of twice-a-day Listerine Antiseptic treatments. Listerine Antiseptic is the same antiseptic that has been famous for more than 60 years in the field of oral hygiene. Lambert Pharmacal Company, St. Louis, Missouri.

THE WEEK'S MAIL

DAY-PART-I-MEHNT DE CO-RE

DEAR SIR: As I was reading your zine of May 31st, I noticed a note in the cartoon. It reads, "Je suis très à gauche." I believe you'll find that the accent goes toward the left. N'est-ce pas?
JOSEPH RICCARDI, Cleveland

Vooz est absolument correct, in L'accent que vooz est obvieuxly to eez call l'accent grave, et we ployé l'accent aigu.

HIGH-STRUNG

DEAR SIR: In The Week's Mail, I there is a reference under "Humor" to the number of city block light years.

It is indeed more than all the world can boast. Just to give you an idea, suppose that ordinary kite or string about one fortieth of an inch in diameter were available in a length of 100 light years.

If this piece of string were wound around and around the earth like yarn, so that all of the surface of the earth were covered, there would be about 1000 layers of string over the earth, and the entire earth would be covered almost a quarter-of-a-mile-thick with string. Judging by the way some of the people on the earth have been acting, it might be a good idea to start winding.

F. W. GODSEY, JR., Pittsburgh

Sounds like a sensible idea. Why not start winding string right away. But what about the wind the string?

WATCH OUR LANGUAGE,

GENTLEMEN: "Damn" was in the Heavy, Heavy Over Head Crichton (May 24, 1947). The word was intended to express carelessness or indifference, but the connection the word should be derived from "tinker's dam." A tinker called upon to do mending of kettles or pans; in performing the task he was necessary to build up a little wall to hold the mend in place until it hardened. After the repair was made, the useless dam was carelessly thrown aside, whence our expression "don't throw away the tinker's dam."

MILDRED OGLE, Bunker Hill

Not that he gives a tinker's dam, the name is spelled Crichton. Webster's "d—" to "dam."

THE GENTLER SEX

DEAR SIR: The article on my grandmother, Conchita Cintrón (Beauty in the East) (Continued on page 81)

KEEP UP WITH THE WORLD

BY FRELING FOSTER

For several decades after Russia's first railroad began to operate between St. Petersburg and Moscow in 1851, the trains running on Sunday and holy days carried, for religious services, one or two "church cars" whose special equipment included stained-glass windows and sacred paintings.

For every 1,000 Americans who died last year of heart disease, 295 were of normal weight, 227 were underweight and 478 overweight; while for every 1,000 who died of diabetes, 238 were of normal weight, 152 were underweight and 610 overweight.

Of the 30 most popular cocktails and other mixed drinks—from the Alexander to the Zombie—in the United States today, rum is the chief ingredient of eight, whisky of seven, gin of seven, wine of five and brandy of three.

America's greatest furor was that created by Jenny Lind, the Swedish singer, during her concert tour (1850-1852). Its extent is indicated by a collection of Lindiana owned by the New York Historical Society which contains, among its thousands of items, scores of the countless articles on which her name and portrait were used as a trade-mark or decoration, such as bonnets, beds, whiskies, wall-papers and men's fancy vest buttons.

The Todas of southern India, a tribe of 700 aborigines who still permit brothers and friends to have wives in common, devote little time to a profitable occupation as they are supported largely by a neighboring tribe which regards them with superstitious veneration. The Todas themselves so worship the cow that their single temple is a dairy presided over by their chief holy man who desanctifies the sacred milk before its distribution.

Probably the most fantastic ever made for an article of a historical importance was that American who, a few years ago, tempted a number of museums in an attempt to sell "the skin of the serpent that tempted Eve in the Garden of Eden."

A unique double suicide by electrocution was committed by an American couple in 1926 near Trieste. After wrapping many yards of electric wire around himself and his sweetheart, the young man tied to the other end of the wire and it up and over a high-tension transmission line.

During the theatrical year ended May 31, 1947, Broadway started with 17 new Broadway shows. Of those that opened, 13 closed within a week and ten others within a month, while 16 were hits (11 more performances). Three of the successes were among the 11 shows still running at the end of the season.

Recent cases in which difficulties were considerably lessened by the psychological effect of color in the repainting of a black telephone booth a soothing green which resulted in a tremendous decrease in the number of suicides who jumped from it, after the repainting of telephone booths which resulted in faster communications and the elimination of verbal lines.

The Euthanasia Society of America is now conducting a campaign to legalize euthanasia or "mercy killing" on the following basis: Any sane person who wishes to be put to death to end his incurable physical suffering first apply to a court for a permit. Then three physicians, appointed by the court to investigate and, if they approve, permit is granted and the patient may use it or not—if and when he chooses.

Contrary to the common belief, most lynchings are incited by attacks on white women, not on Negroes. In the United States in the past 10 years were accused of any kind of crime.

WHOSE DOG IS THAT ?

"Greg Duda" is a puli (Hungarian sheep dog) owned by a Metropolitan star who has been called "Queen of American Carmens." Miss S. was born in Deepwater, Missouri . . . started to sing at the age of five . . . has appeared in pictures, but at present is devoting her efforts entirely to opera, motion pictures, and radio work. She likes golf, tennis and driving her black convertible . . . often taking the wheel from her chauffeur. She always looks for the "Ethyl" trademark when buying gasoline because: "Driving is more fun when the car runs smoothly and powerfully! That's why I choose 'Ethyl' gasoline."

"Bruce" belongs to one of the busiest men in radio. Mr. G appears on as many as eleven shows a week and his specialty is kidding sponsors and commercials. He works without notes or script . . . just says whatever comes into his head . . . which is something when you consider he's on the air about seven hours a week. You can hear him over the CBS network at 11 A.M. EDT Monday through Friday and at 9:00 P.M. EDT Tuesdays.

His home is in Virginia, where he enjoys sailing, raising horses and driving his new car. He says he always uses "Ethyl" gasoline because: "If I didn't, they wouldn't put my name in this ad."

From the clues given, can you name the famous owners of these happy canines?

2. "Great Pal," a Great Dane, belongs to a famous movie comedian who is coming back to the screen after an absence of several years. This should be great news to the folks who roared at the antics of this frantic young man with horn-rimmed spectacles when he starred in "Grandma's Boy," "Safety Last" and "The Freshman." His new, sure-to-click comedy is "The Sin of Harold Diddlebock," a feature release of United Artists.

He lives with his wife and children in Beverly Hills, drives a light gray convertible and collects old cars. He uses "Ethyl" gasoline in *all* his cars because: "There's nothing like 'Ethyl' gasoline for bringing out the power of a new car and putting a bit of life back into an old one."

Read this to check your identification of the dogs' owners:

It's pretty hard to identify somebody from a picture of his or her dog. Also the fact that the person is an "Ethyl" gasoline user is not the best of clues. Millions of people like both dogs and high-quality gasoline. However, we think we've given you enough other clues to identify: **1.** Gladys Swarthout. **2.** Harold Lloyd. **3.** Arthur Godfrey.

These famous people look for the "Ethyl" trademark for the same good reasons that millions of other car owners do. They know the familiar yellow-and-black "Ethyl" emblem on a pump means the oil company has improved its best gasoline with "Ethyl" antiknock compound. This famous ingredient steps up power and performance—helps any car, new or old, do its best. Ethyl Corporation, New York.

THE WEEK'S WORK

"I'm sorry—the machine decided," Humor Editor Williams tells a sad cartoonist, as his Gagometer tears up her idea

TO TELEVISION, the Space Ship and the Bomb, we can now add another miracle of scientific achievement: the Gurney Gagometer. It seems that Mr. Gurney Williams, Collier's humor editor, has looked at nearly 1,250,000 cartoon gags and he thought it high time someone came through with a machine to take over the job. So he got together the works of an alarm clock, a rattrap, a mousetrap, a photographic timer, various springs, a buzzer and a bell.

Gurney hooked up these mechanical intestines to several flashlight bulbs and batteries, and set the intricate mechanism inside a wooden cabinet. Finally on June 12, 1947—while Mrs. Williams was crying, "Gurney, the screens aren't in yet!"—the machine worked.

Do not get the impression that the Gagometer is the mechanical dream of an impractical Edison. It actually operates. While Mr. Williams lolls leisurely, a lovely assistant slips a cartoon idea into a slot at one end of the Gagometer. The mechanism whirs, indicating the gag is being pretested by an Assistant Brain. If the idea has possibilities, it is put through for further consideration. The starter button is turned, the Electronic Brain goes into action. A flashing light indicates the Brain is thinking.

Should the idea be deemed unworthy, a buzzer sounds ominously, and torn pieces of gag are ejected brutally from the top of the machine. If okayed, the idea is paid for immediately—three cents! Instructions for operation are clearly printed on top: "Caution: Use only as directed. If headaches persist or recur frequently, consult your doctor."

When pressed for a carefully prepared statement on his amazing device, Mr. Williams said, "I understand the British and the Russians are working on similar devices. The British call theirs the Hawscope, the Russians named theirs the *Mashina Dlya Shootok* (Machine for Gags). They're both two years behind, neither having the Assistant Brain, one of the best-kept secrets of the peace."

We understand cartoonists are feverishly working on a counter device.

ROBERT GIBBONS (*A Thing Called Heart*, p. 16) grew up in an atmosphere of local athletics in Tuscaloosa, Alabama, where his father was a high-school coach who believed in "heart" as the essential ingredient of a ballplayer. "He had to believe it," explains Mr. Gibbons, "being one

of the lightest guards ever to kick football at Alabama."

As soon as he reached the discretion, Mr. Gibbons, who twin, began writing. So far ground out millions of words which about 300,000 have mostly in two novels. In 1915 married, had a son, now seven, he describes as a born ball statesman, writer and scientist. he went to war, serving aboard LST, and ashore at Leyte and

When Joe Garagiola, Cincinnati catcher, got his thumb busted during the World Series of '46, Mr. Gibbons recalled the same thing happened to Joe during a game at Rizal Stadium some months earlier while playing for the Manila Dodgers, a team managed by Kirby High. Gibbons also recalled watching a little named Schantz or Schanz win Okinawa against Manila.

"He was so small that his uniform draped down to his ankles," said Gibbons. "He lost the game without heart, and the whole stadium booed him. I don't know whether the man has made his way into professional baseball."

"The characters of *A Thing Called Heart* are out of my imagination; they are tempered by recollection of such things as a twice-busted little man in an oversized uniform, the nature of my father's sportsmanship."

Mr. Gibbons admits hero worship motivates a lot of his writing, practically all the heroes of his life have turned out to be lecherous so-and-sos. "But I'm not going to cule my son when he begins to play at this baseball star and that champion hero," he adds. "For I'll still be believing, in my reserved, adult way, in my own personal heroes."

EXTRA! Flash! Special! On the morning of Friday, June 13, a member staggered across the floor of the New York Stock Exchange carrying stacks of the new Collier's under each arm, shouting, "I dope on why Farley broke Roosevelt!" Trading stopped as members rushed up and got the copy. Next day's reports show the market had risen.

This week's cover: Blue Jimmy Snyder captured the vibrant blue of the Bahama heavens. The British Colonial Hotel in Nassau in the foreground is pretty attractive, posed by native Bahamians. . .

TED SINE

From all the garden's host, one butterfly on dancing
wings hovers before her, spending its brief hour
with joy to symbolize her love. Just so, the diamond
on her finger will some day gleam more brilliant than
any other, reflecting her love's own image. Her
engagement ring-stone should be chosen, then,
for its proud place. It need not be of many carats,
for color, clarity and cutting contribute
also to beauty and value. Be sure to
seek the advice of a trusted jeweler.

Harvey stumbled into the room. Edna Mae put her arm around his shoulder. "How did you find me?" he asked

GENIUS WORKING

HENRY NORTON

"You're still tops," Edna Mae said to Harvey Renner. "And no other copywriter can make a statement." However, no other copywriter tried

HARVEY RENNER wrote radio commercials. Yes, Harvey Renner was the type of person who enjoyed writing radio commercials, and with men who knew commercials best it was generally conceded he did a very nice type job.

Harvey had a noble brow, straight blond hair, and inky fingers. In an occupation usually noted for oddly assorted garments, thought-glazed eyes, and a tendency to three-day drunks, Harvey was notable. He drank sparingly, his neat gray suit just missed being dapper, and his pale, narrow, sensitive face had all the calm intellect of a bank clerk or a horse player.

At the moment Harvey was putting the final deft touches to a singing commercial. Strictly from Gilbert and Sullivan, the music, so the internal rhyme scheme had to be fast and tricky without reducing the sponsor's name to unintelligibility. Unintelligibility on the radio usually results from an announcer or singer tackling a word like un-

intelligibility. He was seated at his desk, beating out rhythm with a finger purpled by ditto carbon, when Edna Mae Scott put her three-dollar coiffure into the room. She was Mr. Disbrow's secretary. The ill-informed might cling, if they wished, to the idea that Mr. Disbrow was the brain behind the adver-

tising agency of Yates & Disbrow. Edna Mae knew better. Were she ever to leave Mr. Disbrow, for any of the reasons that kept coming to her mind, the entire enterprise would, she was sure, fold up.

Edna Mae, having a deep-rooted respect for the symptoms of genius at work, waited quietly; after a moment Harvey's hand slowed and he turned to look at her. The sunlight from the reception room beyond touched her hair and built a small leaping fire among her blond-gold curls. Harvey sighed and all memory of the commercial vanished.

"Orbed maiden with white fire laden," he quoted softly, and sighed again. "Yes, Miss Scott?"

Edna Mae puzzled briefly over his use of the word "orbed"; then, smoothing her dress at the waist, she decided that no matter how he intended it, she had a right to it.

"Idea conference, Mr. Renner," she said. "Mr. Disbrow and Mr. Evans right away, in the room."

Harvey frowned at the clock and checked it elaborately with his own watch. He had plenty of time to finish his work, but there was no harm letting people know how busy he was.

Edna Mae added softly, "And Mr. Castle, too."

Harvey Renner got to his feet immediately, said, "Thank you, Miss Scott!" with more warmth than the occasion seemed to (Continued on page 60)

BOY vs. BASS

BY WARWICK M. TOMPKINS

Deep in the dangerous waters off Tahiti, a nine-year-old American boy stalks and finally shoots a sea bass that weighs nearly half as much as he

MAKOA'S paddle missed a stroke as he waved to his friends on the American schooner, Wander Bird, anchored just inside the reef in Papeete, Tahiti. Makoa was dressed for hunting in the ocean's depths. His golden skin glistened with coconut oil, and his shock of black hair was sleeked down and caught by a bright band of plaited fibers. His only garment was a scanty *pareu* patterned with a white flower.

For all of his weight he was not squat nor ugly as he sat in the green dugout. He had the smooth muscles of a great swimmer and tireless paddler. Today he was taking Ann, 11, Commodore, 9, and the Skipper on a fishing expedition, but there were no rods or reels in the boat. The fishing was to be the more exciting and difficult sport in which the fishermen swim underwater to shoot their game with peculiar weapons.

"We're all ready," Skipper greeted the Tahitian, "I see you've brought the spears and slings!" In the bottom of the canoe lay a half-dozen slender rods with barbs at one end and several short lengths of bamboo with strong rubber loops lashed at one end. "Bring your diving masks, you two," the Skipper called to the children, and they jumped into the canoe.

Their diving masks were oval pieces of glass mounted on red rubber which covered their eyes and noses, but not their mouths, and were held in place by heavy rubber bands. The purpose of the mask is to keep water from getting against one's eyes. Unless a diver is swimming he lets his mask hang around his neck and this the children did now as Makoa headed toward the reef, the canoe and its single outrigger leaving a double wake.

On the seaward side of the reef the water was suddenly blue and deep. "Makoa made a special spear for you, son," Skipper told Commodore. "Let's see what kind of a hunter you are." The spear was three feet long, thinner than a lead pencil and more like a tailless arrow than a spear.

"Here's the sling," Makoa said. "Put your spear through the tube, pull back the rubber band and zing! Let 'r go! It works like a slingshot. You'll soon get the knack."

Commodore slipped over the side of the canoe and lay face down on the surface of the water as he paddled slowly along the edge of the reef. The world he saw was different from anything he'd ever seen before. He was excited and even a little frightened. What creatures might not be lurking along those coral cliffs? He had heard

of fierce eels and the huge M rays which flit like bats through tropic waters. He knew about the deadly barracuda and the tridacna, that monstrous clam which can trap and kill any diver.

Only the brim of the reef's precipice was brightly illuminated by the sun. In the crevices of the palisade, plants flourished, and animals which he could hardly distinguish. In the bubbles and back of the surf the upper growths waved vigorously, but farther down, movements were slow and languid.

The face of the reef was pocked with caves, tunnels and passages leading into darkness. It was a fairly regular precipice, but now and again there were isolated piles, standing like sentinels in watery silence.

When Commodore swam toward he discovered there were sounds in the water. The surf heard the dominant splash, and out of its turmoil a gentle rain of debris lazily down the cliff. Stones and lumps ticked delicately as they bounced. He watched Skipper unsuccessfully at a rainbow fish picked up the metallic "ping!" as the arrow struck the reef.

"Over here!" Makoa called to the swimmers. "Good hunting!" He treaded water and pointed out a Here an underwater cape thrust from the reef. Twenty-five feet from a sandy bottom shelved gradually deeper water. Commodore could see black outcroppings of rock sloping upward from the sand. The spears rested on a graceful, natural shelf. Through it, slim green shadows drifted. He gasped when he realized that these were fish.

Makoa suddenly raised himself and exhaled explosively, and dropped first toward the bottom. When he was far down Commodore saw him easily, his broad feet beginning to thrash in short, hard kicks. As he saw him the fish shifted away and sinking closer to the bottom or going under overhanging rocks.

Commodore was obliged to breathe and when he looked down Makoa was already rising transparently. A second or two later broke surface and shook his spears. A two-foot fish was impaled on its jaws gasped and from the flailing strings of diamond drops flew in arcs. Makoa paddled to a rock tied his catch to it with a bit of twine.

"Looks easy," Commodore murmured rashly. "Anything a champion does easily," Skipper cautioned. "Com-

URATION BY DAVID SHAW

RAH! RAH! RADIO

BY RAFE GIBBS

The coed is chief engineer of Cornell's station WVBR (Voice of the Big Red). She's repairing the equipment

THE most insolent, idealistic, raucous, sentimental, daring, conservative industry in the nation today is college radio. It is also the poorest financially and the fastest-growing.

If anybody would like to argue any one of these points, welcome, welcome. The Intercollegiate Broadcasting System, operated by students and for students on campuses all over the country, thrives on argument. Choose your own side, pro or con, on any question; name your own weapon, reason or roughhouse. The collegians are virtuosos of persuasion.

When certain Yale men felt that the Princeton campus radio was presenting the football situation in an unfair, or unfavorable-to-Yale light, they took the argument into the enemy's territory.

They drove to Princeton, deployed into scouting and attacking parties, tiptoed into the WPRU studio, strong-armed the eight persons they found there, including the announcer, engineer and commentator, lashed them to chairs, placed their own previously prepared platter of football commentary on the turntable, and predicted to the shocked radio listeners of Princeton that Yale would win Saturday's game—which, as it happened, Yale did.

But within minutes after the offending platter began to grind, Princeton listeners came to the rescue, pouring out of houses all over the campus. In a soul-satisfying riot, they roughed up the invaders and threw them out. The next week a giant "P" was burned into the grass at Yale's stadium.

Of course from an elderly point of view, all that was proved by this melee was that boys will be boys.

But sometimes the college radio boys devote their talents to higher purposes. Far away at campus problems, they work for tolerance, they try high-minded experiments in the drama, and some but not all tackle national and international affairs.

The radio talent of Brigham Young University, Provo, Utah, protested the high prices of books in a little skit entitled *The President's Freshman* (no connection intended with the member of their own faculty). A part of the skit ran something like this:

President Slushbottom: Now, my boy, the thing you must do is buy textbooks.

My boy: Yes, sir.

President Slushbottom: You will need Psychology I, by Slushbottom, \$4; Sociology Made Easy, by Slushbottom, \$5; Sociology Made I, by Slushbottom, \$4; and Sociology, by Slushbottom, \$6, a comprehensive work. Got those books, my boy?

My boy: Yes, sir, but . . .

President Slushbottom: You can stop me, my boy. I know what you were going to do. You cannot buy these books secondhand. You must try to sell them at the end of the year. At every year, that's the Slushbottom way. Now, think I can live on my salary, do you?

Professors in some colleges objected to the spread custom of broadcasting Music to the masses, expressing doubt as to the compatibility of music with mental effort. But the Intercollegiate

Men from Brown and girls from Pembroke College demonstrate a studio technique that is informal, fresh, strictly collegiate. In a round-table session over Brown's WBRU, students discussed birth control

At Brown the "underground" radio is only a problem, not politics. This group is checking transmitters

The Intercollegiate Broadcasting System has very little money, limited facilities and a small audience. But it is the fastest-growing and freest-talking network in the nation

WVBR of Cornell University came to the nonfraternity students who claimed they crimination in the matter of getting de- s at football games. The system of seat was revised.

ians, in a series of round-table inter- faculty members, asked the president, W. Dodds: "Does Princeton discrimi- Negroes on admissions?"

g that it was curious that there were Negroes in a student body of 3,500, a ed why applications for admission car- tion as to race. Not, the president said, s of discrimination.

was said on the subject. But WPRU- ith interest that next year's application ot ask about race.

won a minor victory over college regu- its series of programs dazzlingly but y entitled Sex after Six. The idea was be "all out by six" rule for women visit-

ing in men's dormitories. The students, contending that 6 P.M. was too early to break up a cocktail party, plugged for an extension to 9 P.M. The college authorities compromised on 7 P.M.

College radio was born at Brown University in 1936, when David Borst and George Abraham hooked up low-power transmitters to interdormitory heating pipes. Within a few years 12 more colleges established stations, applying the technique now generally in use, of hooking up to regular electric wires. In 1940 these stations formed the Intercollegiate Broadcasting System, a strong central organization with headquarters in New York, on which any college may call for help in solving its radio problems. David Linton is its only full-time officer, but many professionals, including the two Brown men who started the whole thing, are on call.

After the slowdown of the war, college radio has picked up again. It is twice as big a thing today as it was a year ago, and it promises to be twice as big again by this time next year. It now reaches more than 100,000 listeners through broadcasting stations in 32 colleges and universities scattered through the country. IBS reports that 20 more stations will go on the air in September.

In addition IBS has 18 more "trial" members, whose stations are under construction. Plus applications for membership and calls for technical help from many more student groups. Plus plans for regional, national and finally international hookups with students all over the world.

College radio has limitless ambition. It even hopes, by grace of sponsors, (Continued on page 52)

Students are often interviewed on the campus. Questions can be more controversial than commercial radio allows

Cayuga's waters an on-the-spot crew from WVBR the treetops to broadcast the Cornell boat race

The Cornell outfit bought this 1922-model station wagon, for use as a mobile unit, but couldn't often take it out because of flat tires. Makeshift equipment, however, discourages few campus broadcasters

A THING CALLED HEART

BY ROBERT GIBBONS

The story of a game little man who made the Big Leagues

IT BEGAN as long ago as the first part of last year and as far away as Rizal Stadium in Manila—a far place made remoter still by a far time. It began when the USO All-Stars came, in the course of their Pacific tour, to Manila, where they played a five-game series with the Base X Blues. It began when big-leaguer Ed Rankin said to Willys Jackson—

But before that, there had been a war, and before the war, Willys Jackson had pitched ball in the industrial leagues of Vulcan City. There they ranked him with the game's great right-handers before he was out of high school. Home-townners are that way. "Little Billy," they called him. "That's my little man," they said. "That's my boy." Even when he couldn't finish a game he got the kind of hand that fans give a favorite. But most of the time he finished his games, and most of the time he won them. They said in Vulcan City that he was booked for the majors, you couldn't keep him out with a locked gate.

But Sam Chester, who had edited sports through more years than Willys Jackson had lived, shook his head and said to himself, "He's mighty small for the big leagues. He'd need an arm like leather and more heart than the law allows." Then, to hide his doubts, Sam whooped it up in his column. For Sam was a sentimentalist to whom sports were essentially games, not big business; they were games played by men, and Sam liked to believe that a little man could sometimes have enough of a thing called "heart" to make up for what he lacked in brawn. That was Sam's belief, and he sold it to Willys Jackson. It happened that they were both pint-sized men.

In the summer of 1941, the Hawks signed Willys Jackson and sent him to their Southern Association farm. Before his selective service number came up, he pitched three games, winning two. Myers of the Appeal wrote: *For his size the best right-hander these old eyes have glimpsed in many a moon.*

After that, the only write-ups Willys Jackson got were in mimeographed camp newspapers—*Jackson Blanks* 167th. . . . *Little Giant Handcuffs*

Eglin. He burned down everything he met in the service outfits, but the going wasn't professional. It was a hybrid game they got from crossing the sand lot with the majors. A man couldn't tell whether he was getting better or worse. He couldn't tell whether he still had what it took. In Manila, for instance, the Base X Blues had World Series veterans teamed with guys who had never managed to get beyond utility outfielder for Chattanooga—or some cow college in Texas. In this conglomerate, Willys Jackson—or Jeep, as he had come to be called—played second base and Marc Nettles played short, when not taking their respective turns on the rubber. And though for four years the game of baseball had eddied in the swollen current of war, Billy the Jeep still played the game as he thought Sam Chester of the News might like to see it played. That was as it should have been—for if so enduring a quality as heart cannot last four years, what can?

But a romanticist who clings to such things must have his heroes, near and far. Willys Jackson had them. Near was Marc Nettles, who had given him the name "Jeep." Marc was an old campaigner—five years with the Hawks before he got into the Army. He was a bony, sun-hardened, even-tempered man who believed no fairy tales about the sporting world. He chewed his tobacco and spat cynically into the abiding dust of the Orient. "Nahhh. Jeep boy. You'll find out, you'll learn. In the majors they spike you in your sleep. They cut out your heart to make a lousy dollar. Why don'tcha go back home and hunt muskies or whatever you was doing before they rassed us into this Army? And play ball for fun, son. Hell on it for a living."

THIS cynicism from so near an idol did nothing but strengthen Jeep's faith. He listened and laughed, taking it all in in the way a kid brother takes in the worldly wisdom of an elder. He said, "You going back to the Hawks, ain't you, Marc?"

To this stock question Marc Nettles had a stock reply: "Sure, Jeep. But I'm in a rut. All I know is ballplayin'. I couldn't sell Bibles—not even in Mi'ssippi." The thinly spat tobacco juice, the twisted grin in the lean, unbelieving face. And Jeep the believer laughed. Great kidder, old Marc was.

Meanwhile, a far idol drew near. There had been a time in Willys Jackson's life when his greatest heroes of baseball were hitters, not pitchers. It was in those days that Ed Rankin had first become a bright name, and in those days—when the diamond was an empty lot behind the Dixie Produce Company's warehouse—a boy going to bat said to himself, "I'm Babe Ruth," or "I'm Lou Gehrig," or "I'm Ed Rankin." And that was what he was in his mind. So it had been with Willys Jackson, and some of the luster of those other days lingered yet in his mind.

"You ever know Ed Rankin, Marc?"

"Yeah, Jeep, yeah. We was with Shreveport once, way back."

"What's he like?"

"Well, he's a good-enough ball-player," Marc said. And that was all he said, because nobody was paying him to tell the Jeep about what heels sometimes got into pro ball. Some

things the kid would have to learn the hard way. He would have to learn that Rankin was a big, hog-jawed, ham-handed slugger who despised such minor subtleties as the bunt, the live-dollar hotel room, the subway; he liked to slam the old ball out of the park, live in a suite, take a taxi wherever he went. Lower than all the low things of the world he ranked little men, and the lowest of these were pitchers. But that was something the Jeep would have to learn the hard way.

IN THE first game with the All-Stars, Jackson was hot. They said in the stands that he was hotter than a firecracker. They liked to see a little man do well. He gave up five hits, struck out Ed Rankin twice. That was a mistake. It brought on the trouble in the second game—Jeep Jackson was playing second base.

The battery for Base X was Marc Nettles and Tommy Bizzoco, and Marc was pitching a competent game, nothing inspired like Jeep's game of the day before, but fair. He was a run behind going into the fourth, but nobody was sweating any blood over it. Even Billy the Jeep felt a divided loyalty as Rankin came to bat. A man could have too many heroes sometimes. Of course, the thing to do was to play to win, and that was what Billy meant to do. But if big Ed happened to like one of Marc's pitches, maybe planted it outside the park, well—wouldn't it be all in the ball game? And wouldn't it give the guys in the stands a big kick? And wasn't that what the game was all about—wasn't it just a part of the big show to keep everybody happy until the boats went home? Sure.

Over the PA system came a brief announcement: *T/5 Irwin P. Miller, report to your company headquarters. You are going home.* The stands cheered for Irwin, whoever the hell he was. "Hey, Mac, what if that hadda been you?"

"Who? Me? Why, I'da stayed for the ball game."

"Like hell."

"Lookit old Ed. I'd know that big guy at the plate anywhere in the world."

"Even Manilya?"

"Even Manilya, gurilya. Look at 'im." The sergeant laughed to remember and to have remembrance so crystallized that he could feel it where he lived.

Marc Nettles burred a fast called strike down the middle. He just didn't go for this big fellow; never had. Catcher Tommy Bizzoco, cocky and prancy-legged, strode out beyond the plate, gestured choppingly with the ball at Marc. "You got 'im playing for our side, Marc. You got 'im standing here. Show 'im your fast one now." Marc felt a grin twist his lips. The young'uns like Tommy and the Jeep, they were eager. They played it for a game.

Rankin reached for the next one, sent a looper between first and second, an easy single. The outfielder came in on it, bobbled the ball. Rankin rounded first and started for second. Then there at the bag was the little squirt who had set him down without a hit yesterday. Okay, Junior, stand there. This is a man's game. Rankin went in sliding. There was some dust,

In the way that Jarrell leaped and stretched his gloved hand high above his head was something that—beyond work and play—deserved Olympian accolade

DOING WHAT COMES NATURALLY

BY HANNAH LEES

Have you a special talent? Chances are you have, and aptitude testing can uncover it. The result may surprise you

A typical aptitude-test subject, Laurence H. Hudson, clerk in the office of B. W. Dyer & Co., was unhappy in his job and agreed to try the Johnson O'Connor Research Foundation career-

ANYONE ever call you a born salesman? A born cook, artist, mechanic or anything else? If so, it's probably true, and you're lucky if you're working at it. But even if you aren't, the chances are seven thousand nine hundred and ninety-nine to one that you were born to do something better than most people. And if you're that odd one and in addition have a very large vocabulary, you may well end up a big-shot executive. So says the Johnson O'Connor Research Foundation, which ought to know—having spent twenty-five scientific years isolating human aptitudes and finding out just for what part of the world's work their owners are best suited.

It all started in 1922 when the engineering department of General Electric was trying to find ways to utilize waste products and, thinking logically, began also to try to find ways of fitting men more exactly to their jobs. Standard intelligence tests hadn't seemed to help much.

So Johnson O'Connor, a young engineer with the company, who had a background of astronomical-mathematical research, worked out a test which showed that some people, regardless of education, intelligence or training, were much quicker and surer with their fingers than other people. Another test showed that some people were particularly deft at using tweezers and they weren't necessarily

the same people who were deft with their fingers. In a company that manufactured intricate electrical equipment, this was an important discovery, and there might well be many others.

O'Connor set up a laboratory right in the plant—calling his work Human Engineering so as to come under the engineering department budget—and began to work out other tests for other important aptitudes, and to give them to the employees. As men found themselves being shifted to jobs they could do better and liked better they started bringing their families in for testing. In a few years the O'Connor Laboratory had to split off from General Electric and become a full-time project on its own.

Today there are ten permanent laboratories scattered about the country, most of them under the name of Human Engineering Laboratories and all giving uniform aptitude tests. The best-known one was at Stevens Institute of Technology in Hoboken until the war nosed it out, and is now in downtown New York, but other big ones are in Boston, Philadelphia, Chicago and Los Angeles. And there are any number of traveling laboratories that go out and set up shop in schools or factories or other organizations. Sometimes they test just one department or class, sometimes the entire pay roll or enrollment. Often a firm will make a radical redistribution of jobs, based on aptitude findings.

Probably the most striking thing about these Human Engineering Laboratories—beyond the fact that given seven hours of anyone's time and twenty dollars of his cash, it can tell him what he is likely to be good at and why—is their extremely unpsychological approach in this psychological age to the question of human abilities.

They're an Inborn Gift

Aptitudes, they believe, are as inherent as blue eyes and more so than curly hair, and have little relation to intelligence and even less to environment or childhood conditioning.

If, in spite of your fondest dreams and after years of exhausting practice, your daughter still hates the piano, it needn't mean she is in revolt against you or even that she has no soul. Possibly she simply wasn't born with finger dexterity. An aptitude test could have told you this before she ever went near a piano.

Or if your boy, to be more practical, has trouble getting through simple arithmetic, and routinely fails all his written exams, don't laugh hollowly, if he still talks about being an engineer. He may have great structural visualization, lots of creative imagination and a very subjective personality, a combination which belongs to most top-flight engineers and scientists. All he may lack is natural skill

at pencil and paper work—aptitude, they call it. All that is needed is to shift to a small school can help him get through the elementary paper work with much discouragement.

That is one reason why the Engineers encourage parents to have their children tested early—nine, say, is not too young.

Many a boy who could have done important engineering work has spent his life as a garage mechanic because he was too slow at writing down answers in examinations even though he had tremendous talent sign.

These are fancy words: finger dexterity, structural visualization, counting aptitude and the rest, tests that go with them are remarkably simple.

Suppose someone gives you a card with a hundred little holes and with three hundred small steel pins. Suppose you're told to put the pins in the holes, three pins to each hole, using only one hand. If you find you can fit great many holes in a very short time, you have finger dexterity and will be good at making exact dressmaking and tailoring work, good in an assembly line, good at playing the piano. If you are slow and clumsy at this you have no finger dexterity. Let other people do the fine hand work of the world, because however you practice and improve, people

vocabulary test Hudson scored 22, average for a clerk's vocabulary, but it was possible to find what other latent talents might fit him for a better job

The wiggly-block test determines your ability to visualize objects in three dimensions. Hudson's score here was 44, showing a tendency to deal in abstractions

ability in the tweezer test indicated Hudson could work well with small objects, for example, in dentistry, watch repair or preparing advertising layouts

The problem in the inductive-reasoning test is to select three related pictures from a group of six. Hudson's high score here demonstrated his executive ability

finger dexterity will always do things better.

Suppose you are shown a block of wood cut up into a number of wiggly pieces. Suppose this cube is taken before your eyes and the pieces are scattered out haphazardly. How fast can you put them together again into a cube?

It's structural visualization. If you can do it fast and easily you ought to be building things, or designing, or working in a laboratory.

An Asset in Many Callings

Engineers, architects, stage designers and scientists need structural visualization and are, in fact, seldom able to do without it. Surgeons need it. But if it should take you long, wasting minutes to put together the simplest of these wiggly blocks, you have nothing to brood about. It only means you naturally think in pictures. Lawyers, bankers, teachers and businessmen are all in work that needs no structural visualization. They are much better off without

The Foundation's favorite proof that aptitudes need have nothing to do with intelligence came when a prominent college professor brought a young relative in for testing, a charming boy but one of disturbingly low IQ. It took the professor a painful quarter of an hour to put together

the same wiggly blocks the charming dimwit could assemble in less than a minute. Even if the boy never got through high school, with this ability there were a dozen different mechanical jobs in which he could be useful and comfortable—and that was worth knowing even at the expense of the professor's momentary loss of self-esteem.

If someone should show you two formidable columns of figures side by side, how quickly could you check the two and find which pairs were the same and which different? That's a measure of accounting aptitude. If you can do it fast and accurately, you might be a good bookkeeper, a good stenographer, a good statistician or expert accountant. You'd probably be happy working in a bank, at anything from teller to president, depending on your other aptitudes. Musicians need accounting aptitude too, strangely enough, to read difficult musical scores easily.

If, on the other hand, you stumble through the columns and they swim before your eyes it doesn't mean at all you aren't quite bright, merely that paper and pencil work is always going to be a little tough for you. You may still be a brilliant salesman or business executive.

How do you naturally think? Not how well, but how? If someone popped the word *table* at you, would

(Continued on page 59)

Results of the completed tests suggested that Hudson was best qualified for a career in advertising. After a year's training he was made advertising manager

THEY KICKED US OFF OUR LAND

BY LESTER VELIE

A few big cattle and sheep ranchers out West, squeezed by economic pressure, have waged a battle, so far successfully, to get their hands on U.S. public lands totaling half the area of 13 states. Here Collier's Associate Editor Lester Velie, after a tour of the range country, presents his report on this war against all the people in the land

OUT of the dry, white heat of Utah's August, 150 big cattle and sheep ranchers clumped into the lobby of a Salt Lake City hotel one day last year and tossed their off-white Stetsons on a table. As they crowded into a conference room the ancient rivalry between cattlemen and sheepmen, who had fought bloody brawls with barbed wire and guns and nooses for domination of the West's limitless range lands, was forgotten in the face of a common enemy—"bureaucracy."

For two days the men talked and planned. The presence of Senator Pat McCarran, of Nevada, reported The American Cattle Producer, monthly organ of the American National Livestock Association, "did much to guide the thoughts and actions of the conference." Among other actions the ranchers appointed a committee to

plan how they could get their hands on public lands whose total area was half the size of the 13 mountain states. The ranchers' motive, they sincerely believed, was to save their economic hides.

What they did not see was that if their scheme succeeded they might well impoverish the entire West.

At Denver early this year the big stockmen showed their hand. A joint committee of the American National Livestock Association and the National Wool Growers' Association came out with their plan and the slogan to push it.

The plan: The government should sell 145,000,000 acres of public lands to a closed shop of ranchers now grazing the lands, and only to them. The price: from 9 cents to \$2.80 an acre, 10 per cent down and 30 years to pay. The slogan: Return the public

lands to the West (i.e., a favor to 100,000 ranchers).

"If we play our cards right, we'll hit the jack pot," a leader of the stockmen said.

Hitting the jack pot for the stockmen could break the bank for the people of the West. For the stakes could be higher: the West's two biggest resources, its land and its water.

Looking down on part of the 100,000-acre jack pot from a high altitude, the range country reaching west from the Great Plains to the escarpment of the Rockies seemed boundless. The stockmen could understand why the land seemed inexhaustible to them. But the cattlemen, who would only be a part of the jack pot, would understand why the land seemed inexhaustible to them. This jack pot, if it were to be divided among the cattlemen, would only be a part of the jack pot, and they would be losing in shifting the public lands to private ownership.

Sure to follow would be 80,000,000 acres of forest grazing lands

Grazing by too many cattle in the range country has spoiled the sod and dumped the good earth into the rivers on so grand a scale that downstream the river beds often are higher than the surrounding country, as is Albuquerque, below

ing a total kitty of 225,000,000

In a sense the big ranchers could be expected to take a proprietary attitude toward the range, for they have made it as their own for years. The land was once known as the American Desert, and was thought to be quite valueless. Then along came the hard-working, resourceful men and tamed it. They fought searing droughts and raging blizzards, transformed the grasslands into a cattle empire and laid the foundation for a whole region's economy.

Today these men, still hard-working, still conscientious, fear that the government will force them to reduce their herds, and they are fighting for the acquisition of the public lands necessary for their survival.

Collier's for July 2, 1934

Stedman

Just of a once vast public land, these lands contain untold oil and mineral wealth, and are estimated deposits of untold source of atomic energy. As the strategic watershed area, mountain streams bear the most important crop, its water, the great Rio Grande, Colorado river systems which make water as far away as California. Some stockmen look no more than the cow's tail, but as we are overlooking the watershed, we already bring up many as the community's water supply. Just of the unfenced open where Americans can hunt, camp on their own federal land, and yield tourist revenues which the difference between prosperity and depression for some states. Colorado estimated its tourist-business last year at \$1,500,000,000.

Stockmen Hold the Aces

They pay for the public lands, stockmen held seemingly untold aces. They control two large trade associations which control a small fraction of the total livestock output but hold the ace as if they speak for all. America's stockman knows its Washington so well that a \$1,000,000 in subsidies for the

wool growers last year and this year punched holes in the State Department's land program.

But the Western stockmen's ace in the hole is the Cow Bloc, which includes some of the capital's most influential senators. One of them, the silver-haired and venerable Pat McCarran, is an old hand at playing with blocks. As vice general of the classic Silver Bloc, McCarran was so persuasive that Uncle Sam wouldn't sell his raw Treasury-bond silver to hard-pressed war producers at less than \$1.24 an ounce, although the world price was then 22 cents.

The Cow and Sheep Bloc really took on political muscle with the Republican triumph last fall. For them, through the happy workings of chance, seniority and astute politicking, chairmanships of both the Senate and House public-lands committees—guardians of the public domain—fell to two Cow Bloc members.

Representative Hiram Boren, Democratic, Fair game subcommittee chairman in the House, an ardent worshiper of the public lands, whose member's friendly office is piled high with conservation literature, stepped down for a new kind of leadership. Succeeding him was Representative Frank A. Barrett, rancher, Laramie, Wyoming, lawyer, whose four years in Congress have been distinguished chiefly by his single-minded purpose

to dispose of the U. S. public domain.

To the chairmanship of the Senate Committee on Public Lands came a man of similar mind. Senator Everett Wick Robertson, also of Wyoming, owner of 2-1/2-100 sheep grazing the public ranges, ex-vice-president of the Wyoming Stock Growers' Association, and member of the American National Livestock Association.

"Like setting wolves to guard sheep," Lee Carter, columnist for Denver's Rocky Mountain News, observed wryly.

Campaigning for an Empire

This spring the Cow Bloc members swung into action in widely scattered fronts to liquidate the public-lands empire.

One front was the Cow Bloc's own battle at the Pacific. When Congress recently debated the terms under which Hawaii should come into the Union as a state, the Cow Bloc sought to set a precedent. Let Hawaii, the state get the public lands owned by Hawaii, the territory. Representative Barrett opposed. There was a good reason for Barrett's stand. Once Hawaii came in with the territorial public lands, why couldn't Wyoming say, claim the government-owned lands lying within its borders?

The Cow Bloc was just on a second front too—the 225,000 acres of

spectacular Wyoming lands fronting the majestic Teton range, known as the Jackson Hole Monument. Here Representative Barrett was pressing a bill to abolish the monument and re-open the reserved mountain park to commercial exploitation. Such exploitation before the government moved in had already pocketed the area with oil-rich oilfields, ungainly ranches and other money-making laws for the tourist.

In this case too the Cow Bloc has the same single-minded objective. Several hundred monument fans fear they'll lose their bargain-price grazing rights if the Jackson Hole area continues as a monument. More important in the over-all Cow Bloc strategy, is the precedent angle. If the stockmen win at Jackson Hole they set a precedent for breaking open all the national parks to hungry herds of sheep and goat-tipped, close-grazing sheep which share the grasslands as close as a race wound—and are close to present erosion of the land.

But these battles at Hawaii and Jackson Hole, important in themselves, were only flank assaults.

The stockmen and the Cow Bloc know how to attack frontally too. Last year Senator Carl A. Hatch, of New Mexico, introduced a bill to sell two-thirds of the public lands in his state for the benefit of public

(Continued on page 41)

A GAME FOR TWO

BY CATHERINE HUBBELL

It isn't easy for a girl to grow up when her mother is trying so hard to stay young

BEING home made a difference in one's thoughts. The Welton School for Girls closed early. "Too early," Mother said, running her lovely, narrow hand over Daphne's taffy-brown hair. "But, darling, it will be wonderful, of course," she added.

Mother was a business girl. That was how she thought of herself, Daphne knew. Not a businesswoman. A woman wore size 18 dresses, arch-supporter shoes, and gentle furrows somewhere on her face. But Mother—her name was Margo, like a dancer or an actress—Mother was a girl. If she was thirteen, Mother was thirty-five, and that was not thinkable. She was not thirty-five at the office where she thought up ways to advertise things. Nor was she thirty-five when Laurence Driscoll, one of the vice-presidents, took them to dinner—mother and daughter. To the Cascades, or the Starlight Roof.

Mr. Driscoll had gray in his hair and he *did* have furrows—the kind that come from squinting out of airplanes, or sailing his boat. He seemed a lot older than Margo; Mother seemed to amuse him. "Margo, you're a child," he would say, and Mother would put her head back and give that tinkling laugh, so that Daphne wriggled a bit.

Mother was good about Daphne's clothes. She didn't put little-girl things on her, all smocks and fullness. She let Daphne be thirteen, all right. There was the dahlia-red silk, the aqua jersey. But mother herself was size 11, and she had raven's-wing hair, black and glossy.

At school there had been her friend, Dora, who read grown-up plays and wanted to act, even though she was plump. There were other girls, pretty ones, clever ones. Girls without families, or girls with five brothers. But through all the small skirmishes, misdeeds and excitements, their thinking was arranged. They said, "Oh, heck, prunes again!" or, "Miss So-and-So is a goop," and they wrote poems for the school paper. All day and evening, they took each hourly hurdle and at night they slept lightly, dreamlessly.

In the city, there were so many pieces to the picture of living. Ideas jumped up because of a song, or a hat, or remembering the way Mr. Driscoll put a hundred-dollar bill over the dinner check. There was a technique about living which her mother had learned, and Daphne was afraid she wouldn't be as good at understanding the technique as her mother was. She was already taller than Margo, and sometimes she bumped into a table or a chair as she moved around the apartment.

"Darling," Margo would say, with a smile, "walk by, not through, it."

And there was the girl downstairs, called Winifred. They had met in the

elevator. Blond and gossamer, though only fourteen, she was plainly not the kind who bumped into furniture.

"Dig me for a movie," Winifred had murmured, but Daphne felt shy.

The apartment was full of Mother: her yellow bedroom with the crystal bottles on the dressing table, and Mother's clothes on padded hangers; dove-gray note paper.

"Let's see, camp opens June 25th. We'll have to shop, Daphne—you've grown."

Daphne knew camp was not just camp. It was a Solution. Mother had said to Lea Davis, her best friend: "Yes, I can tell you, Lea, it's a luxury, having my little girl. I hate to give it up. But you know, New York is impossible."

Mother said New York was impossible, but Mother was completely New York.

Daphne kept begging, "Mother let me stay here, I'm tired of camp. I won't be a bother. Let's have a summer together."

And her mother rushed to her, "Daphne, dear, it's not that you could ever bother me. Can't you see, I'm worked to death at the office? And it gets hot, even with roof gardens, hot and dusty. Would you like Dora to visit for a few days?"

Daphne saw herself leading the plump Dora into Schrafft's, across Fifth Avenue. Dora whose mother disapproved of New York, because it made Dora think about acting more than ever.

Daphne took a tortoise-shell comb and swept her hair up.

"Not Dora, Mother. Just us."

"Precious," said Mother, looking up at her—Margo was so small—"I do believe you're going to be something special, tall and individual, with a graceful neck."

Daphne suspected her mother believed that the best kind of women would always be size 11.

"No, Daphne, camp again. Let me see—hiking shoes, and these tennis ones will do." And there was Mother holding Daphne's quite large sneakers and looking for some place to put them temporarily.

THE phone was always ringing for her mother. The doormen bowed in half for Mother. Sometimes Daphne believed traffic changed just because it was time for Mother to cross the street.

In the mornings, after Margo had left, Daphne straightened the apartment. She put away the blue dishes and drew up light bedspreads. Then she could go to the park with a book. Mother had swept her hand across the shelves—"I'm not going to put things under lock and key, Daphne. You're old enough to have taste."

It was exciting to have Mother talk this way.

She could go to the Shelton for a swim, or meet Mother for lunch with some of her office friends, who would murmur nostalgically: "That wide-eyed look—we've lost it."

And Margo in cream-colored linen and a bellhop hat of emerald green, looking like someone any studio in Hollywood would sign up, sat back pleased. Daphne understood that her mother loved her.

At school, the principal liked to say, "It is an art to choose a perfect thing and hold to it, content."

But Mother had many things. She had success, beauty, a town apartment, a daughter. Being a widow had not made her solemn. She could have Mr. Driscoll, too, Daphne thought.

And when she looked at her mother's life, Daphne thought that the principal's philosophy seemed rather empty.

Daphne took the bus along the drive some mornings, or went into the Modern Museum. Right now they had a Mr. Chagall whose work was very difficult—particularly the one called Celebrating My Birthday where he rode through the air gazing at himself in a hand mirror.

Then she wrote long letters to Dora, although she did not have boy friends to mention, and Dora, somehow, had acquired one. It was very important. It was the way you made your mark in the world. There were two kinds of girls—those with boy friends and those without. Even Mother had that smiling expectancy about men.

At the school dances, when boys came over from a near-by academy in station wagons, Daphne was in agony. She was tall, she was never going to be cute. It always ended with some teacher coyly leading a boy up to her; usually the boy was all teeth and frantically plastered-down hair.

Still, on the radio, married people suffered so.

It was fun to have dinner with Lea Davis, Mother's red-haired friend. Lea was thin and amusing, and she was not a girl. She was a woman. In spite of their friendship, Margo and Lea often disagreed.

"Honestly, Margo, you have more vacation time piled up than any of us," said Lea. "Why don't you give yourself a break?"

"I just can't, Lea. There's that new cosmetic line, and Laurence Driscoll said—"

"Ah." Lea cast a green-eyed twinkle at Daphne, and Mother got stiff and cool, for a minute. Sulky, like a little girl.

A week before camp, it got very warm. Mr. Driscoll took them to his Connecticut house for the week end. They swam at Compo Beach, and Daphne gulped grape juice when the others had cocktails. Lea Davis came along, and a huge man called Duke Winters.

The grownups talked a great deal about trends, Russia, oil and autosuggestion in advertising. Through their voices Daphne heard something not restful, something to come out on top. As she sat at Lea in white shorts and bra, her mother in checked gingham, Daphne felt that Lea wasn't and that she was nervously bidding time, waiting for something. When Mr. Driscoll and Lea played clock golf it was as if they had been around them, as if they knew from way back, had always known them.

The man called Duke was big and jolly. He romped with Mr. Driscoll's two cocker spaniels and with Daphne.

"This little miss is potentially a model," told Margo. "She'll be a model, some day, and everyone will fall for her."

Daphne felt warm and content. When she wrote Dora she could pretend Duke was a beautiful age—28, and it would be like mentioning a boy friend.

ON SATURDAY night they went to a country fair, and Margo got on the merry-go-round with Daphne and Daphne. Daphne narrowed her eyes as the horses flew up and down, and Mother looked about sixteen, as she saw Lea and Laurence Driscoll watching. Daphne felt her face grow hot and angry. Lea looked most as if she pitied Mother.

Daphne was ashamed to be so ashamed. She thought of her mother as perfect. Yet Lea and Laurence Driscoll those doubtful smiles as Margo flew around on the painted horses.

On the whole, nobody was happy or rested.

Duke drove Margo and Daphne back to New York. He was different from Mr. Driscoll. His clothes were not sharply pressed, and he did not care about running his hands over boats or planes. What he liked was making furniture, he said.

Speeding along the Bronx Parkway in the dark, Daphne felt the friendliness flowing from Margo. It was as if he were trying to tell Margo through her. Margo, on the other side, was cool, unreachable.

Duke said good night, but he was for Mother. The eyes said friendly, be nice—I adore you. Daphne wriggled inside, but Margo only gave that light, spoon-again laugh.

Monday in New York was hot. "Baby," Margo said, with a bronze leg paint and a pink face, "don't stir. Meet me at five at Drury Lane, and we'll go to a cooled movie and sit."

Daphne reached out and held her. "Mother, you look so cute."

Mother gave a little grimace of belief. No, the week end seemed so far. (Continued on page 34)

Daphne felt on the outside of a bright, bad dream, lost in a personal misery, while others lived and laughed, and went in pairs

CONY ISLAND IS A HOWL

BY AMY FORBES

Take a look at that crowd on the beach. It isn't surprising that hundreds of children get lost on a busy day at Coney Island. The policewoman is entitled to scowl too, for she'll have to ride herd on the strays all day, even though she knows that at least half of them were lost on purpose. A mother will turn her child loose, watch till a policeman spots him, then go her own carefree way into the surf. She knows the city will care for him till she claims him

LAUGH? They die laughing at Coney Island. They laugh as they tumble down the giant polished wood slide together, they laugh when the man presses the button that releases the air that blows a girl's skirt up over her head, they laugh when the ocean waves smack them down, they shriek with laughter when they start the awful descent from the top of the roller coaster.

Oh, Coney Island is a funny place. They even have laughing robots there. A big fat papier-mâché woman laughs so loud you can hear her a block away, and when you come up close you can see she's shaking all over with mechanical glee, head wagging, chest heaving, arms flapping. She does this all day long, never stopping for a second, to give the customers an idea of how much merriment they'll have if they buy a ticket to her Fun in the Dark ride.

Laughter is for sale at Coney Island, along with fright, horror and, in a way, love. By offering these commodities at low, mass-production prices, the Island proprietors are doing a fine business that seems not to feel stock-market fluctuations, buyers' strikes or other hazards that trouble most businessmen.

Only one thing can wilt Coney's

synthetic cheer, and that's rain as long as the sun shines, all is well on the Island, and the hotter it is the better. When a real heat wave comes to New York, inhibiting the city's customary activities, when it's too hot to eat, too hot to sleep, then, oh, Coney Island comes into its own. Then anybody with a few nickels in his pocket can trade the city's heat for a share in Coney's three and a half miles of Atlantic Ocean beach, and a half miles of boardwalk, and a half miles of joy rides, hot fun houses, waxworks and shows, all more or less cooled by water breezes. Anybody can, about one seventh of New York's 8,000,000 population does.

On a very hot day Coney Island never fails to come through with makings of a little story for the papers: "Heat draws record throngs to Coney Island . . . two drowned, ten arrested . . . 353 lost children picked up by police." On such a day Coney Island always poses for that picture you see every year showing its beach flypaper-packed with wriggling humanity, each person occupying his own space. Park Commissioner Robert M. W. once sorrowfully pointed out, "The space required for a Coney Island day is more than that required for a city of 8,000,000 people."

(Continued on page 44)

who takes four showers daily in wine, has a card in the Plumbers' Union. She makes it up by designing her own heated shower stall. Some of Tirza's customers have never seen a flesh show before. She finds this amazing, but makes it up to giving full measure as advertised. Her costume is okayed by authorities

in the Tunnel of Love move slowly along a completely darkened canal, attendants count that trip lost which doesn't bring back at least two lipstick-kissed men. More violent rides have stolen this technique, and it's possible to enjoy romance in the dark while having the daylights shaken out of you

This show has been running steadily at Steeplechase Park for more than 45 years and it still panics 'em. The clown is known as a legspert because of his skill in maneuvering unsuspecting girls into position over air vents. When gallant escorts grow indignant, the clown and his helpers use them to get more laughs

This infernal machine turns full loops, providing the ecstatic customers with what psychologists call "secure insecurity." The insecurity is obvious; the security comes from centrifugal force and a couple of little bars to grasp. A foot pedal will stop the motion, but it is best not to stop it upside down

Deftly, but very slowly, Ralph's fingers went on putting the automatic together

THE AUTOGRAPH

BY DON POPE

WELL?" said Ralph Bozeman, his voice small and mean like himself. "Spit it out, Charley, before it chokes you."

He stared blankly at Charley, not into his eyes but over the big fellow's shoulder at a spider-shaped stain on the dirty brown wallpaper. His fingers went on putting the .45 automatic together, deftly because they knew the insides of guns like the tongue knows the mouth, but very slowly so as to irritate Big Charley.

Big Charley, straddling a crippled kitchen chair, watched the thin white fingers thrusting one small part of the pistol into another, this way and that. "Look, Ralph," he said, "do me a favor. Will you do me a favor? Quit cuddling that rod, it gives me the jitters. That live cop in the closet, he gives me the jitters too."

"You were born with the jitters," Ralph said. "The copper's tied good. He'll keep."

"For how long? If he ever gets a chance to talk, we'll—"

Ralph's bleak eyes flicked across him. Charley let the sentence die.

"He won't talk." Ralph reached with taunting slowness for the pistol barrel. Polishing the barrel with a scrap of oily flannel, he made a little ceremony out of it like a man cleaning a favorite pipe.

"You and your damn' guns," snorted Charley. "Mooning over 'em like they was dames!"

Bozeman's thin nostrils flared. "Women!" he said. "I hate women. They'll put a noose round your neck."

"Sure," Charley said. "You go soft on anything and you're asking for it

right between the eyes. On *anything*."

"Shut up. You talk too much." Ralph held the barrel firmly, pinching the butt end between thumb and forefinger. "A gun," he went on, "is a man's best friend. Treat it right, and it won't never cross you." He seated the barrel in the receiver and his movements were suddenly swift as he capped it with the slide and reached for the link pin.

"Put the copper in the car," he said harshly. "I'll be ready by the time you are."

Nobody could say Ralph Bozeman wasn't a sport. He let the copper stumble three steps up the highway before he shot him in the back. He wiped the pistol thoroughly, fought off the temptation to keep it, and tossed it beside the body as Charley skidded the car around.

"There," Ralph grunted, "let the fingerprint dicks work on that. Much good it'll do 'em."

THE man in the green eyeshade laid the pistol on the desk and shook his head at the lieutenant of Homicide. "No prints, Lieutenant. Wiped clean as a whistle."

"Yeah," said the lieutenant of Homicide, "that's what the department lab said. I guess I didn't really expect you to find anything they couldn't. Only—" He rubbed his forehead with a freckled hand and sighed. "Well, there goes our last chance of convicting those two rats."

"No luck at sweating it out of them?"

The lieutenant studied a bruised knuckle. "Yes and no. The big

fellow sang like a canary, but he'll probably take it back in court. We couldn't crack Bozeman. Anyhow—" He shrugged. "You know how the law reads. One crook's word against another. Means nothing either way. We need a witness and"—he flapped a hand toward the pistol, where it lay squat and ugly in a pool of light—"the only witness we can locate won't talk."

The man in the eyeshade coughed. "Ballistics?"

"Simple," the lieutenant said, "and useless. Army gun. Stolen from a National Guard armory."

The man in the eyeshade, who looked like a professor of English literature and was in fact a professor of criminology, built a finger tent. "Tell me about this man, Bozeman, Lieutenant."

"Ralph Bozeman. Alias this and that. Graduate of the best penitentiaries. Bank robber, kidnaper, cop killer. Out on parole, naturally. The old sad story, like a thousand others, except that—he has an almost pathological love of guns."

The professor leaned forward. "H'm. Not unusual in those who make a living by violence, but—you know, I'll give you odds he had this gun apart. And if he did—"

The lieutenant of Homicide felt the growth of tension in the shadowy room. He was fascinated by this dry little man who was now taking the pistol apart with a precise skill Ralph Bozeman would have envied.

Recoil spring plug depressed. Barrel bushing out. Recoil spring and guide removed. "That wire prod,

Lieutenant. By your hand. The Link pin out. Slide off and lay the barrel out. He held it up to his eye and the rest of the gun under the light.

"H'm," he said. "Ahh. Your handkerchief please, ant."

The lieutenant found his hand shaking. Damn these academics with their sense of drama.

HAND covered by the handkerchief, the professor slipped the barrel out. He held it up to his eye and the butt end was at an angle to his vision. The lieutenant breathed.

"Beautiful," said the professor, his face a rare burst of emotion. Abruptly, the careless air of a stage actor producing a rabbit, he handed the lieutenant the barrel and the handkerchief.

"In my opinion," the professor leaned back comfortably and took out his pipe. "your witness decided to talk. At least," he said, "whoever had this barrel out photographed it nicely with his hand and forefinger."

The lieutenant feasted his eyes on the intricate little pattern of ridges and valleys that was the signature of one person, and only one person, in the world. He thought of the empty face of a policeman, the twisted face of the man who had lost his faith in a gun.

And the lieutenant of Homicide laughed deep in his throat, wrapped the gun barrel tenderly in his handkerchief.

A SHORT SHORT STORY COMPLETE ON THIS PAGE

How to make it a cool 90 in the shade

THE WAY TO DO IT is to mix yourself a Four Roses Mint Julep.

For, on a sultry summer's day, there's nothing quite so cooling and refreshing as the frosty, mint-fragrant perfection of this noble drink.

Four Roses, famed as the *perfect* Julep whiskey, gives a Mint Julep a distinctive, flavorful magnificence such as you've never known!

How to make the world's finest Mint Julep
Take a few sprigs of fresh, tender young

mint. Cover with powdered sugar and enough water to dissolve sugar. Crush the mint (or simply stir it). Place the mixture in bottom of tall glass and fill with shaved ice.

Then pour in that matchless whiskey, Four Roses, until glass is brimming. Garnish with mint and let stand till frost forms thick.

Fine Blended Whiskey—90.5 proof, 40% straight whiskies 5 years or more old, 60% grain neutral spirits.

FOUR ROSES

AMERICA'S MOST
FAMOUS BOUQUET

Frankfort Distillers Corporation, New York.

A flashy ex-bricklayer and playwright named Guglielmo Giannini is making a bid for the grandiose office vacated by Mussolini. There's a fair chance he'll get it this year

Italy's misery and despair have set the stage for the rise of playwright Giannini, shown with his secretary, Eginio Lazzari, at the first Qualunquist party

HE WANTS TO BE ITALY'S DUCE

BY BARRETT MCGURN

ROME

WHEN victorious American troops turned the Anzio beachhead town of Aprilia back to its residents, one of their first acts was to chip the word "Fascio" from the stone front of the shattered town hall. The thousands of unrecovered mines in the wheat fields and the hundreds of flattened homes were enough reminder of Mussolini and war.

It was estimated that the cost of restoring the town to what it had been would be a crushing \$850 per person. With the average wage earner receiving \$23 a month all the 3,000 Aprilians looked with a naïve confidence to the town's newborn anti-Fascist government to work some democratic miracle of restoration.

Now, three years later, scarcely \$1 per capita has been spent toward repair. The \$10,000 rounded up in taxes during the past miserable year was eaten up almost entirely by the semi-starvation wages of the town doctor and nurse and the score of municipal clerks and laborers.

During Mussolini's rule almost all the Aprilians were Fascists. In

the first months after the liberation a fourth became Communists, but the rest joined the moderate centrist Christian Democrat (Catholic) party, which was the most successful political group through the rest of Italy.

Now in Aprilia, as in all other parts of Italy, a new political breeze is blowing. In the several weeks since Aprilia's doctor, Giuliano Russo, proclaimed himself a "Qualunquist," 12 per cent of the voters have enlisted under his banner, and the end is not in sight.

Just what "Qualunquism" is, no one in Aprilia is quite sure. That is scarcely surprising, however, for even Qualunquism's inventor, Guglielmo Giannini, a plump fifty-five-year-old ex-Fascist playwright, is not clear about it.

But one thing is certain: It opposes almost everything that Fascism fought, and it affirms a major share of what Fascism supported.

Fascism's stock has risen in Italy these past few months. In the cold, windowless barrooms of Aprilia, some wine drinkers started asserting

boldly last winter that they are really still Fascists. On a Sunday afternoon you could even hear a few of them put their heads together to sing Giovinezza (Youth), the Fascist anthem. They did it as a joke, of course, for Fascism is still illegal in Italy. But they were not joking as they recalled the prosperity Aprilia knew under Mussolini.

Aprilia was one of the model farm towns Mussolini built a decade ago when he drained the swamps south of Rome. Most of its new settlers had been landless peasants.

Recall Fascist Prosperity

For a long while after the Allies left, these benefits of Fascism were forgotten, but now men like fifty-seven-year-old Aristodemo Giammaria, one of Aprilia's new Qualunquists, are once again recalling them. His nostalgia is pretty natural.

Giammaria ran the stable for Aprilia's plow horses during Fascism and still has the same job. But like everything else in Aprilia—and all of Italy—his business is much less pros-

perous. He has only three horses under Fascism he had seven.

When the Americans gave Aprilia back to its then vigorously anti-Fascist local officials, Giammaria, one of the best propagandists of the Catholic party. Bitterly anti-Communist, as he had been under Fascism, Giammaria smiled his approval at the fellow Christian Democrats who were repeating the great slogans across the ruins of Aprilia. You can still see them there.

"The Pope sent us spaghetti and butter," says one. "Long live the Holy Father."

But now Giammaria wears a lapel the symbol of Qualunquism. He shows a much-abused, impoverished middle-class Italian of the Milquetoast type squeezed in between the government and the victim's pockets tumble out of money—taxes.

To Giammaria and the rest of Aprilia's Qualunquists, the movement is a protest against the current anti-Fascist government which has been unable to return prosperity to Italy.

It is a protest against the f

two rusting tanks still lie in the debris of Aprilia's square;

That the town's two priests must hear confessions inside a box made from packing cases;

That the modernistic theater which once resembled a pavilion of the New York World's Fair is still an unused shambles;

That hundreds of mines in the fields continue to take a toll of shepherds tending their flocks and of farmers driving fence posts; and

That more people live in houses made of metal ammunition cases and slats from Swiss Relief boxes than any other type.

The fact that Mussolini's war caused it all is almost forgotten.

"We hated the cliques around Mussolini but we never had anything against Mussolini himself," Giannini now reminds his fellow Aprilians as he recruits followers. "Mussolini banished malaria. He kept order here. Now you go out and you never know when some crook will stop you. What we need is a strong man. Someone who will govern us well. What we need in Italy is one of those big sticks policemen use. Not a little one, but one of those big ones. To hit people on the head. . ."

The man to whom Qualunquists look to do this job is large-bellied sandy-haired Guglielmo Giannini, an ex-bricklayer who has rallied at least 3,000,000 of Italy's 20,000,000 voters to his nebulous cause. In his own opinion he will take power in Italy this year. There is a chance he will.

The birth of Qualunquism seems to have occurred on that day in April, 1942, when Giannini's only son, Mario, a handsome blond youth of twenty-one, was killed in a crash of his fighter plane at its home field near Ancona in central Italy. Giannini had joined the Fascist party a year before. A cynic like most Fascists, he had urged his son to have as little as possible to do with the war. Against his advice, the youth took a commission as a lieutenant in the Italian Air Force.

A Political Weekly is Founded

The loss of his son was the fault of the world's "professional politicians"—Mussolini, Roosevelt, Churchill and "the rest of them"—Giannini decided. Unabashed at the immensity of the project, he resolved to do something about it. When the Allies entered Rome he made the requisite application for permission to start a political weekly and after a six-month wait received it.

He called the paper L'Uomo Qualunque (The Common Man), and from it "Qualunquism," in itself a meaningless word, drew its name. L'Uomo Qualunque was one of the first clear voices in a suddenly piously democratic Rome which dared to say that not everything was perfect in Italy's new state of "liberation."

Two months after it appeared, the Italian Press Commission suppressed it, charging that it was "invidious" to Italy's cobelligerent war effort and that Giannini was a Fascist. Giannini managed a successful appeal. Within a half year after L'Uomo Qualunque's reappearance it had the biggest circulation in Italy, 800,000.

L'Uomo Qualunque dared to say what few other "liberated" Italians had the courage to assert. In northern Italy the Partisan underground fighters swaggered along the streets as heroes. Giannini upbraided many of them as "mere criminals pretending to be leftists." The murders and thefts committed as part of the guerrilla war behind Axis lines often had been nothing but crimes for the personal betterment of the doer, Giannini intimated. Many Italians applauded and the paper's circulation boomed.

Within a year Giannini's followers

urged him to start a party of his own. He did, calling it "The Front of the Common Man." Lately he has added two more words to make it "The Liberal Democratic Front of the Common Man."

Qualunquism's two-year growth in competition with the sixty-year-old Catholic political movement, fifty-year-old Socialism and thirty-year-old Communism has been phenomenal. The experience of one former Fascist army officer helps explain this growth. "Disgusted" with the high-handed manner of the Partisans in northern Italy, he volunteered as an organizer of the Front and talked his father, a perfume manufacturer in Naples, into turning the firm's office into a Front headquarters. In three weeks he set up a dozen Qualunquist "nuclei" of fifty members in each.

As in other Qualunquist centers, former Fascists were welcomed. "After all they are the better class of people—the only chance to save Italy," the ex-officer explained.

Like Fascism and National Socialism in their early stages, Giannini's movement of criticism has attracted malcontents of almost every type. High-ranking ex-Fascists who have found it difficult to begin life anew in an Italy ruled by anti-Fascists, jobless veterans, large landowners afraid of expropriation by the Communists, churchgoers worried at the rising tide of leftist anticlericalism, all have joined the ranks.

In a score of ways the swiftly growing Qualunquist Front has been reminiscent of the rise of Fascism, which itself took power only two years after Mussolini started it. The very organizational setup of the party is similar. The Qualunquists are organized in nuclei of from five to fifty members. The nuclei are assembled into groups of from two to ten. The groups funnel into "regroupings" which unite the sections of a region. The core around which the party has grown has been Giannini's newspapers.

Besides L'Uomo Qualunque there are now thirty other Qualunquist publications. There are dailies both in Rome and Milan. There are twenty-four regional papers, each with a circulation of a few thousand. There is a woman's weekly, Donna Qualunque (Average Woman), edited by the eldest of Giannini's two attractive daughters, twenty-two-year-old Yvonne.

As issue of the Qualunquist papers has followed issue, the ideas of Qualunquism have become slightly less cloudy. As in early Nazism and Fascism there is still

no clear-cut program but this is apparent:

Giannini has no use for the late President Roosevelt, a man the *Qualunquist* press has described as "fortunate funct." The Atlantic Charter was a plot to save British and American ships. Roosevelt and Winston Churchill are responsible for much of the destruction.

Communism, Socialism, Yulius and Ethel, Soviet Russia, and the "historic" policy of division of power on the European continent have all been in turn. A United States of Europe is the Qualunquist goal. Appalling idea, it takes on a different complexion when Giannini names who sought the same goal: Napoleon, Mussolini, Hitler.

Philosophy of Armament

Giannini would like to see armed Italy. Is that a duplicate of solini's program? Oh, no, it assures his expanding audience.

"There are four policies for a state to follow: to arm and go to war and remain at peace, to remain at peace, and to remain at peace, and to remain at peace, and to remain at peace. The proper policy is the second. Germany chose and Italy the last and craziest of them."

The irony, sarcasm, invective, and slang and occasional wit have characterized Giannini and his pages with gutter language. The irony, sarcasm, invective, and slang and occasional wit have characterized Giannini and his pages with gutter language. The irony, sarcasm, invective, and slang and occasional wit have characterized Giannini and his pages with gutter language.

An example both of Giannini's technique and of his view of organized labor was given when Lewis' coal strike in America off Italy's fuel supply last fall. "bourgeois state" had no right to labor leader to cause such an inconvenience, Giannini protested. "liberals" such as his Qualunquist in power, no Lewis would get a such a strike, he declared.

Internally, Giannini has called for an "administrative state" run by technicians, and without his much "professional politicians." It is a state in which the common man is "bothered," a place in which peace booms until every farmhouse

television set. Most of the administrators who acquired experience during the past generation were Fascists, many of whom are just leaving jail. The only "professional politicians" who have a voice now are the anti-Fascists. How a Qualunquist state set up under these conditions would differ from the old Fascism remains an open question.

Giannini has professed himself no longer a Fascist. He has repudiated the Roman salute, the high boots and the slogans of Mussolini's Fascism as ridiculous trappings to which Italy will never return. But as often as he rejects Fascism, Giannini seems to talk in a curious circle that brings him around to the same position Mussolini probably would have occupied if he were alive. Giannini's attitude toward Franco is an example.

It was no concern of Italy during the Spanish Civil War or now what government Spain had, Giannini asserts. "And you may add," Giannini writes, "that the much-reported opposition to Franco does not and cannot exist in Spain. The Spanish Uomo Qualunque knows that Franco saved Spain from war and that there is prosperity and well-being in Spain. There are Spaniards who are discontented with Franco but the reason is that it is he who governs the Iberian peninsula and not they."

In Assembly Minus Necktie

Giannini's attitude toward the Constitutional Assembly which has served as Italy's parliament since the foundation of the republic has been little more respectful than was Mussolini's. To Giannini it is a mere "theater" whose anti-Fascist actors have little grip on the "real politics" of the country. With apparently studied disrespect, Giannini's shirt was tieless when he arrived to take his seat as a newly elected Qualunquist member on the far right side of that chamber.

One of the few characteristics of Fascism which have been missing from Qualunquism has been the bearing of arms. The subject has not been far from Giannini's mind. When three more or less real attempts were made on his life a year ago, Giannini wrote a front-page open letter to Rear Admiral Ellery Stone, the American who has been chief of the Allied Commission in Italy.

If the Qualunquists took up arms in self-defense it would be virtual Fascism, Giannini conceded.

"But what would you do if you were in my position?" the Qualunquist chief-tain demanded. "Surely you would order up a nice squad of strong men armed with hand grenades, machine pistols and

other such toys. I cannot recall forces on my own account, would be taken for a Fascist not at all like to wind up being It was not of himself alone of was thinking, the Qualunquist added. "Any political man menaced. Any rich man is menaced. With the impudence which

lighted his followers, Giannini quick retort when this writ Admiral Stone's answer.

The admiral had pointed out he had received no copy of Giannini in the mails and, accordingly reply to it.

"I'll put a copy of the paper envelope and mail it to him," Giannini responded.

The Qualunquist movement started at first by the voluntary local well-wishers and by the papers. Now as Giannini's secretary, Eginio Lazzari, sits at Giannini's cluttered, nine-room apartment in Rome, he picks through two-thousand-line checks for coming mail (worth about \$500,000). Contributions from party members alike are gladly accepted.

Because Giannini likes to be home in his bathrobe, the Qualunquist headquarters have remained in the middle-class home. He gets up at home until 2 P.M., naps for an hour, works on until 10 P.M. and leaves the house just before 11 P.M. Until 3 or 4 A.M. he is at his office receiving callers and preparing proofs on his day's editorial. President Truman he is a dilettante player, but most of his spare days goes into reading Italian and foreign news articles, and into writing on books on political science.

Until his son's death launched his political campaign, Giannini had virtually no ground in political matters. His education was discontinued just after finishing elementary school in Naples because, as his official Qualunquist biography says, "he was in things other than those taught in school."

Becoming a writer seems to be young Giannini's main desire. Federico Giannini, had been an extremely well-known journalist but young Guglielmo's mother was an Englishwoman. Jackson—preferred to see him in a textile shop. Guglielmo was unhappy from job to job, later an electrician, traveling in Italy, Switzerland and Germany for a finance company, performing

Alternative to Dictatorship

Giannini's household headquarters
inquist strategists see the con-
ns in Italy as just such a choice
their party and Communism.
le Giannini thinks that in the
ion there will be a winner and

oes not really think a chief of
ds any better preparation than

t the only indispensable quali-
or sitting on a throne—or on
r," the book asserts with some
ni's typical vulgarity, "is to
ckside, and no man lacks that."

Even more devotion to the ideas of
Fascism than Qualunquism admits has
been shown by various scattered little
groups through Italy since the war.
Mimeographed sheets have been distrib-
uted, pointing out to Italy's ill-paid gov-
ernmental employees that they were the
beneficiaries of many social aids during
the time of Mussolini. Black Fascist
flags have been found in the morning
light flapping from the masts at univer-
sities and on public buildings.

"Long live Il Duce" has appeared
overnight on walls. Police have uncov-
ered evidence pointing to the existence of
pro-Fascist groups, but no evidence has
been obtained to indicate that these
groups number more than a few thou-
sand members or that they are inter-
connected in any sort of effective
organization.

As the political lines in Italy have been
drawn at the extreme right and the ex-
treme left, the Communist answer to
Qualunquism has been an indignant
charge that Giannini's fold includes not
only Axis collaborators but also Fascist
war profiteers, feudal Sicilian landhold-
ers, "enemies of progress" in the back-
ward heel and toe of the Italian boot and
"the most reactionary wing of the
Roman Curia" in Vatican City.

Catholics Denounce Demagoguery

The Catholic party has backed up the
Communist thesis against Qualunquism
at least part way with charges that it is
a foul-languaged demagogic movement
built on destructive criticism of Italy's
struggling efforts to achieve democracy.
But the moderate Catholic party is dwin-
dling away as its members, harassed by
all the ills of the impoverished country,
increasingly harken to the lurid promises
of the extremists.

Apparently it is upon the democratic
center and the non-Communist left that
the U.S. State Department is pinning its
hopes. But these moderates will continue
to dwindle in numbers unless American
help—by example, by propaganda and
by economic assistance—is maintained.
It is apparent now that the few months
between armistice and peace treaty are
too short a time to introduce democracy
and guarantee its survival.

There are those who see in the pro-
gressive division of Italian political opin-
ion into two extreme camps the seeds
of civil war: One such is embittered
Communist Gino Grechi, who works his
twelve acres of ruined cotton, grain and
sugar-beet land on the Anzio beachhead
just outside Aprilia. Fascism took him
to Albania, Greece, Libya and Russia
as a corporal, and to Germany as a pris-
oner. It was a system which pretended
to be "for the laborer" but, so far as he
is concerned, directed all the money
"into the pockets of the gentlemen."
Under the man-in-the-press symbol of
Qualunquism he sees the old Fascists.

"Before they take control," Grechi is
telling his fellow Communists at Aprilia,
"either we'll all be killed or they will."

Combat-sick Italians probably will not
go to the extreme of civil war. But it is
certain that either Qualunquist Dr. Russo
or Communist Grechi has a much bet-
ter chance of finishing this year as po-
litical boss of Aprilia than the incumbent
Christian Democrat Vindigni. The Com-
munist party commands at least one fifth
of the Italian vote and enjoyed recent
successes in elections in Sicily. If Amer-
ican aid stopped tomorrow the Commu-
nists probably would capture Italy.

Whether the ex-bad boy of a Neapoli-
tan high school will ever don the dis-
carded robes of the other Duce probably
will depend in large part on how rap-
idly American loans clean up the rubble
of Aprilia and restore a moderate pros-
perity. Like Fascism and Nazism, a
Qualunquist dictatorship is likely to be
chosen only in desperation.

THE END

O. SOGLOW

Miss Joanne Dru's natty ensemble adds up to \$370.50, not including the horse

GLAMOR HITS THE RANGE

BY JIM MARSHALL

A poor lady cow-poke's working outfit may set her back several hundred bucks, if she does the thing up in high style

TIME was when a cowgirl could go to work with a few bucks' worth of duds. Today she's probably the most expensively dressed working girl in the world. Her outfit costs her around \$400—not counting the horse.

But Marge Riley, once a ranch girl herself up around Sheridan, Wyoming, says a lady cow-poke can outspend a New York or Hollywood glamor girl without half trying. Miss Riley designs most of the cowgirl outfits for the movies and for dude ranch visitors and she ought to know. She's the style queen of the San Fernando Valley, and can ride and rope with the best of them.

Marge recently dressed Joanne Dru ranch style during the making of Howard Hawks' *Red River*. Miss Dru, in old-style calicoes and gingham, felt grubby beside the duds and dudesses who galloped over from near-by ranches to the Arizona location where the picture was being shot. So Marge fixed her up with a standard 1947 outfit like those the dudesses wore.

The bill came to \$370.50, starting with a \$125 suit. With this went a \$5.50 tie, a \$15 belt and buckle, a \$35 hat with a \$15 band, a \$60 bag, \$65 boots and \$50 silver spurs.

A New York heiress who visited an Arizona dude ranch this spring and ordered "the works" from Marge Riley got a bill for \$750.50. It itemized down to a fancy Stetson at \$150, a \$75 shirt and a \$75 skirt; \$65 boots and \$100 spurs; a \$75 belt, a \$60 bag, and oddments like scarves, ties, tie slides, hatbands and a rope at \$75.50. A

calfskin jacket to top it off was price-marked at \$75. The lady priced a carved, silver-trimmed saddle to go with all this: \$375. She found she could buy bridles up to almost any price that she wanted to pay, but a rather modest number would set her back \$50.

A great deal of the expense attached to cow-country costumes comes from silver ornaments and carved leather. A girl who wants to let herself go can pile on a couple of thousand dollars' worth of silver buttons, buckles, spurs and saddle trimmings without half trying. There are saddles of carved leather, with silver trimmings, out West, that cost \$5,000—and to some ranch queens they're just as necessary as a mink coat on Park Avenue.

Stetson hats cost up to \$150 and compare with anything any New York milliner ever turned out. Bags run from \$10 to \$100 and footgear runs up to \$65 a pair—a price even rich city-folk might shrink from paying. A horse or two may easily cost more than a coupé, some of the famous palominos running into the thousands.

Miss Dru used to be a Powers model. She figures that half a century has increased a ranch girl's clothes cost at least ten times. And more than that, if the girl goes in for silver and turquoise trimmings on her outfit, as some of them do.

Incidentally, while a city outfit for a working girl may weigh only a couple of pounds, leather and silver are quite heavy; it takes a good strong girl to wear a cow-country getup all day. ★★★

A GAME FOR TWO

Continued from page 22

have shaken things up, like dice in a parcheesi cup. . . .

Daphne was in the shower when the phone rang. She groped for towel and slippers and went dripping into the foyer.

A voice said, "This is Winifred. Do you remember me?—from the fourth floor."

"Oh, how do you do?"

"I do just awful. It's hot. Would you be interested in a blind date? Two awfully cute boys are coming to see me, and we thought we'd go off for the day."

Daphne wanted to be coolly interested and act as if she might consider it. But she said, "Geel!"

"Well," Winifred's voice was bored, "come down in forty-five minutes, and listen, you're sixteen. I said you were."

DAPHNE stood dripping in the foyer, half miserable, half palpitating. In a way, she had accepted camp as the next thing in her life. These few last days would be just with Mother, eating out and going to shows. Now she had to rearrange her mind and realize that boy friends were still the most important thing in life, and that you were measured by your ability to attract men. A man was a challenge. You faced this challenge, at least. Maybe you failed, but you took it up. Two awfully cute boys, Winifred had said. Daphne swallowed. Her clothes, her nails, her wet hair!

Covering herself with bath powder, she put a polish called Crimmon Alibi on her nails and sat achingly tense while it dried. She saw in the mirror a tall, pink-faced girl with tangled brown hair and wide shoulders. She supposed she was starting to come out in the right places, though not quite as right as the people in the movies.

Wildly she searched among her dresses, which all seemed made for picking strawberries. The yellow with the off-the-shoulders neck was best. She put her hair up with combs and flowers and wore a pair of Margo's big earrings. Daphne thought: Sixteen? Well, yes, maybe more. She wished she was meeting a younger Duke Winters.

Her fingers trembling and icy, Daphne rang Winifred's doorbell.

Winifred was something like Lana Turner, Daphne decided, but very bored. She took Daphne into her room, full of small, pink pillows and pictures of boys stuck in the mirror. There seemed to be a vague lack of adults in Winifred's life. She spoke of an Aunt Alice.

"It's awfully hot. I don't know what we'll do. They go to St. Paul's, and their father has been married three times. The third wife is a Hawaiian. I met them at a party. Do you like brunet men?"

Daphne's head whirled. Winifred jumped around so. She wished almost that plump, stage-struck Dora were sitting beside her.

"Brunets," she said vaguely. "Are you going to wear that?"

Winifred had on a black sheer dress. "I guess so. Your mother's cute. You're not small like her."

"No," Daphne agreed forlornly.

The bell rang and Winifred became less bored. She took Daphne's arm with a firm pinch. "Listen, now. You're sixteen, and act as if you had lots of dates. They're rich. Maybe we can get to the Oval Room for lunch."

The boys had brown faces, smooth and hard. One was very short and blond; the other was tall with thick, black hair that swept off his forehead. They wore tan jackets and light trousers. The blond was Melvyn, and his brother was Andy. Daphne's heart beat too loudly. Andy was like the boys in the hair tonic ads—handsome and grinning. It did not seem possible that he and Melvyn were broth-

ers. It turned out they were or brothers.

Andy said, "Hi-yah, babe? loudly, and Winifred tossed her head. They did not know each other very well after all.

"This is Daphne Moore."

"Make it Dally," Andy said, a glance over Daphne and coming to Winifred almost as if to say: I like her better.

"Or just Daf," said Melvyn me-

Melvyn was quite morose in fact, was ugly so he went the whole way and acted it, too. He had stubby hands on his tie was a picture of Niagara.

"How are the frogs, Mel?" Winifred asked, now all lightness and goodness, knowing how to talk to boys turned to Daphne. "He cuts them."

Daphne did not know whether to say "Ugh!" or "How super!" Her face came out tight and little. "Really?"

Now they would see she was a little girl. She felt her face going.

Andy said, "How about going to the Bowery, or to the zoo?"

"No frogs," Melvyn barked.

Daphne had to come in on the floor. She spoke boldly, looking into brown eyes, her heart fluttering to her mouth, "We could go swimming at the Shelton."

The others looked at each other. Daphne felt pale. Then Andy said, "It is a nice little thing, is it?"

Winifred broke in hurriedly, "get going."

They went out, Winifred with her and Daphne not with but along with Melvyn. On the street, Melvyn so and brought out his dark glasses and looked repulsive and gnome-like.

There was nothing said about the Room or the Shelton. When she was not going to be an expensive date, Winifred became sort of wild and Daphne became a Good Sport. Daphne realized that if she didn't hurry and take a Good Sport too, right away, she were going to flop.

"What grade are you in?" she started on with Melvyn.

He stared at her from behind his glasses. In the best Orson Welles nique he boomed, "I can't be graduated fair lady. The school has me dropped court-martial in the fall, and I dropped of frog into the luncheon milk. I am in for this school world long. I am going on a phase of the atom bomb will destroy only human beings and animals intact."

Andy threw back a remark, "nut, but he might just happen to go."

ANDY, decided Daphne, would go into a man who looked out of world in a tuxedo, holding a glass hand—a man with a house full of leather chairs, dogs that brought him pers right to him, and married to a beautiful blonde like Winifred.

Daphne ached from thinking up to say to Melvyn. She thought sane, scheduled life at Weldon's of camp next week where she would be wearing sneakers and jersey pull while Winifred would be walking.

Andy. She saw them walking all over earth, in love, of course. She thought her pretty mother and wondered had ever failed on a date. Tears bled in back of her eyes. To fail at it.

Winifred and Andy were walking close together, Winifred's silk streamed as she walked.

Melvyn's fat cheeks stuck out in a file. He kicked a tin can under a foot and the man stumbled.

"Young ass," the man hissed.

"Keep cool, brother," said Melvyn.

FINE BEER
HAS BEEN A SYMBOL
OF HOSPITALITY
FOR 8,000 YEARS

MOST POPULAR BEER OF ALL TIME

Through the ages have known
to serve beer is simple hospitality.
discovered generations ago that
Budweiser is to pay guests a

of hosts and guests alike, Budweiser has
become something more than beer—a
tradition in hospitality.

Budweiser

ANHEUSER-BUSCH...ST. LOUIS

IT LIVES WITH
GOOD TASTE...EVERYWHERE

"Now, young sirs, what is all this?" Melvyn snapped his fingers. "Beer, and cheese and crackers in the green living room, Snodgrass. We're back from the wild and desolate stretches."

"You're too young for beer." The butler scowled at Melvyn.

"Beer, we said," intoned Andy, who was older.

"Is his name really Snodgrass?" Winifred whispered, "I thought that was only in books."

"He came out of a book," Andy said. It was a gorgeous house, full of paintings, and bronze statues; small silky rugs slid around under their feet.

They played the Moussorgsky records and Winifred smoked a cigarette. She and Andy sat side by side, and Daphne

"Dance, yes?"

Melvyn frowned. "Go fly your grass skirt. You want the lighter phases of music. My soul is dark and heavy."

"Unload your soul," Andy said crisply, "and put on Cugat."

Andy looked odd. He had gotten up from being with Winifred and was standing in front of Lani.

She put her head back and flashed white teeth at him. "Dance?" she said for the second time.

Andy and Lani danced. He was tall and graceful. They danced with single-mindedness and absorption. Winifred laughed nervously, shot a well-what-do-you-think-of-that look at Daphne, and stared down at her white hands.

Melvyn kept snorting out, "Break it up, break it up, you two."

The butler came in. Picking up the empty bottles and dishes, he went out, his back rigid with disapproval.

Lani acted as if no one was in the room but Andy and herself. The music throbbed in the dimming opulence, and the boy and the brown woman went on dancing, wordlessly.

Winifred walked over deliberately to Melvyn.

"Show me your laboratory, Mel. where you keep things," she said, as sweet as spoonfuls of molasses.

Melvyn tried to be indifferent, but he crumpled into a lump of flattered male.

"On the third floor. I'll cut up a frog for you."

They went away, Winifred like a

and to Daphne, "I hate them—messing up the world. Teaching youth, bah! The Eskimos are smart."

"Why?" asked Daphne, relieved to feel they might be having what is called conversation.

"Kill off the old guys. Take them way out and leave them on a cake of ice to die."

Now Daphne knew why girls did dreadful things. If there were only something she could do to make Andy notice her. If she could be a different girl, interesting, sure of herself...

They took the elevated down to the Battery. The train was very dirty. The passengers slept or stared ahead of them, chewing gum; or they ogled Winifred in her black dress. Winifred's cheeks got pink. Andy slid his arm in back of the seat, and Melvyn called out coarsely, "No passes in public!"

Daphne thought she would die from pure bitterness.

THE Battery was dirty, too. They had liverwurst sandwiches and cream soda, and they walked through dingy side streets where moving vans and trucks were bunched. A group of Chinese girls passed them. They looked at Andy and giggled and pushed each other. Andy only smiled. Even Chinese girls acted up, thought Daphne in panic.

Once Winifred stood near her and whispered fiercely, "Give out, dopey!"

But Daphne did not know how to turn a mood on and off.

Then Melvyn said to Andy, "Hey—let's go home and tease the hula skirt. There's beer, and cheese and crackers." He threw out his stocky chest and intoned, "And Moussorgsky. We've got the recordings."

"Who?" Daphne asked wearily.

"Moussorgsky—the musician. He and I are buddies. I feel him in me. I'm Moussorgsky himself, walking through the city."

"You're something," Daphne announced tartly, and for the first time, they all laughed with, not at, her. She began mentally to unclench herself.

They went to Andy's and Melvyn's home in the East Eighties. It was a private house with a wrought-iron door, and a butler of whom the boys seemed slightly afraid.

knew this was how life was. Always a man and a woman drew together, looked into each other's eyes. And all else was unimportant, dry as dust. The things the principal at Weldon had said about contentment were words out of a cross-stitched sampler in a crumbling room.

Daphne's heart weighed her down. She dreamed of swimming stroke by stroke with Andy in some blue water, pulling herself up on a raft... "Good for you," he'd say. The sky would be blinding silver. Andy would be planning a long trip to, well—to Madagascar. "Daphne, come with me—come."

She saw Andy timidly touch a strand of Winifred's hair, and all was lost.

Melvyn sprawled in a chair, listening to Moussorgsky's Night on Bald Mountain. He had dismissed Daphne from his mind. He was a very young boy, pretending that two things only were of importance—Melvyn, and what Melvyn thought. He would undoubtedly be a big success.

The beer made Daphne hot and sleepy. She glanced up hazily and saw a brown woman in a billowy red dress standing in the doorway. A woman with ink-black hair and full vermilion-bright lips.

"Here's Lani," Andy sprang up.

It was their father's third wife. She walked across the parquet floor on beautiful, bare feet. Her slanted eyes traveled over the girls in an unsmiling way and she inclined her head ever so slightly. Lani did not sit on a chair. She chose a hassock, lighted a cigarette and waved to the phonograph.

golden-haired beauty ascending the stairs of some madman's house. Daphne knew Winifred was simply doing this because of Andy and Lani. Winifred would never let herself be without attention, she would know what steps to take.

Melvyn called, "Want to come, Daf, and see my lovely little creatures?"

Daphne shook her head.

Winifred leaned back, elaborately ignoring the dancers. She taunted Daphne, "I guess camp is your speed, all right."

Then Daphne sat and watched Andy and Lani, and the shadows grew longer. She felt on the outside of a bright, bad dream, lost in a personal misery, while others lived and laughed, and went in pairs.

Lani had begun to sing, and smooth, hard face was overlaid kind of hynosis...

Daphne could not remember first saw the other man, the man gray hair and the dark red face stood in an entrance out of sight of Andy and Lani. She shivered. Pictures had elucidated most of the ferent phases of anger that depicted by a man's expression now she was beholding a man's real life.

He came away from where standing quickly, and before she could know he was there, he yanked Andy away from Lani, hit him full in the face.

DAPHNE heard the crack blow. Andy was down on the floor. He started to rise. A narrow stream of blood traveled out of his mouth moved from side to side like a trident, screaming terrible alien sound.

Daphne ran out of the room into the hallway. The worst part of the night, half getting to his feet, could not bear to wait and see would be able to get all the way up to the man hit him again.

She got out of the house, pushed the heavy door shut. She thought right. I'm on the street, I must everything is all right.

Andy—whom she loved—was hurt! The picture was printed in her brain. She would never be able to forget those three people changing the scene in the room.

She took a bus and immediately to feel sick. The driver said, "The rear, miss," and then she had right off, but a man followed her stood on the curb. It was Mr. Winters.

"It's all right, kiddo," he kept but his face was distressed.

It was a question of which was distressed—Mr. Winters' face or Daphne's stomach.

The sympathetic, moon-shaped of people went by and Daphne's upside down.

Duke got a taxi. She would have to be alone with her head on the leather, riding with her eyes shut. He promised to get her mother.

It's *Smart*
to own
an Olds

You'll be "in the swim" with the smartest people . . . in a Style-Leader Oldsmobile. This "Custom Cruiser" Convertible, for example, is a stand-out in any gathering . . . in the city . . . at the country club . . . at fashionable summer resorts. And driving this smart looking Oldsmobile—the car with all the automatic features—is as restful as a day at the beach. The top goes up or down automatically. Windows raise or lower hydraulically. The front seat goes forward or back at the touch of a button. And as for the driver . . . all he does is sit and steer, thanks to GM Hydra-Matic Drive*. Gear shifting is fully automatic. There's not even a clutch pedal in the car!

Oldsmobile

*Optional at extra cost.

Swim suit designed by Tina Leser

Convertible Coupe by Oldsmobile.

Beer belongs...enjoy it

In this home-loving land of ours . . . in this America of kindness, of friendship, of good-humored tolerance . . . perhaps no beverages are more "at home" on more occasions than good American beer and ale.

For beer is the kind of beverage Americans like. It belongs—to pleasant living, to good fellowship, to sensible moderation. And our right to enjoy it, this too belongs—to our own American heritage of personal freedom.

AMERICA'S BEVERAGE OF MODERATION

"What's wrong thing?" he asked, passing a handkerchief over her forehead. "I did not think it was food. It was, the mounting strangeness of the night. When she remembered and Winifred, perhaps still up at that house looking at the frogs, to feel terrible again. "You, Mr. Winters." She smiled at him. "The Duke, chickie. I'll bring her around in two shakes." "I came in very soon. "It's the heat, and you need a change."

Mother was so dainty. She was graceful than Lani, more self than Winifred. Her mother never have had the kind of troubles. "She said 'your speed.' It's just my speed. "I'll always be clumsy and I will have all the boys. I'll be like you. I'm a failure!" "I was shocked motionless. Prob- question, she got Daphne to about the afternoon. "Brat!" she meaning Winifred. And when told her about Lani and the go made clucking noises. "I bought a lace bed jacket for

"I'll tag you a couple of punches just to make it look good. Then in the fifth—bam!—he knocks you out!"

LES COLIN

"Darling, look at Ingrid Bergman—she's cute? Hardly." "Tears, Daphne remembered. "Very likely Ingrid would know how to handle the Winifreds. "How can I learn?"

"I moved around the room like a dervish, putting shoe trees in Daphne's pumps. Then she spoke

"I learn by failing. After a failure, I'm better. You're a bigger person than I mean other persons don't walk on you so much. You know more about yourself. It's like a test in school. You pass it, don't you?" "Mother's face was earnest, wide-eyed. "I nodded, not sure she understood but warmed inside by something like mother's voice, and Margo held her hand.

"The next day was different because Mother stayed home from work. "I called the office and told them, and I had shirred eggs, which took a long time to cook and to eat. After that, I lay on the sofa reading a movie about Ingrid Bergman while Mother seemed very busy at her desk. "Note notes, made some out-of-town calls and fixed up bundles of clothes for the Red Cross to send to Europe. Daphne thought some of the things Mother was sending were too

In the afternoon, Lea Davis came in. She looked as handsome as ever, but subdued. She picked up the movie magazine.

"Honey, don't fall for glamor. It's overworked."

"Daphne should know," said Mother cryptically.

"Margo—" Lea began, looking at Daphne, then away.

"Yes."

"I want to tell you something. I hope you won't think—I mean, you're my best friend—"

Mother seemed paler. She got up and took Lea's hand. "I know," Margo said. "I'm glad. You were always meant for each other."

And then they both cried and kissed each other, and Lea said, "I'm so happy," and wiped her eyes on a handkerchief printed with French words.

"Honestly!" Daphne exclaimed, but she knew what it was before they told her.

"It's Laurence Driscoll," Lea said. "We're getting married, and once I thought—"

MARGO sprang up. "We'll have a party. Lea, call Laurence and Duke Winters. This has to be celebrated."

Daphne could not be sure that her mother was happy. Perhaps she had had a failure, too, the thing she had talked about last night. You could be grown up and get hurt, and not be allowed to show it. She felt a moment of coolness toward Lea. But Lea was kind, really. Today she had a quiet glow to her. And hadn't Mother said about failing—"Eventually you pass"?

When the men came, Mother was in a dark blue crepe with her hair worn in a low knot at the back. She looked, Daphne puzzled, like someone else.

Duke was very nice. He didn't mention about getting off the bus with Daphne yesterday. In a corner of the room Laurence Driscoll said to Margo: "Margo, I—"

But she wouldn't let him finish. "I'm glad, so glad." And he was looking down at her with a crinkly smile, and suddenly they were just very good friends.

They had cocktails, with the inevitable grape juice for Daphne. She thought they were all different today. They were calmer and happier, and somehow it made New York nice again. Their voices wiped out the sound of a man's quick, running steps and Lani's screaming. She thought, sadly: I'll go away to camp and there'll be the four of them—two pairs, again."

"Margo," Lea began on the old theme, "when are you going to take some time off?"

"Right away," said Margo suddenly. "I've taken a cottage up at Cape Cod and Daphne and I are going up there."

"May I be invited?" Duke said, his eyes pleading.

Mother didn't laugh in that tinkly way or throw her head back. She looked Duke in the face and said, gently, "Perhaps."

"Mother!"

"And Daphne can have her school pals like Dora up if she wants, but the main thing is we'll be together," Mother went on. "We'll have a long, wonderful lazy time. There are things a woman can teach her own child, I guess, that no one else can."

"Bravo!" cried Lea walking swiftly across the room, looking so tall beside Margo. Looking so admiringly at Margo.

Long after they had gone, Daphne lay in bed, her head swimming with the wonder of not having to go to camp. She thought of the letter she would write to Dora. About everything. And then she remembered something else, something that had seemed so different.

Mother had called herself a woman. THE END

THEY KICKED US OFF OUR LAND

Continued from page 21

institutions there. Under the cloak of charity the Hatch bill would have opened the way for bargain-price land sales in every other of the 13 public-land states. Representative Barrett, in a similar do-good measure, proposed that federal lands in Wyoming be sold to cattlemen (at \$1.25 an acre, tops) with the proceeds going to the state university.

Senator Robertson of Wyoming didn't even bother with do-good angles. He proposed simply that the public lands, property of all Americans, be turned over to the states in which they lie. Presumably, the Western livestockmen, acting through their legislatures, could take it from there.

All told, 58 bills affecting the public lands were dumped into the hopper of the 79th Congress. Only a handful, if enacted, would have opened the way for cattlemen, lumbermen and other interests to break into the national parks and forests, to mine the grass- and timber-lands without restraint and to exhaust the last virgin preserves of our national wealth.

So far in the present 80th Congress 55 land bills have been introduced.

Public Opinion Is Hostile

But the stockmen's main assault on the public lands was held up while they waged a struggle for public opinion in the West itself. There, the stockmen found to their surprise that their self-imposed crusade to "return the public lands to the West" evoked little gratitude from fellow Westerners. Instead, the livestockman—long the darling of the cowboy country—found himself pilloried as a grasping destroyer of the West's lands and waters.

In the West when men confer it is said, "They're making a medicine together." The public-lands medicine of the big stockmen was so strong that their own neighbors and lifelong friends couldn't take it.

One such neighbor is Charles J. Moynihan, law partner of Dan Hughes, the Montrose, Colorado, sheepman who is spearheading the stockmen's public-lands drive.

"I can't imagine the West I've always known being fenced in by private owners with 'No Trespassing' signs scattered around in every direction," Moynihan wrote Washington officials. "It will make a feudal province out of the Rocky Mountain region . . . and will affect our concept of democracy."

Lee Knous, governor of Colorado and ex-partner of Hughes, rebelled too. The spare, six-foot governor took aside Dan Hughes, full-faced and beefy product of the cow country's good steaks.

"It's inconceivable, Dan, that Congress would enact such legislation or that the public would support it," he said.

In Idaho, the state legislature sent a joint memorial to Congress.

"It has been the common practice for private owners of land acquired at nominal cost, after removing the lumber, to let it go for delinquent taxes thereby forestalling reforestation, development and protection of the land," the Idaho legislators warned.

In Utah, Senator Arthur V. Watkins polled ranchers and others and found sentiment two to one against the land-sale proposal. In Colorado, the mountain region's leading newspapers belabored the land drive so lustily that the Record Stockman, a livestock trade paper, protested:

"Shame on Denver's daily press . . . Here Denver sits, the livestock breeding capital of America, reaping more than it realizes from cattle, sheep and hogs. Yet the Rocky Mountain News and the

Denver Post editorially smear a man as a 'land grabber' or a 'speculator.' Stockmen are going to the livestock paper finished stockmen.

Some of the ranchers aren't this.

"The proposals were initiated by a very small group of selfish stockmen who charged the Carbon Stock Association with small stockmen at Gunnison, Colo. 'They'd ruin the soils, waters and other natural resources.'"

By early summer the crowd had gathered such force that it reached all the way to Washington. There J. Byron Wilson, three-pound woolgrowers' lobbyist, advised boys back home that the land drive had become so hot a political potato better let it cool.

With his ear cocked to the crowd from the West, Senator John H. Wheeler of Colorado called the land drive a selfish proposal of all time. The Cow Bloc's Senator Pat McClellan, on realizing that sale of the public lands would deprive Nevada of millions in highway funds, knew it was time for a retreat.

"I am opposed to turning the public lands over to the stockmen or even to the states," he said.

But what the West doesn't know is that the public lands have already been turned over to the stockmen. Livestockmen have become the lords and masters of the land and the West seems to have no other way to be confronted by the public-lands drive.

What public opinion barred men from doing openly, the Congress has done quietly. They did it. The Cow Bloc helped appropriations for policing the public lands. It cut the grazing field service budget from \$1,070,360 to \$373,000.

This meant that there could be one office in each state to regulate 100,000,000 acres of range lands and 20,000-odd ranchers.

Too Few Police and Patrolmen

It meant that of 250-odd inspectors and graziers (inspectors odd remain to patrol and police the range) adds up to no federal inspection force since surviving personnel, a staff, will have its hands full with work.

In actual practice, the Taylor Grazing Act, passed in 1934, to "prevent grazing and soil deterioration," is repealed.

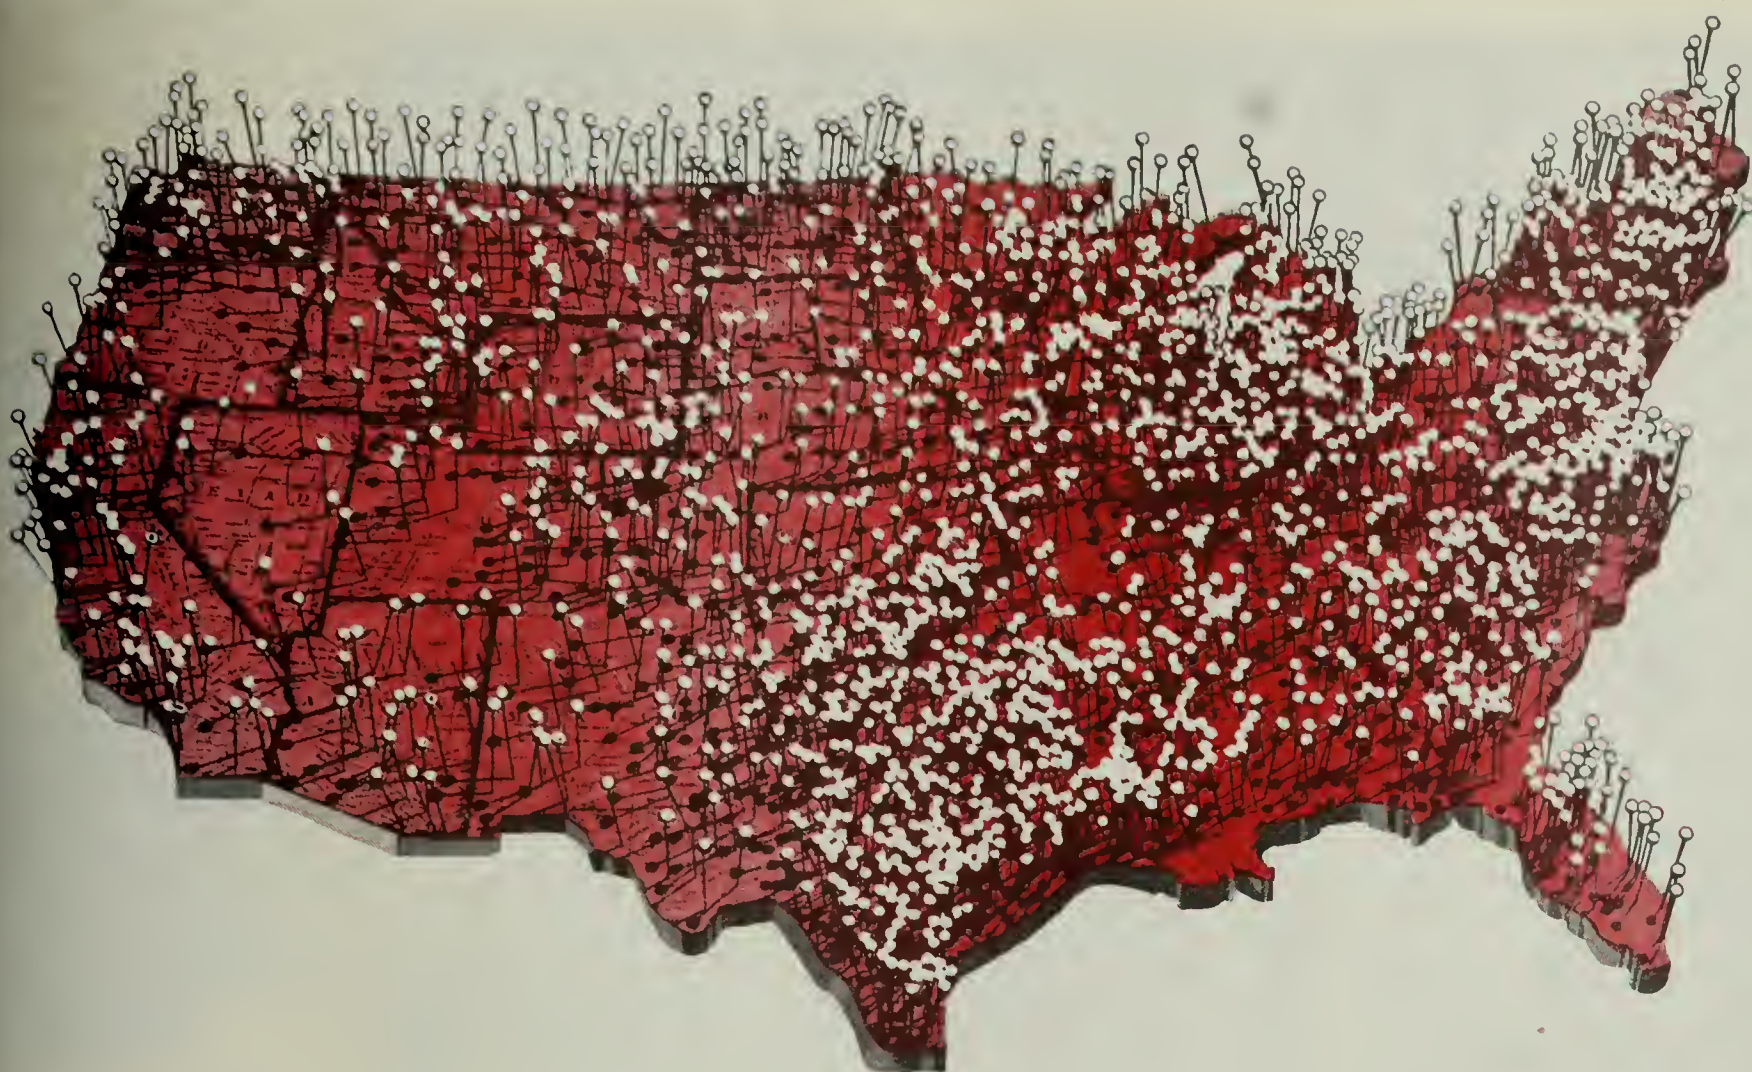

The way the big stockmen and the Cow Bloc broke the back of the service is an object lesson in pressure politics in America. The step was to capture the grazing service. The law had set up advisory boards for stockmen to confer with local officials about the number of livestock in the range and similar questions. A year the stockmen's advisors weren't conferring, they were giving orders.

The second step was to invest the Grazing Service to death, and Harold Ickes, then Secretary of the Interior, gave the stockmen an order.

In an unguarded moment in 1935 Congress it would cost only \$1 million to run the Grazing Service. The actual budget turned out to be as much, the House Appropriations Committee, composed largely of craters, began to scrutinize the prices at which the Westerners were grazing the public lands.

"Such fees—a nickel a cow per acre—are ridiculous," Representative

MENNEN **QUINSANA**

H. Andersen of Minnesota, protested. "The Forest Service fee is 31 cents, and in my own country, Minnesota, pasturage costs \$1.25 or more per month."

"Raise your fees," the House committee warned the Department of Interior, "or we'll cut your appropriations."

Manfully, Interior tried to raise the fees, only to be taken out of the play by the Cow Bloc. Senator Pat McCarran began investigating the Grazing Service and kept it up for seven years, making that department one of the most investigated in government history. The senator filed five large reports. The last one urged the firing of "a very small handful of self-seeking opportunist administrators," (who had sought to raise the fees).

By coincidence the stockmen themselves brought forward just the candidate to run the Grazing Service and the Land Management Bureau (of which the grazing unit is a part). He was none other than Dan Hughes, the leader of the stockmen's fight to sell the public lands to selected private owners at bargain prices.

Turning over the care of the public lands to a sheep raiser who wanted only to make them private didn't seem as logical to Secretary of the Interior Krug as it did to the big stockmen.

When Krug said, "No," the stockmen gave him their Sunday punch. They hit him in the appropriations. It was easy. The stockmen and the Cow Bloc senators, experts on grazing, told the hatchet-wielding House Appropriations Committee that the Grazing Service needed only a fraction of the money it was getting anyway.

The lands from which the stockmen thus ousted Uncle Sam without buying so much as an acre, had a long history of abuse before the government bureaucrats came. The nomadic sheepman with his several dozen sheep, the cattle baron who staked out miles of public domain for his thousands of steers, the small rancher with his shoestring herd, all these had one thing in common. They overstocked and overgrazed the good earth.

So thorough was their unsupervised grazing that in 1936 the Department of Agriculture reported, "a range once capable of supporting 22.5 million animal units (a unit is one cow or horse or five sheep) can now carry only 10.8 million. On nearly 55 per cent of the entire range area (roughly the 13 mountain states) forage values have been reduced by more than half." It was to halt this devastation that the Taylor Grazing Act was passed in 1934 at the request of most of the Western stockmen.

Attrition of Grazing Ranges

Today, on vast spaces where lush grasses once grew belly-high to a horse, the relentless cropping by too many mouths has so skinned the land that they won't recover in our generation or that of our grandchildren. Government soil experts say the Western range land is sick and requires at least 50 years of careful nursing to heal the damage already done and perhaps another 50 years to restore the health that once supported twice the livestock the range now feeds. But instead of convalescence, the stockmen's virtual repeal of government inspection will intensify the maltreatment which put the range lands in the hospital in the first place.

Small ranchers are worried.

"With the supervision cut, there'll be a struggle for the range, and the little guy'll get pushed around," Ed Ennis, who runs 400 head of cattle in Grand County, Colorado, told me. "Maybe we'll have some old-fashioned range wars, the kind my father saw here years ago. Trespassing? Overgrazing? Sure, how are we going to stop it?" Small rancher Ennis and his friends have been bombarding their congressmen to re-

store Grazing Service appropriations. Cattle helped make the mountain states, and grass makes cattle. By destroying the grass, the Western stockmen are digging a grave for their industry.

But the stockmen are hurting more than their own industry. By stripping wide-open spaces of their green cover they are letting the rains dump the earth into the West's rivers.

I stood in a gentle spring rain in a canyon near the Continental Divide above Boulder, Colorado, and watched a segment of the process which threatens the life of a whole region. A mountain stream which old-timers told me was once clear and sparkling was now choked and turgid.

"Too thick to drink and too thick to plow," a forest ranger put it.

Appalling Waste of Topsoil

Overgrazing had removed the vegetation with which nature slows water runoff and the unfettered waters were peeling off the exposed topsoil and carrying it into the stream. The mountain streams hustle the silt into the Colorado, the Grande and other great river systems which in turn deposit it at the rate of millions of acre-feet (an acre of foot deep) each year in the mountain reservoirs. And it is these reservoirs which help nourish the semiarid West. (The Elephant Butte dam built by federal engineers to guarantee water to Mexico "forever" is already so choked with silt deposited by the Rio Grande at the rate of 20,000 acre-feet a year that the state is alarmed over its supply.)

The same overgrazing that dumps earth into the rivers opens up gulches on the uplands as the water once seeped into the high ground rushes down to swell the rivers and an ever-increasing toll of damage is done.

The West has been slow to line up cattleman in the uplands with the land and water shortages downstream. Congress slashed appropriations for reclamation projects in the West, and Western governors hastened to Washington and persuaded it to restore more dams and other water and power projects.

A forest ranger commented bitterly. "They're spending billions for concrete dams to store water, but they spend pennies for the millions of dams we protect, the blades of nature designed to save the land water."

The critical area that controls the West's water resources is the watershed region which lies chiefly in the foothills of Colorado and Wyoming. Much of this watershed land lies within the 80,000,000 acres of grazing lands which are administered and protected by the Forest Service of the Department of Agriculture.

With the scalp of the Department of Interior's Grazing Service tied to the belts, the big stockmen are now getting these 80,000,000 acres of Forest Service lands.

More than half of these are badly depleted, but efforts to cut down the numbers of cattle and sheep that graze them have plunged the Forest Service into a battle for its life.

The stockmen and the Cow Bloc are how to deal with such government bureaus. The American Cattle Producer (a trade publication) this April put a happy thought.

"Maybe the Forest Service has much money appropriated for its paper editorialized. 'Such a situation can be easily remedied. Cut the appropriations.'"

Another article by Mr. Velie on the subject will appear in an early issue.

THIS IS A "STICK-UP"

"stick-up"—and you're the loser—when dirty oil circulates through your engine. Why have your oil tested—*free*—by the famous AC Test Pad method, at any registered AC Oil Filter Service Station? This positive test only takes a minute, while you're having your oil checked. If your oil contains grit, dirt or carbon, it stands out clearly on the clean white AC Test Pad.

Oil is not a lubricant. It clogs piston rings and slots—makes valves stick—wears out moving parts—wastes fuel and oil—robs engines of power.

If you haven't an adequate oil filter, or if the filter element needs changing, "highway robbery" is going on in your engine, every mile you drive. You can prevent it by installing an AC Oil Filter or Element, of the right size for your engine, to keep your oil free from damaging dirt. Why not do it today?

CONEY ISLAND IS A HOWL

Continued from page 24

Every year the Coney Island Chamber of Commerce boasts of the resort's drawing power, but objects to the pictures that prove it because "those pictures tend to discourage good customers."

Last season the Island was host to a total of 70,000,000 customers, and the hot-day average now hovers around 1,250,000.

Of these probably not more than half are "good" customers, that is, customers with upward of a dollar apiece to spend. Only a few thousand rent bathhouses in which to dress and undress. The non-spenders come early, bring their own lunch, enjoy sand and surf for free, and go home late. If the night is as hot as the day, they may not go home at all, choosing to make their beds right there on the sand rather than return to the steam-bath atmosphere of a city tenement.

The nonspenders either dress and undress surreptitiously in cars or under the boardwalk, or else they wear their bathing suits under their street clothes, and only have to peel off to be ready for the beach. This is known as "bum-bathing," and those who follow this system are called drippers, because that's what they do when they put street clothes back on over wet bathing suits.

Temptation on Surf Avenue

But it's easy to get rid of money at Coney if you want to. From the minute you leave the subway and emerge on Surf Avenue, you are surrounded with 10- to 25-cent temptations to try your luck, strength or courage, to hit the baby, to see the freaks, alive, alive, to watch the pretty girlie take a bath in wine, alive, alive.

The wine-bath girl, named Tirza, says the kids who gather in front of her place can't believe she really takes a shower bath before their very eyes. She used to offer \$1,000 to anybody who could prove her attractions were not true as advertised. But the customers couldn't believe in \$1,000 either, so now her Barker only offers to "refund your ticket money, plus \$1 for your time," if Tirza doesn't live up to her promises. She does, all right, so realistically that the police once closed her show for three days. Now her filmy net G-string and bra have been okayed by the license bureau, and her show flourishes. Winters Tirza spends with her family in Miami, Florida, in the house the wine bath bought.

The aristocrat of Coney Island places is Steeplechase Park, where for \$1 you get trees, grass and a place to sit down, plus your choice of 12 rides. No girls.

Or for \$21 you can buy "the cheapest vacation in New York"—a season pass entitling you to use the 300-foot swimming pool, lockers, private beach and athletic facilities. You may also purchase as many flings as you want on the fright-and-fun gadgets in the park and inside the pavilion—"the only place on Coney Island where it never rains."

Steeplechase, built 51 years ago by George Tilyou and now run by his two sons, George C. and Frank, is the last of the famous establishments which can remember the time when Coney was something a little fancier than it is now, when Eddie Cantor used to perform at Henderson's Music Hall, when Marie Dressler ran the popcorn-and-peanut concession, when Jimmy Durante was a singing waiter, when the wild-animal acts were as good as any circus, when premature babies grew before your very eyes in Dr. Couney's glass-enclosed incubators, and when a Feltman dinner under the trees was as fine a thing and just as expensive as the best in Manhattan.

A little earlier, Coney was the center

of sporting society. Jeffries and Co. fought there, and all the race-crowds from Gravesend made it headquarters. Earlier still, Coney almost as social as Newport. It retained the famous in its de luxe hotel Daniel Webster, Henry Clay, the Roosevelts, and scores of visiting pean princelings.

The gradual cheapening of the came about through cheaper transportation. The extension of the five-cent way to Coney in the twenties marked the beginning of the new mass-production nickel-and-dime era. Periodic fires out the costlier places, one by one, ing way for entertainment at pe prices.

One type of attraction, however

changed very little since the 1880s rides. Coney Island had the first a ment railway in the world, a mile of roller coaster, built by Lamar Thompson in 1884. From it have developed the fearsome Cyclone and ens of other variants now in use al the world. The psychological ex tion for the fascination of these vi nauseating rides is that they satisf basic need for mild danger. All are supposed to want the sort of "insecurity" we felt as infants when body tossed us into the air. All of supposed to want it, but some of us The Tilyou brothers, in de Steeplechase attractions, still follow father's maxims: "Never hire a f attraction that can eat or talk ba you," and "Let the customers ent each other." The customers do ent each other hilariously. The pav stage show, consisting of a sta routine built upon the simple bu of blowing a girl's skirt up ove head has been running to a packed steadily, day in day out, for the p years.

There's only one threat to Coney petual existence along its present Park Commissioner Moses says t any more of it burns down, he is to change it into a simple beach an letic resort, minus rides, girls and works.

THE END

Collier's for July 26, 1931

IT'S HERE!... SUPER SAFE ... AND SILENT

THE NEW *Silent* VACUUM CUP

Millions of test miles prove this handsome new tire wears up to 40% longer and stops 17% quicker. Thicker tread, stronger body... longer mileage, greater safety... highlighted by the satin-smooth white sidewall... make this America's most modern tire.

It bears an honored name, rich with tradition for safety, dependability and long wear. Running mate to fine cars for more than thirty years, it now establishes a new peak of perfection in appearance and performance.

... Pennsylvania Silent Vacuum Cup is made of maximum allowable amount of natural rubber. All natural rubber tread in the larger size and stronger-than-usual rayon throughout the body.

... Because of its great strength, this tire requires less air pressure. You get a soft-cushion ride, more grip on curves, more tread rubber on the road. ... See the new tire at the sign of the Pennsylvania Rubber Co. ... it's tire headquarters.

PENNSYLVANIA TIRES

PENNSYLVANIA RUBBER CO. • PENN-CRAFT PARK • JEANNETTE, PA.

A THING CALLED HEART

Continued from page 17

there was a close play, there was what looked like a quick jab of Rankin's spiked foot at the little man's leg. But it is hard to say which happens and which is made to happen in a close play at the base.

The Jeep could say, however, because words went with what had happened, and they were: "Dirty sawed-off runt." Nobody else heard the words, not even the base umpire, who had run halfway to second base to cover the play. "Safe!" he called, and leveled his arms out, palms down. He was wearing greens and looked more like a mechanic than an umpire. But his was the say-so.

SOMETHING was happening inside the little man called Jeep. Something that had been inside him a long time was breaking to pieces, and the strange thing he thought of was thin blue china cups which had hung from little brass hooks somewhere—he couldn't remember where.

"Safe!" he yelled. "I had 'im out by three feet!"

The umpire shook his head, inexorable authority. Everybody makes mistakes—even umpires. But umpires can't admit them.

"And he spiked me!" Then Jeep looked down at his leg, saw no marks there, perhaps a snag in the sock, but no marks. "Or tried to," he said. He felt like a kid complaining in the empty lot back home.

Behind him Rankin laughed gruntily. "Whatziss—a man's ball game or a kid's debatin' s'ciety, hunh?"

The umpire said, "Play ball."

Marc Nettles came strolling toward them. "Let's go, Jeep boy." The lean brown face, secure from all illusion.

Rankin said, "Hey, Nettles, ain't you guys got any men out here?"

Tobacco juice from Marc's thin lips clotted unbecomingly in the dust at his feet. "We didn't leave many back home, Rankin."

"Bull," Rankin said.

"Gimme the ball, Jeep."

The breakdown seemed over now. It was the end of something. He couldn't remember the blue cups, but—to hell with the cups. It was where something came to pieces and wasn't any more. He could have sworn the spikes went into his leg. Only a snag in the sock.

"Gimme the damn' ball, Jeep."

He felt Marc's bony hand take the ball. The reality of it lifted him out of the nightlike feeling that had been flooding in around him. Marc grinned—same old grin, crooked—and said, "That's just a taste of the big time, fella. Bitter as a chicken with a busted gall, ain't it?" Then Marc turned and went back to the rubber.

For Jeep the blur of stands reshaped itself behind home plate and along the base lines. The diamond spread out, gray earth, green grass. The Jeep moved out to his position. Behind him he heard the grunty laughter and the slanting voice again: "You couldn't be a bat boy wit' my club. In the big time we dust off the plate wit' a little punk like you." Then Rankin took a short lead off second, pawed at the earth with his spikes, and laughed again.

In the fifth game of the series, Willys Jackson was knocked out of the box in the first inning—like this: Jernigan singled to right field. Samuelson walked. Knopka doubled off the left-field wall, scoring Jernigan. Rankin drove Jackson's first pitch over the right-field fence for one of the longest home runs ever hit in Rizal Stadium. Jeep left the game while the crowd was still murmuring over Rankin's drive. . . .

It was the fourth game of the World Series that Jeep Jackson again faced Ed Rankin. In midseason the Hawks had

called Jackson up from the minors to help fill the gap left by Marc Nettles, who, after winning five straight games for the Hawks, had departed for Mexico, where baseball in a sprawling adolescence had flung out arms as far as Brooklyn.

When Jackson joined the Hawk club, nobody was talking much about Marc Nettles. Shorty Knopka, third baseman, did have this to say: "You knew Marc in Manila, didn't you, Jeep? Well, you know how he was. He just didn't believe a guy could get anything like a square deal in this racket. He wanted more cabbage, and the boys in the office couldn't see it. They said his time in the Army hadn't done his arm any good. So Marc said, 'To hell with 'em,' and headed south. I think it was a mistake, and maybe you do too, but it's just the way things go."

"Yeah," Jeep said. "Yeah, I guess so." It was like dry sawdust in his mouth. He didn't get it. A swell guy like Marc Nettles.

In his half season with the Hawks, Jeep

Sox. That made it two and one. Rankin had a home run, a double, and two singles for a perfect day at the plate. The wise guys said the fences at Parnham Field were made for big Ed Rankin. It looked that way. In the first inning of the fourth game, with two men on, Rankin hit another homer into the right-field bleachers. And Willys (Billy the Jeep) Jackson, after one-third inning in his first World Series game, retired from the mound. The Sox won, going away. Three and one.

Then there came a surprise. Marlow won a second game for the Hawks and sent everybody back to Hawk Park—for one more game. You were kidding if you said, "Maybe for two more games?" "C'niss Marlow wuk eveday? A guy gotta rest, ain't 'e?"

"So it's all over but dividin' up t' gate, see?"

So—everybody knew it but the Hawks, and they didn't know it. They didn't know it in the sixth game, so they tied up the Series at three all. And that was how it stood when Dobbie Oliver announced

all baseball's not as sweet-smelling a bouquet of posies. They get sawd where their hearts ought to be." changed hands with the knife, trimm away meticulously, as if that were most important task of the day.

"But, Willys, if you think you got s dust—how you reckon I felt? You kn the first World Series I ever cover. Nineteen nineteen. You wasn't even be. How you reckon I felt?" He took cigar from his mouth, spat a shred of bacca away. Then he returned the cig still cold and fireless, to his teeth, chewed it, waited.

The little man at the window took small change, counted it over with purpose. The sounds of the city ca distantly in upon the room. The li man on the bed said, "You mention Marc Nettles in a couple of letters fr Manila. I guess his good-neighbor pol sort of jarred you too, as well as t thing about Rank—"

The little man at the window whir around. The bones in his face seen pressing outward to make spots of wh ness on his skin. "Leave me alone, Sa I know I'm a punk, a runty punk with business in a man's game. Leave me hell alone, will you? I know when licked."

Sam Chester got up slowly. The cl ing of the penknife made a small sing ness of sound in the room. Then S walked to the door. "Okay, Willys," said. "You know where you belong I ter than anybody else can ever tell yo He opened the door. "But you're forgi ting about a lot of good guys—like T Lacey and Amos Jarrell and She Knopka. It's all Rankin and Nettles w you. Okay."

Sam Chester made to leave, then smi as if on a very fond memory. "You kn better than anybody else whether you licked. But I remember the first tim ever saw you—you remember? The se was 38 to 5 in favor of the other guys, t you still wouldn't quit. Remember? you know better than anybody t whether you're a runty punk. And if y are—well, you won't even be playing Waycross in another year. Because be a runt is tough, but being a punk ak with it is lousy. It makes a guy stink. A you know better than anybody t whether you stink."

Sam Chester laughed as if nothing the world happened to be very fun. Then he left, because the little man at window was just standing there, sil white-faced, trembling, blinking to k back tears that didn't belong in any m world.

THE crowd was the largest he had e worked before. But he had to keep mind right in the groove. He was swi ing, not a good sweat, a thin sick moisture on his forehead and upper. Some baseball clubs were named birds, and that was the way the cries the infield were, birdcalls, shrill and perative.

"Take your time, kid, take your tim "You're way ahead of him, boy!" stretched, threw. The umpire's fist w up, thumb jutting from it. And that s three of them—one, two, three. But t big fellow would be first up in the sec inning.

Dobbie came out, helped him into s jacket, patted him on the shoul. "Great work, kid! You looked goo good as hell."

Then Dobbie moved away toward p first-base coaching box, looking lik a man who felt good. But Dobbie di know. The big man was the one, he the one.

The top of the Hawks' batting on got a run, and that put him away ou front, didn't it? And Tim Lacey w smart catcher, knew as many hitter any other man in baseball. Lacey w know how to handle the big t Wouldn't he?

IT SEEMED A BRIGHT IDEA AT THE TIME

Originator	Idea	Result
A detective in Chicago	He taught his pet spaniel how to push open a door with his nose.	Returning from a night shift, he found the refrigerator open and all faucets running.
A hobo in Goshen, Indiana	After eating a free meal at Salvation Army headquarters, he left this note: "I've fixed your light meter so it won't register."	All the fuses in the building blew out.
A railroad engineer in Chicago	On the day he retired, he tossed his work jacket in the firebox.	He left his last pay check in the jacket pocket.
A migrant to Whittier, California	He found a house for rent and phoned his family in Rochester, New York, to send on all household goods by plane.	His freight bill was \$3,000.
A gentleman in Baltimore	He mailed out this letter: "I would like to own \$1,000,000. . . . I request each recipient to send me \$1 until I have \$1,000,000. . . . Self-addressed envelope enclosed."	The recipients turned over their letters to postal inspectors.
A resident of Springfield, Illinois	Arrested for stealing \$3,000 from a bank, he explained he had done it to pay off \$3,000 he owed another bank.	The judge sent him to jail.
A motorist of Elizabeth, New Jersey	He made a new license plate for his auto out of cardboard, painting a perfect facsimile.	Police saw the difference and the judge fined him \$50.

—W. E. FARBERSTEIN

Jackson didn't finish a great many games. He would go five, maybe six innings, like a fire in dry sedge, and then—the showers. But he managed to win as many as he lost, and that filled enough of the gap to put the Hawks into the Series with the Sox.

The wise guys said it would be the Graysox in five games, maybe four. Marlow might win one for the Hawks, they said, but it would be the Sox the rest of the way. Well, Marlow won his game, scattering five hits into one run. In the second game the Sox jumped on four Hawk pitchers for ten runs, and the Series, tied at one and one, moved to Parnham Field.

The wise guys said that the championship would be decided there. They said that manager Dobbie Oliver of the Hawks had shot his bolt. It looked like they might be right. In the third game Wheeler turned in a two-hitter for the

that his pitcher for the final game would be Willys Jackson. . . .

There were two little men in the hotel room. One of them stood at a window and gazed out on the sunny distances of morning over the city. The other little man sat on the bed and, with a tiny gold penknife, cut delicate hairlike shavings from his fingernails. His face was wedge-shaped, wrinkled in a perpetual grimace that was half a smile, half a frown. He talked around a fireless cigar clenched between his teeth. He said, "Stories get around, Willys. I know what's eatin' you. I wanted to talk to you after what happened in that fourth game, but I didn't know whether Dobbie would work you again."

The little man at the window shrugged. He had said nothing except a greeting since Sam Chester had come into the room. Sam said, "It happens to rookies all the time, when they first find out that

REMEMBER THIS NAME . . .

THE NEW BIG NAME IN BEER

"BREWERS' BEST BEER is among the finest", says Sherman Billingsley, host of New York's famous Stork Club.

Yes, remember the name BREWERS' BEST PREMIUM BEER. Once you try it you'll ask for it again and again. For BREWERS' BEST is truly a high quality distinctive beer—with light, clean appetizing flavor.

BREWERS' BEST PREMIUM BEER represents a great stride forward in American brewing because it is brewed and bottled by a *country-wide* group of fully selected prominent brewers whose combined experience and resources have produced a superior premium beer.

Remember the name—BREWERS' BEST. You'll be asking for it...and saying after the very first sip, "Now *this* is it—a great glass of beer!"

shouldn't be. But it had to be. Then,
with the bases full, Knopka took a bounc-
ing ball, stepped on third, made the
throw to first. In time, by two steps.

. . . good guys . . . Shorty Knopka . . .

But big-league fielding didn't make a
pitcher out of . . .

Dirty sawed-off runt. From that the
crumbling had begun. And then to help
it along had been the way Marc Nettles
went. But, before all that, a kid named
Willys Jackson had got into the big time
with a bunch of schoolboy notions that
should have been left as far away as the
days when they used to play with a two-
bit ball that had sawdust inside. Wasn't
that the trouble? Sure.

"You're on deck, bud."

"Yeah," he said. "Yeah." He had to
quit going over and over it. In two,
maybe three more innings, the big fellow
would come to bat again. At the thought
of it Willys Jackson felt a dread like a
child's fear at the approach of night, the
time of darkness and unseen things.

Pitching automatically in the fifth he
retired three more batters in order. He
did it again in the sixth. As he went out
to work in the seventh he realized that
he felt tired and beaten, though he was
still the one big run ahead. Huss was at
the plate. Rankin stood to one side, lean-
ing lazily on his bat, waiting. He glanced
out at Willys Jackson like a man care-
lessly certain of odds and fortune. And
Willys Jackson, who had come six in-
nings, wondered what other strength he
might find in himself.

AS HE made the first pitch to Huss
something rang a bell in the dis-
tances of memory, a far bell. *Thirty-eight
to five. 38 to 5.* It was a hit, driven be-
tween short and third. One on, Rankin
up. *38 to 5.* Then with the blurred focus
that the years gave to remembrance, the
big man wasn't Rankin any more, but was
a lad by the name of Ralph Sykes, the

captain of the West End Tigers. . . . And
the Tigers came in those days down to
Southside, and the game was played on
a lot back of Dixie Produce. The West
Enders had some big boys like Ralph
Sykes, and it wasn't much of a contest,
even with Willys Jackson pitching for
Southside.

After three-and-a-half innings of play,
the afternoon would get on toward night.
The boys from West End gathered up
what belongings they had brought and
started off the field.

"Hey, where you think you goin'?"

"Hey, yourself, we goin' home."

"Yeah, but we ain't had our innin's."

"You ain't? Well, ain't that too bad!"

"Hey, but you got to give us our
innin's."

"Yeah? Well, you kids choose up sides
and play your innin's. We goin' home." Willys Jackson followed the West End
boys out to the street, watched them go up
the walk, laughing and jolly among
themselves.

"We'll getcha next time," he yelled
after them. "It ain't no ball game if we
don't get our innin's."

"Aaa, shet up, Sawed-off. Shet up and
go on home to Mama."

Then one of the two men in a car
parked at the curb said, "What's the
trouble here, young fella?" He was the
little man of the two. The other man was
a big man and looked like he ought to be
somebody Willys knew.

Willys said, "Aw, they feather-legged
on us, wouldn't give us our innin's. Jus'
cause they was a little ahead, said we
couldn't ever catch up."

"How much ahead were they?" said the
big man.

"Aw," Willy said, "jus' 38 to 5." Then
the two men got a big laugh out of that,
and when they laughed, Willys felt about
them the way he felt about the West End
boys, so he yelled at the little man and the
big man, "We mighta tied it up. It ain't

right to quit a game that ain't finished." Then, because he believed so much in the
rightness of never giving up, he began to
cry.

It was then that the men stopped laugh-
ing. The little man said, "Hell-fire, son,
you're exactly right. But don't cry about
it."

And the big man said, "No—no use in
crying. Just be good enough so they
don't get you 38 to 5 next time. That's
what to do. Be that good." Then the car
went away with the two men in it. A
long time later it turned out that the big
man was Harry Brock, the same Harry
Brock that kid pitchers were thinking
about when they said, "I'm old Dizzy," or
"I'm Carl Hubbell," or "I'm Harry
Brock." That was who had sat in the
car. And the little man—his name was
Chester, and he liked to believe in a thing
called heart.

It was in his house, at his dining-room
table after supper one night that the paper
had been signed which made Willys Jack-
son the property of the Hawks. Shaking
hands with the man who had signed for
the Hawks, Sam Chester had said, "He'll
deliver, Harry, you bet. He's got an arm
like leather and more heart than the law
allows," . . . while the little bit of a fellow
he was plugging for sat believing that the
world must be a pretty fine place, and
idly, as he thought, counting the thin blue
cups that hung in Mrs. Chester's china
closet. . . .

THE birdlike cries of the infield were
like bright stones scattered over the
cloth of memory. "Be workin' in there,
kid, be workin' in there!" "You the one,
boy! You the one!"

Tim Lacey stepped jauntily out, pegged
the ball to Jeep. "Be pitchin' to me, Jeep,
be pitchin' to me." The umpire signaled
the count—one and one.

*I musta blacked out. I can't even re-
member.* He checked on the runner at
first, stretched, threw to the plate. He
watched Rankin's bat come around as
though in slow-motion. *Klopf!* But that
was the sound of a fast ball into a mitt,
and Lacey held the ball up for Rankin to
see, then pegged to Billy. "The big one
now, baby. Pitch to me!"

Rankin stepped out of the box, and it
was like stopping a river that must surely
have carried them without doubt to the
issue. And now when Rankin stepped
into the box again, the flood had stopped,
and it was just the two of them—the big
man and the little one, face to face. The
stands, the whole park, seemed very quiet
—or was it that sounds seemed far away
and of no importance? He didn't know,
Willys Jackson didn't. He tossed to
Raulston at first base, keeping the runner
close, not to put off the inevitable mo-
ment, but to be ready for it when it came.
Raulston threw back. Billy, stretched,
glanced at first, turned and pitched. And
suddenly there was the solid thud of the
ball in Lacey's mitt, and there was
Rankin's grunt as his big bat came
around, full circle.

Then, gazing toward the runner at first,
waiting surely for the next batter, Willys
Jackson stood all alone in the wide dia-
mond, or at least as much alone as a man
can be when his mind and heart are peop-
led with a thousand good moments. He
laughed a little to himself and turned to
face the batter.

THE END

CHARLES E. MARY

GARDENIA

BY KATHRYN GRONDAHL

He was a saddened man—and she a sorrowing child. It was good for both of them to meet in this way, at this

THE red-flowered bean vine clambered over the pickets of the white fence did not alter Henry Buckle's view of the road at all. The road sloped gently past the fence to become a little stretch the main street of the mountain town, then it coasted free, looping down among the trees toward the lake.

A few rods above Henry's gate the road one time bending down into the canyon. Deersprings, the other turning up through a grove of live oak into the back country. It was this road Henry stared, although he was waiting for no one.

He stood on his porch in the hot quiet, his neck and cropped, grizzled head thrust forward from the open collar of his blue shirt. The top button of his duck pants was undone and spread a little V to ease the settling of his lunch. His starry paunch were like a strong old bear's.

The telegram was in his pocket. It lay there lightly, yet somehow he could feel it nudging him like a child's elbow. One of the Mitchell twins was coming home, but it wasn't Molly.

The thought of Molly was with him still, and it seemed to let the tucks out of his head, sagged, and he knew he didn't feel up to going on this afternoon. It was a perfect day for fishing. Over beyond Goat Mountain he knew how it would be: a glinting ruffle of water over the inlet stone, the Baptism Pool lying cool and clear as a child's face.

It wasn't Molly who was coming and for a moment he felt like an old, old man with a weary mind, because the Molly he was lonely for was real any more. It was Molly the child he had known and she was now long grown and gone.

Henry let himself down with nice care into the worn withes of his wicker porch chair. He held his pipe on the porch rail but held it unlighted, the brown bowl hidden in the larger brown bowl of his hand. His eyes were still on the country road, then around the bend he saw a little girl coming. Far off, but unmistakably a little girl because of the way she dangled. Besides, he recognized something of a girl's walk, a kind of choosiness in the way she put the next foot down.

It was as if wishing had made it so, and the girl was Molly coming down from the mountain ranch to ask to tag along fishing.

Only Molly was now twenty years older than the young one. Molly had put her braids up long ago.

A MONARCH butterfly drifted across the road and came to rest, wavering orange and black on Henry's blue sleeve, then fluttered down over the rows of dwarf zinnias that banded the porch. Beyond the zinnias the neat lawn spread away under a walnut tree, beyond which his shabby sedan waited, her nose headed out, Henry's rod and creel stowed in the back seat.

His eyes went back to the child on the road. She was making time, Henry noted, coming without any sideways looking, moving straight through the mottle of light and shade. She was a colt-legged and her braids swung forward in short reins.

He had never seen the child before. Maybe she belonged at the inn down by the lake or to the camps on Goat Mountain. Either way, she was a summer kid, one from the sunburned flock that came and went in shifts through the seasons, seasonally shoving up to Henry's porch to buy penny stamps to lick for grubby postage.

Henry thumbed tobacco into his pipe and lit it. In a little while he'd back the car into the garage. Maybe he'd put on his boots and wash them. Back and hoe a little corn and call his son. The afternoon spent. . . .

Time has carried me fast, thought Henry. He was twenty-five years this fall that Mitch's father brought the twins to the (Continued on p.

The child crossed the road and stood by the gate, waiting. There was an envelope in her hand.

RAH! RAH! RADIO

Continued from page 15

to become self-supporting, a happy state already achieved by a few of its members. Local advertisers—restaurants, florists, barbers, hairdressers, clothes shops—gladly buy collegiate air time. A few national advertisers have done the same, with good results.

The joyful thing about college radio is that it can do practically anything it pleases—from defying the laws of physics in its homemade transmitting equipment to discussing birth control on the air. (In a round-table discussion two men from Brown and two girls from Pembroke College concluded that there was no insurmountable objection to birth control.) College radio can and sometimes does commit the crime of crimes in radio, which is, keep silence. This happens when somebody loses the key to the studio, or when a turntable quits turning, or when the announcer of the Wake-Up Club sleeps through the alarm.

Perfect Freedom from Taboos

Since college stations are nonprofit, low-power, short-range outfits, they don't have to have Federal Communications Commission licenses. Since they don't cater to kiddies or elderly citizens with blue-law ideas, they are free from most of the taboos that restrain freedom of speech on the commercial air. They can use swear words when the script calls for them, and motherhood, to them, is not necessarily sacred in the manner of the soap operas. Actually in some college scripts Mother is depicted as a selfish old harridan.

Since the college stations are not officially speaking for the college to the community at large, but are simply talking amongst themselves on the campus, the college authorities generally give them their head. Since everybody works for free and there is no pay roll to meet, they can, if they wish, display an Olympian indifference toward would-be sponsors. Harvard's station said "No, thanks," to an offer of a popular cigarette commercial, because Harvard simply can't stand singing commercials. Brigham Young declined the same commercial because the Mormons who run the school don't believe in smoking.

Most stations broadcast at least one hour of classical music a day, from records. They also arrange for as many "live" long-hair musical events as they can—such as the concert series at Cornell featuring Marian Anderson and other

artists, and the symphony orchestra chapel choir programs at Princeton. The great musical event of now being prepared by IBS college stations.

Robert Landon, a Boston music graduate (and a S campus radio-station alumnus) Europe interviewing young composers in each major city also arranging for recording major works. His comments works will be put onto 26 p distribution to all IBS men year.

Every collegiate little dramatic workshop gets its turn, preferably with original plays again the lack of taboos encourages production. Ernest Kinoy, a student at Columbia University, New York, of his scripts to commercial one fine script of his which was on Columbia University's W not salable commercially because subject—the effect of a national act law of religious persecution called Dream into Egypt.

Station KUOI at the University of Idaho is experimenting with plays, putting on one act each

Most stations, in imitation of commercials, have inquiring reporter quiz shows, bingo shows and participation stunt shows.

Their weakest point seems news and comment on news. Stations have regular news programs. About once a week the round-table discussions of bomb, or Palestine, or the Nations, but their own polls in such shows are not popular.

Cornell, one of the few stations with its own Associated Press tele broadcast good news summarizing last November's elections, the whole town of Ithaca will news—for the regular local station goes off the air at sundown.

The regular radio industry in the collegians with interest. for the last several years college-radio alumni have found regular radio, as technicians, as announcers.

College radio is beginning to radio industry in the same way mer stock serves Broadway—ground for new talent.

COLLIER'S

Collier's for Jul

Aunt Laura to help raise. A boy about nine hands high. It wasn't long afterward that the raising of them was left to a little side help from Henry. He attended to Molly from the start. The strong one, the sassy one, the one who never whimpered, while Hugh was a true Mitchell at all. A kid who had to be coaxed and of more things than a boy

watched his smoke spiral. You've tried harder for Mitch's sake, himself, but Hugh had been a to get next to.

When a man gets off to a bad someone, and there's disappointment, then a kind of sore pride sets in and there's no cracking it. It was just a kid, and I should have a way.

He gave a big gold watch from his pocket. In another hour Laura should have been in her nap and then he'd phone her a message out to the ranch. He already heard Laura's excited when she learned one of the twins was home.

The little girl had reached the road. Henry could see her denim overalls, still stiff with crease, and a polo shirt fitted so evenly Henry thought it was just out of a box too. Her hair was tan, a bleached grass green, tied with narrow blue ribbon. She had a lot of sorrel in the color of her braids and she'd usually used rubber bands to hold them, but now these braids were just the little silky whisk brooms.

She walked straight for the low building that sat down the side of Henry's house. The side of the house was smothered with hop vine. The front was clear and the glass pane had gold letters: Post Office. She stood stiff

and whistled. She turned and spied on the porch and made no move. She beckoned, she crossed the road and stood by the white gate and waited for him, waiting. There was an envelope in her hand.

On Saturday, Henry explained, "and the post office at noon, but come and maybe I can fix it."

She came up the graveled path and on the first step of the porch, she stopped. She sees a heavy, grizzled man with steel-rimmed specs and she thought Henry, and she's probably measuring me against her own father. Henry smiled.

"Come up and sit down." He waved her to the wicker settee and looked at the envelope with its carefully block-printed address. "I guess you need a

He nodded and sat on the edge of the settee. Her knees and sneakers pressed against his. She smelled of talcum, fresh and road dust. Her eyes were brown, acorn brown, and any resemblance to Molly was all gone. Her tired face was pointed and her hair was brown. There was nothing colt about her. She was boned like a fawn.

"Do you own the post office?" she asked politely.

Henry was grave. "I just run it. It's off hours, but I'll see your letter stamped and goes out tonight." He looked at her. "It's quite an important letter. She pulled out her handkerchief and wrote it to find her coins. "How can I mail to New York, please?" He said the price is five cents." Henry spoke in a friendly tone. "It will go down to the post office on tonight's bus and then catch the bus from there." He accepted the

nickel. She parted with her letter and he tucked it in his shirt pocket with care and patted it.

"Thank you." She tied up her handkerchief. "Can you tell me how soon it will get there?"

Henry considered. "I'd say Tuesday." She figured audibly. "Then I'll have an answer by Friday, won't I?"

"Might." Henry nodded. "If it's answered right off by air mail."

"Oh, Daddy will." She smiled then, showing a line of gold brace across her four front teeth. "Well," she rose and bobbed her head, "thank you very much." She started toward the steps then turned. "What time does the mail come on Friday?"

He told the truth. "That all depends on how often the bus breaks down on the long pull up from Deersprings."

She looked bleak. "Then there's no sure time for me to come and get my letter so nobody will know?" Her hands fluttered a little at her sides. "It's a kind of secret letter."

"Well," Henry drawled, "in certain cases I give special service." He rubbed his chin judiciously and peered at her over his spectacles. The child straightened to meet this inspection, her eyes hopeful. "Particularly when it's a kind of secret letter. Maybe I can just hold that letter out for you."

"Can you?" The brace on her teeth gleamed again. "I'll come right after lunch on Friday to see if it's here," she promised. She smoothed her shorts with little gestures and stepped backward. "Well, thank you. I guess I better go now."

Henry grinned. "Before you go, you'd better give me your name and address so I'll know what letter to save."

"Oh." She paused and then explained seriously. "I guess because I know my own name so well I think everybody else does too. My name is Hildegard Wick. I mean that was my name. I've changed it and I told Daddy all about it in that letter so probably my letter will come to Gardenia Wick, Miss Gardenia Wick."

She looked at Henry, a little unsure. "Miss Gardenia Wick," he repeated firmly.

"I hate Hildegard," she told him in a rush. "I don't feel like Hildegard. Everybody calls me Gardy for short anyway, so I thought Gardy could be short for Gardenia just the same." She hesitated. "Only better."

"I see," said Henry and he did. "That's a very sweet-smelling name, Gardenia."

The child gave a pleased sigh. "I changed it yesterday. Gardenia Wick. I'm staying at the Mitchell ranch."

HENRY was openly surprised. "Well! And here I didn't know Laura had company."

"We aren't exactly company." She cocked her head trying to define. "You see Mother knows a friend of Miss Mitchell's and she said we could come. I was awful sick with pneumonia this spring and Mother wanted me to be in the country to get stronger, so we came up Thursday night and we're staying in the cottage and I'm going to learn to ride a horse!"

"Good!" Henry grinned. "Why, in no time you'll be riding down to pick up the ranch mail."

"Will I?" The thought was enormous.

"Don't see why not," Henry answered. "I knew a little girl no bigger than you who did just that. She came agalloping too." He smiled. "I bet Aunt Laura likes having a little girl around again."

At that the child's face tightened. "She's not really my aunt," she corrected him sharply. Then aware of her manners, she hung her head. "I mean I don't

think it's nice to call people aunt or uncle when they really aren't."

Henry was silent and puzzled. This must be some quirk all her own, thought Henry. I can't imagine any child not liking Laura. Laura had a talent for being an aunt. It seemed like her birth-right. She was all kindly clucks and in her time had cured a mountain of little ills with a mountain of raisin cookies.

"I better go now." Her face was still tight. "I'm s'posed to be resting, so I'd better hurry back."

"Wait a minute, Gardenia." Henry beckoned her back with the stem of his pipe. This child's been sick. He couldn't let any thin, troubled tyke walk another four miles of hot road. "Come back and sit a minute and I'll drive you out to the ranch. I got a telegram I might as well deliver at the same time."

She came back obediently and sat down folding her hands in a ball on top of her knees. The fine hairs on her arms showed white against the new sunburn. "A telegram comes very fast, doesn't it? Like magic."

Henry agreed. "Like magic."

SHE sighed. "Maybe Daddy'll send a telegram to say he's coming. I've invited him to come in my letter. I haven't seen him since I was only six years old. I've been with Mother all that time and he'd be surprised to see what I look like now." She looked at Henry anxiously. "It isn't because Daddy doesn't want me, but he lives in a club and he can't have a little girl living with him. I mean there wouldn't be room and nobody to fix my clothes, though I can braid my own hair."

Henry spoke quietly, "Your braids look just fine."

"Well," she admitted, "Mother did these, but I can do it, or I could have it cut off, then it would be easy." The solution seemed good. "I'll tell him that when—if he comes. I thought he could sleep at the inn if Mother—maybe she wouldn't even have to know he was here," she added doubtfully.

She was looking at him with worried brown eyes, seeking his opinion, his assurance. Henry pretended to examine his pipe but instead his lowered eyes saw only the skinned place on her knobby knee painted orange-red with mercurochrome.

"How old are you, Gardenia?" he asked her.

"I'll be nine next April."

Henry sighed. "Well, we'll just have to wait and see how it works out. But remember, whether your father telegraphs or writes I'll hold it for you safe." He stirred and made a business of placing the telegram and letter on the porch rail and his pipe atop them. "You wait here just a minute. I've got some sweet corn in the kitchen I'm going to take out to Laura. Then we'll get going."

When Henry came back with his sack of corn ears, Gardenia was no longer on the settee. She was leaning against the porch pillar, her face into the vines. Before he could speak, she turned, her face flushed.

"I read the telegram," she said defiantly; then in appeal, "I didn't mean to read it. It was open and I was pretending it was for me and then I read it!"

Henry shifted his sack. "Well now," he was hearty, "there's not so much harm in that."

Her back was against the pillar, her face sharp. "Hugh Mitchell is coming here, isn't he?" It was an accusation. "It's the Hugh Mitchell who's an archteck, isn't it?"

For a moment Henry was bewildered. The child was standing so stiff, so charged, so at bay. Hugh, he thought, Hugh again. There's something all mixed up here and I wonder if I can deal with it. He felt tired and unable. Then that mispronounced word came back and touched him. Archteck. . . . Why, she's

just a baby, eight years old, puckered up with trouble.

Henry put his sack down and came toward her. "Why, yes, that's Hugh, all right, child, but—"

"And he has a blue car?" Her voice slid off hopelessly. "I didn't guess this was his ranch. Mother didn't tell me." She faltered under the betrayal of it.

Henry placed his big hands lightly on her shoulders. "Now, Gardenia, tell me. What can be so bad about Hugh's coming?"

Her slim shoulders were rigid under his hands. "He wants me to call him Uncle Hugh—but I won't! He's not my really uncle—and if he marries Mother he won't be my really father either!"

She began to cry in a gasping way and covered her face with her thin hands. Henry pulled her toward him with a murmur and led her to the settee.

not so able maybe, but this little girl is a whole lot prettier.

He watched her wipe her eyes on her wrist, then pull out her knotted hanky and use the ears of the knot to dab her cheeks.

"That's better." Henry bent down to see her face. "Now tell me what all this fuss is about."

She took a quavery breath. "People only have one really father," she insisted, "but he won't come. Daddy didn't even come when I was sick. He'll only send me a check and tell me to be a g-good girl."

Henry sat forward, thoughtful. Tears had darkened her lashes and they were arcs of star points. A hope began to creep up on Henry, that maybe through this child he might at last make his peace with Hugh.

He looked down at the damp streak on

Couldn't have been better. She lived at Mitchell ranch and Aunt Laura like her mother and I was like her father.

Gardenia stirred. "What was his name?"

"Mary," he said; "but we call Molly."

"Was she the one who galloped horse to get the mail?"

"She's the one, all right."

Gardenia clasped her hands. "A father was all alone, no real father or mother."

"Well, she didn't feel alone. We had good care of her—and she was my brother."

There was a wait. "What was his name?"

Henry paused. "Hugh," he said.

"You mean it was that Hugh who looked at the telegram—'only was a little boy?'"

"That's right."

"And you were a father to him?"

Henry considered. "Not so much. See, Hugh was quite a shy little boy, liked to be alone."

"I don't like to be alone. I have wished I had a brother." She frowned. Henry began to feel surer. "Why don't his sister play with him?"

"Oh, she did, some." Henry shook his head sadly. "But Hugh wasn't too good at games, so the other kids thought he was much fun."

She sat up. "Why, how mean should have been extra nice to him cause he was sick."

"I suppose," Henry admitted, "most kids don't think of that." He said casually, "They used to call him Hugh."

Gardenia looked appalled. "Did you call him that too?"

"Sometimes, when she was mad."

"Why didn't you stop her?" she asked, pained and demanding.

Why didn't I? thought Henry. I never had an idea then that some day I might be shamed into the boy? He was for words but she had gone on.

"Hooley." She tasted the name and spat it out. "How mean! He must have hated it. If I'd been there I'd have killed them all!" Her point was hot with outrage and she said, "I'd have made them call him Hugh, like Terry, that boy in the papers with the Dragon Lady. I thought of another and pounced. 'Van! He's a movie actor I saw.'"

"H'm," said Henry, then took a guess. "I think Hugh wanted to be called the name his father had—Mitch."

GARDENIA sat quiet for several minutes and Henry waited, a lion's lion mounting in him. Finally she broke it.

"Mitch," she repeated. "That's better. I'd better call him then." She leaned up and looked up for Henry's approval. "I'm going to call him Mitch all the time now on."

One of her golden tan braids lay on her blue sleeve. "He'll like that," she assured her, and contentment came into her chest. "Mitch will like that." She waited a minute. "And next Saturday I'll ask your mother if you can go with me. How would you like to lay a lily on a rifle?"

She nodded. "What kind of a rifle?"

"I'll show you. Trout flies are pretty little things." He pulled out his big watch and held it up to her. "Now, young lady, what time is it?"

"Turnip?" She giggled. "Fiddlesticks."

"Know what that means?" Henry tended to ponder. "You and I have to go for a double chocolate soda bottle set out for the ranch."

"Oh," she sighed. "Chocolate is my favorite."

It always is, thought Henry, and he grinned. "I'm a good guesser."

THE END

"It must hand you a terrific boot to realize that you'll be remembered long after we're all forgotten"

COLLIER'S

JOHN RUGE

"Now—now." He patted her. I must sound like Laura, he thought ruefully, an old rooster instead of a hen, and I've got something here no clucks or cookies can comfort. He tightened his arm about her, carefully: her bones felt so delicate under his touch. She leaned against him and he was gratified to feel some of the tightness going out of her. Her spasm of tears had stopped and she was now tapering off with jerky sniffs.

So he'd thought this was the ghost of Molly coming down the road: Square, forthright, gusty Molly—and here I am holding a temperamental little skinned of matchsticks.

He looked down upon her head and saw the tiny clean stream of her part, the sheen of her locks flowing into braids, the halo of shorter hairs along her brow. The skin of her small nose was beginning to peel a bit.

The satisfaction of giving shelter warmed Henry; heresy sneaked into his heart. She's not so healthy as Molly,

the wrist she'd used to wipe her tears off, and his hope spread. For if Hugh married, that would make Gardenia a Mitchell, and then this little girl would be a kind of granddaughter for Henry.

He knew he was going to try, knew what he was going to say and he leaned back against the settee cushions and began with careful ease. "Maybe you're right and your real father isn't going to come." He crossed his knees slowly to show her what a comfortable conversation this was going to be. "But I'll bet he's got good secret reasons for not coming, that he figures it's best this way. Maybe—why, maybe he's even hoping you'll find a new father, someone to look after you since he can't, things being how they are."

The child lifted her face to that thought, then dropped it. Henry went on slowly, trying hard. "Now about this 'really' business, I'm not so sure. You see, I had a little girl once. I wasn't her 'really' father, but we got along fine.

How to take it easy

The easy way to move a load is with a truck that's built to *fit* the load.

It's always easy with a Dodge "Job-Rated" truck. Facts show why!

Fact 1—It's easy because the truck has "Job-Rated" power . . . the right one of seven great Dodge truck engines for moving its load.

Fact 2—It's easy because the truck has a "Job-Rated" frame to carry its load . . . without stress or strain.

Fact 3—It's easy because the truck has a "Job-Rated" power line. Clutch, transmission, springs, brakes, axle and tires are "Job-Rated" for its load.

Such a truck lasts longer. It's more economical. It's safer. It's more dependable.

It satisfies its owner because it fits his hauling job. It's "Job-Rated!"

For the best truck investment you've ever made, see your Dodge dealer. Tell him what you haul and where you haul it.

He'll recommend the right Dodge "Job-Rated" truck for your business economy—long life and dependability.

TRUCK SERVICE, TRUCK PARTS . . . IMPORTANT, TOO!

As a responsible business man, the Dodge dealer in your community is interested in your continued satisfaction: *First*, by giving dependable Dodge truck service whenever you need it; *Second*,

by providing you with factory-recommended truck parts . . . identical in quality and in workmanship to original Dodge "Job-Rated" parts. This is the Dodge way to your protection against cost!

Remember ONLY DODGE BUILDS "Job-Rated" TRUCKS. 175 BASIC CHASSIS MODELS TO FIT 97% OF ALL HAULING (LIGHT DELIVERY UNITS TO BIG, HEAVY-DUTY HAULING)

DODGE "Job-Rated" TRUCKS

He just hung on like a bull-knew that I'd quit struggling o later." Makoa shook his head don't know how long I was e. I remember how my hand r how blood came out of the how my lungs felt as though r collapsing. It seemed a long, n. Fortunately I had my knife e finally got it free. I jabbed e but he was too well hidden for

me to hurt him badly. I couldn't make him open those jaws. So I cut off my finger. I had only one life but ten fingers.

"Well," he concluded, rubbing the stump at the memory, "let's go now and see if we can't get this old bass. But remember—don't go reaching into black holes."

The bass seemed to have learned caution. It was no longer easy to get within shooting range of him. He had a trick of swimming insolently just beyond reach of the spears.

"Just as soon as my arrow hits the bottom he flips around until I can almost grab him barehanded," Skipper complained. "If he'd only give me one shot at him that way I couldn't miss."

Many years before a steamer had foundered on the reef, and now the fleeing bass led his pursuers to all that was left of that wreck, an enormous boiler. Skipper saw it first as he dived angrily after the bass. He was nearly spent from the longest dive he'd ever made when he finally released his spear only to see it miss again. The bass flicked his tail derisively and slid into the blackness of the huge cylinder.

With his vision dimming and pain shooting through his chest, Skipper kicked off from the bottom. Near panic struck him as he looked longingly toward the light so far above. He swam, kicking and clawing, wondering dimly if he could lose consciousness before he broke through to life-giving air. He was exhausted when his head eventually emerged, and he knocked aside his mask so he could drink the air in great gulps.

Makoa had seen the bass glide into the boiler. He dived to get Skipper's arrow and look over the situation. It was the muffled sound of his voice which later induced Skipper to lift his ears from the water. Makoa was completing instructions to Commodore and the pair of them were plainly waiting for Skipper's assistance.

"One of you should surely get him when he comes out," Makoa was saying. "You take one of those holes, Commodore, and the Skipper can take the other."

So, a moment later, the trio dived together, and it was only as they dropped downward that Skipper noticed Makoa was without his spear. He was swimming unencumbered, but with his knife gripped in his teeth.

As Makoa had explained there were three sizable holes in the boiler, one for each of the swimmers. The big man reached the boiler first and hung above it, gripping the crumbling metal as he watched the other two swim to their positions. He saw them ready their spears and then—with a devil-may-care, here-I-go gesture—

"Don't, Makoa! Come back!" Skipper was so startled he tried to shout, but the water gagged him, and Makoa neither heard nor saw him. Makoa had pulled himself through the jagged aperture and

was pursuing the bass inside the boiler.

Things began happening at once. A school of smaller fish wished out past Skipper, and a frightened sting ray flapped out of the cavern which had swallowed Makoa. Skipper watched the vent below him, and suddenly saw the bass half exposed. He ripped back his sling and released it, but he was too much shaken by Makoa's foolhardiness to concentrate on his aim. The spear clanged on the iron, turning the bass to the only retreat left to him.

Squarely in front of Commodore, broadside to, the big fish darted into open water—and stopped. The boy was not more than three feet from him. His spear was scarcely clear of its projector when he saw it strike squarely and pass directly through its target.

A Glimpse of the Death Throes

The bass spun on the steel like a huge, badly balanced pinwheel, flailing madly in erratic circles, falling slowly and helplessly toward the bottom. Commodore tried to catch the spear as the stricken bass whirled past, but the fish's frenzy foiled him. The tiring boy shot to the surface, keeping his gaze fixed on the fish while he rose.

"Did you see? I got him! I got him!" he screamed to Ann.

"I saw! Hurry back before he gets away," his sister yelled.

Just then Makoa and Skipper broke water together.

"Jeepers! You scared me to death, Makoa," Skipper said. "I wouldn't have gone into that trap for a million bucks."

"Who hit him—you or Commodore?" Makoa demanded delightedly. "We got him, you know—somebody did."

"What?" Skipper questioned stupidly. "I missed him, clean. You don't mean that Commodore—? Really?"

"I'll say he got him," Makoa laughed like a boy. "I'll go and get him—"

"No, you don't!" Commodore said. "That's my fish. I shot him and I'll bring him in." And this time it was easy to see and overtake the gyrating bass. Its burnished sides made bursts of silvery light in the depths and it could no longer swim strongly.

"Oooh. He's strong! He almost got away from me again," Commodore gasped when he finally reached the surface with his prize.

"No wonder. He weighs a good twenty-five pounds," Skipper gloated, pleased as though he had shot the bass himself.

The fishermen started home. Finally Skipper turned to Makoa. "Come now, confess, Makoa. That was a risky stunt, going into that boiler, wasn't it? How could you tell what was in there?"

"I couldn't tell," the Tahitian confessed somewhat shamefacedly, "but that old bass—he'd made me so mad. I couldn't let him get away. And, as I rather suspected, he wasn't the only thing in there, either—"

"We saw the ray and a lot of small fish," Skipper said. "I was afraid there might be an eel."

Makoa pointed to his right thigh. "Know what did that?" he asked. Curling halfway around it and slanting from the knee to the edge of his *pareu* was an angry red welt. It was like a burn, or the sear of a whiplash.

"That is the trade-mark of an octopus. One hit me when I was coming out. I don't think he was very big. I didn't stick around to see, either. I slashed with my knife, and he spit ink. I think I cut off a couple of his long arms. I got out quick. You know, I just don't like octopuses!"

THE END

CAN YOUR SCALP PASS THE "FINGER-NAIL (F-N) TEST?"

TRY IT! Scratch your head. If you find signs of dryness, loose ugly dandruff, you need Wildroot Cream-Oil hair tonic. Grooms hair... relieves dryness... removes loose dandruff! Contains soothing Lanolin, an oil resembling the natural oil of your skin.

YOUR HAIR CAN LOOK LIKE THIS WITH NEW WILDROOT CREAM-OIL

A LITTLE WILDROOT CREAM-OIL does a lot for your hair. Keeps your hair well groomed all day long. Leaves no trace of that greasy, plastered down look. Makes your hair look and feel good.

NON-ALCOHOLIC CONTAINS LANOLIN!

AGAIN AND AGAIN the choice of men who put good grooming first—that's Wildroot Cream-Oil. No wonder 4 out of 5 new users from coast to coast said they preferred it to any other hair tonic they had used before. Ask for it at your barber or drug counter. Now in tubes and bottles.

IMPORTANT: Smart women use Wildroot Cream-Oil for quick grooming and for relieving dryness. Wildroot Cream-Oil is excellent for training children's hair.

DOING WHAT COMES NATURALLY

Continued from page 19

word that came to your mind be *cloth* or *furniture*? If so, you're thinking objectively. But reaction to *table* was something *fast* or *multiplication* or *con-* could be thinking subjectively. You react to one word wouldn't think about you, but the way a hundred words may, and in it certainly does.

If your responses to words are ones you have an objective. You'll easily understand the people think and not surprise them with your own way of most of your responses are unusual, you are subjective and happiest working on your

people are the leaders of organizers, the best teachers, great discoveries of the world made by subjective people. A man invented the radio but objective men to put it into your neighbors' homes. This word-test sounds pretty vague and real but the O'Connor Foundation basis of its hundred thousand guinea pigs, feels it's the roof of all the tests they give. It runs directly in the face of evidence.

Test Revealed a Misfit

kably charming man with a word as a salesman came into laboratories to be tested some. His word-response was so subjective that the director once the test was wrong and to repeat it. But the second responses were still subjective. He was somewhat apologetic that without his record as a laboratory would have said be in some line of research, it was all wrong for him, he that he had come to the laboratory selling had suddenly gone on.

always wanted to do economic had had majored in economics at college, but when he he had been offered such a job selling job—he'd been the popular man in his class—that he he could turn it down.

dy had envied his lucky break had on. Then he'd got married, pushed on a little further, all pressing his real but much less ambition. Suddenly in his late selling ability had failed him. He told him he had just gone in his heart he knew what the test told him: He should never to be a salesman. He soon job in statistical research. He'll be rich as he once thought he'd be having a lot more fun.

people, on the other hand, is shy and withdrawn as the active dreamer if they are made adequate by the wrong kind of in engineering school whose objective personalities but no visualization almost always act subjective way. Their family want them to be engineers and se, but you can't be a good engineer without structural visualization. what else you have. The boys he's something wrong and feel ue. The sooner they get out to people the better for everyone. is by no means theoretical or individual case histories. The apn has a very illuminating list of 800 men who took the aptitude tests ten years ago. Four hundred are executives and 400 tech-

nical engineers. All the executives who achieved big or even adequate salaries had objective personalities and scored low in structural visualization. All the successful engineers were subjective and scored high in structural visualization.

Here's another aptitude. Suppose someone gives you the statement "The moon is made of green cheese," how much could you write about that in five minutes, not how logically or how beautifully, but how much? The laboratory grades you on quantity alone. It doesn't even read your answer, just counts the words. That's ideaphoria, or creative imagination. What it stands for is a rapid flow of ideas. Salesmen have to have this to a high degree and so do teachers. Eighty per cent of all high-school teachers who have taken the test scored very high in it. Artists and writers who have to produce in quantity need it. But a low score doesn't mean you aren't creative, merely that you can't create fast.

So far the Foundation has isolated about fifteen different aptitudes and has done elaborate correlating as to which combinations of aptitudes are needed for various jobs. About a dozen more apti-

insurance that he will. That intangible called drive and other intangibles such as pride and even spite can often substitute quite well for real ability. But they feel it is a great waste of human energy for a person to spend his life in work he has no natural ability for, doubly so because then he isn't spending it in work he does have natural ability for. They think, too, that a lot of restlessness and dissatisfaction with life comes from people not using all their aptitudes.

It wouldn't make sense to advise a man or woman who is comfortably established in one kind of work to change to entirely different work, but it is often possible for a person to branch out so as to use newly discovered aptitudes. A doctor who found he was highly objective—most doctors are subjective—might be happier if he did more medical society or community health work.

A hardheaded executive found from tests that he was extremely subjective, with a highly facile flow of ideas. When he had digested this discovery for a few weeks, he decided he'd try writing some of the important reports he had always delegated to a junior. He had a wonder-

writing trouble-shooting letters between the company and the government. His only worry has been to stick to design, which he likes and knows he is fitted for, when the company keeps trying to push him into executive work, which he is also in some ways fitted for, but isn't so happy in. He has a few too many aptitudes to be comfortable.

You're better off if you have only a few strongly developed aptitudes than if you have nine or ten. The too-many-aptitudes person can do almost anything easily and is apt to flit from one interest to another. A lot of the most dissatisfied and least successful people that come to the laboratories are people with too many conflicting aptitudes, who have never been able to make up their minds on which ones to concentrate. And the strongest aptitude in the world is no insurance of success unless you develop it and the necessary knowledge to use it.

Tweezer dexterity and structural visualization are important aptitudes for a surgeon but he still has to go to medical school and work for years in hospitals before you'd entrust your gall bladder to him. Accounting aptitude is important to nurses but no matter how beautiful her temperature charts and how exact she is about administering medicines, it's no help if she doesn't understand the doctor's instructions. And that brings us to vocabulary, which the O'Connor Foundation, along with a good many other experts on human progress, has found to be the only positive measure of success or potential success and which is the only acquired characteristic they test for.

Ratio of Vocabulary to Success

It's a little uncanny, this matter of vocabulary. You wouldn't think a bank president would need to know as many words as a professor of English, or the head of a big automobile business as many as a popular lecturer, but the evidence seems to be that he does. Right on down the line the most successful people in any line of work turn out to have the biggest vocabularies. The bank president will have a bigger vocabulary than the college professor unless the professor is top man in his department. The automobile tycoon will have a bigger vocabulary than the professional lecturer unless the lecturer is also a national authority on some subject.

The way the Human Engineer explains it, and it makes sense, is this: Words are the tools with which we make use of ideas. An idea is not clear in our minds until we can think in words. We need not talk well or even write well but we have to have the words in our minds before we can formulate ideas.

A wide vocabulary generally works best harnessed to the right aptitudes, and, though you can't do much about developing aptitudes you haven't got, the sky's the limit when it comes to developing a vocabulary you haven't got. And it does seem to have some effect on your capacity for progress, which is why it is the one test outside of innate aptitudes the Foundation includes. Mr. O'Connor once took a group of teenage boys who couldn't pass ordinary intelligence tests and drilled them for a month on vocabulary, nothing but vocabulary. At the end of the month they retook the tests and passed them easily.

Maybe if there is any formula for success, it is to find out in your early teens all the things you do most naturally and begin from then on to think and talk in as many words as possible about how you can use those aptitudes.

THE END

tudes are still in the experimental stage. It takes about ten years and nearly \$20,000 to isolate one aptitude, and, since the Foundation is a nonprofit institution and dependent on outside endowment, it can go ahead only as fast as its budget allows. But, at best, isolating an aptitude is a fairly elaborate job.

First they dream up a test and give it experimentally to two hundred people. If the results of this look promising they give it to a thousand more of each sex to find out how accurate it is, all the time correlating it with other aptitudes and with the subjects' known capacities. Finally if the aptitude seems to shape up as a sure-enough can-do that some people have more of than others, then comes the job of finding out what that particular can-do is useful for.

Grip, a test they are giving experimentally now at the Philadelphia laboratory, is in that stage. A little gadget you hold in your hand measures how hard you can grip with each hand. The laboratory is fairly sure Grip is a measure of physical energy and suspects it may be a measure of that important intangible called drive.

The Human Engineers won't go so far as to say that lack of any particular aptitude is positive proof a person will never succeed in a particular line of work, or that a very definite aptitude is

ful time at it and the reports were so good they turned out to be a big source of new business. A restless housewife who found she was objective and had structural visualization might go out and work on committees planning better playgrounds or other city improvements. If on the other hand she found she was subjective she might understand better why she had always hated committee work, stop feeling guilty about it and find some other more individual enterprise.

The Human Engineering Laboratories have found that not more than one person in 8,000 is entirely lacking in all the aptitudes they now test for. It may be something of a blow to discover you are not naturally equipped to do the things you have thought you wanted to do, but there is always the compensation of finding other work you have real aptitude for. A boy who came of a journalistic family and had been encouraged by his English teachers at college spent three years after college drifting from journalistic job to radio job to advertising job. He thought he wanted to write but he also knew he was miserable trying.

He finally took the aptitude tests and found that nothing pointed to his being a creative writer, and a good many things pointed to his being an engineer. He got a job in an airplane factory and has been doing fine ever since, part of the time

Finest Tone System in RCA Victor history . . .

This symbolizes the "Golden Throat," RCA Victor's exclusive 3-way Acoustical System. This thrilling development is explained technically in an illustrated booklet attached to RCA Victor instruments.

ONLY RCA VICTOR
MAKES THE VICTROLA
"Victrola"—T.M.

GENIUS WORKING

Continued from page 11

deserve, and headed for the conference.

Joe Castle was getting to be a nuisance, if not an actual menace. Disbrow had hired him a year ago, a chubby, red-faced man addicted to loud shirts and small familiarities with the office force. Harvey had to admit that Joe could think on his feet. He'd plucked two smash campaigns out of conference-room air, including the one for Unavoidable Slips, the lingerie for the Woman Who Cares Too Much. And his great idea for Barkies, with the picture of the woeful puppy watching its master eat up a platter of the sponsor's dog food.

This was the first time Disbrow had thrown Joe and Harvey into actual competition, although Castle was now also ranked as a senior writer. But there was more at stake than a single campaign.

FIRST to arrive in the windowless conference room, so designed to eliminate all outside distraction, Harvey stared moodily at the room's sole decoration. It was a life-size oil of the late Compton Yates, founder of the agency, whose widow had put up a gallant but losing fight before Disbrow got control. There was a space beside the picture.

Disbrow would hang there one day, Harvey thought, and that was what made this Castle business so rugged. For Disbrow would have to name a partner soon, and until Castle appeared, Harvey Renner, as the old man's favorite, had been almost an automatic choice.

Favorites in an advertising agency are little different from race-track favorites, Harvey thought. They lose as often as they win—but a horse only has one guy on his back at a time.

Disbrow and Evans, the account executive, came in breathing a heady scent of excellent cigar smoke. The cigars were Disbrow's own special fifty-centers, but each had been carefully ringed with the band of a popular six-cent make whose account the agency had.

"Harvey, we've got a great opportunity here," Disbrow said by way of greeting. "This client Ralph has is willing to go the limit if he gets what he wants."

Evans said, "Hadn't we better wait for Joe?"

Disbrow nodded. "Good man, Joe." "Good man," said Harvey.

The door opened for Joe Castle. He wore blue slacks and a yellow sport shirt with an open throat. He stood in the doorway an instant, smiling, one hand slightly raised, a carefully posed picture of unfettered genius on the verge of action. Harvey decided he looked like a cheerleader for MacMurray College for Women. Joe went around the table and sat by Disbrow.

"Castle to the king's side," he said.

Evans guffawed. Disbrow smiled appreciatively and said, "Sharp this morning, eh, Joe?"

"Ha, ha," Harvey said. *He's even found out Disbrow likes chess!*

Pleasantries disposed of, Disbrow grew serious and began fumbling with the papers in front of him. None of them had any bearing on the new client.

"Ralph here has a client who wants to take a bit of a plunge in radio," Disbrow said. "I'll let him brief you on his problems, and then we can pool our thinking on the best way to go ahead."

"Right, chief," said Evans. He surveyed the two writers with the air of a Hindu who is about to do the celebrated rope trick, using live cobras for rope.

"Boys," he said, "this promises to be the most sensational thing since the discovery of soap. Here's this fellow has a brand-new type remedy. It's terrific!"

"Remedy for what?" Harvey asked.

Evans looked annoyed. "Hell, Renner; for everything, I guess. It makes you feel

fine. It hasn't even been na That's your department. You're to have the brains, the creati Take this remedy and plan a on it, complete with name. That'll knock their eyes out!"

"It's a straight radio campa brow pointed out. "No other you boys have to carry the ma how's the man's production so

Evans made a circle with and forefinger. "He can go soon as the orders start pe Naturally, he isn't going to p production until he sees how responds. That's our baby."

"What's his name?" asked C Evans frowned. "It's Knits "Simon R. Knits, spelled K-N- "H'm," Castle said. "S-T— tough!"

"Well, here's all the data," E He gave each of the writers a n "Formula and all, and passed b Food and Drug people. So go

"We'll give it top priorit Castle said; "complete with lat for the bottle, campaign and sle some sure-fire radio copy."

"That's the spirit," Disbrow Outside the door, Harvey looked at Castle malignantly. how did you know that remedy to be a bottled product?"

"Isn't it?" asked Castle airil "You've been briefed in Renner said. "You and Eva this whole thing so you'd get a and look good. I ought to punc

"Ah, ah!" Castle smirked, b a finger. "Temper!" He walked out, leaving Ha ing after him with fists ina clenched; he was in the sam when Edna Mae found him later.

"Well, you look frustrate!" s "Those chiselers!" Harvey sa you—making puns."

"Tell Mama." His knee joints melted, and h a smile of sickly adoration. It while before he could remen had been troubling him.

She crinkled her eyes at his protest, tutted in concern at ment of Castle's integrity and sympathetically on the arm.

"Don't you worry," she said. they did frame you, you can rings around Castle. Just go in 'em who's the old master."

"But he's got a head start!" "They'll need it," she said. still tops. No other copywriter that statement."

"I'll do it!" he said. "They'll Renner spelled backward is stil "I'll bet that's how you go business in the first place," "Listen, if you want some h your brochure, I'll be free aro

WHEN he brought in his c Mae had completed a r her make-up, and was reading with studious attention. She brows at the sheaf of paper in hand. "Writing books yet," sl "I forgot and made three ca explained. "I'll put these extra the wastebasket. But read the see if it sounds okay to you."

She read it with a complete pression. It is considered very for an agency critic to show a approval or disapproval on a ing. Such a demonstration tract from the final, measure Even if the copy is written by spere—its first reading gets e pan treatment. Always.

But when she laid the cop

Mae looked at Harvey with awe in her eyes. "Love that breathed. "It's genius! He's new complaint!" "That angle?"

It's sensational! Think of comedy to people just because so good. You're in," she said. "Over top this."

Renner stood up and smoothed his face wore the high spiritual of a knight who has finally Grail, or a comedian whose thing has just passed twenty. "It will be time enough for it," "And don't think I'll forget Miss—Edna Mae."

Y went home, to the riotous evening only an agency man forward to—sitting in front listening to a show of which he read every word, listening to entertainment but with eardrums just the slightest fluff or deviancy annoy the sponsor.

into the conference room next to Edna Mae's crisp brochure arm, and serenity in his soul. at the bewhiskered face of Yates, 1871-1933, and in his beside it he saw James Disbrow, 1950, and Harvey Renner, es, Disbrow & Renner. It had found. Renner & Disbrow. The agency.

Harvey!" boomed Disbrow. "I jumped guiltily out of the big end of the conference table. All come in together, Disbrow and Castle, which would have never sign had not Harvey been in his idea. He snuggled the under his arm and smiled. "Expecting great things," Evans

a little something—" Harvey minute!" Castle said.

He looked up and looked at them, resting on the table. Today he wore slacks and a burnt-orange shirt. He looked like a cheerleader from Green State University. He had once done a series of protesting various colleges, and the words remained in his memory, of the things that come finally up a writer's mind.

"I've got something," Castle said. "And you, I'm only thinking out loud. It seems to me we're to have to endorse this product on a totally equal. We can't just climb on the good old acid stomach, or the hangings on, or loss of pep—fine here, we need something more." He tapped suddenly, and smote his hand on an open palm. In awe-struck said, "I got it!"

He leaned forward tensely, Evans saw dropping, Disbrow forgetting off on his cigar. A feeling of crept over Harvey Renner. He was putting on a terrific act; they were following dangerously— "Castle repeated. "Of course now the word *euphoria*—means well-being, of radiant health. This product Euphoria! We'll do this way! 'Do you feel better than you do other times? Do you have your ups and downs? Then what Euphoria can do for ya!' He said *and* the well! We'll— "Evans moaned happily. Renner sat rigid, stunned, listening. Castle elaborate on the ideas in his own brochure. Not word for word was actually improving on it—but closely enough to rule out chance of coincidence. He stood it as long as he could, and white and silent, he got up and out of the room. Behind him said, "Harvey, wait a minute. But he closed the door softly behind him, and walked over to where

Edna Mae sat enthroned behind her desk.

"Judas!" he said. "You betrayed me! You gave him my brochure—my idea! You—" He stopped. She was smiling.

"But natch!" she said. "After all, getting it across is the main—Harvey! Wait a minute! Where are you going?"

But Harvey was gone, this time out the door of the agency and hatless into the street. He walked through a blur of people and traffic, and it was not for a number of blocks that he remembered the brochure still under his arm. Tearing it up, he tossed it behind him.

Had any man ever had it so bad? he wondered. His brain child stolen and his future wrecked by a clown in motley and a hussy with soft lips. He was betrayed and despised.

"Wake up, laddie," said a harsh voice. A rough hand turned him and pointed back along the sidewalk where a straggling line of paper fragments marked his passing. The policeman frowned at him.

"Where's your civic pride?" he said. "Don't you see the waste cans? Don't you want to live in a tidy city?"

"What difference does it make?" Harvey said listlessly.

"Difference?" the officer said indignantly. "It makes the difference there's a law agin throwing trash on the city streets. I've a good mind to make you pick up every piece with your teeth!"

Harvey wasn't listening. He was thinking that this round, red face in front of him was a reasonably exact facsimile of Joe Castle's face—

"I'll punch your nose," he muttered. And to his own surprise, he did.

HE WAS booked, fingerprinted and locked in a quiet single cell with only vague awareness of his fate. He would rot here in a dungeon, like the prisoner of Chillon. Better that than to face again the people at Yates & Disbrow—probably by now Yates, Disbrow & Castle.

A hoarse voice broke through this musing. "Come out, you. The young lady's springin' you."

"I'll see he behaves," said Edna Mae.

Harvey stumbled into the room and Edna Mae put a protecting arm around his shoulder. The heady scent she wore enveloped him.

"How did you find me?"

"That paper you were throwing around had the agency name on it," she said. "They called up, and by then I knew what had happened in the conference."

Stupidly, he said, "By then you knew?"

"Come on," she said. "Mr. Disbrow's just named you a partner in the agency! Joe Castle's been fired, and you've got all his work to do besides your own. Come on, Harvey, they're waiting for us."

"But—but, I don't understand!" said Harvey. It was a corny line, but he could think of none truer.

"Did you think I'd given Joe Castle your idea?" Edna Mae said. "He got one of your own carbons out of your wastebasket last night—the janitor saw him! But I'd already put a copy of your brochure on Mr. Disbrow's desk, so the chief knew it was your idea as soon as Joe started talking. I always try to let the chief know things in advance, so he can make better snap judgments!"

"But what did Disbrow think when I walked out?"

"He thought you were being noble," said Edna Mae. "That's why he made you a partner. I had to write him quite a little speech on integrity to deliver when he announced your elevation. So there's a cocktail party in your honor this afternoon, and you stay away from those girls in the mailing room, d'you hear?"

Harvey kissed her in a fashion that drew a low, admiring whistle from the listening cop. "Edna Mae," he said solemnly, "I love you so much it hurts!"

"If pain persists, or is unusually severe," she said, "see your parson."

Before I could step between, the monk darted forward with incredible speed and snatched the wig from Betsy's head. "So I was not wrong!" he laughed gl

CONTINUING THE EXCITING STORY OF ROMANCE AND HIGH ADVENTURE

MERCHANT OF VALOR

BY CLARENCE BUDINGTON KELLAND

The Story:

The events narrated take place in sixteenth-century Italy. A Medici Pope sits at Rome, trying to control a country turbulent with internal strife.

PETER CAREW, son of an English wool merchant, is in Florence on business for his father. An honest, straightforward boy, Peter falls under what he believes is an enchantment cast by a haughty and beautiful Italian girl whose purposes are shrouded in mystery. Not knowing her name, Peter calls her BETSY.

After a street fight in which he slays some henchmen of Florence's Cardinal, Peter is forced to flee the city and enroll in GIOVANNI DEL MEDICI's Black Bands, a famous free-lance army.

A cheerfully unscrupulous monk, who boasts of being the hunting dog for the Pope, follows Peter tenaciously, hoping the love-smitten Englishman will lead him to the elusive Betsy. The monk works in conjunction with COUNT PIERO RIARIO, who hates Peter for preventing him from mistreating a ragged, homeless mountain girl named BEATRICE.

In the camp of King Francis of France, on whose side the Black Bands are fighting, Betsy—disguised as a French courtesan—rides and flirts with the generals, and is reputed to be the latest love of the SIEUR DE BONNIVET.

One night her servant, the dwarf JOHN-PETER, brings a demented old man into Peter Carew's tent; he demands that Peter take the old man to Betsy immediately. Peter and his servant, CHRISTOFORO, walk through the camp early in the morning, the old man limping between them. They come upon a group of six masked men trying to force Betsy's door. "It is Giovanni of the Black Bands. Open!" says the leader of the party.

Peter's loyalty to his general is exceeded by his love for the aloof adventuress. Determined to keep any intruder from Betsy's door, even though it cost his life or the life of his general, Peter unsheathes his sword and, shouting denunciations of Giovanni's treachery, rushes to the fray.

IV

THE six were loosely grouped about the leader, who was smitten with surprise at my shout of attack, so that I cut through them at the threshold and placed my back against the wall. None might enter save over my body. Christoforo was but a pace behind me. The leader urged the men upon us, and they hacked at us with rigid will. The night was loud with the clash of sword and the trampling of feet and the panting of men. Christoforo and I stood shoulder to shoulder, and grateful was I for his company that night the leader was at me with the ferocity of a lion. I thanked God I was wide of the leader's long arm, and that six men attacking two could not hinder another's movements. They gave back, paused to think it over. It may have been to draw our backs from the wall, but we stood firm.

One thing I knew, even in the excitement of the darkness—and that was that the leader was Lord Giovanni. For he was not of the size of

Keep one box at home—one at work.

*BAND-AID is the registered trade-mark of Johnson & Johnson for its adhesive bandage.

Lord, nor did he fight like him, nor have his strength of wrist and arm. He had not come himself, but had sent others to do his treacherous business for him. But even as I thought of this the man sprang again to the attack, snarling. It was no dainty swordsmanship, but wild, savage swinging and slashing, and the sound of Christoforo's voice jeering at them was audible above the clang of steel; and I, feeling the savage joy of it, shouted in English.

Again they gave back, leaving a little space.

"The Englishman!" snarled the leader, and lunged at me so deftly that I was like to be spitted. But I warded off his stroke and countered, and as he stumbled backward his headgear fell and his mask with it. And my heart leaped with joy and relief, for the face under the mask was the face of Piero Riario.

"Ha, woman harrier!" I said joyously.

NOW I knew My Lord had no part in this matter and that I had hated him without just reason. I saw that his naming of My Lord's name had been a treachery so that in the morning when Betsy was missing it would have been said that he had stolen her away.

But now lights moved in the night, and there were voices, for the neighborhood was aroused by the din of our fighting.

Uneasiness came to the face of the Count Riario. "This is the second time, Englishman," he said.

"Aye, a second thwarting. Beware of the third."

The lights and voices were closer now, and suddenly, with a sharp word to his followers, Riario turned and ran toward his horses. I did not follow him, and restrained Christoforo.

"Nay," I said. "Our task is to guard this door. The rest is for another day."

Then, behind me I heard the sound of bolts being drawn and the door opened; turning, I saw Betsy standing in night attire, lovely against the light of candles within.

"Bar the door, Betsy," I said, "and keep safe inside."

"It is safe," she said. "I watched through the window. Come in, both of ye, before too many questions be asked."

But suddenly I bethought myself of the madman we had brought hither and whom I had forgotten in the excitement of it; I spoke to Christoforo, who ran to the spot where we had left him cowering. But Christoforo returned empty-handed.

"While we fought," he said ruefully, "he slunk away."

To search for him now in the darkness and in that country would have been futile, and I blamed myself but did not see what I could have done about it. So we went into the room and Christoforo goggled at Betsy, and I could not keep my eyes off her face because it was softly flushed with sleep and wondrous lovely to look upon.

"What is this?" she demanded.

"It was lucky chance," I said. "We came hither, leading a madman to place in thy charge. Which must have been brought about by some saint who hath thee in her care. Otherwise thou shouldst have been carried away by Piero Riario."

"Riario!" she said. "Was the monk also there?"

"Nay," I answered. "I deem this to be the private enterprise of Riario, whose head hath been turned by passion for thee. He was not urged on by the monk. He knoweth not that thou art Betsy."

"The monk will know on the morrow," she said tartly. "What is this you say about a madman?"

"One entrusted to us by John-Peter," I said. "The homunculus brought the creature to my tent, and questioned him."

"Niccolo Gozzoli!" she said softly. I nodded. "Niccolo Gozzoli. John-Peter hath run him to earth at last!" Her voice sharpened. "And now thou hast let him elude thee."

"There was little choice in th I said dryly. "What good w madman be to thee once tho Riario's hands?"

She nodded, and looked at m but with some puzzlement a were a troublesome mystery. no softening toward me, nor di words of thanks that we had opportunist. Christoforo sn his nose and eyed me sidewise.

"I thank God," he said, "th terest in any woman doth not hour. There is neither reason sistency in them, but only perv grave peril to a man's sanity."

"Hold thy tongue, Christoforo angrily.

Betsy smiled. "Christoforo rare gift of wisdom," she said, at him kindly. "We women be yet not because we desire it. Christoforo, it is because our divided by a curtain, and what or hope or desire on the one s constantly thwarted and altered tradicted by what goes on on side of it. We open doors into do not wish to enter, and bar a selves doors that lead to our is some poison descending to us when she was bitten by the serp

I stared at her hungrily as there, seeming in her night atti and more childlike than was h and sweeter and softer and m maid that could give back lov But with it all there was a dig and a loftiness that made me that she was far above the st mere merchant.

"How canst look so fair?" words were wrung from me— and virtuous when thy life is contrary?"

She was not angry with me she sad nor in any wise "Thou," she said, "art a gr animal, to whom good is good evil, and no compromising Never wilt thou understand may be evil and evil may be pending upon how and why th good thing or a bad thing. I wall betwixt saint and Sata them forever apart, but alwa complex mingling of the two."

"My mind is not apt at su sions, Betsy," I said, "but I well what I want in a woman, my mother would want ere she the maid into her home."

SHE laughed at me, but it wa laugh, not tinged with de hope, Pietro, thou dost accor desire," she said, and then wi ness in her eyes, "but I sorely Now go thy ways, both of the

"Nay," I said stubbornly, stay until we see the sun rise s thee."

"What of the eyes that see my house at dawn?" she asked in her voice.

"I will lop the ears from any speaks evil of thee," I said.

"It would seem, then," she thine own ears be in grave thou dost think and speak mos me." Again her eyes held th puzzlement as if there were she did not understand abou was troubled by it. "It seems, "I cannot be rid of thee, no ma try. And I would not have th and hurt by it."

So she turned, and with n thanks to us went out of the sat there until dawn, drowsing went out into the cold of th and back to my tent.

I laid me down to recaptur of the sleep I had lost, but Lord Giovanni was comm never could be certain of sle and I was aroused by orders pany him and a detachment of

My Lord related with zest. So
was General Bonnivet at the
the fury of it that he demanded
rd that he be conducted to the
so that he could trace with his

own eye the various maneuvers which
had discomfited the enemy.

This My Lord was full eager to do,
and we rode again over the stricken field
strewn with enemy slain, and Bonnivet
complimented My Lord saying that no
more perfect battle ever had been fought,
and that My Lord was, in truth, a very
god of war. They rode up and down,
even counting the enemy slain in the
massacre. But even upon a field of car-
nage it is the will of God that some re-
main alive. We were passing a ruined hut,
all unsuspecting of peril, when there
arose from amidst its tumbled stones a
man with a great gun, and he aimed and
fired it at us.

My Lord cried out and all but fell
from his saddle, but Bonnivet caught
him and held him.

"Art hit, My Lord?" he asked.

"In the leg," said my master between
his teeth. After disposing of the enemy
soldier, we lowered My Lord from his
horse and found that a clumsy ball,
which weighed no less than eleven
ounces, had penetrated his leg above the
ankle where the greave of his armor left
a slight space above the soleret. Amidst
the blood were fragments of bone and
chain armor—a most ghastly wound.

IN SILENCE, when the litter came, we
carried him back, and King Francis
sent his own physician, the learned He-
brew Abraham of Mantua, to treat the
wound, and I do not believe the King
could have grieved more deeply had the
wounded man been his own son. He
gave orders that My Lord Giovanni be
transported forthwith down the Po River
to Piacenza to be nursed. Under safe
conduct given by the Spanish General
Pescara, and with a strong escort—nec-
essary because he was most bitterly hated
by the people of those parts—My Lord
was floated down upon a barge. The
Black Bands were left leaderless, which
was an evil thing for the King.

My Lord would not permit that I go
with him, but gave me duties to perform.
Also he charged me to write an account
of it to his dear wife, which I did, striv-
ing to allay her fears. . . .

From that day our army was a differ-
ent army. For it had felt that with My
Lord Giovanni present no evil could be-
fall, and all men agreed that his wound-
ing was equal to the loss of a pitched
battle. Even the spirit and discipline of
the Black Bands suffered in his absence,
and I looked forward with foreboding
to the day of the great battle betwixt the
French King and Pescara which, so men
said, would decide the fate of Europe.

I sat, mournful, before my tent when

"I just previewed a new movie. With a little
dirt added it might make a good book"

JON CORNIN

"A chance to win 75 SILVER DOLLARS AND..."

SILVER DOLLARS and TWO DOZEN brand
new Arrow Shirts: "Do Arrows shrink
out of fit when washed?"

ANN: Never! Arrows have Sanforized
labels, meaning: "No fabric shrinkage
over 1%!"

M. C.: GOOD FOR YOU! ANOTHER 25 big,
round silver dollars AND two dozen won-
derful Arrow Shirts! Congratulations to
a smart lady!

ANN: Thank you very much, Sir — but
you can keep the shirts!

M. C.: Yes, little lady, here's your
chance to win 75 SILVER DOLLARS and
two dozen handsome shirts! First
question, for 25 SILVER DOLLARS: "What
make of shirt is this?"

ANN: An Arrow Shirt! I know that
one-and-only Arrow Collar!

M. C.: She's RIGHT! She's AB-SO-LUTE-LY
RIGHT! Here you are—25 bright silver
dollars! The second question, for an-
other 25 BIG SILVER DOLLARS: "Why do
Arrows fit so perfectly?"

ANN: Because of Arrow's special "Mi-
toga" design! They're cut to follow a
man's torso.

M. C.: RIGHT AGAIN! Give the little la-dy
a hand! Last question, for 25 SHINING

M. C.: Why—why—this is INCREDIBLE!
You don't want these fine Arrows for
your husband? Why? Why?

ANN: He's too attractive, already! With
these new Arrow Shirts I could NEVER
hold him!

Cluett, Peabody & Co., Inc.

the obese monk came plodding toward me, his sandals squishing in the mud, and he was no welcome sight for I believed he was far away. He stopped, and with false face of sympathy he said, "I grieve with thee, my son, for the evil that hath befallen thy general." He cocked his beady eye and puffed out his flabby cheeks. "There be those," he said, "who desire the death of Giovanni de' Medici more strongly than the Spaniards, and who grow impatient that he is not killed honorably in the heat of battle. Is it not time that a halt be caused to the growth of his fame? It needs but little more to persuade the rule of Florence and all Tuscany to drop into his pocket like an over-ripe fruit. But this be high politics and above my understanding."

"I think," said I, "that thou art one who would see treachery in the smile of a baby and plotting in the chirping of little birds."

He shrugged his fat shoulders. "At any rate, my son, you may sleep untroubled. Count Piero Riario hath left the camp. It is not wise for a minor man to tamper with the women of great lords."

"I am glad he has gone," said I. "One day I should be obliged to send him on a longer journey."

"I wash my hands of him," said the monk. "Passion for this woman hath addled his brains. He is no longer useful to me. But tell me, my son, how was it you discovered the plot? How came it that you arrived so opportunely to prevent the stealing of Bonnivet's mistress?"

"Chance," said I. "Kind chance that led me thither as I strolled by."

"Was it chance that stayed thee in the woman's house till dawn?"

"Nay," said I, "it was but what a man should do to protect a woman."

HE LEERED at me. "Tell me this, my son. There were three of ye. Thyself, Christoforo and another. Who was this other? Whence came he? Why wert thou conducting him to the house of Bonnivet's woman? A madman, I am told, in whom was no tincture of reason. What kernel didst hope to pick from such a shell?"

"It is thou who art the madman," I said, striving to make a jeer of it, for I was alarmed that he knew so much. But from his manner and way of speaking I guessed that he did not know that John-Peter had found the madman.

I was reassured upon the point, but his next question alarmed me. "This woman," he said, "who bears a French name, but whose face is not French, and of whose kinship to her family there is no record, how comes it thou art her acquaintance?"

"All I know of her," I said, "is that I carried to her a message from My Lord."

"Methinks thou liest," he said. "I shall keep an eye upon her. Aye, an she be proven to be who I suspect she is, then I will approach thee again with an offer. And if this madman but prove to be who I suspect he may be, then I will be in strong position to trade."

"Thy mind doth run again to treasure and jewels?"

"It runneth to profit. Out of this matter I shall gain me an abbey for delivering this maid to Cardinal Passerini—or secular wealth for saving her slender limbs from torture. And thou, my son, are the heart and core of it. I will stick to thee like a leech."

I stood up, towering over the monk, and I curled my lip at him. He gave back a step as if he feared lest I forget my reverence for his churchliness. To encourage him in that thought I took one stride toward him, and his beady eyes blackened with malice. He spoke no other word, but scuttled away. . . .

I shall ever feel that had My Lord Giovanni been present to lead his incomparable troops and to restrain the forwardness of King Francis with wise counsel the disaster would not have be-

fallen and many good gentlemen who are dead would be alive. That day of February 24th will live in my mind as the most terrible of my life save only one.

Our camp lay betwixt the walls of the great park of Mirabello, which guarded our front from the army of Pescara, and the beleaguered city of Pavia, and we were confident, aye, overconfident. We knew that Pescara's army was in straits, mutinous from hunger, and suffering from cold. He must fight or withdraw, for his conditions were intolerable. Many tongues were spoken under his banner, Spanish horsemen under Lannoy, *Landsknechts* under the rebel Bourbon, and fanatic Lutherans marching in what they deemed a holy war. Our own army was scarcely less polyglot, made up of sixteen companies of gendarmes, five thousand Germans, seven thousand French foot, eight thousand Swiss and some six thousand Italians, among which were the leaderless Black Bands.

Now, before the enemy could come at

Lannoy came on safely, followed by *Landsknechts* a hundred deep. And then Pescara, aware of God-sent opportunity, poured in reinforcements of lances, light horse, harquebusiers. But for a time the French King repelled this attack which outnumbered him four to one. All might yet have gone well because of the courage of men fighting under the eyes of their King—but then, on the flank, our Swiss crumpled and our Germans were cut down. De Levra sallied out from Pavia, and then, suddenly, there was panic and confusion and dreadful slaughter. The Most Christian King fought alone for his life, with lance, with sword, and none could reach him to rescue him. And there, unhorsed, unhelmed, wounded, bloody, his mouth full of mud and bitterness, the rash young King of France was taken prisoner.

It was a carnage. There died the flower of France: old La Tremoille; La Palice; San Severino; Richard of Suffolk would revolt against our King Henry no more.

gens. Though I be not a man of imagination, I could see her, so and proud and desirable, screaming and struggling in the savage arms of bearded *Landsknecht* or unco-

"Christoforo!" I cried out. "Aye, Pietro," he said, waiting for you to remember. A chancy maid, and uncanny, but sweet withal. May the holy saints that no horror hath befallen her!

So, reckless of what enemy encounter, we rode across the field, over the dismembered dead, wailing wounded. So busied we met with their greed that they us not.

AND so we came to the place where the house that had sheltered there was no house, only roof and smoking rafters and piles of stone. Amidst this ruin I searched, for her name and tearing at the stone with my hands. But she was not there, anything that I could recognize. And in my despair I sat and throbbed head in cold hands, myself up to agony and hopelessness.

"It serves not," said Christoforo a short while, "to sit here till some man dog digs thee in the ribs with a dagger to enrich himself with the rings of thy fingernails."

Dully and without will to move, I climbed upon my horse and him as he rode, and after a time his voice which commonly and jeering was tender.

"It runs in my mind," he said, such as she come to no common nor to such violation as doth in mad. Nay. She hath wit and and, should these fail her, there cery. For I do believe she hath the of magic at her finger tips. So ta Pietro. No *Landsknecht* could c her. By necromancy she would t him into a rooting hog."

Now there was nonsense, yet heartening nonsense. Just as no lieves that harm or suffering c to him—which belief is placed in God to make it possible for him without losing his reason—so d man believe that nought of evil fall the one he loves. Therefore I was sick with fearfulness, nev a tiny flower of hope blossome gloom. And because there was else I could do in her behalf, most earnestly. And felt the bet I lightened my own load by piling the shoulders of God. Which, c is how the compassionate Father intended us to use Him.

It was a weary ride upon all hausted horses down the stream Ficinio to the broader Po. We eaten since dawn, and because the insignia of the Black Bands not ask for food or shelter, beca that land we were hated becau cruelties our men had inflicted i peasantry. So we found shelter of sty, and I doffed my armor an down in the foul straw.

I thought of Betsy and of Giovanni, and what disaster th had brought to his fortunes; I th my mother, wondering if she good health; and of my father business he had sent me to tra Florence. It seemed to me he v discontented with me, and angr long delay in coming home. I pleased with myself, and nothir world seemed right or pleasing. and ever again my heart comp mind to return to Betsy. How find her? If I found her wha I find? I despaired. A future i she had no part seemed black an indeed.

Then, suddenly, I slept, and awakened, Christoforo crouching corner frying eggs on his breast, all the men I have ever known.

BUTCH

by LARRY REYNOLDS

"I'm not being mean, Butch. If th' cops weren't so close I'd gladly stop"

COLLIER'S

us they must first breach the high and thick walls of the park of Mirabello, which gave our commanders ample notice of the attack and time to deploy our troops to best advantage. All night their sappers, wearing white shirts in the darkness so they could recognize one another, tore great holes, three of them, in the obstructing walls. Then, in the dawn our gentlemen, accoutered in armor like knights ready for a tournament, detected with sleepless eyes the movement of stealthy harquebusiers creeping upon us through the park, with light horsemen striving to cut their way around to the walls of Pavia. But our artilleryman, the great Galliot de Genouillac, opened fire with his guns, and so dreadful was the carnage that they retreated headlong.

The headstrong King, enjoying the premature flush of victory, gave orders to advance from our good position to level ground where his favorite gendarmes could maneuver, and in that lay fatal error, because they came between our cannon and the enemy, forcing the cannon to become silent. With them rode Francis himself, seeing himself that day a plumed knight instead of leader and king. He rode for glory.

He might, indeed, have been riding to glory save for the path he chose, that path which My Lord Giovanni would never have followed because it made of his own men a rampart between themselves and our roaring cannon. So that

And Bonnivet—that gallant, scheming, flashing man died with his head upon the shoulder of the Abbot of Najera. Perhaps ten thousand of us died. The army as an army was no more.

Through that day the Black Bands fought with stubbornness and courage. But the skill was lacking, the darting surprise, the generalship that had made us the most feared troops in all Europe, and great were our losses.

THEN we, the captains, met in shivering council—what were left of us. And it was determined that I, being his close friend, should ride to bear to our general, the Lord Giovanni, the tale of what had befallen—and ask him for his commands and what we should do about it.

So, wearied as I was and sore, I mounted my horse once more, and taking Christoforo for company, set out for the River Po, hoping there to find some barge to carry me to Piacenza where lay my wounded lord.

And then—for in a day of battle a man's mind is occupied with other matters than women—I remembered Betsy. And I knew a fear greater than any I had ever suffered for myself. Her lodging had been on the very outskirts of the great battle whose field swarmed now with despoilers and looters, with savage men from the north who would hold a girl a more precious booty than gold or

or miss, it took the same amount of energy to roll the ball down the alley. In 3 minutes, you'll "burn" about 10 oz. of dextrose.

energy you expend in fishing is about the same whether you're content to bob a cork or prefer to catch a trout stream. You will use about 10 oz. of dextrose on hour.

Listening to radio are small pleasures, but do you know that in a quiet home you use about 10 oz. of dextrose on hour?

Down hill on a pair of skis may look easy, but it's exercise as well as good fun. An afternoon of skiing will use nearly 16 oz. of dextrose.

Swimming like a fish, or just paddle around. In either case, you're exercising lungs, arms and legs, using up energy at the rate of at least 7 oz. of dextrose per hour.

As gasoline is fuel for your motor, dextrose is fuel for your body. Even just rolling along a quiet road, your body will "burn" nearly 1 oz. of dextrose per hour. Just think what you use in Sunday traffic!

NOTE: In these examples, caloric expenditure is expressed in equivalent quantities of dextrose sugar, the immediate source of body energy.

What Do You Do For Fun?

From Archery to Zither playing, you can have fun in many ways.

To enjoy your favorite sport thoroughly, you should maintain your "E. Q.", your Energy Quota. It gives you power for every movement, every thought, every breath.

Medical research has determined the amount of energy you expend in every activity. This may be measured in calories or translated into quantities of dextrose sugar, because dextrose is the basic carbohydrate of the body. It is the natural "fuel" sugar of the body, the chief source of all energy. Like any other fuel, dextrose creates energy when it is "burned" in body tissues.

Read the captions under the pictures on this page.

Whether you just "sit this one out" or take an active part, you are constantly using dextrose sugar for energy.

This page is presented for your interest by Corn Products Refining Company, one of the producers of dextrose.

- Incidentally, while reading this page, your mind and body will have used about $\frac{1}{8}$ oz. of dextrose.

Spading, seeding, hoeing, weeding may be work for some people, but they're fun for most men when spring is in the air. You'll "burn" up to 4 oz. of dextrose sugar on hour in the garden.

The 100-shooter may use more dextrose, but even an under par golfer uses about 16 oz. of dextrose for 18 holes. That's why soft drinks, enriched with dextrose, renew energy at the 19th hole.

Whether you're a jitterbug or enjoy a Viennese waltz, you're expending energy replaceable by dextrose sugar. Even in a quiet one-step you would use about 2 oz. of dextrose per hour.

Serious bridge players fidget on their chairs, walk around the table... expend physical as well as mental energy at the rate of about $1\frac{1}{2}$ oz. of dextrose sugar per hour.

Even spectators following the ball use about 1 oz. of dextrose per hour. Tennis players themselves consume as much as 20 oz. in a match. Many champions nibble candy bars between sets, because most candy contains dextrose, food-energy sugar.

Nice work if you can get it! But even at rest, you consume almost 1 oz. of dextrose on hour, because you need energy to power every breath, every move, every thought. © C. P. R. Co., 1947

the most skillful at finding food where even a raven would go hungry.

We rode down that Lombard valley shoulder to shoulder in the sunshine, and though haggard, ragged men cursed us as we passed, and gaunt urchins stoned us from a safe distance, we came at last to Piacenza and My Lord Giovanni, who suffered great pain but would not be content until I had described the battle to him, and that part in it that our Black Bands had played.

"Had I but been there! Had I but been there! Curses upon their foul artillery. He has hit upon a new kind of warfare," My Lord said. "It won the battle. It will win other battles. Pietro, such as thou and I are fated to vanish. Aye and all armored knights and gendarmes."

The good Cardinal Salviati sat by his bedside, his wise, kindly face troubled and his thoughts upon matters higher than belching muzzles and pikemen.

"Always and ever," he said, "men devise how they shall slaughter one another in new and foul ways," he said gently. "Who is there anywhere who labors to contrive new ways of gentleness, or to exalt reason, or bring us nearer to God? The world is in dire travail. The Turk carries all before him and marches toward Vienna. When all Christendom should join to repel the pagan, they fight with one another."

"There is always the Pope," said My Lord bitterly.

"Nay, brother, rail not at Pope or church. The church is founded upon a rock and will prevail, and the rock is the teachings of Him who ordained that there should be peace upon earth and good will to men. The church is ill, Giovanni, sick with the grievous malady of wealth and power. Those who rule the church forget that its kingdom is not one of lands and cities and principalities and of armies, but in the great, universal heart of all mankind. In all lands and climes there be little priests and monks and friars who do keep alive the flame, and live in poverty and virtue. There, my brother, lives the leadership. At the bottom and not at the top. The fault is not with church, but with those into whose unfit hands has fallen the outward rule of church."

These matters were too high for my brain, and I feared I tired My Lord, for the Cardinal had glanced at me warningly.

"What orders hast thou for me and the bands?" I asked.

"My wife hath sped to Rome to work in my behalf," he said wryly. "For it seems I shall need it. I myself, when my wound permits, will go to the restorative mud baths at Abana. My command to thee, Pietro, is that you go forthwith to Trebbio, where will come my wife and son. Look well to their safety."

WE RESTED that night, Christoforo and I, and next morning, albeit reluctantly, we left my master and set forth on the long journey to Trebbio. For days we rode southwesterly through a land where there was neither merriment nor plenty, for the plague had laid its foul hand heavily upon the land, and great wars breed famine and want among the poor people who, in the end, must foot the bill. All Italy was divided and neighbor preyed upon neighbor and there was no order and no good will. It caused me to yearn for England, where we try to arrange things better.

Christoforo was gay and bellowed ribald songs, but as for me, there was no pleasure in the journey but only heaviness of heart, and black fears and hopelessness. For the more I thought about it the less I was able to hope that Betsy was still among the living.

We were still a day from Trebbio, and mountains now lifted themselves on all sides of us. At midday the smell of approaching spring was in the air and Christoforo sang more lustily. Traveling

thus we came to a fork in the way with one path veering to the right and the other to the left, and we debated which we should follow, and while we were considering it, a splendid buck running for his life leaped from a thicket and passed us with graceful leaps. Behind him dogs gave tongue, and then came the hunters riding intent upon their quarry. Without waiting word from me Christoforo followed them to the right and I, not caring which direction we took, rode after him.

Now it is a strange and wonderful thing, as I have learned, how small a decision will cause so large a result; and how, by taking one turn of the road at a fork a man's whole life will become a completely different thing from what it would have been had he taken the other.

In a little time a wide valley opened before us between the cliffs, and it seemed a greener valley than any we had seen. We could see the buck running freely and hear the dogs and the shouts of the huntsmen. Then there was sudden silence, and the hunters were among the dogs, beating them back from the trail—and the buck ran a little way farther and then stopped and lowered its head and commenced to nibble at the young grass as if neither dogs nor hunters were within miles of it. The dogs stood slaving and straining, and the huntsmen sat their horses and looked longingly and with chagrin at the buck. But they did not move so much as an inch.

THEN I saw planted in the ground before them a tiny white cross, and at a distance another tiny white cross, and farther along another, so that, as far as I could see, small holy roods grew in a line like some hedge or boundary marking. And neither horse nor dog crossed this line.

It was a marvel past understanding, so I rode up to the young lord who led the hunt and spoke him courteously.

"Ser Huntsman," said I, "what be these crosses? And, having passed them, why is yon deer fearless of thee and these who hunt with thee?"

He looked at me and his eyes narrowed when he saw the insignie I wore, but he replied with grudging courtesy.

"Beyond this hedge of crosses," he said, "there is refuge. Aye, for hunted beast or for hunted man."

"But I see no wardens to enforce it."

"There be none that the eye can see."

"This must be land of a very potent lord," I said to him.

"Beyond this line," he said, "is neither sword nor pike nor soldier to bear them. But I had sooner swim a river infested with foul crocodiles, than to cross this boundary meaning violence to any living creature."

"Now here is a marvel," I said, wondering. "Of what is thy fear?"

"There be worse and more permanent damages to a man than sword hacks in his flesh," he said.

Then he turned away from me and commanded his party to leash the dogs, and they rode away hastily and silently as if from a spot ridden by a murrain. Christoforo and I peered after them and then at each other, and there was no grin upon his face but only a sort of awe.

"Now what is this?" he asked. "Have we come to the domain of some sorcerer?"

"We have come to something that is a mystery," said I gravely, "and I cannot ride on content until I know more."

"Nay," said he, and shivered, "let us go on our way lest some uncanny thing befall us. I like not traffic with witches nor warlocks. For, though they may not damage the body they be potent to wound the soul."

But such curiosity gripped me that I was determined, and I rode forward saying "We mean neither harm nor violence to any, so we do not violate this strange sanctuary. We be weary and

SO GENTLE AND PURE, SO THOROUGH

and seek sanctuary ourselves. I
 "I am Beatrice," she answered softly.
 "Thy father, Tasso," I asked, "is he
 safe and well?"
 "Aye," she answered, "and speaks thy
 name often in gratitude."
 "Even," said the man in white, "as
 thou dost befriend the least of these thou
 dost befriend also Him." He turned and
 led us into the hut which was plain to
 austerity. With his own hands he set
 forth wine and bread and food com-
 pounded of vegetables, but no flesh or
 fowl. His eyes twinkled as he saw Chris-
 toforo's face fall.

"It will fill thee and amply sustain
 thee," he said, "though no living thing
 has died to satisfy thy appetite. Fall to."

WE ATE with zest, for the food was
 good and the wine sparkling, but I
 was not altogether at ease because of
 the maid, who crouched with her back
 against the wall and stared and stared at
 me, even as she had before the fire on the
 night I rescued her from Riario.

When we were finished and she had
 cleared away, our host began to speak to
 us, and we sat entranced, for his voice
 was golden, and his words flowed forth
 as if he wove the pattern of a wondrous
 tapestry of many colored threads. He
 made me to see life as it should be in a
 world where no man harmed man nor
 beast harmed beast; where there was no
 rancor nor hatred nor brutal selfishness
 nor lust for power. He spoke of a world
 in which every man's platter should be
 heaped with food because the bountiful
 earth could provide enough for all if it
 were but permitted to do so, and wherein
 there should be no England nor France
 nor Venice nor Spain divided against
 one another—but all one people living in
 friendship. He spoke harshly of no man,
 but gently of all, holding that men are
 not evil of themselves, but are forced to
 do evil until they come to love evil—
 forced to do evil by a world of chaos not
 organized for virtue.

"So," he said, "I have created this lit-
 tle oasis of peace as an example, praying
 daily and nightly that each year its bor-
 ders shall spread an inch or a yard or a
 mile, until in the fullness of time it shall
 cover the whole world—and bring the
 Kingdom of Heaven down from the skies

to see who the friend might
 coming up the path a ragged,
 and she came closer and
 out of big wistful eyes and
 less. At first I did not know
 any months had passed, but

"You can't change cops just by slugging and
 shooting them. It's gotta be done by education"

not matters of importance to
he said, "I would accommo-
badly."

"Come to me again," I said, "in thy
first moment of leisure. Meantime, my
friends will strike up a merry lay. Sing
right heartily, friends, to instruct this
gentleman that songs are more pleasant
to the ears of God than threats."

He turned then, with no other word,
and walked back through the open door
and slammed it soundly behind him. Be-
atrice, who stood beside me, plucked at
my arm.

"Ser Pietro," she said, "it is the
younger brother of the Count Riario."

"I care not," said I, "if it be his father
and all his uncles," for I was angry at the
arrogance of him.

"Bethink thee," she cautioned me.
"Why is he here—across thy path to
Trebbio?"

Her words caused me to pause and
consider. In the presence of the brother
of thy enemy it were well to act with
caution. "Though I doubt it," I said to
Beatrice, "it could be an ambush."

"The Count Riario is a vengeful man,
and thou didst rob him of his prey. For
which I give thanks to God."

So I turned to the company and bade
them to sing more loudly to mask any
sounds I might make; and I trod softly
across the courtyard to a window of the
inn and raised myself so that I could
peer inside. There were half a dozen
men, their swords standing against the
wall and their breastplates laid aside.

Their heads were close together as
though they discussed some plan. Among
the men dressed for riding and fighting
was another of different garb, and that
meant everything to me. For it was an
obese man in coarse brown robe; I saw
the great round eyes and the blubber lips
of the monk who boasted that he was
the hunting dog of the Pope!

I went back to the fire and drew Chris-
toforo aside.

"The monk is there," I said.

"The monk!" exclaimed John-Peter.
"Then it is an ambush."

"It seems so to me," I said.

"He must not have Niccolo Gozzoli,"
John-Peter said harshly. "Rather would
I die."

"I know not about Gozzoli," said I,
"but I value highly mine own skin. Now,
shall we steal softly away, being warned?
Or shall we remain to see what comes of
it? These strollers will stand sturdily by
us."

"There is more at hazard," John-Peter
said, "than thy neck, or even Niccolo
Gozzoli."

"Shall we stay or go?" I demanded
shortly.

"The question is too deep for me,"
he said. "We need the advice of another."

"What other?" I demanded.

He was reluctant to speak, but neces-
sity compelled him. "In time of need,"
he said, "a wise woman's advice should
be sought."

"Hast lost thy mind?"

"Nay," he said, "there is one here of
great experience."

"Thou art as mad as Gozzoli, John-
Peter," I told him.

He was stubborn. "I move not until
thou dost consult Mother Rosina," he
said. "What she decides, that will I do."

It seemed a silly, foolish thing that in
this moment of peril I should consult
with a toothless crone, a wandering char-
latan who cozened pennies from the ig-
norant with spurious fortunetelling. But
John-Peter was set upon it—and after
all, who can be certain that such a
woman may not be able to peer some
distance into the future.

So I strode to where she crouched with
straggling gray hair about her face.

"Mother Rosina," I said, "may I con-
sult thy wisdom?"

"To what end?" she croaked.

"To discover," I said, "if I should flee
or fight?"

Painfully, with creaking joints, she
lifted herself to her feet and, bedraggled,
she followed me beyond the circle of fire-
light.

"Mother," I said, "in yonder inn is the
brother of my enemy, who, or so I be-
lieve, lies in wait to do me a damage. But
more important still, his companion is
a monk who hath dogged my steps since
first I set foot on Italy at Livorno. What,
then, shall I do? Shall I remain and face
it out, or shall I slink away?"

Out of the folds of her black sooth-
sayer's dress came a hand; it touched my
arm and lay there. It was not a yellow,
wrinkled hand, covered with warts and
blemishes. It was not the talon of an
old crone, but white and slender with
fingers that tapered and nails well-tended
and shining. My breath caught in my
throat and dizziness all but overcame me.
For I knew that hand and loved it.

"Betsy!" I whispered. "Is it indeed
thou? Art alive and not dead?"

"Hush," she said.

"My love!" said I. "My dear, dear
love!"

I COULD think but one thought and
that was that Betsy was here, alive, un-
harmful, and I mumbled her name over
and over again in my happiness, and
clung to the little hand she had placed on
my arm. But she spoke to me sharply, al-
beit in a low tone of voice.

"Enough!" she said, and seemed to
find no pleasure in my presence. "I am
alive and like to cling long to life if thy
clumsiness brings me not to ruin. I saw
Riario's brother in the door. The monk
is with him?"

I felt as if she had given me a buffet
upon mine ear in return for my love and
it hurt sorely. There was no softness in
her nor anything save the cold, gleaming
beauty of a sword blade—and the beauty
was well concealed by the guise she wore.

"The monk is here," I said.

"But here," she said, "is the question
whose answer we must guess. Does he lie
in wait for thee or for me?"

"For me, I believe," I said. "My com-
ings and goings have been open and
overt for any to see and to follow. While
thine have been stealthy and mysterious.
The belief is fixed in his head that I will
lead him to thee."

"Which," she said icily, "thou hast
done. Matters hang in the balance more
important than thy life or mine. Aye.
The future of all Italy, and of Florence
in particular. And of Rome. The Medi-
ci Pope hath ridden the wrong horse to
disaster. That disaster must become de-
struction."

"Thy safety, Betsy," I said, "is more
to me than all the politics in Europe." I
was silent, thinking upon her determina-
tion and how stubbornly she meddled in

HOW IT CAN "RAIN" INSIDE YOUR WATCH

Scientists explain why
millions of mainsprings break,
and one kind doesn't

"Ping" goes the mainspring! It hap-
pens in so many watches! Rust is the
reason. High humidity with a sudden
drop in temperature can cause conden-
sation of a droplet of moisture inside
the case . . . like a miniature rainstorm.
A tiny pin point of rust begins on the
mainspring. And there, microscopes
show, is where the spring breaks.

The finest steel mainspring ever made
will rust. But now comes Elgin's mir-
acle mainspring: DuraPower*. Made
from an entirely new alloy, it will not
rust. And it retains its original resiliency
indefinitely, gives a steady flow of
power for lasting accuracy.

Hailed as the most important watch-
making development in over 200 years,
Elgin's DuraPower Mainspring elimi-
nates 99% of repairs due to carbon steel
mainspring failures. Only Elgin
Watches including Lord and Lady
Elgins and Elgin DeLuxe have the ex-
clusive DuraPower Mainsprings, and
at no extra cost. Also available at
repair shops for replacements in many
previous Elgin models. Look for the
symbol "dp" on the dial.

DOUBLE DUTY POWER-PAK

INFLATES "FLATS" INSTANTLY
EXTINGUISHES FIRES, TOO!

80% of flat tires are from slow leaks or
small punctures. Inflate them and they'll
hold air at least long enough to reach a
service station.

So, why wrestle with a spare or tire pump?
Why get soiled and irritated? Why wait for
a tow truck?

Keep a small, handy Power-Pak in your car.
Just connect the flexible hose to your tire
valve, turn the handwheel and inflate
instantly with clean, safe CO₂ pressure. Fills
3 average tires. Refilled at small cost. Pretty
cheap! Very convenient!

. . . and this same DOUBLE DUTY Power-
Pak is a completely safe and dependable
extinguisher for oil, gas and electrical fires.
Lots of value for \$6.45? Sure! Don't
accept flimsy substitutes. Insist on Power-
Pak for strong, easy-grip handwheel,
flexible tire hose, safety-valve
and gel cap sealed opening
(your assurance of a
full, leakproof unit).

Buy Power-Pak at gas stations,
auto accessory and hardware stores,
all Buick and Pontiac dealers. At Ford
and Lincoln-Mercury dealers, ask for
Ford or Lincoln Tire and Fire Unit. Mfd. by
Power-Pak Products, Inc., Buffalo 2, N. Y.

high affairs. "Thou dost hate furiously," I said.

"And with cause," she answered.

Men speak of hot Italian blood, but to me that fluid seems cold and deadly, nurturing vengeance and keeping alive for years hatreds which in warmer blood would soften and fade with the fleeting of time.

"It is for thee to say," I said presently. "Shall it be flight or fight?"

"How many be against us?"

"Half a dozen—that I saw. But had I planned such an ambush I would not congregate all my men in the inn, but would conceal some upon the road both ahead and behind to cut off escape."

Then, interrupting our council, the giant came to us and towered over us, holding in his fist a great, knobbed club such as Hercules might have wielded.

"Messire," he said, "the gate be sealed against us." He motioned toward the wall that surrounded the courtyard and to the opening in it through which we had entered. "Armed men are there," he said. "They came creeping stealthily through the darkness. How many I do not know."

BETSY looked up at me, and her young eyes glowed strangely through the ancient and scraggly locks of hair that hid her face. "The decision is made for us," she said with no tremor in her voice, nor fear in her bearing.

"It is no quarrel of thine," I said to the giant.

"We be simple folk and honest," he said. "We love not robbers nor assassins."

Now I be no general, nor ever desired it; but no man of understanding may spend weeks and months in talk with My Lord Giovanni without comprehending something of the business of warfare. Therefore I stood studying our surroundings as best I could in the darkness. The campfire of the strolling mountebanks was in the middle of a courtyard shut in on two sides by walls of stone, pierced by the one gate through which we had entered. The opposite side was shut in by the mass of the inn itself and buildings appertaining thereto; and the fourth side was partly wall and partly barns and stables; before a barn rested two or three of the great two-wheeled carts common to that country. I studied all this and found little to comfort me.

I turned to those around me and said in cautious voice, "Sing, comrades, and be merry, so that we be deemed unsuspecting of danger. Methinks there will be no attack upon us till the fire burns low and we be asleep."

Then came to me a fragme not such as My Lord would b but the best my merchant's manage. "Look ye," I sai "Let it seem that wine hat us. Ye be performers and the way of it. Make carniv the space be small for it, let u sing and dance in procession courtyard. And because v great, gyrating towers with angels we must make the be yonder carts. or July 26, 1947

"Ho, good friends," he said, "the hour
is late. A right blithe evening have ye
enjoyed. Ye must be wearied, and there
be travelers in the inn who wish to sleep
and refresh themselves before they take
the road tomorrow. Therefore, courte-
ously I entreat ye to cease your cater-
wauling that we all may seek repose."

It was only then that he seemed to be-
come aware of me, and started in sur-
prise, and smiled broadly. "What, my
son? Is it indeed thou? Had I but known
thou wert in this company I had bidden
thee inside to regale thyself in greater
comfort. So thou didst escape the great
battle without scathe! I had feared for
thee, knowing thy rash courage. A wel-
come sight art thou."

"I thought not to see thee sniffing in so
remote a spot," I said.

"I sniff where the trail leads," he said.
"And would the trail be mine?"

"How could it be?" he asked, brows
lifted in rare surprise. "I was here before
thee, my son. It is more like you followed
me than that I followed thee. I was af-
flicted to learn of the Lord Giovanni's
wound. Thy destination is Trebbio?"

"Where else?" I asked.

HIS bulging eyes roved over the com-
pany until they rested upon John-
Peter, and remained there and hardened
and glittered. "Now this is indeed a sur-
prise," he said softly. "The manikin.
The manikin of Florence and of Fano,
and of divers other places. Not often am
I surprised, and so pleasantly. For when
thou art present a certain other is not far
distant. Ha, Englishman," he said to me,
"have I not said that if I clove to thee
thou wouldst lead me to her?"

I did not dare so much as turn my eyes
to glance at Betsy to see how she was
taking all this talk.

"So thou, Englishman, and the dwarf
did rendezvous in this place. He, by
right of his dwarfishness, a member of
this company of mountebanks. And she?
A drawing together of the three of ye,
perhaps. A girl most clever at disguises,
so that even I have never seen her face
to know it." He grinned at me and oil
seemed to drip from the grin. "Now
could she have disguised herself as
yonder giant? Or that grimacing Moorish
dwarf? Or one of these merry acrobats?"

"Or perhaps," I said jeeringly, "as one
of the horses or performing dogs."

"She hath deceived me with things full
as marvelous as that," he answered.

Then his full, pouting lips became a
thin line as they pressed together, and his
eyes glinted, and before I could step be-
tween—and with a speed incredible in so
obese a man—he darted forward with
outstretched hand and snatched at Betsy
where she crouched with lowered face.
When his hand came away from her it
clutched her headdress and matted,
tangled wig of bedraggled hair. And
there, lighted by the yellow fire, was her
lovely face for a moment filled with con-
sternation; but in an instant she com-
posed herself and was the proud and
fearless lady I had known.

"Bonnivet's light-o'-love," he laughed,
and there was gloating in his voice. "So
I was not wrong. So I guessed it even
then! Oh, well met, Madonna. And,
perhaps, another mystery solved. Aye.
I was swift to the quarters of The Most
Christian King, but one had been before
me rifling his papers. And who but thou,
who have thwarted me heretofore at
every turn? Now can I indeed sleep in
peace with a fat abbey for my pillow!"

So blasted was I by this sudden thing
that I could neither move nor speak, but
only stood and raged inwardly.

"This," he said, "doth put a different
face upon the matter."

Then, before any could stir or think
what to do, he turned and, stepping as
one who hath achieved a great thing, he
walked back to the inn and entered and
closed the door behind him.

I thought of My Lord Giovanni and

OLD CHARTER

what he would do in like circumstances. It seemed to me, knowing his wisdom in warfare, that he would act boldly and in some unexpected manner that would throw the enemy into confusion.

Here were we, two soldiers, Christoforo and myself, and a motley company of people whose business was to cause laughter and not bloodshed. We were pent and beleaguered in a courtyard from which there was no escape, and by a troop of fighting men trained to warfare. Nor did we know their numbers or their dispositions. It was no quarrel of the mountebanks, but they, as well as I, knew that no mercy would be shown them by the riders of the Count Riario. Ill armed as they were, they would fight for their women and their lives.

OUR case seemed hopeless. I could not see how we could do more than resist with what courage was in us until we were overcome. But there was a thing of more importance to me than my life or my death—and that was Betsy. Desperate as our plight might be, yet there was a slender chance that some might escape, and all my plans must be so contrived that it should be she.

"Betsy," I said, "it seems that here tonight will come an end to my traveling in foreign lands. I, who had thought to die peacefully in old age with the smell of woolen cloths in my nostrils. But, somehow thou shalt escape from it. Hold thyself ready. For in some manner I will see to it."

She looked up at me and I could not read her eyes. "It is a sorry end," she said. "To die in such a spot and in such a petty brawl."

"It is not a sorry end," I said, "for any man to die in defense of the maid who holds his heart, but I am not like My Lord who covets glory. It will grieve my mother sorely, and my father will be distressed having no son to whom the business may descend. Wilt write them a letter and tell them the way of it, and that my loving thoughts were upon them?"

"If I be alive," she said, "I will write that letter."

"Stay by the maid Beatrice."

For a moment she was silent. "I have done thee no good, but only harm," she said. "Do you not hate me for it?"

"I love thee tenderly," I said.

"My heritage," she said, "has been hate—not love." Then she reached out

seemed necessary for it, so I gave him a bullet that abated his desire to do murder and left him sprawling under a table.

"Now that was a gay and pretty bickering," said Christoforo, "and these gentlemen find themselves most unexpectedly in Paradise."

"Or otherwise," said I, stooping to arm myself with Riario's sword. "Their arms and armor will be welcome. Go thou to the door and summon all to come inside, for a good stone inn is easier of defense than a roofless courtyard."

They came trooping in, save three who remained to watch the gate with John-Peter to set fire to the hay, but I called John-Peter to come and leave it to the others. And I found the landlord cowering in a corner and snatched him out.

"Is there a way out of the back of this inn of thine?"

"There is, My Lord," he stuttered.

"Through which horses may pass into the forest and the hills?"

"And a path," he said, "that circles hither and thither until it joins the road to eastward."

"Get three horses swiftly," I ordered, "and saddle them." And then to Betsy: "The men outside know not what hath happened here. I know not how many guard the rear, but not enough to hold thee back. Thou and John-Peter must ride, and take the little Beatrice with thee. Go to Trebbio where thou wilt be safe. When all is ready for thee to go we will set fire to the hay at the gate and set up a shouting to cause them to come to see what we do. So it may be thou shalt escape undetected."

So men of the mountebanks led three horses to the gate in the rear, and I went out through the kitchen with Betsy and John-Peter and the maid Beatrice. There we waited in the darkness until we heard a great din in the courtyard, and, over the black roof lighting the sky, we saw the lurid flames of the burning hay carts. Whereupon Christoforo and I ventured forth to see if any barred the path. But all was silent and lonely there.

I lifted Betsy upon her mount, and Christoforo placed Beatrice in her saddle, and John-Peter scrambled up and they were ready.

"Ride softly and slowly for a mile," said I, "so that the sound of your horses' hoofs will not alarm. Then ride till ye be safe in Trebbio."

"And thou?" asked Betsy.

"I remain with these companions."

She sat straight in her saddle, her pale, lovely face most incongruous above the bedraggled, ragged dress that had been her disguise.

"What thou hast done," she said, "was well thought of. Aye, your Lord Giovanni could have done no better. God guard thee, Pietro, and bring thee and all with thee safe out of it."

"An we win free," said I, "shall I see thee in Trebbio?"

"That I know not," she said, "nor if ever I shall see thee again." Her lips bent in a still, twisted smile. "I seem ever fated to use thee to thy disadvantage. It were best if thou should avoid me, if thou canst."

SUDDENLY I was heavy with fear of the future, for I remembered what I had seen in the crystal ball, and how I saw her lying dead in a room heavy with smoke. It seemed to me that whatever I did, however I prayed for her and in whatever way I served her, it would be vain in the end. So I dared to lift her hand to my lips, and then I turned, not daring to say goodbye for fear of the quivering of my voice. I heard the movement of their horses, but did not turn my head to watch as they rode away into the black forest.

I walked with heavy feet back into the inn and into the room where we had fought with Riario and his men, and there I looked about me, and for a moment could not remember what was

amiss. Then I said loudly in my alarm, "Where is the monk?"

But he was gone, nor was he to be found in the inn—though we ransacked it from attic to cellars. He had slipped away, and none knew when. I blamed myself for it, but what was done was done. I had thought we had left Riario's men leaderless, but now, though he was no fighting man, the monk would take command of them and show them what to do. But no longer were matters so desperate. Their numbers were reduced, and more in quality than in quantity.

"How many men remain to them?" I asked.

"My Lord," said one of the acrobats to me, "I be a stealthy man. Give me leave to go out and spy upon them."

"Aye," said the giant, "Giacomo has the eyes and feet of a cat."

"I be no lord," I said, "but only a merchant's son who is a knight by merest chance. Go cautiously, Giacomo, and return quickly."

"Have no fear of him," the giant said, "for he will pick you a pocket or slit you a throat so deftly and so sweetly that it might have been a shadow." His voice was warm with honest admiration. "Even as this Michelangelo is an artist with brush or chisel, so is Giacomo the most skillful man of this day at snatching a purse. He will return safely."

I WAS in doubt if the arts of thievery did qualify a man for such work as this, but I need have felt no incertitude about it, and my suspense was brief, for in less than an hour Giacomo returned grinning, with a naked sword in one hand and a dagger in the other. "Had I desired," he said vainly, "I could also have fetched his shirt. There be but four of them, My Lord, shivering and uncomfortable and grumbling, whose orders are to stir about and make us think there are more of them. Whatever others there were have gone." He grimaced merrily. "And I wished I could have crept into one of their pockets and slept snugly without the owner being aware."

"Was the monk among them?"

"There was no monk."

"I like it not," said I, and foreboding descended blackly upon me.

"We may sleep soundly, thanks to thee," said the seller of false indulgences. "We have nought to fear from four."

"Nonetheless," said I, "we shall post sentries until the dawn. It may be some ruse. Or worse."

But it was no stratagem. The night was peaceful, though overlong, for I did not close my eyes. And in the dawn, as I stood behind the barricade in the gateway, I saw the four mount horses and ride away, and knew that what had been a dire peril the night before was no longer a threat to our safety. But I did not like it that the monk had vanished. I prayed that Betsy had ridden swiftly, and even now was safe within the walls of Trebbio.

We breakfasted in the inn, served by the timorous landlord, and then set out upon our way.

"Ye shall find welcome and shelter and food in Trebbio," I told them.

So we rode, as ragtag a company as ever I saw, and as gay and carefree and friendly, for all that there were cutpurses and thieves and worse among them; and I did think upon it that there be degrees of wickedness, and various reasons why a man may become a sinner against the law. Also that an unfortunate man might be a very great sinner, with crimes to smirch his soul, but still be a good companion and loyal in his friendships.

With no mishap we reached the neighborhood of Trebbio while the sun was high, and at the head of my tattered malions I rode up to the moat.

"Is my lady here?" I asked the sentinel. "I have messages from My Lord."

"She is here," he said. "But who are these monsters and scarecrows?"

ANOTHER
BOSTITCH
EXAMPLE

A BIG PROFIT IS A LITTLE SAVING multiplied a hundred thousand times

ONE
OF
800

A mid-western specialty manufacturer reports that using Bostitch preformed staples thru an aluminum plate has eliminated the cost of a nut plate, tacks, drilling holes, and nailing on one of his products—a rubbing block—for a total saving of 75%... On a paint stipler—a heavy fabric job—he does the fastening 12 times faster than before... He chose Bostitching also for the assembly of a toy garage; because, as he says, "It is the best, quickest and cheapest" of the numerous methods he had considered.

Many firms, finding such Bostitch profits in one department, are surveying all their fastening operations to find other places where Bostitching may help.

Thousands of combinations of all kinds of materials, metal, cloth, paper, wood, leather, plastics... are fastened better and faster by Bostitch's 800 models of stapling, tacking, and wire stitching machines. Maybe you, too, can profit by applying this method to your fastening work.

250 field men in 91 key cities place at your service the benefits of 50 years' Bostitch research and experience.

Write for data on representative models of the world's most complete line of wire fastening equipment.

"Friends," said I. "Admit them to the courtyard and see to it that they be given wine and food."

Whereupon I entered the castle and was shown to My sweet Lady's apartment where she sat with little Cosimo. She arose eagerly and tremulously as I entered and held out her hands toward me and I lifted one to my lips.

"What of My Lord?"

"He mends," said I. "Within twenty days, or so the doctors say, he will be sound as ever."

"Only," she said dolorously, "to thrust himself into peril again. Oh, Pietro, it is a heavy thing to be wife to such a man as my Giovanni! I have had so little of him since we were wed. And there has scarce been a night when I have slept without terror that the dawn would bring me tidings of his death. And now this battle—this defeat. It hath swept everything away. It hath ruined him."

"Nay," said I, "it is but a setback. There is neither king nor emperor but seeks eagerly to give employment to My Lord Giovanni."

"But pays him not for his services. Where shall he get money, now that the French King is a prisoner? How will he pay what remains of the bands? How will he pay for the damage they do in their idleness?"

SHE read his letter eagerly. "He requires that I go to Rome to mediate with the Pope. He requires that I raise sums of money beyond my power. I am but a woman but he requires all things of me."

Her eyes rested questioningly upon little Cosimo. "Here is his son," she said, not angrily, but sadly. "If My Lord cometh to his death, what patrimony will he leave for Cosimo?"

"He will not die," said I. "Such as he are not slain. As for patrimony, My Lady, thou wilt yet see thy son Duke of Tuscany."

"Not through any contriving of My Lord," she said. "He would rather fight in some small mountain skirmish than trouble peacefully to win a dukedom." Then she smiled, albeit wanly. "Yet," she said, "I would rather have him my husband than any man that liveth, and have what crumbs of love he hath to spare for me in his moments of leisure."

"He hath been invited to Venice when he can travel," said I, "and, if I err not, will be offered the command of the Venetian armies."

She shook her head. "Not Venice," she answered. "He who trusts Venice will drink the bitter cup of regret."

Then, for I could not speak of it sooner: "My Lady, did two maids and a dwarf arrive in Trebbio this morning?"

"There have been no arrivals but thee, Pietro."

"But they should have been here hours ago. Mayhap thou hast not been told of it. Perchance, being wearied, they are asleep."

"Thou art the first to pass the gates this day," she said. "I would know if it were otherwise."

"This maid was in sore danger and I sent her hither for refuge, My Lady. I must make certain."

"Who is this maid, and what is she to thee, Pietro?"

"Who she is I know not, nor what she is, save that I love her so that my heart is like to break."

She rang a little silver bell, summoning a servitor. "Has any maid come this day to Trebbio?" she asked.

"But now one arrived," said the man, "a most ragged and frightened child who doth demand instant speech with thee."

"See," she said sweetly, "she hath come safely." And then to the serving-man: "Fetch her instantly."

So she had come safely through! The relief of it unmanned me and I could feel a trembling of the knees, and I was speechless as I awaited Betsy's coming.

The door opened inward and I stepped toward it hungrily. But it was not Betsy who stood afraid and hesitant, but Beatrice, the mountain maid. She cried out at sight of me and stretched out her little torn hands, and I saw that her feet were bleeding also where they had been torn by stones and briars.

"Oh, Ser Pietro!" she cried piteously.

"Oh, Ser Pietro!"

I had her by the shoulders, shaking her in my impatience. "Speak, child, speak!" I cried. "What of Betsy? Why art here alone?"

"She is taken," said Beatrice.

"By whom?" My voice did not seem to be mine own, but some shrill noise. "Who hath taken her? Where is she now?"

"It was upon the road, Ser Pietro. We left the inn silently and rode down the bypath as thou didst order. But then, out of the darkness arose many men and surrounded us and dragged us into the forest unkindly. And the Lady Betsy, as thou dost call her, faced them boldly, but I was afraid. And then came the monk, riding upon a horse, and he did gloat over her, boasting of how he outwitted thee. And then they compelled us to mount horses and ride. But they placed no value on me, nor watched me carefully. So I did slip down from the horse and hide in the woods till I could come here and warn thee."

"Whither did they ride?" I demanded.

"To the castle of the Count Riario,"

DANGEROUS CURVES AHEAD

The time for bathing suits is here
And it is lamentably clear,
As anyone with eyes can see,
That there is far too much of me.

—Margaret Fishback

she said, "and the monk taunted thy Lady, saying that first the count should have his pleasure of her, and then he would take her to the Cardinal Passerini who would know how to wrench the truth from her. He was gay, Ser Pietro, boasting how he would have an abbey for that night's work."

"My Lady," said I, and I had ceased to tremble for I knew what I must do, and that is always a help, "what men are in Trebbio?"

"A dozen of the bands," she said.

"Loan them to me, I beg of thee."

"They are thine," she said. "The Count Riario is no friend to My Lord." She frowned. "But what is thy purpose?"

"I will have her out of that place if I have to tear it down with my hands."

"It is madness," she said, "to think of assaulting a stronghold with a dozen men."

"I have also my mountebanks," I said.

NOW the child Beatrice stood erect, and there was pride in her, and her eyes were upon me again with that look which I had so often seen there and could not understand.

"There be more than these to aid thee," she said.

"What others?" I asked.

"My father, Tasso," she said, "hath a debt to pay this Piero Riario—and also he hath a debt of gratitude to pay to thee, Ser Pietro."

"My Lady," I said, "have I thy permission to go?"

"Go with God, Pietro," she said, and then, wringing her hands: "It is always thus with me. Always it is my fate to say farewells; to watch the going away of those I love; to restrain my tears and to say 'Go with God' when my heart is breaking, and there is no happiness for me, but only lonely waiting and fears. Aye, go with God, Pietro. Go with God."

(CECILIA) MCKAY RUSSELL, Financial
Editor, New York Daily News
HELEN VIND, Associate Editor, Fortune
JEAN WILSON, Wall St. Bureau Chief,
Chicago Journal of Commerce
MRS. C. G. WYCKOFF, Publisher and
President of the Magazine of Wall Street

What we meant was: Sylvia Porter is the only woman financial writer whose initials are S. P.

DISGRACE TO THE NAVY

DEAR EDITOR: The illustrator of Once More to the Stars (May 31st) must have been a "dogface." He doesn't know anything about Naval uniforms. In the first place an engineering rate is a left-arm rate. In the second place the screw is up-side down designating a water-tender rate, the badge of which was discontinued before World War II. In the third place the color of the screw should have been white and not red.

MORRIS L. THOMSON, MMI/c, U.S.N.R.,
Rock Island, Ill.

. . . or is this the design for the new uniform?
B. P. WACKER, U.S.N.,
U.S.S. Platte

READER'S INDIGEST

DEAR SIR: That part in Fat Heads of Europe where your Mr. Courtney (June 21st) says you can't throw a potato chip without hitting one duke, two duchesses, etc., etc.: Didn't he omit American correspondents from his inventory? By the way, what is Courtney's hat size?

Sincerely,
HENRY PHIL TAYLOR, Chicago, Ill.

OUR FAR-FLUNG READERS

DEAR EDITOR: Why don't you publish an Arabic copy of Collier's which would be read in the whole Arab Middle East?

RAOUL FANANIRI, Cairo, Egypt

We are in hopes that all Arabs will learn to read English, and take their Collier's as she is wrote.

GLASS BLOWERS

DEAR SIR: Read the article on Steuben Glass (June 7th). Have informed various members of our Glass Club about this article and they purchased a copy. We are a large club and while we study "Early American Glass," we are always interested in anything fine and beautiful.

Yours truly,
AMY M. WELSH, Cincinnati, Ohio

SEPARATE PEACE PROSPECTS

MR. HERBERT HOOVER is still able to start excited nation-wide arguments; and he didn't fail to start one with his recent advice to his countrymen to conclude separate peace treaties with Germany and Japan under certain circumstances.

Those circumstances, in brief, would consist in Russia's going on stalling in the matter of all-Allied peace settlements. Russia has been thus stalling up to this writing, for the obvious purpose of keeping the world upset.

Mr. Hoover's recommendation is that we call this Russian bluff now as regards Japan, and next winter as regards Germany if the November conference of the Big Four foreign ministers reaches its expected deadlock.

He does not mean that we should pull our occupation troops out of Germany or Japan after sepa-

rate peace agreements are reached. His idea is that we should go ahead and make most of western Germany (including the British and French zones if possible) self-supporting, and get Japan back on its economic feet, in order to relieve our own taxpayers of the burden of financing these present poorhouses.

It's a hard-boiled proposal, but we think it is also a hardheaded one, and deserving of our most serious attention. After all, this business of siphoning American wealth and materials into these two prostrate nations can't go on forever, if the United States itself is to survive. And if Russia sees that we mean to call it off, Russia in turn may become more reasonable about formally washing up World War II.

Let's talk separate peace loudly for a while, and if that doesn't get results let's translate the talk into action.

THIS PRICELESS FRE

DR. VIRGIL JORDAN, the noted economist, got up recently at a meeting of the Electric Institute and dilated on the fact that the United States is the most productive country in the world. We toiled and fed a large part of the world during the war effort. We are living well now. At the same time we are able to export huge relief commodities to stricken countries.

By contrast, various nations now following the Gospel According to St. Karl Marx are getting along. Russian living standards are unusually low. Great Britain is still tightening its export goals and suffering from apathy.

Dr. Jordan in this speech wondered why we were so. He came to the conclusion that our exuberant ability to produce is no more or less than our still considerable free government interference in our lives and in the lives of others. He also reasoned that the Marxist nation plagued by Marxism itself—Marxism being that government should run everybody's welfare of the whole of society.

They pay off on results in this world, not on promises. Hence, this economist's quickest way to wreck ourselves would be to have for any more Marxism than we now have. He thinks, indeed, that we already have too much.

It wouldn't, of course, be feasible to tear down such Socialist institutions as the TVA or the National Security Act, and we don't know of any economist who wants to do that.

But it is possible to keep government from clinging into any more fields of activity; and what Dr. Jordan thinks we'd better do, is to get the results which capitalism delivers. Marxism is always going to deliver but it's not.

We can't help feeling that the good thing is something there, and that the time has come when Americans to start worrying about the liberties they still enjoy and to do some lawful battling for liberties in proper cases. The more Marxism in action, the more nearly the U.S. brand of freedom looks.

FOOD THAT GETS TO

LARGE numbers of Americans ever since the war have been sending food and other supplies to relatives and friends in Europe. They want to make certain that your help will get to them. Instead of being sidetracked by a thief, we suggest that you communicate with an organization called CARE.

The letters stand for Co-operative for Remittances to Europe, Inc. It is a non-profit, government-approved group which ships food and woolen packages to designated persons in Austria, Belgium, Czechoslovakia, France, Greece, Holland, Italy, Norway, Poland, and all of Berlin, and the American, British and French zones in Germany.

A \$10 CARE food package contains ten pounds of needed foods, and the package is duty-free, ration-free, and tax-free. Herbert Hoover says: "I have had the opportunity to see the service in action. The service is the most efficient way of sending packages to relatives in Europe. In fact, there is no other way where there is real certainty that such packages will reach their destination."

An inquiry addressed to CARE, 50 Broadway, New York 4, N. Y., will bring you detailed information.

Picture OF THE MONTH

Metro-Goldwyn-Mayer presents

CLARK DEBORAH
GABLE • KERR

SYDNEY GREENSTREET

ADOLPHE MENJOU • AVA GARDNER
KEENAN WYNN • EDWARD ARNOLD

in **"THE HUCKSTERS"**

Screen Play by LUTHER DAVIS • Adaptation by
EDWARD CHODOROV and GEORGE WELLS
Based on the Novel by FREDERIC WAKEMAN
Directed by JACK CONWAY
Produced by ARTHUR HORNBLOW, JR.

The book America read and raved about is a great picture. Frederic Wakeman's best-selling novel was a bombshell when it appeared, its romance one of the most daring and reckless ever printed. M-G-M, its producers, bought "The Hucksters" for Clark Gable. Seeing the picture, you'd think the author had written it expressly to fit Clark's handsome measurements. It is a beautiful fit and to make things even more perfect, Deborah Kerr, whose name rhymes with star, fits excitingly in his arms.

What is a huckster? We suggest happily that you turn to this vastly entertaining new film for the answer. There you'll find Clark Gable in Hucksterland, impressing swash-buckling tycoons with his sincere, hand-painted ties, showing them how to make a million dollars with an inspired slogan. Yes, today's huckster lives in a world of station wagons, martinis and love on the run. If he doesn't flash a gold-plated lighter, date the most alluring women—well, he doesn't rate. And Clark Gable certainly rates!

Gable plays Vic Norman—successful and handsome enough to be adored, cynical enough to take a rain-check on love—until he meets Kay. And Kay—that's Deborah Kerr—wait till you see her! She's undoubtedly the find of the year.

To make every moment of this great story ring true, M-G-M summoned a roster of Hollywood's finest actors: Sydney Greenstreet plays Evans, the tyrant who enjoys making money and breaking men; Adolphe Menjou is Kimberly, the suave advertising executive; Ava Gardner is the luscious torch-singer; hilarious Keenan Wynn clowns through some of the funniest situations of his career; and there's Edward Arnold and many more.

"The Hucksters" is solid, fast-paced, star-filled entertainment. Director Jack Conway and Producer Arthur Hornblow, Jr., have clearly made a best-picture out of a best-seller.

THE WEEK'S MAIL

FARLEY ECHOES

DEAR EDITOR: The first installment (I Broke With Roosevelt, June 21st) is interesting; well received in neutral quarters. Its lack of bitterness makes it acceptable and no one can charge its publication was prompted by sour grapes. Congratulate Collier's.

JOHN J. NANGLE, St. Louis

DEAR EDITOR: Caesar had his Brutus, Christ had his Judas—Roosevelt had Farley.

NORMAN C. STOLL, New York

... The article by James A. Farley is ment enough against more than two for President of the U.S.A.

GERALD B. HARTLEY, Callahan

... How come you allow a man whose nature meant to be a patrolman and I made a Cabinet member to defile the glory of his benefactor? No wonder Roosevelt didn't ask the man to visit him while. GEORGE FANDERSON, Chicago

THE FAITH OF THE IRISH 'Tis proud I am, I'm Irish, and my will always sing, For the Faith that's born in Ireland wondrous Holy thing!

MARY WINIFRED KELLY, Philadelphia

DEAR JIM: I have just read your installment in Collier's. You and I should get together and have a go.

L. A. MCGILLIVRAY, El Centro

DEAR MR. FARLEY: Like the rest of the nation I am greedily reading your Roosevelt

I remember, April 12, 1942, at a union breakfast for the waiters Schrafft's you gave the President your "full support," and knowing your candor and honesty, I really took from you as that time.

It's too bad you didn't see fit to let the country have your story back in the past. In sincerity let me wish you every success. We are proud of you. My esteem.

REV. O. E. MORTON, Philadelphia

DEAR MR. FARLEY: I am a lifelong democrat, a veteran of World War I and War II, a staunch supporter of Franklin Roosevelt and a firm believer in your early days as Boxing Champion. Down the years and through paragraphs of your first installment last week. Now, before admitting that of you was entirely faulty, I wish

KEEP UP WITH THE WORLD

BY FRELING FOSTER

Automatic vending machines are now being equipped with a device that makes change, returning in a cup one nickel for a dime or four nickels for a quarter when selling a five-cent item. Those installed in some soft-drink vendors have increased sales as much as 25 per cent.

In the United States today, most railroads classify their trains as "eastbound" and "westbound," even though they may run in other directions. One such is the Southern Pacific line, whose trains are called eastbound when traveling directly north from San Francisco to Portland, Oregon, and westbound when returning southward.

Processionary caterpillars are so gregarious that they move and feed in massive columns with the head of each worm touching the tail of the one in front of it. Moreover, before spinning their own individual cocoons, as many as 400 make and enclose themselves in a communal cocoon, the size of a football, in which they remain until they emerge as moths.

Russia now has a cylindrical machine—four feet in diameter, 16 feet long and resembling a small submarine—that burrows its way through the ground at various depths to enable its sealed-in operator-explorer to search for mineral deposits or to study the soil for construction projects.

Following the custom of awarding Oscars to movie stars, the Mystery Writers of America recently started the presentation of "Edgars" (busts of Edgar Allan Poe) to the four who write, in the preceding year, the best mystery novel, motion picture, radio series and criticism of a mystery work.

The opera Charles VI, by Jacques Halévy in 1843, was banned by a superstition that began years later during a presentation in Paris. On three successive performances someone in the theater dropped after the singing of the aria, "Kill Him!", which caused the opera to be banned until 1858 when Napoleon III ordered a revival that he and the Empress were to attend. On their way to the performance their coach was bombed and they escaped unharmed, but several people were killed or injured. The opera was canceled and, as is now known, the opera was never performed again.

Ninety-three members of the Industrial Workers of the World were convicted for conspiracy in 1918 in the court of Federal Judge Mountain Landis. Instead of the guilt or innocence of each defendant on each of four counts, the jury returned a blanket verdict of guilty within an hour, which resulted in prison sentences totaling 120 years. Then the judge, leaving no doubt, levied a new trial would be sought. Individual fines amounting to \$10,000. A higher court eliminated the fines and so reduced the sentences to nearly all of the men were freed in 1927.

While 33 states in this country today grant divorces on the ground of impotence, only two—Maine and New Hampshire—grant divorces to wives whose husbands join the military service that requires its members to abstain from conjugal relations.

Coaxed by Connie, Miss Meltzer gives command performance

SINCE a new frontier, to Carleton Beals, may be a jungle, test tube, armchair or the stratosphere, it would be only natural for him to slip down Patagonia way and write *The End of the World Strikes Oil* (p. 18).

"Besides, I wanted to see an ostrich brought down by a three-stone *boleadora*," he confesses. "It looks easy, but it's a good way to brain yourself or tangle up your own horse. I know. Patagonian grass is not long enough for a cushion. But it was nice to be in a me-under-my-hat world, as the Gaucho song goes, where each man stands more on his own, where folks will ride twenty or thirty miles out of their way just to put you on the right track."

Mr. Beals has always had the restless foot. He was born in Medicine Lodge, Kansas, back when it looked like it sounds, and was the haunt of Congressman Sockless Jerry Simpson and Carrie Nation. "With such characters around," he says, "what could I do but travel, taking my family, at the age of three, to California?"

Since that day Mr. Beals has horsebacked through Riff country in Spanish Morocco, and over the Andes.

He's ducked bullets during revolutions, been held captive by a generalissimo, chewed the fat with *presidentes* and plainfolks, been in good health in Mexican back country and Central American jungle and mighty sick off Monkey Point, Nicaragua. He's stopped only long enough to write it all down, in many books and essays.

This trip, Mr. Beals conveniently landed in Bolivia two days after revolution broke out, counted many corpses, saw President Rios' funeral in Santiago, local-bussed his way over some of the new Inter-American Highway, interviewed Guatemala's Arévalo, and went swimming in Lake Nicaragua and Lake Titicaca atop the Andes. In Moche, Peru, he ate red steamed crabs, drank *chicha* and danced the *marinela* (song writers, please copy) with old friends of his descended from the Mochicans, quite a people about 2,000 years ago.

His nine months down under convinced Mr. Beals that things are growing so fast there, the southern end of the continent can no longer be considered the dead end the Panama Canal rendered it. "In the new air

age," he prophesies, "it may be a important air center, tied to Australia and routes to Australia, etc. . . it's a new frontier."

THE Beetle in Henry Beetle (The Study of Man, p. 2) from Mr. Hough's grandda W. Beetle, a whalin' cap'n Bedford, Massachusetts. Mr. was born there in 1896, is a University journalissimo, was man first class in the Navy gence during World War I, won a Pulitzer prize for a stupress. He was a press ag he and his wife went to Vineyard to take over the of the Vineyard Gazette.

"I've edited and been edit Gazette for 23 years now," "My co-workers are long friends; our subscribers ple indulgent people. Our home five blocks from the post we are so far out that red-w birds come and sit under our Three years ago I wrote a b Country Editor, and visitors to check whether the boc Mainly they are satisfied."

ROOTS

BY
SAMLEN HUNT

"I've got to go into town, Hanne," Captain Moore said. "Would you like to come with me?"

Their answer to the world's indifference was their love for each other

him in, of course," Jesse told his assistant, and he waited for the old man with his finger the earth all ivy plant that stood on was damp enough. The through the window that the great bare patch of had once been a parade the plant ought to grow. of the plant and its thought of his people, his

re had had to reduce the problem of the displaced of which he was directing form he could grasp h: compare it to some- r in his experience as a the Iowa State Univer- h: a mind that dealt well pific, but he was not able bits of dissociated work, ul; he needed an idea of

the whole purpose in order to keep himself going.

So he had come to think of the camp outside Landsberg as a capsule, thick-walled, membranous, a closed vessel containing seeds, which were people. They had been rescued from concentration camps and captured cities all over middle Europe; this place where they were fed and housed and medically treated had seemed good to the displaced persons at first—but as months grew into years, and they could not seem to find their way back into the world, they grew restive and frightened and angry, as did Jesse Moore.

He heard the old man at his office door, and he thought: What else can I do? I've climbed braided red tape, hand over hand, but when I get near the top, someone takes a pair of scissors and cuts. I have to keep starting over again, and each time it's harder.

I've lost hope; I can't work that way. Somebody else will have to take over, because the first of next month, I'm sending in my resignation. The report I'm working on can just as well be a final report, to go with my quit-papers.

"Hello, Mr. Abrams," he said. "Come in and sit down. Have a cup of coffee with me."

Expertly, he made two cups of coffee with prepared powder and hot water from the kettle he kept on top of the stove.

"That's good," said Mr. Abrams. "I came to see, what news?"

Jesse Moore looked at Mordecai Abrams and, in the way he had, he thought of one as standing for many; he thought of all the old scholars in his charge. Then he looked down at his clouded cup of coffee. "No news," he said. "I heard the President made a speech, but all his proposals bog

down in the Senate. I suppose you heard, too."

"Still, I hoped," said Mr. Abrams, and the cup shook in his hands.

Mordecai Abrams had run away from the czar's conscription, long ago, and had settled in what was then Lithuania, in a farming community. All his life he had taught a poor country school. *Just like you and me, Paul,* Jesse Moore wrote home to a friend in Iowa City. *Never earned much, but had a decent life, teaching the young. His own family grew up, he had grandchildren. Now they're all dead of beatings, or starvation or the gas chamber, and he (the old twisted root, he calls himself) is still alive. How or why, he doesn't know. He thinks perhaps he'll live to get to Palestine, a country he has no use for (church should be separate from state, he says, as in America) but it is a refuge.* (Continued on page 48)

SPARE THE CHILD

**BY HOWARD
WHITMAN**

Out in Kansas there's a school with twice as many teachers as children. The purpose of all these people is to learn and tell others—including psychologists, teachers and you and me—why children behave like

When children arrive at Southard School they tear the place apart as this shot of the front staircase shows. Note shadow of boys fighting at right. Nobody is

AT FIRST you think it is bedlam. A teen-age girl kicks out a window in an upstairs bedroom. Two boys spill a bucket of varnish down the front staircase. Several children display flaxen streaks in their hair, where they have doused it with peroxide. A small boy dashes off the veranda and sets fire to dry grass in the yard. A girl hurls a teacup across the dining room.

Incredibly enough, this is a scientific laboratory. Its purpose is to shed more light on the age-old, baffling question: How do you make children grow up into better people than their parents were? From this red-roofed mansion, the Southard School, in Topeka, Kansas, have come some of the nation's foremost discoveries in child psychology—new ideas of behavior, discipline, personality development. Much of the progressive education movement has been built upon Southard's basic research; and many of the harum-scarum extremes of the same movement have been debunked there.

The Southard School, a part of the nonprofit

Menninger Foundation, learns about well children by studying the sick ones. Not the physically sick. In fact, the children at Southard look perfectly whole. They may be brats, but they're healthy. Yet beneath their loose blue sweaters and bright lumberjackets they carry the worst kind of wounds. They are emotional cripples, children who by the misfortune of lubberly parents and/or cruel experience are all but done in before they have had a chance to grow up.

Intellectually the youngsters at Southard are average or superior. But in the dimension of the human being we call *personality*, they are bent and broken. Some are withdrawn, almost never speak. Some are wild, brutish and intractable. Some are as stubborn as mules; some weep at the drop of a hat. Some suffer from depressions or nightmares.

In its twenty-two years the Southard School has coped with child disorders which make the problems we have with our own children seem like very undersized potatoes. Yet the know-how which Southard

has developed can help all of us—with problems, small problems, even with the day-to-day ills of our "disgustingly normal" children.

Southard's findings have gone out to other institutions, pediatricians and child psychologists from Maine to Oregon, guiding and setting the way for the baffling and endlessly complex business of bringing up children. Its work can be compared with a laboratory which operates in the pure science. Like Dr. Fleming and his discovery of penicillin, the Topeka doctors are still in the initial discoveries; they leave the rest of the production to others.

Thus the Southard School, in startling contrast to most institutions for children, has many more staff members than it has children. Child psychiatrists, psychologists, social workers, therapists outnumber the children two to one. In contrast to state and county institutions where half a dozen professional workers are swamped by hundreds of child patients, the Southard

mits its enrollment to twenty-five children at and it hand-picks these from hundreds of ons, choosing the cases which pose the problems.

chool is in an old Kansas mansion with oles and a sweeping white-pillared veranda. ck from the main highway on the edge of its grounds rambling with wild grass.

Children frequently take out their hostility toward the world by scribbling on walls and blackboards. In this case "Greenwood" is Dr. Edward Greenwood, school director, who quickly wins the youngsters' love

When a new boy is admitted to the school he meets the staff at a conference. Informality is the note as Dr. Greenwood, right, questions the child. Lack of tight discipline lets new arrivals blow off steam

FINIAN'S ANGELS

BY ROBERT D'AMBRY

Things in Glocca Morra are very good indeed for the backers of Finian's Rainbow, who are more numerous than the performers

WHEN the musical, Finian's Rainbow, opened in New York on a cold night last January, warming both critic and spectator with its exuberance, there were two things unusual about it. First, it was an original idea, and second, it turned out to have more backers than any other show currently playing on Broadway. In fact, it was rumored that almost half the people in the opening-night audience were angels. This may have been a slight exaggeration, but that there are at least 100 Finian backers is no fantasy.

Officially, Producer Lee Sabinson's books list only 46 people as having filled the \$200,000 crock of gold needed to produce the musical, each putting up sums ranging from \$2,000 to \$50,000. Actually, the money furnished by these "big" angels was in many cases rounded out by subscriptions from "little" angels in amounts as small as \$50.

How some of these little A's got so pixie as to invest in a musical about Dixie and Glocca Morra is a tale mostly of innocents a-Broadway.

It happened sometime last autumn during the closing stages of a hectic money-raising campaign. At a midtown hotel Authors Yip Harburg and Fred Saidy, Composer Burton Lane and Producer Sabinson, all men of generous proportions, had sung, jigged and declaimed a half inch off their ample girths in efforts to arouse the checkbook in dubious-eyed money men, but still the till wasn't quite full.

"A cracked Irishman and his daughter! Leprechauns! A crock of gold! Social satire! Phooey!" seemed to sum up the attitude of many professional theatrical backers as they backed out the door.

A conference was called. Coffee and other stimulating drinks were downed in quantity without any good ideas coming up until Lee Sabinson exclaimed: "We've called on all of the backers we know. Now why don't we call on just friends?"

One of the friends Sabinson called on was Gertrude Appelbaum, production assistant to Howard Lindsay and Russell Crouse, better known to her fabulous employers and show business as "Apple."

Apple thought the book, lyrics and music of Finian's Rainbow were "just grand." Now the question was: "How many grand would she have to raise?" The answer was "Two," along with the admonishment to get it up quickly as the money was needed to pay for the props.

Apple didn't have two thousand in cash lying around at the moment, so she made a few phone calls, wrote letters and visited a few solvent

friends. Her sales talk went like this: "Finian's Rainbow is a great show. Would you like to be an angel and lose anywhere from \$50 to \$500 backing it?"

It was sure-fire. The \$2,000 rolled in just as easily as if the checks called for payment in stage money.

There was a check from a young lady talent scout who had enlisted in the Army as a private and had worked her way up to captain. Another from the owner of an advertising agency who works closely with theater people. A seaman, formerly in the Merchant Marine, put up \$50 in the name of his wife and daughter. A chemist in a paper mill in Milwaukee, who had always wanted to back a play, rushed his check in by air mail.

There was more money from an attorney and a buyer in a department store, both of New Bedford, Massachusetts. There were even checks from three actors. One was a film player, Charles Korvin. Another was David Brooks, now doing very well in another Broadway musical, Brigadoon.

Of course, Apple by this time had done such a good job of selling that she followed it up with something unheard of in approved money-raising circles. She kicked in with some of her own hard-earned dollars.

For many of these folks this is the first venture into the risky realm of play-backing. The sinking sensation and doubt which gripped most of them before the all-important opening night are now long gone and forgotten. Today their favorite pastime is trying to figure out how much they'll get back in profits.

They dream fondly of Life with Father, which paid off at the rate of 60 to 1, and Arsenic and Old Lace, which returned 25 to 1. But those plays were produced in prewar days. Costs of getting a show on the Broadway boards have risen from 60 to 100 per cent. And audiences are more discriminating and dollar-conscious. Even a show as successful as Annie Get Your Gun had to run a year before its initial costs were paid off.

I happen to be among the lower-bracket angels. So my wife, taking these things into consideration, figured a return of 10 to 1 as conservative: enough to purchase a fur coat out of the dyed-skunk class. Park Avenue thoughts had been causing her pretty face to glow for several days until the phone rang one evening. It was Apple. She said:

"Isn't it wonderful! It looks now as if you'll get back at least double on your Finian investment."

And this with tickets selling six months in advance! Well, after all, is skunk bad? ★★★

Seven of Finian's angels beam down as David Wayne (kneeling, center), Anita Alvarez (in tree), Donald Richards and Dorothy Claire (right foreground) join the ensemble to show what happens When the Idle Poor Become the Idle Rich

PHOTOGRAPH FOR COLLIER'S BY GEORGE KARGER

THE CHAINED GATE

BY JOHN RICHARD HUMPHREYS

There was a chained gate in Jack Vanhoven's mind, a barrier against marriage. Fran was on the other side

JACK, the Vanhovens' oldest boy, drove the car down the highway to the crossing and turned in the wide gravel driveway of "No-Credit" Merton's general store. He drove past the locked red gas pumps and pulled up beside the two-story building, yanking the hand brake tight.

It was summer dusk.

He sat in the car for several minutes, glaring at the side of the building, feeling not the slightest elation at the thought of the night ahead with Fran. The boards of the building were pearl-white in the soft gray air, enclosing inner rooms with a silent intensity: the way, it seemed to Jack, that marriage imprisoned human beings.

He felt depressed and cursed himself, the car, and everything in his sight. He wanted to curse Fran, too, though nothing was really her fault. It was just himself and the damned general thought of marriage to Fran, or anyone.

He had a lot of fun with Fran, too, maybe more than he'd ever had in his life before. But he thought of all the guys he knew who had married their girls because they thought that fun would go on forever. It didn't. It never did. And he knew that things were going too far—now that he'd begun to look forward too much to seeing Fran in the evening. He couldn't keep side-stepping the subject of marriage much longer. A clean break had to be made with Fran tonight, before the thing had him trapped.

Jack got out of the car, shoving the door shut with his elbow. He was a tall, large-boned young man in a powder-blue suit that fitted tightly under his arms and down along his legs—a suit carefully purchased at a secondhand store a year before he stopped growing; and he had not grown in four years. He had steel-rimmed glasses for a stolid Dutch face, and eyes like an intelligent work animal's: tamed, shrewd, restively independent.

He walked toward the rear of the store, his wide shoulders hunched and gigantically rounded, not slouched, but forged and drawn to shape by constant work, by a furious strength impounded groundward to his father's farmland.

Around behind the building, board-covered stairs slanted to the second floor. Going up he could smell the food cooked that evening for dinner, and among the odors, the fumes of a kerosene stove.

Jack stopped at the top in the kitchen light that came out through the screen door and around him to edge his shadow and color the wooden, cavelike walls of the stairway. The kitchen had already been cleared and the dishes washed. Fran's father, a short, fat-swelled man, sat at the kitchen table, his balding head bent under the tiny tin bell at the end of the light string.

Jack opened the screen door and went inside. "How-do, Mr. Merton. Fran around?" The room, behind all its walls, seemed laced with dynamite charges, wired and switched for Mr. Merton's delaying hand. Jack felt sorry for the man.

Mr. Merton had the evening paper spread out over the table top. He held a large pair of shears. When he raised his head his eyelids drooped slightly above his swelling cheekbones, slipping down over his eyeballs with weariness and not slyness. "Hello there, Jack. What's new up your way?"

"Nothing much," Jack said.

Mr. Merton looked down at the paper. "Just cutting out my daughter's wedding notice."

Jack said nothing immediately, trying to think of something to say that would sound just right, knowing-how Mr. Merton felt. Everyone knew: His oldest daughter, Marion, had married the father—or perhaps a father—of her baby a month after its birth.

"In tonight's paper?" Jack said.

"That's right." Mr. Merton finished cutting, and folded the paper back. The shears glittered in the kitchen light, the blades flashing. "I'm a sentimental man. Like to have little keepsakes."

Jack stepped toward the table and asked respectfully, "Is Fran about ready?"

Mr. Merton leaned back in his chair and shouted through the dining room toward the living room, sounding out the far bedroom where the girl's voice came back: "Be there in a minute."

"Better have a cup, Jack. That'll be the longest sixty seconds you ever counted, if I know *women*." He stressed the word with a weary contempt. "Just don't hold your breath."

In a pistonlike movement, Jack sat down at the table. Mr. Merton got up and went over to the stove and came back with the pot and another cup and spoon. He set them down in front of Jack, beside the sugar bowl and the can of condensed milk. There were white rings in the blue-checked oilcloth, cup-sized. Jack poured his own coffee.

"Where you kids going tonight?"

Jack stirred the coffee without looking up. "Downtown to a show, I thought." Jack held his head over the cup to hide anything his eyes might disclose of the gin-spiked ginger ale, the hot dogs and marshmallows hidden below the rug on the back-seat floor of his car. They were well out of sight just in case Mr. Merton came outside when they left, and just happened to glance in the back of the car. The steam of the coffee came up around Jack's face like Mr. Merton's hot eyes and thoughts tracking down the truth. Jack moved his head away from the dark, fuming liquid.

While they drank their coffee, and Jack waited for Fran, Mr. Merton spoke bitterly of the broken pavement in front of the store, complaining angrily of the highway department. But Mr. Merton's mind didn't seem to be on the road.

WHEN his wife came to the kitchen door and said wouldn't the living room be more comfortable, without looking around Mr. Merton said, "I'm satisfied right here. How about you, Jack?"

Jack was puzzled as he nodded and said, "Sure."

Then, finishing his coffee, Jack heard someone running up the stairway. He set his cup down and Fran's little sister came in the room, throwing the screen open. She had heavy, brown-paper-covered books in her arms. She was breathing heavily, faint sounds of fear passing in and out through her lips.

Quickly, she moved in a divelike slip around Jack's chair toward the dining room. Mr. Merton pinned her: "Just a minute. Come here, young miss."

Jack knew then Mr. Merton had been sitting at the kitchen table, facing the doorway, waiting for her a long time.

"Did you hear me? Come here!"

Like a quick, coasting light following sound came through the dining room. She came up behind her little sister and the girl stepped as to one side as Fran stepped into the kitchen, hair curled in dark, fresh ringlets across her head, and she wore a new, red-striped sport. She stepped into the kitchen silence, long-thin-figured, with a face more expressive than realized.

Jack stood up, seeing as he arose the reflection in the two reflecting faces of Fran and her father. The father, Jack knew, resented the dark cut the girl's forehead, resented even her face. Merton's lips began to move before he spoke: "Fran was looking at Fran, trying to control himself. At least let's see if you can't get home at a decent and without lying."

Fran's face turned white first, and then really red from the throat upward. Her eyes larger and darker.

She paced rapidly across the kitchen, without swerving, and went out the door. Jack took a last look in the kitchen as he screened. Fran's little sister stood timidly by the door, the schoolbooks still in her arms. They were large; not with anger. She and he looked at Jack. The screen clapped shut, and she went down the stairs behind Fran with the car. He was still back in the kitchen.

BEFORE they reached the bottom of the stairs Fran's sister began screaming and crying. Along with the crack of Mr. Merton's hat, she heard the jiggling of the kitchen floor and the fling sounds of feet. At the bottom of the stairs she turned around and started back. Jack grabbed her arm.

The scuffling stopped and they heard the sound of the girl go back toward the far end of the house, her sobs fading.

Fran's hand relaxed on the banister. Jack took her arm and she turned. They walked away from the ground, through the darkness, to the car. Jack took her arm, the night air cool on his fingers.

"That's my pop." Her words were pronounced tightly with sarcasm, as they always were. She tried to tie her feelings in with a wisecrack, but she was trying to make people think she was really tough, beyond being hurt.

Jack got into the car and opened the door on the side. She wouldn't get in. "He doesn't have to show us this way just because Marion got herself married. What does he think we are? He didn't have to show her. She skipped school this afternoon."

"Let's go," Jack said. He wanted to leave.

"Did he ask you where we were going?"

"I said maybe to a show."

She glared at the building, and then she stepped out and sat down beside Jack. She shut the door as Fran took her hand from the handle. The water seemed to fall through the hollow body and never hit bottom. He almost decided to drive the twenty miles to Lake Michigan to tell her they were through just as well as the show. He could break things off after a while as well.

He had what he later called a "funny feeling" that they shouldn't go, that (Continued on

In his fury he straddled the chain and threw his feet up against the post. Fran watched him helplessly

THE END OF THE WORLD STRIKES OIL

BY CARLETON BEALS

It's a great day down at the tip of South America as boom towns spring up and gushers dot the sheep ranches. Tens of thousands of prospectors are moving into this forgotten part of the globe, and there's even a tourist rush under way

The sun broke through heavy storm clouds and momentarily illuminated this Dantesque scene, the face of a glacier at the end of the South American continent. Here new icebergs are born as sections of the glacier break away and plunge into the sea

CHILE recently drilled the southernmost oil well in the world. The derrick rises in the rolling sheep meadows of Tierra del Fuego—Fireland—below historic Strait of Magellan. About the near-by ports of Porvenir and Punta Arenas, in bars and gambling joints, you see booted, sheep-jacketed oilmen, a breed previously unknown hereabouts.

"Hell," said one touslehead. "The whole Isla Grande floats on oil."

Isla Grande, the biggest island in the Fireland archipelago, is twice as big as the Netherlands.

A freckled Scotch sheepman spoke up. His burred accent clashed against the soft Spanish like changing gears. "With my own eyes I've seen *chapopote* (tar seepage) down near Cape Ewan, a hundred miles on south."

"They'll be drilling wells right out in the Loma Bay mud flats," claimed the other. "Ever see the rainbow scum at sunrise?"

A half-breed herder rolled a cigarette and wiped his palm on his baggy Gaucho trousers. "Oil isn't the half of it," he said solemnly. "When they crack the Darwin Range on south, they'll find every metal known, uranium too, mark my words. Then watch the scramble."

Fireland these days is full of such wild conjectures.

A Yugoslav storekeeper in Porvenir on the strait—and mostly it is a Yugoslav town—shook his bullethead knowingly. "You come like I did 23 years ago to a bleak empty place, and it's been hard, but look at the little burg now! The guys who first came here and called this wilderness spot Porvenir—Future—knew their onions. The country is filling up, population doubled in ten years. And now with oil and a few other things . . ."

Today Punta Arenas, which started as a tough Chilean prison colony, is a singular combination of the primitive frontier and modernity. It is a cosmopolitan city. Besides Spanish, Indian dialects and much English, one hears Russian, Yugoslav, French, German, Norwegian, Chinese.

The city has electricity, telephones, wireless and cable services, an airfield, paved streets, half a dozen movie palaces, a regular theater, and one of the most comfortable provincial hotels in South America. The stores are showy and well stocked; there are restaurants and many tearooms. A morning daily, *Prensa Austral*, presents the latest international cable news as promptly as does New York. The Museum of Natural History,

Ethnology and Anthropology is important and painstakingly catalogued. The best-appointed British club in all Chile is found here.

There's a mean, whistling wind down here, that eternal pestiferous Patagonian wind that sweeps the plains free of trees and keeps the *coirón* grass combed all one way. Sometimes in drier Argentina, the wind brings dust clouds. Sometimes it whirls down cutting ice particles off the mountaintops.

Winters Not Too Severe

There's no real hot summer here. It's kind of chilly always, but you get in horse racing and football, and in Punta Arenas you can play golf nearly all year—the most southern golf course in the world. Winters here are not too tough. Now and then there's a little snow, but it melts right off. Punta Arenas, the chief port in this way-south world, has milder winters than the Connecticut shore line. In upper Patagonia you often get forty- or fifty-degree winter averages, few frosts.

Four centuries ago Magellan, passing through this area, named it Patagonia—"Big Foot Land"—after the enormous feet of the gigantic natives

he found north of the strait now are almost extinct. The Foot he met swilled down a l water at a gulp and wolfed hamper of sea biscuits.

Tourists are much catered. Venders and stores display robes, leather goods, carved and guanaco bones, precious beads, and the inevitable shells. Muskrat, silver fox, and sable furs are on sale docks an insistent mest droopy mustache, insists of your name and portrait on a sheep skull—or, if you will etch in a nude mermaid.

Soccer, tennis and golf are important annual events. away on a snow mountain cellent ski refuge and ski resort local ski club is quite a section. There are touring and clubs, and membership is peressicient volunteer fire is considered a social honor to the elite, that includes balls and the right to wear uniform and gold helmet. in May is celebrated by tunces and the hurling of filled with cologne water. hilarious and ambitious m hold of an ostrich egg c

ors at a Chilean rodeo wear the traditional poncho and remain on
ck during the entire performance. The cowboys are called "huasos"

when one bursts over your pate you won't forget it.

You can now reach Punta Arenas by plane in nine hours from Santiago, by frequent steamers from Valparaiso and Buenos Aires, by air and auto or train and auto from Buenos Aires. De luxe trains run out of Buenos Aires for the beautiful Patagonian lake region. On my train none of the sleeping cars dated earlier than 1943. Travelers continuing south to the Chilean border are transferred to blue and silver de luxe busses with reserved seats—a five-day run to Gallegos. Dilapidated touring cars carry on to Natales and Punta Arenas in Chile.

Boat Service to Cape Horn

Buenos Aires runs a special excursion boat that threads the most hidden south channels clear to Cape Horn. Otherwise local visitors must hire special boats or take passage on coal boats or the government Coast Guard cutters.

Back of the central plaza in Punta Arenas extends the tin-roofed workers' quarters, and mostly the port is a solid workmen's town: coal miners from Loreto and other mines five miles inland, employees of packing plants, small foundries, garages and gas stations, carpenter shops, tanneries and so on.

Everywhere there are bars, for here casual workers, *rotos* (seasonal workers), miners, prospectors, lumberjacks, the sailors of five continents, and now, oilmen, breeze in to blow off steam after lonely back-country stretches. Gambling is illegal but flourishing, stakes high, and there is agitation to establish a city-owned casino like that at swank Viña del Mar farther north. The dance halls and *casas alegres*, with the castoff women of Buenos Aires, are notorious. As in sheep and cattle towns in Wyoming and Oklahoma, the police don't much bother those who take their pleasures in a really determined mood. It's all right to shoot at the stars but not at your neighbor. It's all right to whoop, but not in the main plaza.

"The inflation?" A local storekeeper frowned at the question.

"Bad . . . bad . . ." he said. "We can't get things we need. Autos, trucks, hardware are tight, but Chile is making nearly all her own electrical goods now. And we always get cheap wood and coal. Plenty of mutton to eat, cheap as all get out."

He was certainly right about mutton. In Patagonia, beef is rarely seen, but you eat mutton even for breakfast. You eat it stewed, hashed, grilled, roasted, pickled; you eat it barbecued, from pits of red-hot stones. But folks are now beginning to eat chickens and eggs, too. One of the world's biggest poultry farms now sits right on the Strait of Magellan.

The nearest oil wells to the new Chilean fields are 450 miles north in central Argentine Patagonia: the great Comodoro Rivadavia field on the Gulf of St. George at the edge of sheep and ostrich plains that stretch west to the great snow-draped Andes. All the Rivadavia derricks gleam silver on the plain, with fresh aluminum paint—typical Argentine neatness and pride.

Now, since the Fireland strike, many technicians believe the whole intervening region may produce oil. Hard pressed for fuel during the war days, Argentina brought in new wells fifty miles south of the established Rivadavia field and boosted production 30 per cent. Certainly, also, the eastern folds of the Andes are rich in oil. The new inland Blue Goose Dome in Peru is reported to be one of the world's greatest, and the Neuquén field, north of Argentina's most beautiful lake country, lies in the northwest corner of Patagonia.

Chilean government experts believe also that much of Pacific Coast Patagonia has oil. The oil is deep but apparently is there. The new Springhill well in Fireland came in at 7,280 feet—a light oil, rich in gasoline and lubricants.

That strike caused more excitement than a new comet. Never again, cried the newspapers gleefully, will Chile

THE STUDY OF MAN

Theoda was studying the customs and culture of the native population, with particular reference to the courting habits—as exemplified by Rufus Nutter, the guy next door

BY HENRY BEETLE HOUGH

THE hammock was faded and slouchy, and there were gaps in the adorning fringes; it was slung between two locust posts on the south side of the oldest house in the village of Baddow, and from it on any evening you could see the sunset, the Atlantic Ocean, and the early history of the Republic.

"Excuse me," murmured Barlow Crane politely, as he slid down for the fourth time against Theoda.

"Don't mind," said Theoda. "I suppose we could sit somewhere else, but I think it's nicer on this side of the house, don't you?"

"I couldn't truthfully say," remarked Barlow. "I don't get a chance to notice anything. I'm too busy trying to stay at my end of the hammock."

Even as he spoke they slid inexorably toward each other again and began to settle gently together. Barlow's knees rose mysteriously.

"Um," he said.

"I'm glad you're more comfortable. It's a ridiculous old hammock, but Daddy is very fond of it because chairs don't fit him well and this always does. I think he courted Mummy bagged up on this very hammock the way we are now."

Barlow Crane rose as if he had been touched off with an electric spark, just as Theoda was shoving delicately to make the hammock sway as if rocked by an ocean zephyr. The ropes creaked, the reaction from Barlow's swift ascent magnified the zephyr into a squall, and Theoda went over backward, bare legs twinkling in the orange twilight.

However, she did not lose her self-possession. Her last thought as equilibrium slid away was what on earth she could have said to frighten a big guy like Barlow.

"Oh, I'm sorry," said he, helping her up, and then with transparent lack of candor, "I was just trying to get at my lighter. Cigarette?"

"The Yale people ought to give refresher courses in hammock management," said Theoda.

"Are you hurt?"

"Only in my higher sensibilities. Yes, I will have a cigarette."

"What's over there?" Barlow inquired, and together they walked to the white fence beyond which the land fell away toward the shore.

"That," said Theoda without enthusiasm, "is the home place of the Nutters. It's usually just crawling with them."

"What are Nutters?"

"People. Newcomers, actually. They settled here around 1690, whereas we Bearses had walked off the boat in 1642."

"Why do you call them Nutters?"

"Because that is their name," said Theoda. "She was looking furtively for signs of Rufus Nutter, who had figured so largely and warmly in her old-style dreams—though she told herself she had never adored him."

"Oh, I see. I thought maybe it was their occupation. New England is all strange to me, you know."

She knew. She had met Barlow twice in the Pacific, once when they had occupied the same bus in Honolulu for twenty minutes, and once when they had eaten C-rations together while sitting in the tail end of a truck overlooking a nameless atoll. Theoda had been with the USO at the time, and he had been a brawny military figure. Meeting him under such circumstances had done something to her, and the second time had shown how the

world is operated in accordance with a great design.

He hailed from Butte, Montana, which influenced her a lot, since—to anyone brought up in Baddow—everything west of Chicago was rugged. She imagined him swinging a major part of the Pacific victory in person, but she learned later that he had fought only occasionally. Between engagements he had found plenty of time on his hands and had become interested in studying the primitive peoples. Then, separated from the Army, he had finished college and had at last come East for graduate work at Yale. He was becoming an anthropologist by degrees, as Theoda punningly put it.

She had learned something of the science herself; she and Barlow had corresponded since their second meeting, and she had no intention of living tamely at home with her memories, like an eagle grounded after a single flight, so long as she could keep in with the real thing. As for Rufus Nutter, it would be unfair to encourage him further. He was obviously not a part of the great design.

"You could come up for week ends," she said.

"What?" Barlow was startled.

"I mean if you *do* decide to do your thesis around an anthropological study of our village. I mean—the setup is perfect."

"Nothing of the kind has ever been done, so far as I know," said Barlow. "It is one thing to apply the scientific method to a tribal community in New Guinea, and another to apply it to a segment of our own society."

"That's hitting the nail squarely on the toes," said Theoda.

"Please don't confuse me," said Barlow. "I'm giving the matter serious thought." His brow furrowed.

"Yes," he said after a long, pensive moment, "I think I'll do it. Will you help me?"

"It's what I had in mind."

"The possibilities are challenging. My approach will be without preconception. Oh, of course I know about New England repressions and taciturnity and—conservatism."

"I suppose we have quite a bunch of that."

"Mark Twain said New England was a finished place, if I remember rightly."

"Let's finish it, anyhow," said Theoda.

THE details of Barlow's project began to fill in. Of course, he said, there was a good deal he couldn't hope to include, but the study could be a sort of trial flight for his career. He could run up at frequent intervals and stop at the inn, and meantime . . .

"I'll make notes," said Theoda.

"That's just what I was going to suggest."

"In fact I'll keep a regular journal, and put in everything, even the way personality reacts to culture up here . . ." She felt just a little like a traitor, but Barlow was grinning.

"Splendid," he said, and began to instruct Theoda in certain lines of anthropological observation.

Her mind wandered from the general, which was the subject of his dissertation, to the particular, which he represented on the hoof. He was a big guy, with crisp dark hair such as might have been worn by a bison, and Western blue eyes like the noonday sky over the Rockies. Theoda inferred these comparisons, for her single flight, naturally, had not taken in everything.

She had reached the point of asking herself, for the twentieth time: Doesn't he recognize encouragement when he sees it—or haven't I been encouraging enough for Montana?

"Do you think you can keep the fundamentals in mind?"

"Sure," said Theoda. "Anthropology is the study of man."

"What? Oh, yes, that is fundamental, isn't it?"

"You said it, brother," said Theoda.

"Funny, you don't talk like a New Englander."

"I'm trying hard not to," said Theoda, looking at him meltingly. "Thanks for noticing." . . .

The next morning he entrained for Yale and on arriving home from the station where she had seen him off, and where he had engaged in no warmer adieu than a mild handshake, Theoda observed her mother washing dishes. She was about to avoid the kitchen on the ground of important concerns elsewhere, but a sudden thought held her on the threshold.

"Well?" said Mrs. Bearse.

"Let me help you, Mummy," said Theoda, advancing and selecting an apron from a hook.

"Sure you won't be cabined, cribbled and confined in such narrow surroundings?"

"Not cribbled, cribbed," said Theoda. "It's a quotation and I consider it very apt. However, I am broad-minded and more than glad to remain and help."

"Thank you," said Mrs. Bearse. "I'm afraid I was giving these dishes a narrow-minded washing and a broad-minded washing will be better."

"I will make a note of that," said Theoda.

"What?"

"Folk humor in the relationship aspect. It's anthropology, you know."

"Oh, is it? Well, these are suds," and so saying, Mrs. Bearse allowed the broadening of Theoda's life to drop into the background for a while.

AFTER the noon meal, Theoda visited Snow's Novelty Shop and bought a fat notebook with candy-striped covers. Repairing to the hammock on the south side of the house, she wrote at the top of the first page, "Anthropological Journal," then sat musingly with the blunt end of a fountain pen touching her lips. She wished to record the useful performance of domestic tasks by the young female, this being none other than Theoda Bearse.

While she hesitated and communed, Rufus Nutter approached from the region beyond the fence. He was so lean that his shadow was hardly more than a slit in the sunlight. As she glanced at him, no poetic similes occurred to Theoda. Rufus could be nice, but he was just like anybody.

"There's a good show at the Elite tonight," he said. "I could pick you up around seven-thirty."

Theoda's face lighted for a moment, then she shook her head and muttered, "Unh-unh."

"You had company for the week end?"

"We did. Say, Nutter, why this verbal barrage?"

"Known him long?"

"Practically a lifetime."

"That's good. I figured he might be an old friend."

"Meaning what?"

"Like me. You and I have known each other for two-three hundred years, practically speaking."

"Probably that explains my feeling of fatigue," said Theoda pointedly.

"Where's he from?"

"Montana. He's a breezy Westerner."

"The glass held pretty steady all week end, least-ways ours did."

"Well, it was between breezes."

"I guess so. Say, Theoda, remember when we were engaged?"

"Which time?"

"I'm sorry you asked that. I'd hoped they might have all run together in a nice way."

"Nutter, take yourself off," said Theoda. "If you stay around here, I shall have to put you in my journal, which would be bad."

"What journal?"

"It has to do with anthropology and the scientific method. Its pages will give Barlow Crane a lot of day-to-day information concerning our local culture and how the operation (Continued on page 65)

"Nutter," Theoda called, "why don't you go home?"
"There is no way you can get me to budge," he said

Alarm-clock testing almost caused a Dreyfuss divorce

Designers end menaces like affectionate shower curtains

New bus design evolved from Raymond Loewy's aching back

OF THE 143,000,000 or so people who inhabit the United States, all but 449 take it for granted that it is man's lot to suffer quietly such indignities as: (a) coffee cups that slop over on trains and then drip interesting patterns onto one's tie or dress front; (b) shower curtains that automatically wrap around one like a damp shroud when the water is turned on; (c) typewriter keys that break the fingernails; (d) the crutch, an instrument of torture which hasn't changed in 10,000 years; (e) the ring around the bathtub; and (f) coffee tables on which one cannot set a cup of coffee without courting a sharp blow on the noggin from the hostess.

The 449 exceptions are the men and women of a small profession known as industrial design who are paid fabulous fees to correct these things—for no more idealistic a purpose than increasing the sales of the manufacturers who hire them. An industrial designer named Raymond Loewy, for instance, has rendered other railroad tableware obsolete by coming up with a new cup, bulging at the sides, narrower across the mouth, which can slop only a minimum of coffee on trains—plus a special guttered saucer to absorb the overflow which might result from wrecks, derailments, etc.

Another industrial designer named Henry Dreyfuss has redone the typewriter so that the keys now fit the feminine fingernail. Another, Thomas Lamb, has for the first time built a crutch which follows the contours of the hand and the armpit, so that the agonizing pressure on bundles of nerves is eased. And other designers have proved that if the water drains out of the bathtub in a circular motion (similar to the sink at a dentist's chair), a ring won't form on the tub.

In addition to these comparatively minor items, the industrial designer (for still larger fees) is imparting the modern touch to products ranging from ocean liners and transatlantic planes to department stores and farm machinery. In fact, you can't look around the room in which you are sitting now without spotting a lamp, a fountain pen, a spoon, a radio, a uniform, a color scheme, or any one of a

dozen other items which has the recent hand of the industrial designer. The application of his invariably seems to result in enrichment of the manufacturer (the industrial designer) and several million people to whom it didn't someone think of that.

It also results in mountainous publicity for some of the top designers who are portrayed in the proportions of Leonardo da Vinci, and Graham Bell, and S. Henry Dreyfuss, for instance, confused with the president of the New York Central because he signed that railroad's crack Century Limited. Walter Teague has blossomed into a famous economic expert who writes books on the virtues of the free system. Raymond Loewy is one of the country's top gladiators.

As the result of his labors, Loewy currently possesses a fantastic, Loewy-designed, cars with Plexiglas tops; a house in Palm Springs, California; a major part of the interior of a swimming pool; a comfortable orthodox colonial house on Long Island; a mansion called La Censeigne in Paris; a villa in the south of France; and 2 speedboats which are fast enough to be requisitioned by the French government during the war.

Loewy has five modern offices in New York, Los Angeles, Chicago, South Bend, and São Paulo, Brazil, in addition to the New York office. He employs 100 employees laboring daily to design new models for the people of the United States, Great Britain, and South America. His New York office alone is \$85,000 a month. Loewy and his associates have a cool \$3,000,000. This is more than the total run of the Big Three of theater design.

Like every other professional designer, they are far less affluent you get started, and older designers are getting along with minor w

Designers Come From

amazing thing about all a little over twenty years was no such thing as insign, and today's top ers in the profession are er theater people, artists s of the society of the un-

Henry Dreyfuss, then a ical scene designer, was x City, Iowa, by his em Radio-Keith-Orpheum d out why a brand-new, decorated movie palace in polis was drawing nothing quantities of Iowa atmos- r Dreyfuss arrived, he

lowered the prices, ran triple features and gave away enough dishes to equip a cafeteria—but still the majority of the populace wandered past his theater and into an unventilated flea-bag movie house down the street. Finally, Dreyfuss decided to make a scientific study of the matter.

For three days he stood outside his theater and watched the reactions of the people walking by. Then he ordered his staff to remove the expensive, deep-pile scarlet carpet from the lobby, and replace it with a plain rubber mat. Almost miraculously, and from that time forth, the RKO theater was jammed.

Dreyfuss simply had discovered that the farmers and the townsfolk had been ashamed of messing up that gorgeous carpet with their muddy boots and galoshes.

As a result of the bonus check which he received for this bit of deduction, Dreyfuss began to cast around for other products that needed redesign and an application of common sense. One day in 1927, an advertising agency friend of his sent him to a manufacturer who made a clock that wasn't selling so well. Dreyfuss looked at the clock and then began a tour of the clock counters of New York's drug and department stores. He watched people squint at the face of his clock and fumble with the winders on its back. Then he saw them weigh several clocks in their hands and finally pick out the clock of another manufacturer, apparently because it was heavier and seemed to be more expensively constructed—which it wasn't.

Dreyfuss went home and began puttering around with the clock. He asked truck drivers and Park Avenue ladies to wind it, until he found a universal-size winder that fitted all fingers. Then he set about designing a simple, easy-to-read face, not too somber, not too gay, since he reasoned that the clock was the first face you saw every morning, and the wrong one was liable to get you off to a bad start emotionally. To test out these faces, he lined up ten clocks by his bedside every night, with the alarms set for various times from 4 A.M. onward.

This nearly led to a Dreyfuss divorce, but the correct clock face emerged first.

Finally, Dreyfuss added a heavy base to the clock and dressed it up with colors and sweeping, modern lines. His new clock went on the market a few months later, and neither the clock nor Dreyfuss has been topped as a best seller since.

At just about this same time, Walter Dorwin Teague, an advertising-layout artist, was asked by one of his accounts, a photographic company, to try to spruce up the old black box camera; and Fashion Artist Raymond Loewy, a French war hero who had come to this country with 17 cents in his pocket after World War I, was called in to design a new type of automobile fabric and later the entire automobile. Both turned out sparkling new products that were as spectacularly successful as Dreyfuss'.

Dawn of the Gadget Era

This was the period when Henry Ford changed over from the Model T to the Model A and the country was embarking on that peculiar American mania for constant new models in everything we use. Frightened manufacturers began a stampede to modernize their products. They turned their backs on their own engineers and made wild grabs at the new geniuses, Loewy, Dreyfuss and Teague, like women in a bargain basement. Other designers like Harold Van Doren, Russel Wright, Ray Patten, John Vassos, Ben Nash and Thomas Lamb rushed to get their share of this pleasant mauling and within five years enough of them were operating to put the profession on a very solid basis.

Although the Big Three (and industrial design as a whole) are accused in many expert quarters of being ballyhooed into a position beyond their actual importance in industry, they have accomplished some extremely worth-while things. Aesthetically, they have rid many everyday appliances of decorative excrescences held over from the Victorian era. They have designed shapes to fit the function of the object and have imparted common-

sense utility and simplicity to nearly everything we use.

A few years ago, for instance, Henry Dreyfuss was doing some research on Middle Western farms, when he discovered something about farm tractors. The tractor then was sold with a beautiful painted hood over the motor, just like an automobile. The first time anything went wrong with the motor, however, Dreyfuss noticed that most farmers removed the hood to tinker with the engine, left the hood lying in the field, and never put it back. So when Dreyfuss designed a farm tractor a short time later, he built it without any hood at all, and that is the most popular style today.

In the same way, when Loewy was asked to redesign a transcontinental bus, he and his men went out and rode several thousand miles in busses. They made notes on the condition of their aching backs and other assorted discomforts en route. Once Loewy asked an old man sitting beside him, "Would you rather have taken the train instead of this bus trip?" The old man then gave his opinion of busses so profanely that he and Loewy were thrown off at the next stop.

The result of all this was a new bus which departed from the eighteenth-century-stagecoach tradition for the first time, and tried to answer all the protests of the drivers, the passengers and the aching of various parts of Loewy's anatomy. The new bus, soon to go into production, is a roomy double-decker affair complete with washroom, toilet, water cooler, hostess, a special clear-view "pilot's" compartment for the driver, and new body-conforming seats which Loewy worked out with the assistance of orthopedic surgeons.

When Teague designed a living-room oil heater, he realized that people feel warmer if they can see a fire, so he put a little glass door in it so they could see the flame. Result: Thousands of people wrote in to proclaim that the heater now gave much more heat, which it didn't.

When Thomas Lamb set out to develop a more efficient handle for

The independent mind and scalpel-edged tongue of Senator Charles Tobey of New Hampshire have brought distress both to Democrats and Republicans, and have drawn sawdust as often as blood.

THE speaker of the new and comfortably Republican House, Representative Joe Martin, was presiding at a dinner meeting of G.O. leaders recently at the Army-Navy Club when Senator Charles William Tobey of New Hampshire lives when his wife, Francelia, is not in town. Martin noticed a waiter wandering about the room peering into politicians' faces.

"Whom are you looking for?" Martin shouted from his podium.

"For Senator Tobey, sir," the waiter answered. "Well, he's not here," Martin sang out in his inhibited way. "He's in the doghouse."

Martin's quip brought a salvo of appreciative laughter from those Republican conservatives who regard the Yankee rebel as "even more of a Dealer than Claude Pepper" and, therefore, as something of a traitor to the traditions and practices of the Grand Old Party. Moreover, many of them present had, at one time or another, felt the hygienic sting of Tobey's tongue.

One victim of the Tobey needle was Ken Wherry, the Nebraska undertaker who has been a senator and his party's whip in the Upper House. At a tactical conference of Republican bigwigs the eve of taking over the new 80th Congress, Wherry appeared to be overly concerned with the senators were to dress for the historic occasion. He seemed to favor morning coats. The suggestion almost caused Michigan's Arthur Vandenberg, who abhors formality, to swallow his cigar.

When the clamor of indignation subsided, Tobey undoubtedly with Wherry's previous calling mind, slyly inquired whether the "gentleman from Nebraska would mind telling us how he spells morning—m-o-u-r-n-i-n-g perhaps?" Even Bob Taft, seldom laughs at anything and less frequently Tobey's thrusts, exploded with glee. Wherry's laugh. Not too long ago, back in Pawnee City, morning coat was his work jacket—an undertaker's.

But Tobey has been relegated to the G.O.P.'s political kennel less for the pain and resentment caused by his scalpel-edged tongue—which has drawn dust as often as blood—than for his consistent conformism. He has steadfastly refused, in years to vote against his conscience when it conflicted with his party's line on both domestic and international issues.

"I am a Republican," he explains, "and I believe that my party shall be the majority voice in guiding the ship of state. But I do not wish its guidance to be in disregard of our form of government and the principles vital to the preservation of our form of government."

His Credo of World-Wide Democracy

He is one of those who see democracy threatened everywhere by such carriers of Communism as poverty, poor housing, disease and insecurity. He believes that democracy can survive only if it is made to work here at home and if America has vigorous leadership in world affairs. His principles compel him, therefore, to vote for higher minimum-wage standards, housing for veterans, the Bretton Woods proposals for global economic rehabilitation and the \$3,750,000,000 loan to Japan.

As a result he is in Coventry within the G.O.P. is anathematized by conservatives in both Houses. But also as a result of his political behavior he has created for himself a position of unusual respect in Washington and prestige in the nation, particularly among those who are convinced that the New Deal may be dead, there will always be other social revolution.

Tobey, last year, was the main figure in the nomination of the millionaire oilman, Fred A. Pauley, for Undersecretary of the Navy. It incurred the displeasure of President Truman.

A few weeks after the Pauley incident Tobey wrote to the President, calling the latter's attention to the fact that the grain shortage, then aggravated by heavy shipments to Europe's hungry, was threatening New England's farmers to slaughter the hens. Tobey asked or implied that some

Collier's for August

ertl to the farmers, if possible, before their
cks disappeared.

"I," wrote Tobey, in a Biblical reference to the
o, in a vision, besought help from the Apos-
P, "is a Macedonian cry."

"It seems to me," Truman replied in a letter,
at you have been making Macedonian cries or
ls ever since I have been in the White House.
unwarranted attacks on Mr. Pauley almost
neda good public servant. You have made it
eedingly difficult for me to get good men to fill
necessary places in the government. You are
continuing your Macedonian cries and I hope
get a lot of pleasure out of them.

If the grain shortage) is a matter of chickens or
p and if it comes to the decision as to which
be kept from starving, naturally, if I make
ision, it will be people. I don't know
that will please you or not."

In his own hand, Truman scribbled across
om of the typewritten letter the command,
nd see me." Tobey, who had won the cor-
ke of his own party members for support-
Administration more often than not, stewed
for a while, then published his correspond-
h the President. To friends he quipped:
does he think I am! Mae West?"

Tobey doesn't bear grudges. He is slow to
d quick to forgive. In spite of the Presi-
buff of last year the Yankee rebel was
the President's side in the fight against the
e Bill to exempt the railroads and other
from prosecution under the Sherman anti-
a. Tobey waged practically a one-man crus-
nst it in the Senate.

erson in this country," he complained, "and
of consumption will be unaffected by this
to exempt rate fixing and fare fixing from
rust laws. The bill gives railroads a mo-
ower in their dealings with shippers and
s and increases the present monopolistic
big railroads over small railroads."

Sometimes on the President's Side

Tobey, a Republican senator, who ap-
Truman, the Democratic President, to
Bulwinkle Bill even before it had actually
e Senate. And he was again on Truman's
ehalf of David Lilienthal when the latter's
he to the Senate for confirmation as chair-
e new Atomic Energy Commission.

forms, with Oregon's Wayne Morse and
s George Aiken, a loosely allied triumvi-
ng the liberal-progressives of the G.O.P.
ote as delicately balanced as a druggist's
ir votes are often decisive. The Senate is
oretically Republican, with 51 members
for the opposition. Any legislation crack-
on labor, hiking tariffs, reducing taxes or
what government controls remain comes

up against Tobey, Morse, Aiken and as many other
independent votes as they can sway to their side.
The uniformly Republican and conservative Senate
committees may report favorably the kind of legis-
lation they like, but there is no guarantee of passage.

The area of Tobey's influence isn't limited to the
Senate floor. The ex-bookkeeper who once audited
a firm's books for a badly needed \$100 while com-
muting between Greenville, New Hampshire, and
Boston, is chairman of the Senate Banking and Cur-
rency Committee, one of the three or four most
important in the Upper House. He is also a mem-
ber of the Interstate and Foreign Commerce Com-
mittee. But it is in the Banking and Currency
Committee that Tobey's influence is most felt.

Much of the legislation affecting the country's
everyday economic life originates in Tobey's com-
mittee. Through the committee's hopper must pass
all bills regulating the banking and credit systems,
the coinage and printing of money. All appoint-
ments to the Federal Reserve Bank, the Reconstruc-
tion Finance Corporation and those government
agencies dealing with prices, rent controls and hous-
ing—as well as the policies of these agencies—are
screened by the committee before being brought to
the Senate floor for decision. How efficiently or
inefficiently our economic system functions depends
considerably on how well or how badly Tobey and
his committee do their job.

On domestic issues particularly, the Tobey-
Morse-Aiken wing is often strengthened by such
senators as Leverett Saltonstall of Massachusetts,
William F. Knowland of California and William
Langer of North Dakota, and occasionally by new-
comers like Kentucky's Sherman Cooper, New
York's Irving Ives and Vermont's Ralph Flanders.

The presence in the Senate of as frisky a herd of
mavericks as ever snorted defiance on the Republi-
can range drew from an unnamable Republican
old-timer a dire prediction last year.

"I don't share the jubilation on this old Hill," he
said. "We've got just enough of a majority and just
enough power to be blamed for everything bad and
not enough to do ourselves any good. We haven't
enough votes in the Senate to have things our own
way. The place is full of rebels. They'll raise a lot
of hell and keep us in a stew. They might divide us
so badly as to hurt our chances in '48."

Practically every Republican you meet in Wash-
ington lately is "worried about '48," particularly
since the rise in Harry Truman's popularity as a re-
sult of his four-square stand against expansion of
Russia's power abroad and John L. Lewis' at home.
Most of the members of the G.O.P. hierarchy ap-
pear to have appointed themselves their party's sav-
iors in the next Presidential election. Tobey isn't
one of them.

In fact, the only time that Tobey's name has been
publicly mentioned for the biggest job in the world
apparently was in a letter written to the New York
Herald Tribune back in November, 1945, by a plain

citizen of Southold, Long Island, who identified
himself as Wilson L. Glover. Citizen Glover
warned that failure of the G.O.P. to nominate To-
bey in 1948 would mean another "Republican dis-
aster," i.e., Democratic victory. But it is doubtful
whether Chairman Carroll Reece and the other
members of the Republican National Committee
will take Glover's warning seriously. Tobey pasted
a clipping of Glover's letter in one of his numerous
scrapbooks and forgot about it.

This is not, therefore, as so many stories about
Republican senators are these days, an assessment
of Tobey as a Presidential candidate. It is merely
the story of the growth of a man, a farmer and a son
and grandson of farmers, into a first-rate politician,
able to exert an extraordinary amount of influence
on our national and international lives.

A Foe of Monopolists and Lobbyists

Tobey was not always the darling of labor and its
political pressure groups that he is today. He has
always disliked and fought monopolists and their
"fat lobbyists with round heads and round bot-
toms," as he describes them, but there was a time
when he wasn't exactly a screaming liberal on do-
mestic issues. And in international matters he was
so completely an isolationist that back in the au-
tumn of 1941 interventionist Frank Sullivan, the
Sage of Saratoga, felt compelled to name "Charley
Tobey" on a team of All-America Stuffed Shirts.

The Tobey of those days used his eloquent tongue,
schooled in classical oratory at the Roxbury (Mas-
sachusetts) Latin School, against Roosevelt, the
New Deal and even his own party's Wendell Willkie.
He accused F.D.R. and Willkie of wanting to have
our boys killed in another "foreign war." Tobey op-
posed the 1940 census as a "snooping attempt" by
the War Department to obtain information for a
mobilization plan, bucked Lend-Lease, convoys,
repeal of the Neutrality Act and whatever he saw
as a "conspiracy to get us into war."

He was cordially hated by the interventionists
who wrote acidulous letters to New Hampshire
newspaper editors, who, in turn, wrote nasty editori-
als on the subject of Tobey. In the roadside me-
tropolis of Center Ossipee, pennies were collected
to buy Tobey a red, white and blue umbrella as a
gibe at his appeaser's stand. But Tobey, with char-
acteristic mental agility, took the edge off the inter-
ventionists' insult when he accepted the umbrella,
by doing a bit of fancy flag waving himself.

"I accept this gift," he said, "in the same spirit of
friendly combat in which, I am sure, it is given. We
all love America and we all wish to see the blessings
that God has bestowed upon America—those things
that have made America great—perpetuated for
ourselves and for future generations. We are all
sincere in our efforts to perpetuate the things we
love in America. It is my judgment that this can best
be done by concentrating (Continued on page 28)

Tobey is the complete product of small-town life. Typical is this picture
taken when he was governor, driving in a countrymen's sulky race

Tobey was a leader in the fight against confirmation of Edwin Pauley as
Undersecretary of the Navy. His stand brought bitter reaction from Truman

HARRIS & EWING

GUNNER'S GOODBY

He wasn't an admiral. But there were seventeen guns to send him home from the sea

BY ALLAN R. BOSWORTH

The four-starred barge lying off the starboard quarter, rocking with the swells, made no move to tie up to the boom alongside the Old Man's gig

THE seven hashmarks on Prosser's sleeve were red, and not the gold of impeccable conduct and unblemished record; they summed up his years, and hinted that some of the younger ones had been wild. He climbed two ladders from the chief's quarters, and was blowing hard when he dropped his gear at the quartermaster's shack, port side of the quarter-deck. Still, it was neither age nor exertion that made him breathless, but a lost and empty feeling, a vague and bewildering sense of being incomplete. He had felt this way all morning.

The battleship rode at anchor. Her deck was steady as a floor, but Guns Prosser stood stockily, feet planted wide from his days in destroyers. That way, he could tell the ship was alive. He felt a dozen pulse beats, and heard her blowers breathing, and understood that wherever men moved, topside or below, they were a part of her. A group went over the port gangway, rating early liberty. They were still a part of the ship; she would draw them back in the morning. But not Guns

Prosser. Today, for Prosser, made thirty years. . . .

He had only to turn in his discharge papers, and let the quartermaster of the watch log him out. He fumbled with the large Manila envelope containing the papers and listened to the junior officer of the deck—it was Mr. Jones—calling down to a motor sailer. Mr. Jones wore gray gloves and carried a long glass, and had a ramrod up his spine. He was telling the cox'n to shove off, make his regular trip, and return. Prosser suddenly realized he had missed this boat.

But time wasn't important any longer, because there was nothing left but time. He breathed more easily, hearing the cox'n's bell and a grind of gears under the ship's side, and the water-muffled stutter of the exhaust. A carrier and two cruisers lay yonder over the port quarter, and the harbor breakwater pointed a gray finger to the open sea. Sun was burning away the fog, but enough remained to soften the outlines of the farther ships and give the swinging water a dull, ponderous quality. After a man had

known the sea so long he could just look at the light on it and tell the time of day. Prosser smelled the fog, and the gasoline exhaust fumes it held down against the sea. He looked where the carrier lay, and remembered ships now gone—ships with cage masts and fighting tops, and proud names. There was a time when they called this Battleship Row. . . .

The motor sailer moved clear, and a bluejacket ran out of the passageway and slid to a stop beside Prosser, snapping his fingers in vexation. He was a seaman named Mason, a striker Prosser had had in Number One turret. He was even younger than Ensign Jones, and kept his hair neatly plastered down, and wore whites with a zipper, tighter than regulations allowed. Prosser smiled at a memory. Those days, they would have called Mason a "sheik."

"Damn that boot ensign!" the boy exclaimed. "I missed chow to make that boat, and he sent me below because my skivvie shirt had a hole in the neck. He's got it in for me!"

Prosser said, "That's tough," more

in amusement than sympathy, handed his papers to the master. Mess gear clattered and the smell of coffee dried the deck. A pair of carriers streaked astern, laying a wake against the empty sea. He caught the roar and deepening a brief island of sound of this the quartermaster's in something like awe. "Ho, Guns!" he said. "Thirty years a long time."

Prosser grinned, but his teeth were tight. A long time, and ended but how could it end so close seemed strange that he could salute Mr. Jones and say, "to leave the ship, sir?" when the last time, when it was irrevocable. It wasn't right, fresh-caught ensign could salute, and say, "Permission to see Prosser go down the hatch if it were only an overnight."

Permission to leave the ship. Permission to take off the uniform used to take so long to get. (Continued on page 27)

EVERY BITE A THRILL!

Just to make it a perfect day . . . a Milky Way candy bar.

Every bite of a Milky Way is a luscious combination of the thick milk chocolate coating . . . the golden layer of creamy caramel . . . and the soft, chocolate nougat center, richly flavored with real malted milk. All melt together to give you that rare taste blend you will find only in a Milky Way.

When you crave good candy, eat a

Milky Way

America's strength in America to protect America and not to dissipate that strength to the far continents of the globe.

"But there are those who disagree; those who welcome the solemn march, step by step and speech by speech, that this country is taking into war. I am hopeful that the considered judgment of the people will prevail. . . ."

But it wasn't until a few days before Pearl Harbor that Tobey really stuck his neck out. He predicted, at a meeting of Nashua Republicans, that Japan would "never dare to attack the United States." The day after the Japanese made any considered judging by the American people unnecessary, F. H. Dobens, columnist, wrote in a Nashua paper that if "we had followed the flag he (Tobey) has been flying, the United States would have been in no shape today to wage any sort of war."

And some days later, one Mrs. Corrine Athone, a healthy 150-pound interventionist, allegedly aroused by Tobey's isolationism, landed a prodigious right hook on Tobey's jaw as he alighted from his automobile outside the combination post office and general store in his home town of Temple. Tobey was left dazed, sitting on the roadside.

But what probably hurt Tobey most was the decline of his personal and political stock in his beloved Temple, a town of 202 inhabitants who occupy a cluster of white, green-shuttered buildings where Highway 101 winds through hills that are green with pine and beside lakes that are blue, deep and cold. To Tobey, who bought the old Felt Farm and settled there in 1903, the year after he married Francelia, to raise a family and some chickens and as many roses, delphiniums and other flowers as his billfold could afford, Temple is "Eden without the original sin" and the place where "souls on the way to Paradise linger for twenty years."

He loved his neighbors and they had demonstrated both their affection for him and their appreciation of his abilities by electing him first as a selectman, then to the state legislature, the governorship, the Congress and, finally, in 1938, to the United States Senate. All of Temple's 141 voters voted for him and gave him a scroll with their signatures and an appreciation of his career as "the first citizen of Temple."

He Values Esteem of Home Folks

Tobey cherished the good will and affection of Temple's people as he cherished his wife, his children, his fierce Protestantism—he's a Baptist with, he says, "a fondness for the Episcopalian service too"—and his good name. Years of struggle to make ends meet in common with the prudent, penny-wise folks around him, had knit him into their lives.

On every last Sunday in August since 1908, Tobey had led his townsmen and folks from towns for miles around in communal prayer and in singing resounding hymns like O Master Let Me Walk With Thee and Break Thou the Bread of Life, Dear Lord to Me. The services are held yearly on a hilltop well up on Temple Mountain near the Tobey home.

Tobey himself hauled an organ from the town's First Congregational Church up the hill on a hayrack for that first meeting long ago.

And on every last Saturday in August, just before the summer boarders went home, Tobey, his fellow townsmen and the menfolk among the visitors rolled up their sleeves and worked at repairing a mile or so of road in the vicinity of the town. They had done this, together, ever

since 1914 and in the evenings after the work was finished they sat together to a supper of fried chicken, cold ham, cheese, salad and fresh strawberries.

There were those years when he was a struggling clerk in a Boston shoe firm and commuted from the big city to Greenville, on the Boston and Maine. He would take the 5:10 P.M. out of Boston and at 7:15 P.M. Mrs. Tobey would meet him in Greenville in a democrat wagon, drawn by a horse the Tobeyes had bought for \$40. Uphill, it would take the Tobeyes 45 minutes to do the two and a half miles to the house. The Tobeyes arose at 5:00 A.M. so that Charley could feed the horse, do some chores about the house and the farm and then try to beat the Boston-bound train into the station. There were many hurricane finishes but, says Tobey now, he never missed a train—as he has never lost an election.

Memories such as those must have crowded upon Tobey, a sensitive and highly organized man, as he read in the Nashua Telegraph an account of a visit to Temple, a week after the Japanese had proved him wrong, by a reporter who talked with some of the senator's old friends.

"We still think the senator is a fine man," an unidentified gentleman told the reporter, "but we are strongly opposed to his present views. He is wrong and should most certainly admit it now, before it is too late."

But Tobey's troubles had only just begun. The Manchester Press Club petitioned the United States Senate to impeach him. The American Legion in Portsmouth attacked him. Nashuans petitioned Tobey himself to resign from the Senate. Tobey, man and senator, examined his conscience and felt that he had done no wrong.

"I am against war," he said, "and will always be. We are in it now and must see it through. I have always believed in international co-operation (he once stumped New Hampshire on behalf of the League of Nations) but never in war. War might destroy our own democracy without solving anything. We will defeat Fascism. But we will also, through widespread devastation and the misery and hunger and disease wrought by war, open wide the gates to Communism."

Tobey's political enemies—and these include his fellow senator from New Hampshire, the ultraconservative Styles Bridges—attribute his 180-degree turn out of the calm winds of conformity into the storm of independence to sheer political opportunism. Tobey knew, they say, that he faced an angry electorate in his campaign for re-election in 1944 and trimmed his sails accordingly.

"All he did," they say, "was to run with the wind."

Critics Overlook Political Past

Aside from the fact that a politician's mission in a democratic society is as much to follow popular will as to lead it toward constructive objectives, his critics' reasons for Tobey's about-face ignore the senator's political past. He began political life as a Bull Mooser, a follower of Theodore Roosevelt. He has remained a Bull Mooser throughout his career, a crusader who had to have a cause or wither.

That's what drew him into the fight against "demon rum" and made a prohibitionist out of Tobey long before he ever ran for a major political office. He campaigned so long against liquor that only recently has he broken himself of the habit of holding up a glass of water, extolling it as the "best of potatoes"

and swallowing it before making public speech.

He is still a teetotaler but has a satiable appetite for ice cream, especially strawberry. His voracity for food has helped to shape Tobey, a faintly penguin-like contour. He is a smallish man with the language of his Yankee coasts as though butter wouldn't melt in his well-molded mouth. Actually, he has a tongue with the bite of a lion's tail.

Once, at a hearing on whether the Office of Price Administration should be continued, the late Senator Bailey of Alabama was complaining that the 15 members of the agency's board on women's wear, "not from the South."

Tobey, lips twitching, turned to the OPA official who happened to be sitting and said:

"That's Senator Claghorn, that's muh fren'."

"What's that?" demanded the Bankhead.

"That's a joke, Senator," said him.

Tobey, although he looks a little in what some consider a "sarcastic manner" with a trick of laying on a visitor's arm and standing "Well, my boy" attitude, is one of the Senate's ablest showmen. Recently, after a bitter debate in a forum with conservative Senator Reed of Kansas, chairman of the Interstate and Foreign Commerce Committee, over the Bulwinkle II, he yielded to his love of publicity by going to the piano, striking a few chords and suggesting that now they all should join in song. He played "I've Been Working for the Railroad." It brought the house down. The senator played so vigorously that his chair fell out from under him.

Leisure Devoted to Gardening

When Tobey isn't busting his chest out, posing increases in rent ceilings, posing hundreds of letters from people helping someone obtain a scholarship from the Army or someone helping an invalid relative in a public institution, he is thumbing through seed catalogs. Gardening is his only hobby.

Tobey maintains his good looks in spite of his concern for his health. He suffers from heart trouble, but his daughter who is afflicted with the disease known as multiple sclerosis, until recently, was considered a complete recovery. Kaiser, a young doctor who claims to have a cure for it and sent the young man to him. A clinic sponsored by Kaiser opened in Washington with Kaiser as doctor in charge. Tobey sent his daughter to the clinic and she is now recovering.

Tobey also has two sons.

That railbird philosopher, Frank Sullivan, couldn't name another team of All-American Football players without ignoring the Nashua paper PM, which in 1941 named him as an America Firster. He has to raise its hat to Charley Tobey, extol him as "one of the best men in Congress who is true in terms of what is good for the country rather than what is good for the Republican party—a courageous sighted Republican senator."

THE END

Collier's for August

"And what is your occupation, Mr. Trimble?"

"I'm a bank teller, sir."

"What are you going to do with the \$5,000 first prize if you win it?"

"I'd rather not say."

rely an answer to one simple question, "could you do it?"
 "I fear this is an instance similar to that long ago provoked the expression, 'save me from my friends.'"
 LARD W. BURGESS, Los Angeles, Cal.

"I'm so glad someone else is jousting beside Bertie McCormick whom I read religiously."
 W. L. KEEFE, Chicago, Ill.

Jim Farley's "tattletale" article reminds me of a group of boys who were sitting under a tree near my house recently, revealing confidences between a friend and himself to the detriment of another.

One of the listeners got up with a disapproving look on his face and started away. Looking over his shoulder, he said, "Aw, Beany, I'm sure glad you ain't my friend."
 BLANCHE F. REYNOLDS, South Beloit, Ill.

"I'm just an ordinary housewife and I don't want to put in my two cents' worth. In heaven's name don't you let his name be in peace?"
 MARY C. FERRIS

"You don't know me from a jack rabbit. I voted in various states Democratic until Franklin Delano sought the presidency and have, since that time, voted Republican and expect to remain a registered Republican for the rest of my life. I will take at least another generation to restore the country from the fraud and political chicanery brought about by Jim Farley."
 FURNESS, San Francisco, Cal.

"Roosevelt was a dynamic personality who represented all that was best in American history and tradition. During his lifetime he was the hope of the world. Why not let him rest in peace?"
 BERNARD ROSE, Montreal, Canada

"The Farley serial is the best in a long time. Our editor is to be congratulated."
 L. BOWDIN, Lake George, N. Y.

"R. FARLEY: You state that the President 'never forgave me for putting him above the personal allegiance owed his due.' Was this the same Farley for which you showed so much concern at the New York State Democratic Convention in 1942 when you engineered the nomination of a political nonentity, John G. Bennett? Dewey ever thanked you, publicly or privately, for putting him where he is now?"
 AKMAKJIAN, Jersey City, N. J.

"FARLEY: Your article makes you a politician but not a patriot. You are a leader and to your party to the detriment of loyalty to your country."
 ED G. KOSSMAN, Jamaica, N. Y.

"FARLEY: I was tremendously impressed in your article on Roosevelt. The way wasn't much news to me, but what I had heard and felt about you to me you have always been an honest man in the best sense of the word. I mention this—but I am not a flatterer. Although I number among my friends men of that faith. What I am saying is that it's time this grand old man got back on its feet. More power to you."
 B. KEELER, Cincinnati, Ohio

"S: Y'wouldn't kid us, would you? In trying to tell us that YOU were F.D.R. when we knew from the fact that F.D.R. had broken with YOU. Incredible enough to think you were F.D.R. when we knew from the fact that F.D.R. had broken with YOU."
 B. KEELER, Cincinnati, Ohio

were indispensable when truth to tell it was high time F.D.R. gave you the gate! Certainly a fourth term was its own evidence that F.D.R. lost nothing by disposing of you!!

HORACE CASSELBERRY, New York, N. Y.

DEAR EDITOR: Keen congratulations and appreciations. Your articles on the New Dealer are a real service to truth and humanity and common decency.

ANONYMOUS

"... It is quite obvious that Mr. Farley was peeved because he wasn't invited to White House social functions, hence the articles. That plus the fact that it's so nice to be paid for airing one's gripes."

MRS. C. B. KAUFMAN, Kenmore, N. Y.

"... F.D.R.'s refusal to admit this back-biter to the circle of his intimates was evidently based on sound judgment. Shame on you!"

RICHARD DERMODY, San Mateo, Cal.

DEAR JIM: I have just read and enjoyed the first installment of your story.

Where Eleanor speaks of "Franklin's social equals" I was enraged, as there never was a Roosevelt—and never will be—who is the social equal of even the lowliest Irishman. ... From some small political experience, I learned that such things must be endured sometimes to win political success.

BEN H. THAYER, Seligman, Mo.

"... As one who has been at least a lukewarm admirer of James Farley, I can no longer even respect him for his cowardly attack on a dead President. May I

state also that this is not written by one who worshiped Mr. Roosevelt, but by a lifelong Republican who loves fair play?"
 A. E. KULL, Oklahoma City, Okla.

"... It occurs to me that this statement should have been made while the late President was alive and able (as he would have been) to have defended himself."

PIERCE MUNSEY, Portales, N. M.

"... Jim Farley does not offend—brings Roosevelt down to earth. Personally, we knew all the older Roosevelts."

Keep your magazine as it is—unafraid of poor critics—and I'll subscribe as long as you do.

CLARA LOUISE LAWRENCE, Santa Clara, Cal.

DEAR MR. FARLEY: I have not read your article but we have heard comments on it and can believe every word you said in regard to this gentleman's attitude toward you. ...

INTERESTED

"... Why I Broke With Roosevelt reminds me of Kipling's lines spoken by Woodrow Wilson when he was ill and broken from working in the interest of peace:

"If you can bear to hear the truth you've spoken

Twisted by knaves to make a trap for fools,
 Or watch the things you gave your life to, broken,

And stoop and build 'em up with worn-out tools. ..."

NED MAUSTON, Los Angeles, Cal.

"... I enjoy the articles no matter who wrote them. I am not Catholic or Democrat."

MIKE R. BORTON, Miami, Fla.

SPORTING ODDS

Horse players at Bay Meadows, near San Francisco, in 1940 were astounded to see the odds on a five-year-old maiden named Green Tea drop suddenly from 90 to 1 to 2 to 1. Not only had the horse never won a race, it had never finished in the money; yet 10 minutes before post time the electric tote board indicated that a large chunk of dough had been wagered on Green Tea.

Convinced that a betting coup was in the offing, hundreds of fans stormed the mutuel windows to cut themselves in. Green Tea was soon installed a 3 to 5 favorite. It ran a placid ninth. Most of the chagrined bettors didn't learn until the next day the source of their "hot tip." A short circuit at one of the \$10 win ticket windows had sent the mutuel machine berserk. Before it could be disconnected, it had "sold" 187 tickets on Green Tea, for which no money was received. And the \$1,870 had been automatically recorded—and paid—in the win pool. The unwitting and unwilling purchaser of these 187 tickets was the American Totalisator Company, which leases the mutuel machines to the race tracks and underwrites any losses caused by mechanical defects.

—Dick Friendlich, San Francisco, Calif.

COLLIER'S will pay a minimum of \$25 for each acceptable contribution to Sporting Odds. Address Sporting Odds, Collier's, 250 Park Avenue, New York 17, N. Y.

DEAR SIR: Mayor James Michael Curley, who was sentenced to jail for using the mails to defraud, charged that Franklin Delano Roosevelt was reaching out from his grave to punish him.

He did his best to degrade the name of Roosevelt in Boston. While Curley's workers were collecting two hundred thousand signatures on a half-mile-long petition to free him by any means, newsboys on Boston streets were shrieking, "Curley is right! If you do not believe it, read what Jim Farley has to say in this week's Collier's, just out." We've been plagued by Curleyism for half a century. Are we now to be plagued by Farleyism?

HENRY BOLTON, Boston, Mass.

"... Don't destroy our illusion (if you want to call it so) of this epoch of history by publishing such articles by a man who is very evidently trying to promote his political ambitions."

I shouldn't read any more of those articles—they make me fighting mad—and I am a Republican—what do you know about that!

MARY MCC. BUCKLEY

"... Our late President was a Gentleman, with all that it implies and more. Kindliness is one of the outstanding qualities of a true Gentleman, and no one can deny that Mr. Roosevelt had even more than his share. That is the one thing Mr. Jim Farley could not understand. It was his own shortcomings and he himself that made the break."

Does a free press mean that anyone can come forth after a man is gone from this life and publish his version of a situation, knowing there can be no reply?

(MRS.) ELSIE N. MACHEN, Philadelphia, Pa.

"... I thought I respected Mr. Farley for holding his tongue these few years. But now comes the dawn. Or should I give him the benefit of the doubt?"

PATRICIA KIEL, New York, N. Y.

"... The other morning I noticed comment on the articles and I hotfooted it to the newsstand to get one. They were out, but I finally located both issues and have not enjoyed anything in a long time as I did these. Already several of the most prominent men here have read my copies, and I have a waiting list, since they are unable to get the issues."

C. P. DICKSON, Raleigh, N. C.

"... I can see where the freedom of the press is a thing which is an ideal of American democracy but there is also an American custom of allowing both sides to be heard."

JOE WASSER, Monticello, N. Y.

Collier's published part of the "other side" in a condensation of Frances Perkins' book, *The Roosevelt I Knew*, and will publish other versions in the future.

THE CHAINED GATE

Continued from page 16

something would happen if they did. He turned on the headlights, and the beams shot out toward the highway.

For a moment he almost decided not to go—then started the engine.

"Tallyho," Fran said, but it wasn't very loud. . . .

A dark blue night, white with stars, colder than Jack thought it would be, but warm enough for swimming.

As they drove in, the big cement beach gates whitened with car light. A sign in simple block printing labeled the closing hour: 12.30 A.M. They drove down the cement auto path that curved at a level with the sand. The sand was a night-white near the road, browning and darkening off toward the water and shore.

They drove to the car-crowded parking place, and from the parking place carried the rug and paper sacks across the loose sand toward the sound of the lake.

The sand squeaked as their heels came down, grains spraying, catching in their shoes. The wind was a steady, cold pressure on their faces as they circled around through the couples and groups sitting and lying on blankets. The sound of a harmonica came nearer and they passed a boy sitting alone, playing to himself.

THE harmonica became fainter and the sound of the waves louder, the wind colder. When they found the shore they walked just above the damp mark of the water until they came to a dark, private place where they could sit back in a gully and still be near the breakers.

Jack collected wood for a fire. Fran spread the rug on the sand, her forehead ringlets gone and her hair falling straight and dark around her thin shoulders, moving with the breeze. All the while he collected the wood Jack kept thinking of the best way to tell Fran they weren't going to see each other any more after tonight.

He wished the trouble hadn't started at Fran's house, because now that made things harder. He knew she was going to think he liked her less because he'd been embarrassed, and he knew breaking up with her now was going to humiliate her more than ever. And he didn't want to break up with her but he had to. He didn't like her less because of her father. If anything, it made her seem closer to him, but she wouldn't understand that. She might even do something crazy when he told her how things stood.

Fran was a funny girl, but not like her older sister Marion. Marion, on summer nights, used to slip out of the house and down the back stairs in her night dress; she'd go out on an impulse, because it was exciting, and sit in her father's car, parked in the shed behind the store. Everyone knew about Marion except Fran's mother and father. She only stopped going out to the shed when Fran told her she'd tell their father if she didn't stop. Fran told Jack on their first date that she'd made her sister behave, so Jack would understand she wasn't at all like Marion.

But Fran was odd in other ways, impulsive, too, talking of running away from home to Hollywood—and then a month or two later saying she'd decided to become a nun. She wanted something, Jack wasn't sure what; deciding he wouldn't be on the furnishing end if it were anything like marriage.

When the wood was collected Jack started the fire. He uncapped the two ginger ale bottles and they each held theirs in one hand, and their roasting sticks in the other. The hot dogs split in the flames, charred, and oils dropped down on the fire. Marshmallows crusted brown and black, their centers melting to a liquid sweetness that burned their mouths.

When they finished eating Jack pulled a flaming stick from the fire and they lighted cigarettes. The bad mood he'd started the evening with was gone.

Jack broke his roasting stick into tiny sections, tossing the pieces into the fire. No one passed near their fire and they were undisturbed back in the wind-protected gully. Jack imagined they were shipwrecked on a desert island. It was a nice feeling, the same feeling he had whenever they went out together, like being the central characters in a movie, the romantic leads. Then, in the darkness around the fire, he imagined the faces of cannibals watching them. He thought of how he'd protect Fran: like the Bronze Man, ripping steel doors off their hinges, pulling limbs off trees for clubs—and next imagined, even felt, a gun strapped low around his hips, like the cover men of adventure magazines.

When Jack got up to build the fire higher he took large branches in his

that way of questioning, with meanings that slipped in behind and came quizzically through statements.

Jack glanced away from her eyes. "Yeah, why not?"

Fran laughed, but her body was too tense for the laugh to come freely. "I don't want any mess like my mother's got. You know how I mean? You're pushing up daisies soon enough."

He had to make his stand then, or never, and Jack took the opening, holding his breath slightly. "Yeah," he said. "I don't want to marry *nobody* myself." A silence hit all around them, her silence.

She said slowly, "Does it have to be that way?"

"How?"

"You know."

Jack reached for the bottle of ginger ale. He drank and set it down again without answering.

She said, "Gee, it's so bad at home I hate to live there. I'll give you a guess

and watched her move into the fire. Her eyes had a wild look, as though in the darkness she'd been talking edly to some ghostly adviser.

She came up beside the fire, tip across the sand with long, pausing. "Are you afraid of getting married?"

"Naw. I just don't like it." She smiled. "It's got me but too," and she took his hand, he colder than the air. They walked to the water together and ran in, quickly under its cold surface.

THEY swam back and forth, in chest-high water, teeth chattering and voices jerking sharply. Jack held his legs up and down to get warm body. He didn't like swimming. The water had a strange black around the white froth, and bubbles followed his hands. It was like swimming on a dead planet's lake where the true light no longer existed. Fran quiet, answering him only occasionally when she spoke, staying too far. She was a better swimmer than Jack, staying easily out of his reach. Jack lowering his legs to be sure of the bottom in the insecurity of the water and the night.

He was thinking of some way to get Fran back to the beach when he head go out of sight, slipping down below the surface as though one had pulled her by the legs. She came up again a few yards and a bathing cap parting the surface with a splash. He started toward her, moved away, backstroking.

She was laughing but it sounded like her hands splashing in the water. "Let's swim to Chicago. Come on, Fran rolled over in the water, tending bare shoulders and back up, her arms reaching out in a smooth crawl stroke toward the shore of the lake.

Jack yelled, "Fran. Hey, Fran go in."

She didn't answer. He looked face rolling up and down, good arms silently dipping and rising, kicked his own legs up and pulled through the water behind her. She farther and farther ahead. He called her again, and after that swam, saving all the breath and he could, keeping track of the beach while he swam.

He could feel the lake getting colder and began to shiver with cramps. He wondered how long he could go and still make it. He wouldn't have to be very far. He still hear the sound of her feet, her no longer, could only feel the rhythmic froth of her kicking ahead. He began to think about not his own body alone sinking in bottomless darkness—but Fran.

He shouted frantically, "Fran!" listened, no longer hearing her in the water. The shore was his throat, and the black water quietly around his body. He called her again, his big arms slicing the lake that gave way around his fingers. The water flooded over his eyes and along his shoulders.

He stopped swimming again, heard her voice. "Jack. What's wrong?" She wasn't far away.

Over to the left he saw her head toward him, her head high, moving in a slow breast stroke, and cap were wet, her face marble against the dark water, dazed and uncertain. "What's wrong?"

Jack treaded slowly, his legs saving his arms, knowing he'd have to handle her. He

"I'd like something pretty much heightened by hydrogenated vegetable oil with just a dash of riboflavin"

COLLIER'S

JEFFERSON MACHAMER

hands and, while she watched him, broke them sharply across his knees. He wanted to be like the pictures of another man, the one in the back of the magazines, in the ad, the one snapping a link chain across the muscles of his chest.

After the fire was fixed they pulled the rug around until they were away from the smoke. The fire reddened the sand, flickering the foot-pitted ground with shadows. Below, in the darkness, the lake waves rolled. They drank more ginger ale, talked, and Jack felt quite happy.

JACK sat facing the fire, and Fran lay across his lap. He pulled his arms around her tightly, forgiving himself with the pressure of his arms for the thought of ever breaking up with Fran. Her head rolled toward his shoulder, the warmth of her temple pressing against the side of his face. When she put her arms up around his shoulders and held him just as tightly he didn't know what to tell her because he didn't want to lose the happiness he had when he was with her, while it lasted.

But when she whispered just under his ear, their heads still pressed together, "I don't ever want to get married," he was instantly wary, sensing a question sounding him out.

He relaxed his arms and her head came slowly away. He knew it had been a question when he saw her eyes; she had

what my mother's going through. Oh, I suppose you can't blame my father so much. He feels terrible, says he can't even face the customers in the store any more. He can't work the humiliation out of his system, but he's doing his level best trying to . . . on all of us." She paused. "What you mean is: You don't want to marry me. Isn't that it?"

The ridges of the flames jerked in the wind. The wood roared and popped, its heat pressing against their faces. He'd had a dozen ways of telling her thought out, and now was the time. But all he could say was, "I guess I just don't like marriage, Fran. Somebody gets pushed around sooner or later. Somebody kicks all the fun down cellar."

Fran lay very quietly. "Yep. You hit the head on the nail. Slip the gentleman his sixty-four dollars." Then she sat up quickly, clapping her hands down on the rug. "Come on. Let's go swimming." He tried to see her face because he hadn't liked the sound of her voice; but she twisted away and stood up. She went over to her swimming suit, and Jack got up, brushing his hands together, watching her back as she moved out of the firelight.

They went up opposite sides of the gully to change their clothes in the darkness, and then came down again to meet at the fire. Jack reached the fire first. When he heard Fran coming he turned

Only Zenith gives you these Twin Triumphs in Tone!

1. IN RECORDS...

**THE SENSATIONAL
COBRA TONE ARM**

All America's raving about this revolutionary Zenith development. It reproduces tone purity and beauty you've *never* heard in records before! Entirely—reproduces tones on a Radionic Wave. No crystals, no magnets, no to change! Magically erases *all* annoying scratch and vibration. Keeps records like new *hundreds* of plays longer! Comes with new Silent-Speed Record Changer that gently, quietly changes 10 and 12 inch records intermixed... so that you enjoy a practically *continuous* flow of music. No other radio—at any price—gives you this sensational *new way* to play records!

2. IN RADIO...

**GENUINE ZENITH-ARMSTRONG
STATIC FREE FM**

Only Zenith brings you this new way to enjoy the world's finest music in glorious new fidelity, without a special aerial... static free even in storms... and yours on *both* the 50 and 100 megacycle wave bands, to protect you against any future change in FM wave lengths. All this in addition to Zenith's famous tone perfection for your favorite regular radio programs, and world-wide short wave as well. Compare—and you'll see that Zenith gives more quality per dollar in *every way*! Get a thrilling demonstration at your radio dealer's today.

Shown closed above, open at right, classic design radio-phonograph console in beautiful grain walnut finish. Cobra Tone Arm, Silent-Speed Record Changer, Standard Broadcast, Genuine Zenith-Armstrong FM. Model 9H081 . . . **\$269***

ZENITH RADIO CORPORATION, CHICAGO 39, ILLINOIS

fluttered his hands in the water, hoping she'd believe him. "My toes are cramping."

She came in closer, worried now, no longer dazed. "You sure?"

"I think so. Let's head back."

Her eyes blinked and she looked up at the sky a moment. As she glanced back her shoulders bobbed quickly toward the fire on the shore, the water pillowlike against the side of her head. "Take it slow, Jack. I'll swim alongside."

After several minutes, the fire as far away as before, he did not try to raise his arms above the water. They were too tired.

He wasn't even sure he'd make it back until the sound of the waves on the shore seemed so close that when he put his legs down they ticked bottom sand.

They walked up and out on the land as silently as they had returned to the shore through the water. Jack said, "For a minute I thought you were heading for Chicago."

The sand stuck to their wet legs, and their skin goose-pimpled in the cold air. They walked into the firelight, into its warmth, heads down, watching their feet hit the sand. Fran said, "I lost my nerve. It wasn't a trick, Jack. I don't want to get married. I don't."

WHEN they were dressed they sat on the rug by the fire. Jack lay back and closed his eyes. His arms didn't feel as tired now, but he closed his eyes because he felt humiliated and ashamed. The smoke of the burning wood blew lightly around them. He could see Fran through his eyelids, her head bent to one side, running a comb through her hair: half his own weight, nowhere near his strength—yet he'd floundered like a terrified baby a hundred yards from shore and made a fool of himself to get her back to land.

Fran brought the comb down with a jerk and raised one hand to her mouth. "What time is it?"

Jack sat up quickly and pulled out his watch. "Twelve forty-five."

She dropped the hand from her mouth slowly and Jack was already on his feet rolling the rug. They started back for the car, running down the shore line where the sand was damp and hard.

Only their car stood in the parking place, a single, stationary car in the middle of a sanded emptiness. They got in quickly, slamming the doors, and drove down the road to the gate.

The gate was as far as they could go. The heavy chain links were aglow in the car lights. Jack glanced at Fran. She was staring straight ahead, her lips pressed together.

Jack said, "There's another gate further down."

He jerked the car in reverse, wheeled it back, then sent the car forward. The second gear was a humming, swirling sound in the car before he slipped it down to high.

They swung around, up to the second gateway, and stopped. In their headlights, sections of the heavy chain were like gold, luminously afire. And beyond the gates Jack could feel, almost see, a man sitting behind a kitchen table, holding a pair of shears in his hand like a dagger, his eyes above his swelling cheeks like cups of fishhooks.

Jack switched off the key.

In the headlights they saw the sign again that labeled the closing hour of the gate. And under this sign was a second sign that said that under no conditions would the gates be reopened until morning. Jack looked at the sign and knew how Marion's husband must have felt the morning Fran's father walked into the garage where he worked and told him what he had to do or go to jail.

The light of the dashboard lay across their laps and faces. Without turning his head toward Fran, Jack said, "Well, that's that."

Beside the gate was a watchman's office, a small boxlike hut where a light bulb burned and they could see a part of a man's head.

Jack switched the key on again and started the engine.

He felt Fran's fingers tighten. She said, "What are you going to do?"

"Make a run for it across the sand. See if I can circle the gate to the highway."

"Jack. We'll get stuck."

As he swung the car back along the road to get a good running start the door of the watchman's office opened and the man inside came out. He stopped outside the doorway, silhouetted by the inside light.

Jack gunned the motor and headed for the sand. He leaned over the steering wheel, his lips pulled back across his teeth. It was like hitting a wall of water. The car struck the sand and swerved, wheels spinning and digging. They sank in the loose sand and the car came to a slow, gradual stop. Only the rear wheels went around and around.

Jack heard the man knocking on the

Jack looked down at Fran, at the top of her head, at the cigarette smoke coiling from her fingers. He felt miserable. He wanted to touch her and knew he couldn't, any more than he could tell her not to worry. He didn't feel mad now, not even trapped. He wanted to touch her tenderly and tell her not to worry about her father, because as soon as they opened the gates in the morning they could head straight for Indiana and be married.

JACK stepped over beside Fran and bent beside her, taking both her hands in his big farm boy's hands, and he said, "Listen, Fran—"

She jerked her hands away, the cigarette spinning down across the floor. Still in a half crouch, he watched her go out the door before he could move. Then Jack grabbed the door frame and went out behind her.

He ran across the pavement toward the gate, gaining behind her. She crossed the chain ahead of him and he almost had her there, catching her a moment later on the highway. They stood in the

she hadn't come back. But he knew he wouldn't believe that, even listen saying that now. He said, "I really want to marry you, Fran, honest. What have to do or say to prove it? I want to because I think I shot you because of being locked in here with honey. Listen to me."

She began yanking and twisting the end of his arm. "You don't give about me. Don't you think I know?"

"Take it easy," Jack said.

Jack pulled and drew her back the gate while she jerked and

When he reached the chain he let it over, and the chain rattled against his legs as he stepped over beside her. Fran's face turned up to him, white reflection in the dark water, hair, the hair moving, rippling wind, her face distorted and

said, "I hope you get it someday you get it as bad as me."

He let go of her shoulders, his fingers one at a time and back. It seemed as though walls of mortar and board—were caved down on his head and shoulders as though he were sinking down body, growing smaller, tighter until the blood in his body was pushed thunderously against his eyes. He opened his mouth at her, to let it out before he blurted. But there was no time for a voice—

At some moment during the fury of his decision he straddled the chain and wrapped the links around his wrists and around between his feet. He threw his feet up against the gatepost and, bending his legs, pulled out of his trousers at his knees, ripped down the back between his legs and the iron chain cut the flesh of his fingers. From far across the dark rustling lake, for a place, he heard his name calling, tiny name far away. Head down, glasses lost, his bent, bursting into the post, his heels grinding against the concrete from itself, but his wrists and arms from his body.

He fell back to the ground, the chain before he wanted to or he could and did not realize the chain was in his hands until he tried to reach again and the loose, broken links across the side of his face.

HIS name came closer and he became as near as her hair at his coat, and her face. He held one hand, each of them held the other, while he felt over the ground for his glasses, finally under his knees, still up put them on with one hand, toward the car with the other hand.

Going out between the gates of the car kicked at the chain, went up through his body like something he had waited to hear, and now that he heard the note was so quiet and far frightening.

It was only two o'clock and he was home in half an hour, dawn. Everything was fine, his hands were bleeding, his pale little on the steering wheel. One of the steering spokes. Fran, with both hands and her head on his shoulder. He could hear the sound of the kicked, broken, frightening like the lake, or else he'd ever known but he imagined hammer click or ready in his hands for something ever might be coming toward light.

He pressed the accelerator down in toward the high, the engine, and at the first he turned down the lane toward

THE END

"Now, this outfit was especially designed for people who have no taste in clothes"

car window. He turned the engine off and rolled the glass down.

"What do you kids think you're doing?" The watchman held a large-bowled pipe casually to his mouth.

Fran pleaded and Jack argued. The man kept shaking his head, explaining the regulations, saying, "If we didn't lock those gates tight we'd be letting folks like you out all night long. Besides, I ain't even got the key."

He helped Jack push the car out of the sand and back to the road. After that there was nothing more to do but go inside the guard's house and keep warm until daybreak. There was no telephone in the hut and no place the guard knew they could find one.

Jack began to get mad—mad at himself, Fran, the guard, everything. He wanted to smash the guard in the face.

There were only two chairs in the hut. Fran and the guard sat down while Jack looked out the window at his car and the heavy chain across the gate. Fran smoked cigarettes one after the other, nervously. No one wanted to speak.

At the end of an hour the guard got up and went over to the door. He opened the door a few inches and spat out on the ground; and after standing a moment in the doorway, went outside, closing the door.

middle of the road, facing each other on the starlit concrete. The wind from the lake moved the fringes of her skirt and hair.

Jack held her arm tightly. "You can't walk home. What's the matter with you? We haven't seen a car come down this road since we been here." He pulled her back toward the gate. "Now come on. Your folks will understand."

She pushed his hand from her arm, straining against his wrist, her face contorted. "Just leave me alone, Jack," she pleaded.

He took her arm again and she twisted her shoulders and head away. "I'm the one that has to face my father. You don't. You know what he'll think. And how do you think he'll feel?"

"Honey, I'll marry you if you want me to."

"Oh, shut up. You don't give a damn about me. You said so. Don't think this means you have to marry me. You don't give a damn about me."

"I just said I didn't like what marriage turned into, Fran. You said the same thing." She began to moan and push at his wrist before he realized how tightly he was holding her arm. He wanted to tell her how frightened he'd been out on the lake, that he'd have gone right on swimming after her till he went down if

Packard proudly presents All-New

TOP DOWN . . .

Magic Console-key control panel!

Whether "On" or "Off," control keys stay in trim alignment. New non-glare "Flite-Glo" instruments for night driving.

New Magic-trol panes!

All windows including the rear quarter windows can be lowered or raised individually or together, simply by pressing buttons.

Magic Prest-O-justment seat!

Press the button and seat slides smoothly back or forward—hydraulically powered. Plenty of leg room for driving comfort.

New 145-H. P. Passmaster

Velvet-smooth power! Engine "safety-sprint" acceleration for passing cars and trucks at high speeds.

Your choice of 6 stunning colors!

Here's breath-taking beauty . . . in Cavalier Maroon, Packard Ivory, Golden Green, Sardonyx Brown, French Blue, or Black.

Packard Comfort-aire ventilation!

New design provides a constant supply of fresh air through dual air ducts, even when windows are closed tight. Prevents window fogging.

merica's first

Postwar Convertible!

Here's America's first postwar convertible! A convertible that's new—completely new—from res to top!

From the clean sweep of its smart bonnet to the tiny wisp of vapor from its whispering exhaust as it breezes by, the sheer beauty of this new Packard Convertible will leave you breathless!

To actually drive it . . . to know the thrill of its performance . . . the flash and surge of its new 145-horsepower Packard straight-8 engine . . . is still another breathless experience!

Hurry to see this most beautiful of all convertibles at your Packard dealer's. But — we warn you — go prepared to lose your heart to it!

THE END OF THE WORLD STRIKES OIL

Continued from page 19

have its transportation paralyzed in war-time. Now, whatever happens to copper and nitrates, Chile will be sitting pretty and can use its foreign credits for machinery and consumers' goods instead of for fuel. There was a gambler's flavor to the talk, for Chileans, next to the Chinese, are the world's most passionate gamblers. "Good luck always smiles on Chile in her darkest moments."

Since it will take years and much capital to develop the fields, the excitement has been like that of a boy with a new Christmas toy who has forgotten he'll have to scrub behind the ears anyway. But part of Argentina's loan of 700,000,000 pesos (\$175,000,000) to Chile has been earmarked to develop the Springhill field with Argentine and American technicians.

Many other things besides oil and the settlers' movement are afoot in Patagonia. The Argentine government hopes to have the deep peat beds of Fireland exploited for fuel. In accordance with President Juan Perón's five-year plan, Patagonian hydroelectric, mining and industrial development is to be pushed. Already trucks, lurching over bad roads, are bringing out coal from experimental shafts in the great coal beds that stretch for 250 miles south from Lake Argentino—to the south ports of Gallegos and Santa Cruz and to Chilean Natales.

A railroad is being surveyed from the coast to the new coal region. Other new mineral deposits have been located: lead, zinc, copper, maybe nickel. Aquiles D. Ygobonne, chief Argentine authority on all things Patagonian, says there are large iron deposits.

New industries will supplement the packing plants and wool-processing establishments that dot Patagonia and the strait. Wool textiles, rayon, clothing, leather goods, shoes, chemicals, soap, plastics, are some of the first products to be turned out. A whole new industrial city is planned for Nahuel Huapi in the lake region. Thus frontier Patagonia, now chiefly a sheep and coal and oil area, in time may become an important industrial zone.

Already several thousand new European immigrants, hand-picked for character and special skills, have been shunted to Patagonia. As the region develops, hundreds of thousands of outsiders will settle there.

Sheep Ranch a Source of Oil

The new Springhill well is at the seat of one of the enormous sheep ranches. From Springhill on three sides can be seen the slate purple water of Magellan Strait, the four big winking lighthouses on the First Narrows, the short pipe line snaking northwest where tankers come. Small black and white dolphins frisk in front of steamers rushing in on the roaring fifty-foot tide. The Alacaluf Indians say the dolphins are children of the moon, trying to leap up to their mother who abandoned them to run after the sun.

Primitive roads—bitten deep by half a century of sheep drives to the packing houses, woolsheds and boiling-down plants along the strait—lead into the Argentine third of the island and southwest to Porvenir. Sheep herds along Patagonian roads, north and south of the strait, sometimes stretch as far as the eye can reach.

Ostriches, the feathers of which are prized for capes, cloaks, bed coverings, wall hangings and rugs, are hunted down on horseback with *boleadoras*—three stones in leather thongs—dexterously whirled about the legs. This implement was used long before the Spaniards came. One archaeologist claims it has been

"I tell you, 'J.B.', a man's outlook is pretty hopeless these days. Every year the Administration sees to it that the dollar is worth less; and all the while scientists keep adding years to our lives"

COLLIER'S

JOHN RUGE

found with human bones and skeletons of the extinct two-toed horse in ice-age deposits dating back twenty thousand years.

Small herds of guanacos, lowland cousins of the llama, neigh and cavort across the meadows daintily, with excited darts of their long necks and small proud heads.

Small Porvenir, on a magnificent bay on the east shore of the strait, which there bends southward, is laid out Spanish-Moorish style around a central plaza. Inner patios, protected from the wind, grow palms and flowers and ivy. In a plaza flower bed stands a white marble black-snouted bear, an animal now known in the vicinity—perhaps a Yugoslav importation. Three times a week a National Air Lines plane shuttles the forty-odd miles across the strait to Punta Arenas—Sand Point.

The gold prospecting region is far south. A hundred miles below Punta Arenas, on big Dawson Island, is another large sheep ranch and the biggest sawmill in the region, which buzzes away at the oaks and coigue, the famous evergreen antarctic beech. From the trunks of these mighty trees burst forth large pink fungi, eagerly eaten by Firelanders as a delicacy. Farther south on famous Beagle Canal, with the world's most striking scenery, are more sheep ranches, British missionaries and the world's most southern prison, Ushuaia, Argentina's Devil's Island, a long, grim, high-walled edifice.

It is a dazzlingly splendid region: flowering meadows, glaciers, cascades, snow peaks, great forests, deep-cut fiords—a sort of combination of Norway and Switzerland, and more majestic than either. In the vast cathedral-like silence, sometimes a new iceberg is born with a crash, a rumble and roar, and the sea smokes as it builds into crashing surf. The innumerable islands are often alive with seals and sea birds and black swans. The lakes are often scarlet with flamingos.

Some great peaks bear innumerable glaciers, and their black slopes look as if they had been clawed by white fingers.

The most massive glaciers are known as the Twelve Apostles. Perhaps the Romanche Glacier is the most stupendous: a great slanting wall of blue ice, flanked by leaping waterfalls plunging through evergreen forests. If the light is just right, a dozen spray-born rainbows arch, one above the other, across the grinding ice pack.

But Punta Arenas is the main center. There at the International Bar, Don Gregorio slapped down his gin and tonic and pushed back his tall silk hat from his curly chestnut hair. It was the signal for typical Fireland cracker-barrel wisdom.

Don Gregorio looks Scotch and moves in English circles, but probably is an offspring of some Scotch herder and a Tehuelche Indian woman, handsome specimens when they are young. It is not considered polite anywhere in Magallanes Territory to quiz a man about his past. Don Gregorio was in port for the winter and an annual binge.

On a remote south shore, he has a sturdy cabin he shares with two other gold washers. His operations are simple. Patiently he smokes his pipe till an angry storm washes up gold-glistening black sands from some undersea source. When these have been worked over, he smokes through to another storm.

Now, at the International Bar, his stovepipe pushed back, Don Gregorio waved his big hand vaguely south toward the great snowy Darwin Range, then vaguely north at the crumpled black and white ridges of the Paine Cordillera above Natales, and pronounced solemnly, "There's death in them thar hills."

He was not referring to fellow prospectors who for three quarters of a century have been leaving their bones about, but to his belief that there is pitchblende in the area, and this would ultimately mean atom bombs, once the heavy white uranium has been extracted from the black ore.

The uranium legend runs all along the eastern Andean valleys. Long ago El

Jimmy, notorious early English told a visitor that coal packed north of Rio Turbio often turns to pitchblende. It is there the government plans to drive in a rail build factories. Some substance to these tall yarns by the boncovey of a pitchblende de Mendoza, farther north.

News reports that uranium reason for Byrd's latest South expedition may have had no base where was that expedition Patagonia's back yard, water closely than in Argentina and two governments hastily cojoin expedition, and Argentina second permanent lighthouse arctic Continent.

To Australia via South

Byrd's transpolar flights added to excitement around nas, which now looks forward to the jumping-off place for travel from Chile and Argentina the South Pole to Australia. have significance for either a peaceful world.

All these new impulses on the tip of South America are a tention of southward frontier in both Argentina and Chile. Argentina has built fine road throughout the Patagonian. The Argentina Automobile maintains the swankest auto in the world and numerous an in emergency auto parts stretches within a few hours quén and Rivadavia oil fields ing.

Chile has had a tougher late last century she was cut south by the fierce Araucano satisfactory treaty was finally since then the southward from ment has gathered drive.

tels, well, kind of good, and up at Coy-
haique in the back country, there are
three more. You should see the beautiful
lakes, the fine streams—black with ducks
and eight- to twelve-pound trout."

Trails Through Scenic Wonders

Back from Aysén, new roads feed
on into Argentina. The main highway
follows the new split-rail fences along
beautiful dancing Simpson River up the
thrilling Snail Grade through stupendous
forests, past gorgeous lakes and the Vir-
gin Falls. To this name, a local Irish wag
who loves showing strangers around al-
ways appends the phrase, "sooner or
later." Natales, farther south, now a
place of 10,000, has also felt the boom.

Most of Patagonia in both countries
is still primitive and bleak, windy, open-
sky country like our Middle West plateau
country before cities, railroads and new
industries flocked in. Today, Patagonia,
with more resources than quite a few
areas in our own now rich-populated
West, is similarly a new frontier, but
since farm lands are limited in most
places, transformation of the region must
wait upon the organized implantation of
new industries.

This effort is mostly in the blueprint
stage for a future of good intentions. But
the southward push is getting stronger,
and it can mature with new roads, rail-
roads, airfields, towns, schools and in-
dustries. It is too soon yet to measure the
real tempo of the change in the quicken-
ing life of Patagonia, but the blood of
civilization, so called, has at last flowed
into the cold extremities of the great
continental land-giants—Siberia, Alaska,
Patagonia and Fireland—and is pouring
in new life. Folk far south in beautiful
Patagonia believe that because of supe-
rior climate and more resources, their
region is the most practical of all such
areas and faces a great future.

THE PRICE OF POWER

BY CHARLES CARVER

ILLUSTRATED BY WILLIAM PACHNER

I showed her the magic words on the stand and then passed my right hand over the crystal ball a few times to increase the strength and power of

STRICTLY by will power I beat back the impulse to toss the young lady out on her ear. I didn't mind so much the amused skepticism with which she brought up her problem, nor the disagreeable condescension with which she discussed it—but when this girl began carelessly fingering a ten spot to back up her request, I almost forgot myself.

Because persecution, ridicule and suspicion have surrounded my profession for ages, we practitioners have to be particularly careful about our ethics. For instance, anyone caught selling the Power for peanuts, so to speak, was worse than a traitor. And that was exactly what my supple visitor was trying to engineer.

I took in the cold, hard eyes, the sleek, dark hair, the even, predatory teeth. The hunt does something to women, I thought. It makes panthers out of kittens. Furthermore, the vibrations I received from this girl were especially bad. A Gemini, I guessed. I'm a Leo myself—never could get in step with a Gemini.

"What month were you born?" I asked her.

"June 14th." The answer was obvious, but professionally satisfying nonetheless.

"And you are suggesting," I said, ignoring the bill in her hand, "that for the selfish ends of romance I should deliberately misread the crystal this evening when you lure this timid swain of yours here for a séance?"

"I'm not luring him." She chuckled unpleasantly, deep in her throat. "He suggested it. And incidentally it's

not 'misreading,' mister. Just tell him the signs say to marry a girl he met at the Palm Pavilion, a girl who was wearing a mother-of-pearl tiara. Tell him her middle name is Diana."

"Namely, you?"

"Namely, me."

I looked at her in horror. I had forgotten how tight the web could be spun, with what devious delicacy it could be drawn choking-tight.

"But do you believe your friend would be so much influenced by a reading?" I asked. "So much that he would take a step as important as marriage?"

She smiled slowly. "You mean is he enough of a sucker?" The vibrations I got were very unpleasant indeed. "Sure he is. He told me himself he believed in fortunetellers." She drew herself up suddenly. "Not that I don't love him," she said defensively. "Of course I do."

"Even if he were poor?"

"Of course. Say—!"

"Simply a guess," I told her. "Simply a wild guess."

There was an uncomfortable pause. "You, of course, do not believe in crystal gazing—crystallomancy, as we call it?" I lighted a small piece of incense and made several right-hand passes over my crystal.

"Don't be silly," she said. But I caught the same half-ashamed eagerness in her voice that I had heard in so many during my years of practice.

"Please sit over here," I told her, indicating a cushion to my left. "No living soul should be to the north of the crystal during a reading."

"I don't want a reading," she said—and moved obediently to the cushion. Because it was her first encounter with the occult, I explained what I could as I made the preparations.

I explained, for instance, about oxide of iron, with its strong affinity for magnetism, and how it is part of the crystal. (Mine is a particularly fine one of Bohemian glass.) I told her of the tea made of *artemisia vulgaris*, the ancient tonic prescribed by the sorcerers of the Middle Ages, and of the herb succory (its leaves always turn north), which creates magnetism in the body. I explained that with the moon approaching full and the sun in its northernmost declination, the conditions were excellent for clairvoyance.

FINALLY I showed her the four words, so old their meanings are lost, although their magic remains, which were written in raised gold on the four sides of the ebony stand before us: TETRAGRAMMATON to the north; EMMANUEL to the east; AGLA to the south; and ADONAY to the west.

I passed my right hand over the glass a few more times to increase the strength and power of the vision, then a few passes with my left hand to heighten the sensitiveness. The girl was leaning over the crystal as though mesmerized. In a low voice I explained about the breathing. Then we sat silent while the fumes of the incense and the trapped forces did their work. It did not take as long as the usual reading.

"I see," I said, "a tired disheveled woman in a cheap room cooking stew

on a hot plate for three children. I see a man at her, asleep, face hidden in her. Wait! There is a gold ring. I see initials. I think 'L,' and 'K,' but the vision is dim." She gasped, pale as a ghost. "That's impossible! He's a lion!"

I peered into the sphere. "He was rich. For years the poverty. A disinheritance—disillusionment. . . ."

Suddenly I recoiled from the sphere and covered it with a cloth. "There will be no charge for this reading," I said shakily. "Sorry, but I'm bitter to have the Power, and please leave me now. A young man is, don't you see, here, I beg you."

Her eyes locked with mine. "I saw him," she said. "I saw him clearly over the wisps of smoke from the incense. For a moment she was badly frightened. The money toward me, she closed my eyes and said 'padme hum' four times slowly."

When I opened them she was gone, but the ten dollars was still there. I decided to give it to charity. Necromancers Home people on the other hand I felt a little better. The fifty dollars a young man gave me that morning. I be fireworks when he hadn't played Cupid as I checked his birth date. I wasn't in me to throw my brother Leo to that gold mine.

What's more, it would be highly unethical.

SPARE THE CHILD

Continued from page 13

h should obtain in every home. t is this discipline? Certainly it is not boundless license touted in the early s, when any curb upon a child's be- or was abhorred as a mar upon his ing psyche. Geisel, former or of Southard, replaced the old n of license with the theory that en have a need for discipline. They ly like it. Children feel more se- when they know the rules and are o live up to them. They have op- nities to win praise. They get a g of accomplishment when they do s required of them. child, one of the Southard doctors ns, is like a man driving his auto- through strange territory. Dis- is his road map. Too often we he child loose with no map at all, en we despair when he piles up in h, or gets lost or stuck in the mud. vant to keep him on the main high- n the name of sweet horse sense ve him a map. is the kind of discipline children he Southard School. As children er the explosive phases they find an win greater satisfactions by e the rules than by breaking them. used to say, "Praise that which is gnore that which is bad." In such sphere the hellions who arrive at often are constructive citizens ey depart. ard people know that the art of e children is about 99 per cent of understanding how they oper- ke this incident: ung woman recreational worker he kitchen of the big house when he children, a belligerent boy of came up to her with a meat knife ssed it against her arm. "You nk I'd dare to cut you, do you?" d. She could have answered, Bo- "You haven't got the guts to cut hen most certainly he'd have her arm to prove he wasn't yel- d she quietly replied, "Yes, I u'd cut me if you got a notion e boy dropped her arm and way. d deal of conduct which seems

shocking to the outsider actually is benefi- cial. The children swear a great deal. They go around protesting their hatreds. You hear them shout excitedly, "I hate you, Murphy!" One boy went up to Dr. Murphy and said, "I'm going to kill you!" Dr. Murphy, not at all humorously, replied, "Suppose we make an appoint- ment for that," and the two of them fig- ured that a certain twelve minutes on the following Thursday would be the ideal time for the killing. (Somehow this ap- pointment slipped the boy's mind when Thursday rolled around.) "It is important that children with un- resolved hatred have someone to use as a target. They need someone to hate. Otherwise they aim this hatred inward against themselves," Dr. Greenwood ex- plains. In short, the Southard School must let the hatred come out and put love back in its place—an immense job for which there is no precise blueprint.

How the Urge to Hate Is Cured

An investment of love is made in each child by the easy, understanding way in which his rampages or his failings are ac- cepted. Children lose their "need to hate" as the weeks and months roll by. They begin to love Dr. Greenwood because he loves them. His luminous, happy face and the way his hand finds a place on their shoulders make them know that with the doc, love of children is no act; it just comes naturally. Once when three children ran off and slept in a chicken coop, Dr. Greenwood's only retaliation was to remain in his office until 4 o'clock the next day. For the children, just be- ing deprived of his presence was punish- ment enough.

The change from sick, antisocial be- havior to the healthy, democratic way of getting along with others is a slow but satisfying process. Children who smashed and swore in the beginning learn to let off steam in Dr. Greenwood's "gripe ses- sions," where, in the best traditions of the United States Congress, they can air what ails 'em. They learn to savor and enjoy their special rights, such as the right to help themselves to anything on the bottom shelf of the icebox during the snack hour, to toast their own sand- wiches, to pour their own juice. They learn to balance their rights against du- ties, to expect to pay out of their allow- ance for a window they break or to stay

Beauty of this place is that it's made of green lumber and in no time it will have the appearance of a charming, century-old colonial cottage"

home from the Friday night movie if they raise Cain at bedtime.

All this, of course, is part of the process of getting well. But sometimes the dressing and binding of wounds is not enough; sometimes the wounds must be opened and drained and the cause of infection removed.

A few children are given psychoanalytic treatment. More are given modified forms of psychotherapy, in which, largely by a talking-out process, they bring the cause of infection to the surface where it can be washed away.

A few years ago a boy came to Southard, billed by his family doctor as a pathological liar. True to form, he told no less than fifty gaudy falsehoods in his first three days at the school and he didn't seem to grasp the fact that he was lying.

Cases such as this do not clear up by magic. It took months of arduous and often discouraging psychotherapy, the boy sitting down with his doctor and hashing and rehashing his life's experiences. As with a detective tracing clues to a crime, there were blind alleys and false leads and disappointments.

Psychology of a Phony Athlete

But the case eventually was solved: The boy's lying dealt mainly with his prowess in athletics. He claimed to have won all manner of contests, to have captained dozens of teams, broken records, won trophies and so on. His mother, it developed, had been a wealthy socialite and had married his father during a trip to Europe in the 1920s. She palmed the father off as a European nobleman with three or four titles, though actually he had been a blacksmith's helper. But in private quarrels the mother would spitefully denounce him as a phony. The boy loved his father and over the years developed a method of accepting the lie his father lived. This method was to live a lie himself.

Under full illumination, the need for lying vanished like a bogeyman under the bed. The boy could face his father's situation, understand it without justifying it, and go on to shape his own life. Furthermore, the recreational therapists at Southard coached him in athletics and helped him develop considerable ability. He was soon able to find satisfaction in the truth about his athletic prowess.

Every morning the staff meet to discuss the endless, and endlessly new, problems which the children pose. I sat in on some of the conferences and was amazed at the patience with which the doctors, therapists, teachers and social workers go after each new challenge. I would have thought they'd occasionally throw up their hands and say, "To hell with it," as too many parents do.

But the staff were undismayed by the little boy who seemed preoccupied with death, who always dressed up like an undertaker; or by the boy who insisted on staying the same age, who never wanted to grow up; or by the girl who demanded punishment, who'd say, "Damn it, Greenwood, why don't you punish me?" and then, if a privilege were withdrawn, would bitterly sob, "You're always punishing me!"

One purpose of the morning conference is to integrate the total treatment of the child. A recreational therapist reports that an eight-year-old boy refuses to participate in any games. Invitations to "Come on, get into the fun" leave him trembling on the side lines, his shoulders slumped, his arms tucked close into his chest. The doctor who has been treating him says, "Don't coax him. Let him alone. One of his troubles is that he has been 'pushed' by his parents since infancy. Now he is afraid to enter into anything for fear he may not measure up."

Actual schoolteaching at Southard is as you will find it nowhere else in the world; often a class has only two stu-

dents, and never more than five. When children arrive at Southard, the school principal, Myrtle Thompson, gives them a standard achievement test to find out what grade they are best suited for. But formal schooling is usually the least of these children's problems. Some have emotional blocks which make them seem like morons, yet they have high intelligence and can sail happily through their schoolwork once the blocks are removed.

One girl was an absolute blank in spelling. Her teacher took her all the way back to simplest phonetics in the hope of getting her to spell easy words like "house" and "street." But it was not until her larger emotional difficulties were cleared up that spelling began to come as normally as it does to other children. Her block against learning to spell was a revolt against growing up, a resignation from responsibility. But don't confuse it with malingering. She *actually couldn't spell*.

No child is forced to attend classes.

From original hostility to Southard's staff members, children usually shift to strong affection, as here evidenced toward Dr. Morton Bassan

They come and go as they please and often take whole weeks off at a time. (The Southard mentors discovered long ago that you can lead a child to the classroom but you cannot make him learn.) Nominally, there is a morning assembly in the white frame house after breakfast and then the children who feel like it drift off to classes. No bell tolls the end of assembly. If they're having a good time it can go on indefinitely.

A few years ago Southard had an older girl whose parents wailed, "We don't know what to do with her. She absolutely refuses to go to school." If they thought the Southard teachers would shackle her to a desk and pump learning into her, they must have been disenchanted by what followed. The girl was allowed to cut school for two and three weeks at a time. Her teacher met her now and then for chats out in the sun or in the shade of the handsome pin oak in the yard. It must have tried the teacher's patience never once to attempt to sell education.

But the long, slow investment of interest and affection finally paid off one day when the girl asked, "Will you teach me arithmetic? Gosh, I don't even know my multiplication tables!"

Once their emotional illnesses are cured, the children are transferred to the regular public school in Topeka. Here they can make the final adjustment before they go home. In the final months some children are also taken out of the big mansion altogether and sent to live with private families in Topeka. Here, under supervision of social workers, they get back to a mode of family life which makes the return home less of a jolt.

Being a parent myself I could not resist asking the Southard School experts for a few tips. How can you and I bring into our homes a healthier atmosphere for our own children?

"Don't reject your child," several of the staff counseled. While we may be certain we love our children, the children themselves are never positive. They need

Wouldn't the household turn into a tual admiration society? Only if make it so, I was told. Praise, like things human, is worthless unless honest. Given when earned, it takes high value and a child will exert himself to win it—just as adults go through sorts of exertions for a citation or a bon. Conversely, the withholding of praise is one of the most effective disciplinary tools a parent has, but it skill.

Dr. Albert Preston stressed the importance in child discipline of a united front. "It is terribly confusing for children when a father comes up with a stock line, 'It's all right with me, but your mother.' Each parent should have authority. Each should stand by the other's decisions," Dr. Preston advises. Parents can hash out their differences after the children go to bed when they openly lock horns on disciplinary measures the children are and confused—just as you'd be if a traffic officer told you a red light stop and another said it meant go.

From Dr. Mary Leitch came the suggestion that parents watch what they say about in their children's presence. It doesn't mean hush-hush or censorship. It means an awareness that children are perceptive human beings, drawing inferences from all the things they see and hear.

Dr. Leitch told of a small girl who overheard the following conversation at her brooding heart for years afterward: Her parents were neighbors that they had sold the house. "when our little girl was on the floor," Overdramatizing the situation, the mother exclaimed, "My goodness, the worst thing we ever did!" The girl, playing on the floor, drew the conclusion that she was the cause of the worst thing her parents ever did. It was all her fault.

A good rule of thumb, says Dr. Preston, is always to assume the child is listening to all that goes on—the chances are

What Parents Don't Understand

All of us, the experts agreed, are less likely to get alarmed about children if we knew more about what children tick. Shamefully, most of us know more about automobiles and radios than we do about our offspring. Sometimes we are alarmed when the perfectly normal things all expect of them.

Take lying, for instance. Nearly all children go through a phase of storytelling, or even the outright fabrication of falsehoods. This is because the children sometimes have a hard time distinguishing between what *really happened* and what *they thought happened*. A small child may tell you he put his jacket away (actually believe that he did), then may find it later on the floor of his room. A crude accusation of lying doesn't take into account the little fellow's immature approach to reality, his learning to differentiate between the real and the imaginary.

Finally, I polled the Southard experts on what a child needs most. Skates and sleds and velos? A governess, an expensive nurse? The thing all children thirst for is intangible. No capsule has yet been found to contain it, and no toy department offers it for sale. It is a pedestrian called love.

Sometimes a ten-cent gift, unexpected, carries more love than a half-hour talk, a lively interest in events of a child's day, can be more laden than expensive tickets to a game. Attention to a child's ideas (though they seem "small" or "smug Olympus") can give a business of heart that can be of no other way.

Shades of Magerkurth and Durocher! Before taking his turn at bat, the Japanese Babe Ruth, Hiroshi Oshita, doffs his cap and bows in obeisance to the umpire.

JAPAN'S AT BATTO AGAIN

BY WELDON JAMES

Baseball's booming in Nippon once more, but its top men aren't completely happy. They bewail the fans' politeness, and want them to act more like Americans

MR. SOTARO SUZUKI is a pleased man, for baseball is once more a respectable sport in Japan. From sand lot to Tokyo's great Korakuen Stadium, the Japanese again play with a batto, bara, globu and mito. The pitcher throws a man out at fasto on a bunto, the shortstop throws one out at secondo, and the left fielder plays close in to sardo for a weak batter. It's ball two, strike three, and you're out, for millions of Japanese who don't even know they're speaking English.

Mr. Suzuki is an amiable little guy who writes sports for Yomiuri, the biggest newspaper in Tokyo, and doubles in brass as vice-president of the Nippon Professional Baseball League. He beams nowadays at the way his favorite sport is booming, but he has his worries. The game, he thinks, could stand a lot more Americanization. Especially on the money angle, because even with crowded grandstands the professional teams just don't make dough. And maybe on a little more color, or just how to treat the umpire.

"If only we could produce a Leo Durocher,"

said Mr. Suzuki wistfully, recalling with sadness the Oriental impassivity with which a Japanese slugger receives the depressing news of "Strike three!"

"Or," he continued thoughtfully, "if only Mr. Durocher could lend us a hand while he's vacationing this year—he could teach us a lot. But of course that's impossible. Anyway, we're trying to make the game more American. Our league slogan this year is 'Follow the American ball.'"

The Lip would doubtless be struck dumb with horror by one aspect of the eminently respectable Japanese game: the godlike status of the umpire. The Japanese call him "umpiya," all right, but their own word for that, *shinbankan*, means "supreme authority"—and to Japanese players in the past he might as well have been Emperor Hirohito himself. Neither they nor the spectators would have dreamed of questioning or booing Mister Umpiya. Each batter doffed his cap and bowed to the umpire when he entered the box and that little ceremony told it all.

The American occupation, however, may yet

make "rhubarb" popular in Japan. Recently, Mr. Suzuki sent a memo to each club president urging that the players be encouraged to "give more character, show more pep, and quit bowing to the umpire—to act more like Americans." This has not yet resulted in American-type rumpuses or "rhubarbs," but most have quit bowing to the umpire. Only occasionally do they slip up, doff their caps and bow from old habit. Small wonder, at the moment No Japanese pro makes more than 5,000 yen a month—but all the umpires get exactly that. It's the only league in the world in which all the umpires make as much as the top-notch stars.

In the amateur games, especially with college nines, the players are equally polite and ceremonious with one another. Before the game begins the two teams line up between the pitcher's mound and home plate and doff their caps and bow in military unison. And to heckle or argue with Honorable Opponent during the game would be unthinkable.

"Gee," commented one G.I., homesick Brooklyn and Ebbets Field, "when they throw

A Truck with a Cab that "Breathes"

guy out at first, you almost feel like the first baseman ought to bow and say, 'So sorry!'

The professionals have cut out the team-bowing act, but their game retains the gray respectability of Nipponese politeness, and the spectators share it. A couple hundred G.I.s, munching peanuts and sipping Army-ration beer, yelling, "T'row da bum out," or cussing the umpire, make more noise than the 50,000 Japanese overflowing the Korakuen Stadium, and furnish a colorful liveliness Mr. Suzuki wishes the appalled Nipponese spectators might imitate.

But Mr. Suzuki is pleased enough to have the stadium frequently filled. In Japan's topsy-turvy baseball world, the amateurs usually draw bigger crowds than the professionals.

The professional game, frowned upon by the wartime Japanese government, was dropped in 1943 and was revived only last year. The amateur game continued through the war on a reduced scale—but good nationalists no longer called it baseball. They renamed it *yakyu*, meaning "field ball."

How Democratizing Is Baseball?

Our military-government people are pleased by the baseball boom. They don't think that baseball in itself will make the Japanese any more democratic than it did before the war. But compared with the schools' old military drill, it's practically Jeffersonian. Our physical-education experts are actively propagandizing for more baseball everywhere, working in particular and with great success to popularize a one-out game for hurried city youngsters.

Today, baseball is by far Japan's Number One sport, outdrawing even *sumo*, the Japanese version of wrestling, which the militarists promoted as the national game. It remains popular, but even so the great halls are seldom filled except during the semiannual national ten-day tournaments.

Three famous wrestlers last year quit *sumo* to become baseball players, on the theory that the money was better. They practiced picking up oval stones with chopsticks for a couple of months, "to make the fingers more nimble," had their wrestlers' topknots barbered off in a public ceremony of renunciation, and joined the Greenbergs—a barnstorming outfit named, of course, for Hank.

But the wrestlers were flops as ball-players, and they have not been heard from this season.

Last year the Nippon Professional League ball games, all played in Tokyo and Osaka, drew 1,558,615 paid customers. Very satisfactory, according to Mr. Suzuki, except that the individual teams

lost money (the league made a lit five yen 20 sen a customer (then a cents), the teams were making most first few weeks of the season. The war inflation caught up with them not even the Osaka Rings, who championship, got out of the red.

This year the league upped prices (now about 60 cents) for seats, 15 for grandstand and five for the bleachers, and the teams' tendency on the increase, hope money. They have to buy black food for the players, however, league has to maintain two hotels in Tokyo and Osaka. The cost of food has soared sky-high, too.

Before the war the American-made Japanese ball sold for a dozen; today the league pays per ball.

Bats have jumped from five 120, and the new gloves, extensions of the latest imports the using, cost 500.

Such prices have given Japanese ball one aspect that no kid in Cincinnati would appreciate. A keeps a foul ball is considered. The league, ably abetted by N in his writings for Yomiuri, convinced the Japanese fan that it "triotic to baseball" to "steal" into the stands, and a good fan wouldn't be found dead with.

With true Japanese thrift, professional teams use the balls over until they're deader than athletics' chances after the first. Twelve balls are supplied for six are invariably returned for use, and on occasion all are deemed fit for another match. Doubtless slows up the game counts in some degree for hitting of most Japanese batters.

Veteran baseball critics Japanese fielders are pretty sensational so, but that few players are any great shakes and it isn't that the pitchers are only so-so. Most of them use twisting sidearm delivery, and get rattled, instead of slowing get a grip on themselves, they and faster.

The outfielders know this, play close to the infield. This fouls up the fielding, with baseman and the center field disastrously, but it also means center fielder may stop a hit throw out the runner at first.

One of the big-stick boys the fielders all move back is Hiroshi Oshita, a left fielder. Flyers known throughout as Japan's Babe Ruth. He led with 20 home runs last year.

"I wonder what supplies they managed to pick up today at a price slightly higher than we had figured on?"

Another team, "Babe" Oshita's Tokyo Flyers, is owned by the Tokyo Express and Railway Company. The "Babe," like other players, draws his 5,000 yen a month from the company all the year round, though he does no work for it. "I have a desk, and read there," he says.

Mikimoto, the Pearl King, has another profit angle. His Kinki Railroad owns three of the Osaka clubs, the Tigers, Bears and Rings, and the two Osaka ball parks as well. His railway cashes in on extra fares to the games, and he profits on the park rentals.

Hon. Suzuki's American Ideas

But Mr. Suzuki isn't satisfied with this setup. He thinks the Japanese game will improve with better salaries, better contract arrangements, American-style farm systems—and that these are possible only when baseball makes money on its own, no matter who owns the clubs.

"We want to Americanize the game completely," he says happily. "We've got to learn to make money from it."

Mr. Suzuki has had this Americanizing idea a long time. During the war, he recalls, the militarists wanted to ban the use of English in the game and substitute "Army terms."

"For 'strike,' for example," he said, "they wanted to substitute the war-word *yoshi*—meaning 'approved.' And for 'out,' the war-word *hike* (pronounced hee-kay) meaning 'get back!'"

Mr. Suzuki's opposition to such nonsense led to trouble with the secret police, and, in a way, to the wartime disappearance of league baseball after 1943. Now, with no obstacles in his "Americanizing" way, he is all smiles.

He has one other ambition dear to his sporting heart—to have a crack Japanese team play an American nine. The nearest bet is a G.I. team, of which Japan is full, and Suzuki-san hopes that one of these days he can arrange a match.

"I think we might surprise them," he says. The Nipponese might, too. Babe Ruth must remember to this day the 1934 close call he and Simmons, Foxx, Gehrig and others of the All-Star aggregation had in Tokyo. A Tokyo Giants' pitcher named Eiji "Schoolboy" Sawamura, then only 17, held the ever-winning Americans to six hits, and only Gehrig's eighth-inning homer (one of 47 racked up by the Americans in their 18 games with the Japanese) gave them their 1-0 victory.

Young Sawamura was a soldier during the war, and went down with a troop transport torpedoed off Formosa by the U.S. Navy in 1944. But Mr. Suzuki has his hopes for more "Schoolboys," and is happy that now the Army can draft them no more.

MIGHTY MONARCH OF THE AIR

perhaps. He could teach, and he feels sure they must badly need teachers there.

"I had hoped, too," said Jesse Moore.

Taking old Abrams as a sample of all the old men in camp, the director had a vision, sentimental, perhaps, of what an old man wanted: time to look back and consider what he had done, and to see his children and their children. Old Abrams would have to watch other men's grandchildren. Still, he had a right to a few hours of quiet sunshine, somewhere, the right to respect and the company of a few other old scholars who liked to talk. Even here, he tried to teach, tried to make use of himself and his knowledge.

"Come back and talk, any time," Jesse Moore said.

He got up, and watched Abrams slowly cross the parade ground and go into the recreation hall, where some of the young artists had lettered on the wall: "This—is the corridor where we work and learn in preparation for the blessed day when we shall march through the gateway to our promised land."

They meant a specific gateway, the one between outside and inside, the one that finished off the brick wall, and was flanked with two statues—an old scholar, like Abrams, laden with his past on one side, a young pioneer like Saul Weitzman, who had helped to build the wall, on the other. In the first joy of what had seemed deliverance, the young men in camp had torn down an old brick shed, had made tools out of nameless bits of hoarded metal, smelted over hardly more than handfuls of coke and charcoal. They had chipped away the old cement carefully, and had built the entire wall of salvaged bricks, wanting to show what they could do and what they had to offer.

LATE that afternoon, Jesse Moore went through the gate himself, as he had errands to do in the town of Landsberg. But before that he had seen a dozen other displaced persons, persons asking for help, for news, for courage. "Isn't the United Nations going to have a committee, or something, to deal with us?" they cried. "Couldn't we get Nansen passports? We'd go anywhere, it doesn't matter."

It was strange. These prisoners had a more elaborate kind of freedom than any of their rescuers dreamed of. They had no country, and for the most part, no family ties now: They would go anywhere that would take them in—Canada, Cuba, Africa—it didn't matter, so long as they could work for their food and make some sort of home; become human beings, instead of numbers. They did not want to be guarded, or sheltered, but only to be allowed to take their chances—all over again.

Jesse Moore, who felt his only work was to break down the walls of the capsule and let out the seeds so they could get somewhere in the earth, under the sun, could only give the people who came to his office a cup of coffee.

"Here," he said to each one. "Have some."

Maybe it only brought them to his office more often, but what of it? What was he there for?

They're good seeds, he wrote to his friend in scientific farming, or they would never have survived so long. They've been tested in terrible ways, and still they have hope and promise, still they're alive, and hide other good life inside them. . . .

Sometimes a relative who had escaped from Germany in 1938 and settled in South Africa, or England, saved enough to send for the remnants of his family, once he found where they were. Or a train of reckless, displaced men, strong

and able to work or to snatch what they wanted, broke out of camp to take their chances in a still chaotic world. There were children, without living kin, roaming roads they had never seen before, going nowhere, never looking back.

"Have some coffee," he said to Hanne Gruen. He had watched her from the beginning, and she stood in his mind for all the young, orphaned, homeless girls. He thought of her, standing alone by the wall, combing her hair or reading.

Hanne worried him; she kept herself to herself too much. Others her age clung to older refugees, or found lovers or husbands or friends, but Hanne stayed alone. She would not even let the desperate, eleven-year-old Peter Kalakis (Greek? Armenian? A Pole?) come near

trying to make these people real to people who could not believe. *Fresh-colored, lively. He's survived, and almost forgotten, it seems, enough to kill all the others who were with him. He was not only political, but from Poland. A real pioneer type, not too imaginative, but capable of going anywhere, and putting down boundary stakes.*

There were some others like Saul, among the young. They married, they had babies in the camp hospital, they worked as they could, and gave one another instruction in language, current history from what they heard on the radio, manual arts. Their passion was to establish themselves somewhere, in a small group, a few couples and a few strays adopted for luck, so they could

"Such coffee!" she apologized American captain. "Seeds! Burn You should have come to my house, tasted my coffee in the old days, some real Torte, made with su whole cups of butter!"

Even in these houses crowded roomers, or bombed-out relatives in Cologne and Frankfurt, there were life pictures on the walls, and curtains, and china, some of it old Meissen, some newer souvenirs with gold swastikas for a border cups. Captain Moore put down abruptly. "I've got to go along,"

HE DID the rest of his errands. He walked along the streets, noticed that people wore real clothes. Old clothes, to be sure, cut in traditional German manner, a little little big, but of the most durable materials. The young girls, particularly, aged to look smart in tight swe suits made from clothing that belonged to men in the household.

There's Hilda Lessing, Jesse noted grimly. The slender, dark girl was walking out with an MP and now she wore his ring. It was because of Hilda that Hanne came into Landsberg any more. Many of the displaced persons, cleaning themselves up and making themselves presentable, had gone into the town. Many had never because they had come in seen and covered trucks, at night, Hanne.

Hell, I'll be glad to get by and that's a fact, Jesse Moore edged to himself. I don't belong here. It's another sign that through.

On the way back he thought cision he had made to resign. Hanne: Both things worried were tied up with each other.

Hanne's father, a widower with his two children over a very store in Rotterdam. No have been jealous of the family were poor and unnoticeable her father worked with the ur He died in the bombing of and her brother disappeared noon.

Hanne's friends, warm and to the motherless child, were family next door. The parents, religious, kept the holidays, but children weren't, they were only gay, and Miriam was Hanne's friend. Then one day the father appeared.

Another afternoon, a truck the store, as if to make delivery the driver got out, Hanne saw the Nazi uniform, but before she for help, he had snatched her sidewalk. She found herself sands before her, and like a ready jammed into the car truck, bound nowhere, qu with fear, or screaming r like sixteen-year-old Hanne.

Toward the end of the with many others from the camps strung in a line around had been taken into the town the war factories. She had machine with a town girl Lessing. She whispered Hilda; the next time they when the American general at man's inhumanity to citizens of Landsberg wall camps.

"It was the others," they "Of course, we didn't know "They lie! We told the oners shouted.

The general made then

COLLIER'S

her. He was a wild boy, who stole, and fought, and had a hoarse, rough voice, from shouting obscenities, perhaps. But he was a warm creature, who had once been a member of a big family; and now he was alone. Of all at whom he flung his wild affection, Hanne was the one he needed. Captain Moore had thought: If she'd just comb his hair—or sit with him to eat. . . .

But she pulled her skirts away, almost visibly, when Peter came near her. Peter knew this, and now he often lay in wait, and tried to trip her with a stone, tried to yank her thin old clothes, to tear them. Still she would not look at him.

"I've got to go into town, Hanne," Captain Moore said. "Would you like to come with me, just for a little change?"

"No," Hanne said softly. "No more."

"I'd have liked your company," Captain Moore said. "I'm sorry I haven't heard about your passport, Hanne. How's Saul?"

HANNE was a pretty girl, nineteen, with brown hair, blue eyes and pale clear skin. She kept amazingly clean with broken bits of comb, and a piece of soap from some charity organization in the United States. She groomed herself, Jesse Moore suddenly saw, as if for sale on an auction block. One female, single, in moderately good health . . . strong—can work.

Hanne shrugged. "Saul is the same," she said. "Still wants me, like before."

Saul amazed Jesse Moore. One of those strong, solid men, he wrote home,

begin to make the family, the village, the town, the city.

"You won't marry him?" Captain Moore asked.

"No," said Hanne.

He knew why. She thought one girl alone might be adopted, might be given a passport, have a chance to find work. She was ready to travel alone, and travel light, and that was one reason she could not spare so much as a kind word to the kid, Peter Kalakis, and why she had fought her love for Saul Weitzman to a standstill.

"I'm sorry," Jesse Moore said, and he was. It was too late for Hanne, he thought now. There was no hope for her. I've got to resign, he thought. I haven't done enough. It's too late for a lot of them.

Landsberg, a pleasant-looking old German town, where Hitler had written Mein Kampf, was getting back to normal, though times, and the occupation, were hard. There was no coal for parlor stoves, so parlors with their memorials to the finer life—sofas, chairs, carpets, the Bible on the table under the lamp, along with the other books—were closed off. The things in store windows were never for sale. Old men hauled loads of wood they had gone to the forests to cut.

Still, it was a change from barracks to see real houses. Captain Moore, homesick for Iowa, had been inside many of them. He went inside one this afternoon, where his friend, Bill Addison, was quartered. Bill was out, but Jesse had afternoon coffee with his landlady.

benches where men had been piled. He made them look at still smoldering corpses, and smell the smells of disease and death; he made them examine the enamel basins from which prisoners had been fed like dogs.

Hilda had wept.

When she saw the tears, Hanne thought Hilda would be her friend, and she often walked about in Landsberg, looking for her.

When she found her, Hilda gave her a long cold look, not letting go her American's arm. "Scum!" she said. "Concentration camp scum!"

After that, there was only Saul for Hanne, and she would not have him. She stood alone, and perhaps heard the others saying:

"Listen, we're lepers, so far as people outside are concerned. They hate us, for reminding them of what happened to us. If the Americans leave Germany, it will start all over again, the next day. . . ."

JESSE MOORE let himself into his office, which was cold and dark. The staff had quit work hours before. As he turned on the lights, and saw the files and the desks and the papers, his heart sank deeper. All the paraphernalia. All the paper forms. Everything but the will and the intent and the determination to get these people out of here before they died.

He picked up a handful of papers from his desk, and for most of the names he had a face, and a story. He tried hard about this, knowing that namelessness was the disintegrating acid for the displaced people. It was strange how few of them ever really knew just what had happened to them. They were Poles, Lithuanians, Russians, Germans; they came from every country; only about a quarter of them were Jews, but they had all been so enslaved they were as nameless as those men who had been chained to galley oars, or who had built the Pyramids for the Pharaohs. Some had been born in this place, others had married here, many had died. They told all they knew to Jesse Moore and his workers, to soldiers who came by, to one another, trying to make themselves real, even to themselves. They read their papers. They asked questions. They listened.

"If you ever get out of here, listen, go to Bremen. Ask for Peter Kohl. He was a second cousin. A printer. Tell him about me. Tell him to try and find if there are any others—I lost them at Osowiecim. . . ."

"I have a cousin in America who sings on the radio and makes jokes. A rich man. When I get out, he'll help me, I know. He used to write, send packages of food and clothes to us. Tell him I'm here. . . ."

They at least believed what had happened, and knew it was not impossible, as so many in the outer world felt. When a package of canned milk and old sweaters came, the recipient would feel a strange elation for a few seconds—his name was on a package, he existed. He was not wiped off the lists of living people. Inside the capsule, they lived as they could, but it was a barren growth: hope faded, months went by. People, like Hanne, gave up, and no longer believed the rumors of people being allowed into England to work, or being permitted into South America, or Mexico.

"You think we're going to get out of here?" one of the women shouted. "Hasn't it sunk in yet? No one wants us! We'll get charity food and charity clothes, maybe some international talking group will discuss us, every year. But we'll get out of here the old, underground way." She uttered the words with a peculiar grim downward gesture.

"Hell," said Jesse Moore. "I can't write the whole report tonight. I'll get something to eat before I start."

The dining hall was almost empty. Captain Moore ate something tepid and

institutional-tasting, and had a glass of water for a change. He had American cigarettes from the PX and before he went back to work, he gave one to the dismal man behind the counter.

"Here," he said, "have one."

"Sure," the man said.

Rare as good cigarettes were, there was nothing gracious about the exchange. The air withered graciousness. Jesse Moore was even glad to get back into the office, away from the sight of the barracks with their lighted windows, and from the wind that flapped around him like a coat. He went to the window to pull down the blinds.

As he did so, he saw a couple in a violent embrace. They stood in a moving, twisting closeness that could not bring them close enough; there was tension in their shuddering outline in the pale

first cup of coffee when Saul and Hanne came and spoke to him.

They had the unmistakable look of lovers, Jesse Moore thought. The girl had a translucent look of happiness, and she clung to Saul's hand. He was surprised when Saul said, "Captain Moore, can you help us get married? We want to, as soon as we can. I don't know what kind of papers. . . ."

Captain Moore said, slowly, wondering if this were his sign, "I'm very glad for you two. You'll find it better together, I know."

Luckily, Saul had a citizenship and it could be arranged. Captain Moore saw them married in the Chaim Bialik library, among the gathered books of these homeless people, and he went to call on the married couple in their new home, a few days later.

moonlight that now flooded the parade ground. When he recognized the figures, Captain Moore was not shocked. Hanne, who would not marry Saul, and Saul, who wanted to marry Hanne. He watched them until they moved away, slowly, with that intense, absorbed movement that meant they would not separate, that they were only going somewhere else for the love they had to have.

Jesse Moore, a heavy-set man of fifty himself, was not surprised. Aren't morals an affectation for people with countries, he speculated—countries and enough to eat, and names?

Turning back to work, he thought of what was happening to Hanne, because her hope was gone. While she still hoped, secretly, she groomed herself, standing alone by the brick wall. Why should she marry, become one part of two? Doubly hard to get passports for two, of different nationalities. Who would adopt a married couple? Or even give them work to do?

If I could see even a glimmer, I'd hang on, Jesse Moore thought. I've been here long enough to know how things go—but I've got to have a sign. I can't fight this feeling of complete failure in myself. . . .

It was gray and cold when Jesse Moore quit work. He would get some breakfast and some sleep before the day's complaints and beseechings began to pour over him again. He was sitting over the

The barracks, which had once housed German soldiers quartered on the town of Landsberg, had all been painted, at first, and given names. They were named Roosevelt or Shalom—Peace—so a man could say to his friend (a man from Silesia), "Come over and see us tonight. We're in 6-B, Shalom," and it would sound almost personal, almost like a home.

A CORNER bed in a barracks was the most desirable place; someone had given up such a corner to the young Weitzmans. With just a blanket or two hung on ropes, and a bureau, the corner was a real room, with a wall and a window. Saul, who was a good carpenter, had built shelves to hold Hanne's purse and comb, and his own shaving things, and a few cans of food and ash trays, wedding presents.

"Oh, we're snug," Saul said, laughing, entertaining the first visitors, who sat in a row on the bed. He and Hanne were happy, but when Jesse Moore went back to his office and his report, afterward, he thought: She hasn't really cut her chances. Saul's a Danish citizen, actually. Maybe he'll get into America on the quota. Maybe she knew that, and that was why—

All week long, he looked for a sign, and saw only the old things. A man, suddenly remembering something, stopped still as he swept the bare earth, and his

face grew lined and old, though only seventeen. One of the boys a fight with a gang in town, and Palakis smeared one of the barracks stolen paint. A woman shrieked her sleep, and everybody in the barracks heard her, and guessed dreams.

"If we could only have a room selves," someone said.

It was Hanne, after all, who gave Moore the sign. He found her in his office one noontime, with faced Peter Kalakis clinging to her. Her face was white, too, with a cision, and she had lost her translucence.

"Captain Moore," she said, here, who's always in trouble. any way we could make him our brother for me, or could we act for our child?"

"You're nineteen, aren't you, Jesse Moore said. "Saul's twenty?"

"And Peter's eleven," she said. difference does that make? someone to look after him. Y he started to run away last night brought him back. He has nothing—he'd be a wild animal weeks, starving. . . ."

Tears poured down her face. "But why take this on yourself, Moore asked. "There are ages—"

"No orphanages," Hanne said. "Why?" Jesse Moore asked.

"I suppose I like this kid," Hanne said. "And maybe I've got a brother, a wild animal, somewhere in Europe!"

"I remember you had a brother," Moore said.

HE THOUGHT about it, his ivy. For a couple married week to take on a strange, wife fore they even had their own meant taking on an enormous really. A handicap that might settling on a farm, or finding couple, yes. A couple with a kid—well—

He said, "I'll come and see you and Saul tonight."

"He sleeps in the next bed," Hanne said. "Mrs. Krotchko Peter has terrible nightmares, so we like him to be near."

After she and Peter had gone, Moore sat thinking some more. He was wearing a shirt of Saul's. had not only combed, but cut. Suddenly he reached into his drawer, and took out his letter nation prepared for Washington his angers and his failures.

One seed had got out through an invisible crack in the tough difference that held these people together. Not on the wing port, or new immigration law, strange, interior way of growth the seed had escaped. The man stood alone by the fence, his hair, had married the man. The couple without a future had taken an orphan into their home. That was the extra thing, the promise that made Jesse Moore much more personal letter that made his friends and home say he was hipped on. He came from Iowa, where all, a farming state, and he had seeds. Hanne was a seed that. Only one. Still, thought. one seed can produce a whole. It would grow well anywhere a chance. . . .

What the hell's the matter home? he wrote, the letter writer jamming in his hand. Statue of Liberty dropped to make a fence? Doesn't member these are people here?

stayed in for thirty years!" ch disgust. "You don't catch n over. Not me!"

dn't answer. There was the e charge lying off the starboard

quarter, rocking with the swells, making no move to tie up to the boom alongside the Old Man's gig. Prosser turned toward the break in the deck, and climbed the ladder there; he had thought of something he had to do, and purpose drove away the lost, empty feeling.

He made his way amidships, and climbed again, and the two gunner's mates looked up curiously when he came out on the flying bridge. They were ready, with the blank ammo already laid out for the two one-pounders of the saluting battery.

"What the hell are you doing up here, Guns?" Janofsky demanded. "I thought you'd be halfway to that chicken ranch in Chula Vista. You don't have to fire this salute."

"I'm not off this wagon yet," Guns Prosser said. "Stand by!"

IT WAS the least thing he could do—the fitting and proper thing. He stood in the starboard wing of the flying bridge and looked down over the after part of the ship, and back down the years. There was the lad in the too-tight liberty blues, and the girls waiting, and Mr. Corley's stiff back at the gangway. There were the wild years, and Mr. Corley saying, "Prosser, if you want to make this liberty boat, you'll lay below and get into a regulation jumper!" There was the summary court, and the brig time; the red ink on his record, and Mr. Corley back of them all—Corley riding him, making things tough, almost driving him over the hill.

And then there was the change, as if he had grown up, and the First War, and a crow on his sleeve. There was no longer the girl at the Sands Street gate, or any one watching the Ferry Building clock; the girl was gone from the sun-splashed Plaza where the fountain laughed at the tourists, and there was only that one with the patient hands, waiting where the shrill-voiced red trains rolled in at Sixth and Main. . . .

"There he comes!" Janofsky said. "Here's the stop watch."

Guns Prosser pulled himself back to the present and looked down at the quarterdeck. On the port side, Mr. Jones stood guardian at his gangway. Mason waited by the quartermaster's shack, filled with the suspicious intolerance of youth, and with youth's impatient dreams.

On the starboard side, the traditional honors were beginning again.

"I never used a stop watch to time the intervals of a salute," Guns Prosser said. He straightened proudly; his voice rose loud and clear on the wind that whipped across the flying bridge and snapped the four-starred flag descending the hoist. What he spoke was the gunner's chant:

"If I wasn't a gunner, I wouldn't be here! Ready—starboard—fire! Away from my wife and home so dear! Ready—port—fire! If I wasn't a gunner, I wouldn't be here! Ready—starboard—fire! Away from my wife and home so dear! Ready—port—fire!"

Seventeen guns. To Prosser they were more than a salute to that four-starred flag and the man who broke it wherever he went aboard a man-of-war: They were, as well, a salute to thirty proud years, and an ending to them—they made it easier to go.

As the mahogany-hulled barge moved away, he noticed one thing: Admiral Corley's back was still ramrod straight, despite the years.

And now he knew what he had to say to Mason, when they went ashore in the next liberty boat. He'd tell Mason that if she was the right girl, she'd still be waiting for him.

THE END

Absorbine Jr. kills Athlete's Foot "Bugs" on contact!

Before

Here you see a picture, much enlarged, of the parasitic growth which causes the pain and maddening itching of Athlete's Foot. These tiny organisms flourish on perspiration products and dead skin. When they attack raw flesh, every step is torture.

After

Here you see a picture (same magnification) of Athlete's Foot organisms *after* contact with Absorbine Jr. Note how the growth has wilted and died. No longer can it cause itching and pain. Contact with Absorbine Jr. has killed the growth!

Look for Cracks between your toes

When feet are hot and steaming, perspiration irritates the skin, often to the point where it cracks and shreds away in moist patches. This summer condition invites Athlete's Foot! The ever-present organisms multiply fast in warm weather... they attack raw flesh through the open cracks, and every step is agony!

Apply Absorbine Jr. full strength

Absorbine Jr. kills the Athlete's Foot organisms on contact! To guard against reinfection: Don't share towels or bathmats. Boil socks at least 15 minutes to kill the organisms. Disinfect shoes. In advanced cases consult physician.

Absorbine Jr. also benefits you four other important ways:

1. It dries the skin between the toes, discouraging future attacks of Athlete's Foot.
2. It relieves itching and pain of Athlete's Foot.
3. It dissolves the perspiration products on which Athlete's Foot organisms thrive.
4. It cleanses and helps heal broken tissues.

Play Safe!

Daily Hygiene! You can help ward off Athlete's Foot by applying Absorbine Jr. to your feet *every day*! Wonderfully cooling and refreshing after bathing. Absorbine Jr. has also been famous for more than 50 years for the relief of muscular aches and pains. Ask your druggist for Absorbine Jr. today. \$1.25 for a long lasting bottle.

W. F. YOUNG, INC., Springfield, Mass.

We climbed the curving road until we came to the knoll. There, robed in white, stood the man with the birds. "Welcome all," he said in his deep, rich

CONCLUDING THE EXCITING STORY OF ROMANCE AND HIGH ADVENTURE

MERCHANT OF VALOR

BY CLARENCE BUDINGTON KELLAND

The Story:

The events narrated take place in sixteenth-century Italy. A Medici Pope sits at Rome, trying to control a country turbulent with internal strife.

PETER CAREW, son of an English wool merchant, is in Florence on business for his father. An honest, straightforward boy, Peter falls under what he believes is an enchantment cast by a haughty and beautiful Italian adventuress, whose purposes are shrouded in mystery. Not knowing her name, Peter calls her BETSY.

After routing a band of assassins in Florence, Peter is forced to flee the city and enroll in GIOVANNI DE' MEDICI's Black Bands, a famous free-lance army.

A cheerfully unscrupulous monk, who boasts of being the hunting hound for the Pope, follows Peter doggedly, hoping the love-smitten Englishman will lead him to the elusive Betsy, who is engaged in mysterious plotting against the Pope. The monk works in conjunction with COUNT PIERO RIARIO, an evil nobleman who hates Peter because the Englishman has protected a ragged mountain waif, BEATRICE, from Riario's lust.

After a great battle, in which Peter is knighted and his general, Giovanni, wounded, Peter, Betsy and Beatrice, together with some traveling circus performers, are set upon by agents of Riario at an inn. Peter ar-

ranges for Beatrice and the coolly aloof Betsy to escape by a back door while he and the circus mountebanks drive off the attackers.

The next day Peter and the mountebanks come to Giovanni's castle, Trebbio, only to find that Betsy has not yet arrived. His worry turns to wrath when Beatrice, harried and breathless, rushes in to tell Peter that the monk and his men have captured Betsy in the woods; she is being taken to Riario's castle. Without further ado, Peter resolves to attack the castle with his circus friends and what few soldiers can be spared from Trebbio's garrison.

Conclusion

TWELVE men, all that could be spared from Trebbio, were a woefully small force with which to attack a stronghold such as the lair of Count Piero Riario, but one must work with the tools that come to hand, no matter how inadequate. The ten that I took from Trebbio were veterans of the Black Bands, and this was a foray after their own hearts, because there was promise of booty. There were, in addition, five men, including the

giant, from the company of mountebanks, who fit to accompany us, and for whom I borrowed mounds from My Lord's stables. So Niccolo Gozzoli in the care of my mistress went out upon the heels of the ravishers.

The castle, not so large as Trebbio, was on the top of a rock-strewn hill. It was squarely of rock and surrounded by a wall which there was but one gate of entry. There was no moat, but the gate was guarded by a square tower. This we surveyed from the summit of a wood upon the mountain slope of miles away. It was formidable.

Beatrice, tiny upon her big horse, sat beside me. I studied the strength of the castle.

"Ser Pietro," she said, "this is my father as well as thine. Long has the count hated my people and great have been his cruelties. I waited long for the day of repayment."

"Then let us find your father Tasso quickly." "It will not be difficult," she answered, holding her little hands before her mouth and crying, high in note, rising and falling so that it was like the note of some beast in agony. Then

repeated thrice. Presently a faint answer came to us from the westward and another from the south. Beatrice lowered herself swiftly from her horse, climbed to the top of an exposed rock and stood there arms upraised, silhouetted against the sky.

"One will come to us," she said with confidence.

We waited, clustered about the pinnacle, and presently our horses' ears twitched and their heads turned curiously to see what approached. There was a scrambling, and a bearded, haggard face, lost in a mass of matted hair, peered at us from behind a boulder.

"Bruno," said Beatrice, "it is I, and friends of mine and of my father's."

THE man slithered among the stones and stood before us, ragged and savage with hollow eyes.

"It is the Englishman," he said sullenly. "Bruno," she said, "the day has come. Where is my father?"

"At the caves," he answered.

"Hast watched the road?" I asked.

"Aye."

"Have any entered the castle?"

"Horsemen—six—and a monk, and a woman and a dwarf, their hands tied to their saddles."

"They are in the castle now?"

"None has left it, Englishman," said the mountain man.

I turned to Christoforo. "Place thou the companions across the road, well concealed," I said, "so that none may escape. I go to gain allies."

"Not a weasel shall pass us," Christoforo said, "nor a bird. We will guard well the mouth of the burrow."

Thus leaving Christoforo to his duty I rode on with Beatrice, and she was silent and brooding, with eyes deep and dark as pools of still water in a shaded forest.

"Art angry with me, child?" I asked.

"I be no child, nor am I angry with thee," she said.

"Thy mood," said I, "is not a happy one."

She turned her eyes full upon me, and they were twin mysteries. Her young face was without smile of youth.

"I be no child, Ser Pietro," she said, "nor call me such again. I be a woman. Aye, and compelled upon an errand no woman may welcome."

"Thou dost not wish to see thy father?"

"I have heard thee named simple, Ser Pietro," she said, "and simple thou art. The errand is this: That I must go to the succor of another woman, more beautiful than I and better loved than I. And if the errand succeed, then I have aided myself to calamity."

Now this was a saying too dark for my understanding, and I have found it wise, especially in dealing with women, to make no response whatever when their words are heavy with some heavy meaning. If a man pursues such a conversation he is apt to hear matters to his disadvantage. Therefore I rode on beside her silently until we came to that grassy glade in the hills and the tree from which I had rescued Beatrice when Riario pursued her with dogs. And here she looked at me again with brooding eyes but did not mention what had happened there. We rode on to that high, hidden ravine where we had slept that night, and Beatrice uttered again that eerie cry to warn of our approach.

We rounded a shoulder of rock and I saw again the man Tasso—bearded, broad of shoulder, bandy of leg, and he held a great pike in his hand. Somewhat behind him were tattered mountain men and women, silent and menacingly watchful.

"My father," Beatrice called in her clear, birdlike voice, "it is the Englishman come again."

Tasso laid his pike upon the ground and advanced to meet me, and there was, strangely enough, dignity in his bearing, albeit he was so illy clad.

"Ser Englishman," he said, "thou art welcome today, or on any day. Why seek ye Tasso in his den?"

"To ask aid of thee in an enterprise," I said. "I would serve the Count Riario as he hath served thee and others. I would dig him from his burrow and destroy him."

"Upon what quarrel?" he asked.

"He hath made prisoner of a maid," I said, "a maid most precious to me."

"It is a reason," Tasso said, "but there could be better reasons. But thou art young and it doth suffice for thee. What strength hast thou?"

"We be a dozen from the Black Bands," said I, "and a handful of strolling vagabonds."

His lip twitched beneath his beard. "A noble army to besiege a fortress," he said wryly. "Mayhap thou hast more boldness than discretion, Ser Englishman. But, by St. Bartholomew, I like a rash man. Also twelve fighting men in armor

fifty men. Among the weapons was one that gladdened my eyes, for it was a bow of yew with arrows to shoot with it—a goodly English bow standing alone in this cavern so far from its home. And as I perceived it I remembered what I had seen in the crystal ball—the picture of myself, in armor as I was, but with an English bow in my hands; it gave me a sensation that did not please me. Nevertheless I took the bow in my hands and said to Tasso, "With thy permission I will take this for myself, for I have some skill with it."

"And welcome," he said.

"How many defenders in the castle?"

"Perhaps a score," he replied. "They will be hard to come at behind their walls of stone. Where are thy men?"

"Across the road blocking escape."

"Go thou to them," he said. "I will be with thee within the hour with such numbers as I may gather quickly."

I returned to my men and found them

Within the hour, Tasso came with a score of his followers, grim and hungering for vengeance upon lord who had dealt with them so and we sat down to make some plan of battle. I cudgled my brains to how My Lord Giovanni would go it, and what diversions or stratagems would devise. I have ever found there is some problem to be solved is of great difficulty, it is an exacting thing to put off a direct headlong upon it, to pretend to yourself that you can find some way of getting at it wise. And that the very exerting thinking about it will very often lead you to hit upon something by accident or by inspiration.

Therefore I pretended that I was Lord, endowed with his skill, and find no difficulty in devising some means to undo the enemy. The came to me that we might tempt the defenders of the castle to sally forth the gate and have them at disadvantage but I could think of no bait to lure them until I bethought me that I might be cheese in the trap.

If it were to have any success it was because Riario was ignorant of numbers. But before I attempted directed Tasso to prepare first a tree that might be carried by a team of men and used as a ram to batter the gates. And also I requested lacking scaling ladders, a sufficient young trees should be felled and branches removed so that they would furnish footholds to climb. Then, a quarter of a mile down the road I stationed my men of the Black

WHEN this was done, and the sun yet was high, taking Christoforo for companion, I rode at full gallop up to the great barrier.

It was my thought to make it a surprise, but then arrived in reckless unaccompanied.

So we galloped up to the gate and hammered upon it with my bellowed aloud for admission. Riario's name, demanding he come to me as if I were one distraught.

"An the gate opens," said Christoforo, "be ready to clasp thy horse and gallop away."

Then I fell to belaboring the more and to shouting Riario's such challenges and insults as came to my tongue.

I continued this exercise until I shouted down to me from guarding the gate, and I saw peering down betwixt the battlements, and one of the faces of Riario and the other the monk.

"Ho," called Riario, "it is the man. What madness is this. Then he spoke aside and said to the monk: 'He doth desire admission urgently. Can it be, Brother, something within that he doth want?'"

"Count Riario," I called, "right well dost thou know here and what I seek. Canst thou not hunt even a woman pack of dogs to protect thee? me the maid Betsy, and wilt thou or I will pull down thy kennel stone about thine ears. Come fight me for her and thou hast or come with a companion of panions if that be more to thy liking."

It was the monk who answered the count. "Nay, my son, thy ways and meddle not in high for thy comprehension thou dost seek is no prisoner of Riario, but of Florence it powers more mighty even than Go peacefully before evil befalls."

"He hath been reading some romance," Riario said sneeringly. "Tell me, Brother, where, a lady's glove upon his helm"

"I'm sorry, but I don't know who's up, or the score, or what inning this is, or even what teams are playing. I only listen to the games for amusement"

are not to be sneezed at. Also I owe thee a debt. What strength I can muster shall be thine to command."

"How many?" I asked.

"We be outlaws and masterless men," he said, "and have our food to gain in ways thou knowest not of. Some be scattered, but methinks I may gather two-score or better."

"There is need for speed," said I.

"There will be enough for a beginning," he said, "and others will come in through the day. Right eagerly, Ser Englishman, for my men love not this Count Riario."

"What arms?" I asked.

"Not such as would content thy general," he said, "but we be in better posture than when thou and I first met. When war is in the land then such as we add generously to our store of weapons. Come and see."

First he dispatched messengers, and then he led me to a deep, secret cave, where were stored a miscellany of weapons and a scattering of steel caps and breastplates. There were pikes and crossbows and swords and a pair of harquebuses, though with scant powder and ball for them—but withal, enough to arm in some manner a company of

well concealed on both sides of the narrow road leading down from the castle to the broader way that led southward to Florence. From the spot it was possible to see the walls and tower of the stronghold behind which Betsy was imprisoned and at the mercy of Riario and the monk. It was not pleasant to think upon. But of one thing I was determined—if harm came to her, not one of those who inflicted cruelty upon her should be left alive.

I SAT upon a rock with Christoforo and questioned him. "Have any attempted to leave the castle?"

"The gates have not opened," he said. "Nor has there been a sign of life save smoke arising from the kitchens."

"A thing we cannot know is whether word of Betsy's capture was sent to Cardinal Passerini by the monk. It were wise to act as though we knew it had been done."

"Aye," he said. "We must take the place before a man can ride to the city and return with horsemen to take us in the rear."

"Are the defenders aware of our presence?" I asked.

He shook his head. "I think not."

ment retreat within the main structure
where the defense could be compact and
effective.

"Let us sleep while we may, taking
watch in turn," I said. "Thou, Tasso, and
thou, Christoforo, lay ye down first."...

I paced uneasily, thinking of Betsy
within those walls, and painting foul pic-
tures of what she might be suffering at
the hands of Piero Riario. There was
only grim silence in the castle, though
windows were lighted and torches flared
in the courtyard and upon the walls to
tell of sleepless sentinels. I walked
around it and around until the half moon
thrust its rim over the eastern moun-
tains and climbed the skies, and when
I deemed that three hours had passed I
returned to the fire by which Tasso and
Christoforo slept. Now and again an
arrow, trailing flame, swept upward in
an arc from some bowman to penetrate
window or other opening, and in a great
circle crackled a dozen campfires about
which moved black eerie figures. For
those inside there would be no rest, for
every fire arrow must be found promptly
and stifled lest it bring disaster.

I AROUSED Christoforo for the next
I watch and lay down beside Tasso,
laying aside my armor for comfort, and
hoping that Riario had no firearms to
use against us—as, indeed, events proved
that he had not. After a time, troubled as
I was for Betsy's safety, I slept, nor did I
awaken until Tasso shook me at dawn.

Now our plan was this: That with our
improvised scaling ladders we should
make simultaneous attack upon both
sides and rear of the castle, leaving the
front with its gate and towers unmo-
lested—and that when the defenders
were full occupied thus and their atten-
tion was fixed upon repelling those who
scaled the walls, we should suddenly
bring forth our tree trunk and launch it
against the gates. To this duty I assigned
my Black Bands men. The discharge of
fire arrows was to be redoubled since
there could be spared few to stifle their
flames.

An hour after dawn the outlaws,
shouting savagely, rushed upon the walls
and clapped their ladders against them,
mounting fearlessly. I stood with my
men waiting, English bow in hand hop-
ing for some exposed target and praying
the target might be Riario himself. And
suddenly there was smoke pouring from
the upper story of the keep and I remem-
bered that picture I had seen in Betsy's
crystal ball, and here was that picture in
actuality. Which caused me to think
upon the picture that followed it of the
stone-walled room, smoke-filled and
reeking, and of Betsy lying there pallid
and lifeless. I could not bear the thought.

I shouted to my men to raise the bat-
tering log, which they did with good will,
and I, casting aside my longbow, ran at
their side as they trotted with it toward
the juncture of the gates. Arrows were
loosed at us from the tower, but not a
man fell as the barriers trembled and
splintered under the first impact of the
log's butt. Again and again we battered,
with the wounding of but one man. Then
finally the gates burst asunder and we
charged into the courtyard.

It was as I had foreseen. The defenders
of the walls deserted their stations and
ran headlong into the castle itself, and we
caught but few of them before they
reached this safety.

The courtyard and outbuildings were
ours, but there we were sorely exposed to
the marksmanship of archers who shot
down at us from the battlements, and
more than one man fell until we pressed
close to the stones of the castle walls to
huddle there while the defenders hurled
down great stones and missiles and even

boiling water upon us. It was an evil position and untenable for long. I heard Tasso call for axmen to attack such doors as opened at the rear, and I, calling upon my men again, sent them driving against the great main doors under their archway at the front. A huge block of stone, pried from the battlements, crashed down and splintered at my feet, and missiles rained upon us, but the doors shook and quivered under the impact of the log. They were strong, built to withstand such attack, and such was the rain of rocks and missiles upon our heads that, if we failed to batter in the doors soon, we would have to withdraw.

But at the fourth splintering blow the two leaves of the door parted and were wrenched from their hinges and we rushed headlong inside to be met by a wall of defenders who disputed it with us there in that narrow way. It was a grim business of clashing steel and trampling feet and gushing blood and hacked bodies as we pressed them backward. I remember little of it, for the lust of battle seized me. Riario was there fighting right manfully, but I could not come at him myself.

HOW long it lasted I do not know, but at last what remained of them broke before us and ran for the stone stairway, and Riario was one of them. Upon the stairway they made their stand again and we had to climb up to get at them. But we drove them backward step by step. Now I am a big man as I have said, and stronger than most. In this hour, driven by fear for Betsy and rage against the count, my strength was multiplied. Here was no matter of art or skill or the niceties of swordsmanship, and I was careless of what happened to me so long as I might come to the maid in time.

I pressed Riario and forced him upward, and my men fought that day as few men have ever fought. Slowly, step by step we forced them backward and upward, treading over the bodies of such as fell. Riario's handsome face was grim and evil and desperate, for he must have known that this was the end of him. But much as I hated him, and wicked as he was, I must say that on that stairway he

acquitted himself as a man of courage. Between gasps of breath he taunted but I fought silently and grimly. "Shalt never see her alive, E man," he panted. "Didst sleep with the thought that she was arms?"

It might have been so, but I God that he lied in his teeth and that had been, by some miracle, save his savagery.

Now we came to the top of the way and still we forced them back. Here more of us could find footing fight side by side. We drove into and then, of a sudden, the few who remained turned tail and fled for their lives toward the rear of the castle but Riario, who cursed me vilely, turned and ran speedily toward the top of the big building. And there I came to a door which he thrust open, before he could close it my shoulder was against it and I thrust it wide.

It was a square, bare, stone room and standing erect in a corner it was Betsy, wide-eyed and expecting parted lovely lips, and little hands clenched into fists. Once she spoke to Riario leaped toward her, having a thought—to slay her there before my eyes. He was swifter of foot than I, and he raised his sword to strike. In a moment, and because I could not wait in time, hurled my sword at him even as his sword fell. And it was guided by God, flew straight as so that its point went in between the blades of his shoulders and came between his ribs in front. He fell with no sound save an awful gurgling throat and lay prone.

But his own blow had fallen on Betsy, white and still upon the floor which had been her sleeping place. Her eyes were closed. But there was blood upon her, either of her own or Riario's. My eyes were dim, either from the agony of the sight or with the tears that billowed through the door into the room. I threw myself on the floor and lifted her in my arms and fell against me so that her head lay upon my chest and her arms were loosed and spread itself over my face. And I dared to let my lips touch

wixt happiness that Betsy
fear that she could not

survive such a blow, returned to the now
flaming castle where outlaws capered
about great piles of loot and drank mer-
rily from butts of wine rolled up from
the cellars. There Tasso stood brooding.

"Payment will be exacted for this," he
said gloomily. "This Count Riario had
high connections."

"Among the slain or the prisoners," I
asked, "has any seen a fat monk or a
homunculus?"

"There be no prisoners," he said sim-
ply, "and among the dead I have seen
no monk nor homunculus."

"Of that," I said, "I must make sure."

So I searched and questioned, but no
man could remember seeing, during the
fighting nor since, the monk who boasted
that he was the hunting hound of the
Pope. In some manner, during the heat
of the fighting, he must have slipped
away and made good his escape, which
was an evil thing for all of us. For he
would make his way to Florence or else-
where with the tale of this affair; but
worst of all, he survived to continue his
grim pursuit of Betsy. And now the ad-
vantage was with him, for he had seen
her face to know it.

I returned to Tasso and told him the
tale.

"My men must scatter," he said, "for
we cannot stand against those who will
come against us. The escape of this monk
but calls for greater haste."

"I have brought this upon thee,
Tasso."

"A slight matter for us who are used
to being harried like wolves. Who shall
follow a flight of birds? Our booty will
be securely hidden and, when these hills
be safe again, we shall return to it. But
what of thee, Ser Englishman? Thou art
a known man."

"I go to Trebbio," I answered.

"When the maid can travel, if ever
she be able to travel again," he said
broodingly. He waved his hand to indi-
cate his followers. "These must be gone
ere nightfall, before a circle be drawn
around these hills through which they
cannot escape."

I signaled to Christoforo. "Comrade,"
I said to him, "gather the men of the
Black Bands and ride to Trebbio. The
monk hath escaped and will bring down
vengeance upon us."

"And thou?" he asked.

"The maid is hurt, as thou knowest,
and cannot ride. I remain with her."

"A well woman," he said, "is a vexa-
tion; an ill woman is a calamity. I will
see to it that they ride to Trebbio."

THROUGH the remainder of the day
troops of outlaws bent their backs
under burdens of booty, carrying all into
the fastness to be hidden in caves and
burrows, and then they vanished away. I
sat before the mouth of the cave in which
Beatrice ministered to Betsy, waiting and
listening and hoping and fearing. At long
intervals Beatrice came out to me and
each time her message was the same:
"She hath not opened her eyes nor re-
turned to consciousness."

At nightfall Tasso came, and Beatrice
came out and stood beside us.

"This spot will not be safe for thee and
her," Tasso said.

"My father," Beatrice said, "I think
to move her will be to kill her."

"Englishman," Tasso said, "I have re-
paid my debt to thee."

"Right handsomely, friend," I an-
swered, "so that now I am in thy debt in
a sum so great I never can satisfy it."

"My daughter is dear to me," he said.

I understood him. His obligation dis-
charged, it was time for him to look to
his own safety and the safety of his child.
"Go, Tasso," said I, "and my gratitude
will ever follow thee."

But now the child Beatrice stood
straight and gazed into her father's eyes,
and shook her head. "Thou mayest go,
my father," she said, "but I remain."

Tasso glanced from her to me and

frowned, and then, in a manner wholly Italian, he shrugged shoulders and spread his hands. He even smiled grimly. "Had I a house," he said, "I would not be master in it. Be it so."

"In a day, in two days," said Beatrice, "it may be possible to move her. Meantime, my father, cannot a few men remain to watch the roads and give warning?"

"Since," he said with some irony, "thou hast usurped command, it shall be so."

Then, among the rocks, I heard a scrambling, and Christoforo stepped into view, somewhat shamefaced.

"I commanded thee to Trebbio," I said sternly.

"Nay, Pietro—thy command was that some men should go. I be no Trebbio man. I am thy man. To obey thee in all things, save one. I am a leech. I cling to thee. I am a limpet. Command me to anything save to leave thee, and I obey."

Whereat he sat down beside the fire and assumed a most comically stubborn expression of countenance.

"Art a mutinous and intractable rogue," I said, my heart warm within me at his friendship and his loyalty. "Stay then, and have thy throat slit alongside thy betters."

THROUGH that night the maid Beatrice sat sleepless with Betsy whilst I watched outside, alternately drowsing and waking. Christoforo snored beside me. In the morning Beatrice came to me.

"She hath awakened," she told me, "but is bewildered. There is no fever, the saints be thanked."

"Did she speak my name?"

"Nay. There is only rambling talk of letters and of kings and of Venice."

"She will live?" I asked.

"I told thee in the beginning," Beatrice said somewhat impatiently, "that it was but a knock on the head."

"May I go to her?"

"Have patience," she said. "When she is like to know thee I will notify thee."

I sat there through the morning, not daring to stir lest Betsy should send for me, and Christoforo entreated me to eat and drink, but I had no appetite for it, but in midafternoon Beatrice came to me saying, "Since noon she has slept naturally. But now she is awakened and is reasonable."

So I went into the gloomy place and stood beside Betsy scarcely able to see her face.

"Ser Pietro," she said almost in a whisper.

"Betsy!" I answered. "Will all be well with thee?"

"Thanks to thee," she said, and I knelt beside her and took her hand in mine, which she did not resent.

"I came to thee," I said awkwardly, "as quickly as I was able."

"Aye," she answered, "quickly enough."

I hesitated over it, but because I must needs know or die of it, I stammered, "Did harm come to thee, Betsy?"

She smiled faintly. "I am as I was when they took me into that place—thanks to the monk. He thwarted Count Riario who durst not disobey him."

"I shall remember it in his favor," I said, "when I come to deal with him."

"Ser Pietro," she said, "thou must away to Trebbio."

"Wherefore?" I asked.

"To bear the packet to Venice."

"Not for all Venice nor all Tuscany would I leave thee."

"I command it," she said, rising to her elbow, but sinking back again dizzily.

"Nay," said I as gently as I could speak. "Thou knowest that I do love thee, and that whatever thou dost wish I will perform as well as I am able. But there is danger here, and I will not leave thee to it. The monk, of all that were in the castle, hath escaped. Ere long he will return seeking thee."

"The more reason thou shouldst go."

"I owe no allegiance to Venice, nor to Tuscany nor to any country or person but England and My Lord Giovanni and thee. And in this pinch my allegiance to thee is the chief of them."

"I tell thee," she said angrily, "those letters will ruin this Medici Pope."

"That is nought to me compared to thy safety," I said.

"I hate thy stubbornness," she said.

"It is the stubbornness of love."

"If I will love thee wilt thou go?"

"I will not buy thy love, nor do I desire any love that is offered for sale," I told her.

She turned away from me and buried her face, and I knew not how to deal with her or what to say or do, so I got up softly and went out of the tent a most unhappy man. For it did verily seem to me that the lass I loved was one who had no true love ever to give in return, but only regarded it as a merchant doth regard the wares upon his counter, and as a commodity to be used to accomplish her purposes. But she did look, as she lay there, so lonely and lovely that my heart yearned most painfully for her.

"Man for man," she said, "thou art his equal, aye, and better. Have we horses? How soon can they be in readiness?"

"I will see to it, Madonna," I answered, my head confused by her words, and that she held me in some small esteem.

I went down the devious path, but had scrambled but a hundred yards when I saw Tasso coming up to me. He waved a muscled arm to southward.

"They come, Ser Englishman," he said. "Fifty men. We must away."

"It was for that I sought thee, Tasso. My lady is fit for travel. She doth demand that we set out for Trebbio."

"No," he said. "Before we can mount and ride they will have the road—aye, and messengers will gallop ahead to arouse enemies against us. The Riarios have friends to the northward. Before this day ends, Ser Englishman, they will be coming at us from north and south. The mountains are our only refuge."

"Then," said I, "let us into the mountains, though it will displease her." . . .

What we should have done, or how we should have fared in those long days of lurking and hiding that followed, had

close to the things of nature, she bore more the maid I had first met in our English forest and less of the enigma that had always been to me. Young seemed, and with elements of merriment in her. And that stern impatient reach Trebbio and Venice seemed have been laid aside for the time, it ceased to urge us to it.

"Betsy," I said to her as we rested that night, huddling together for warmth, have never seen thee thus—a simple and not a mystery involved in things."

She smiled at me wistfully. "I think, because never before have I seen thee in peace. It is the solitude of these serene hills and the quiet and the peace that hath here been ordained by the saints."

"Aye," said I, "the affairs of man are far distant from us."

"See," she said, pointing to a crag that lifted its face far above the level of the plain, "that clean rock hath reared itself since Saint Adam and Saint Eve were in the Garden, it may be. It will be unchanged, a thousand years from now. She frowned and peered down at her lovely hands, by which I was able to recognize her in any disguise. "Come to that," she said, "a king or an emperor or a pope lasts but for a day. His deed is done and forgotten before the next grain of rock is altered by the action of water. It doth make one think of living humans and the mishaps that befall them, how awful to them are but short of little importance."

"God works in eternity," she said.

"Man's labor is measured by seconds," she said. "But for all that," she said, "for all the briefness of it, it is still necessary that we do in our allotted time the thing that has been allotted to us."

"If the thing be good and beneficial," she said, "but not if it be violent and cruel. Mayhap today's Pope, or King Francis or today's Emperor do great harm to the world so that they work to destroy them. But life is precious and the power to transmit life. Betsy, that this hour by the knife thou couldst destroy one of them. How may we say thou impeded the plans of God? If that tomorrow King Francis or Sultan of Turkey would beget a son who would live to be a saint and benefit to millions. A bad father would have a virtuous son. Why then we seek to break the chain of life."

"Thou art a philosopher. I do not see such thoughts resided in thee."

"Nor I," I answered, greatly surprised at myself. "I did not think that purpose nor out of wisdom."

"But," she said, "out of thy heart which it may be is higher than mine."

TASSO, who had been absent upon our pursuers, came back. His face was worried. "They are close about us," he said, "and in we do not starve meantime, come to us if they persist. Each circle narrows."

"Then," said I, "we must through it."

"Not to the north nor south," he said. "But by luck and the help of the saints we might find a road and escape to the eastward, where they will not expect."

Then up spake Beatrice and said, "I can conduct you to a safe refuge."

So we argued it and made it up. And upon a night when the moon was obscured by clouds and the stars twinkled icily we made our start. We went to the brink of the road, and we saw a patrol ride slowly toward us until their hoofbeats were silent, and then, one by one, they essayed the open road. There was no concealment, and so we went on, and the meadow that

BUTCH

by LARRY REYNOLDS

COLLIER'S

"Pardon me, miss, but your ol' man is puttin' on his bathrobe and slippers and he looks kinda angry"

That day dragged to its end, and yet another day, and Betsy did not ask for me nor did she permit me to come near her. On the third morning I looked up to see her standing, clothed and natural, in the mouth of the cave.

"Good morrow, Pietro," she said.

"Good morrow, Betsy," I answered.

"This day," she said, "we journey to Trebbio."

"Thou art not fit."

"Fit or no," she answered, "that is how it shall be, even if I must travel alone."

There was something in her bearing, something, mayhap, that comes of blood and high birth and so unfamiliar to such as I, that awed me and mastered me. Perhaps it was something individual to her—an indomitable courage and resolution that were a part of her.

"Thou shouldst," I said out of my thoughts, "have mated with My Lord, for he alone is worthy of thee."

Then she said a thing, the first of its kind she ever had uttered to me, and I knew not what to think of it.

"Art not such a poor stick thyself, Pietro," she said. "By how many inches doth Giovanni tower over thee?"

"All men unite to name him the greatest warrior of our age," I said.

It not been for the skill and knowledge and adroitness of the man Tasso, I do not know. He led us through those mountains, hiding us, guiding us where it seemed impossible for human beings to travel, as if he possessed the instincts of some wild creature rather than those of a man. Never did he lead us far from the road that wound northward to Trebbio and thence to Venice, and more than once we looked down from some high spot upon searching patrols.

The mountains were being combed diligently and with double purpose. First by retainers of the Riarios panting to wipe out in blood and cruelty the spite that had been done them by the killing of their kinsman and the burning of his castle; and second by the monk and his following of Passerini men, bent upon the capture of Betsy and of myself. I do not know how many men there were all told, but it seemed to me an army.

There were five of us: Betsy and Beatrice and Tasso and Christoforo and myself. At night we slept without fire and never was there enough to eat, though Tasso was a rare hunter. Betsy, for whom I had feared amid such hardships, thrived upon it, and—if that were possible—grew more beautiful. Certainly, thus

and safely reached the sheltering hills at the back of it. Elated at this success, we made our way up a tinkling brook for some short distance, when Tasso suddenly bade us halt. We could see, as we rounded a shoulder of the ravine, that its walls were lighted by flickering flames, and knew that ahead of us was a fire.

With finger to lips, Tasso crept forward, and I, clumsy as I am and ill-fitted for delicate work, crept at his heels. Not more than a hundred paces from us, in a sheltered dell, was a cozy fire, and the figures of two men sat close to it upon their hunkers. One was a soldier, the other was a broad, obese figure clad in monk's brown robe. Tasso's long knife was in his hands, and silent and serpent-like he slithered toward them. Then I saw him rise suddenly, arm uplifted—and the gleam of his knife.

EVEN as he struck I leaped to my feet, and careless of being seen, I ran to him. There upon the sands lay the soldier, twitching in his blood, and the monk, round eyes big and white with surprise and terror, hunching there unable to move or even to stand or cry out.

"So, Brother," I said as I stood over him, "the hunting dog is hunted."

He somewhat recovered himself at sight of me and recognition of my face. "I thought it was the wild men," he said, "who have no compunction of my churchly office."

"Whose protection thou dost little deserve," I said.

"Come now, my son," he said, his oiliness returning, "there have been some slight differences between thee and me. But nought that a reasonable man may not compose. I have made advantageous offers to thee," he said, "whereby thou might escape from Italy with wealth in thy pouch and the maid at thy side."

"Which," said I scornfully, "I refused."

"It will pay thee to listen receptively," he said. "Now, by delivering thee and the maid to Passerini I may win me an abbey. But even so I remain a churchman. I yearn for a broader and merrier life. I yearn for wealth to scatter upon my pleasures. Even now I can manage thy escape, and mine as well, an thou but make a partner of me."

"Betraying thy employers."

"Kings betray one another, and popes and emperors. Why should the privilege be denied a simple monk? Knowest thou the true name of the maid who is with thee?"

"I know it not nor care to know it."

"Nonetheless she is the key to the treasure of jewels I told thee of, and she can be profitable to both of us. The jewels of the Degli Albizzi."

"Stop thy tongue from clacking," I said to him, "and hoist thyself upon thy fat legs, for this night thou dost travel with us a prisoner."

He shrugged. "I have seen worse fates. At least I am alive, and while I am alive I may still do well for myself. Ah, here be the others. The good Christoforo and the brace of maids. A good evening to thee, Madonna," he said obsequiously to Betsy.

She did not return his greeting, but to me she said, "Remember, Pietro, he stood betwixt me and Riario's lusts."

"Not from chivalry," said I, "but for purposes of his own."

But for all that, I had a more kindly feeling toward him as I remembered it.

"Get to thy feet," I ordered, "and be-think thee constantly that my eyes are upon thee watching for some foul trick."

We dared not tarry, so, with Tasso leading the way and I with ready knife behind the monk, we plodded up the ravine, nor did we halt except briefly to rest the women, until the sun rose over the peaks and it was another day...

We slept until the hour of noon and plodded onward again, and one more night we slept in the hills before we plod-

ded on again, led now by Beatrice, who spoke not at all of the destination toward which she was leading us. And then, upon the third day we came to a land where the sun shone, and the trees were green and sturdy and the grass was lush, and before me, in long line, I saw a boundary of white crosses stretching back into the forest, and I knew to what sanctuary we had come.

We crossed that line marked by sacred symbols, and somehow it seemed to me that a weight was lifted not only from my shoulders but from my heart, and that peace surrounded us here, and virtue. Even the grazing deer but lifted their heads to gaze at us with big, liquid eyes, for there was no fear in them, nor in the birds fluttering near us.

"What is this place?" Betsy asked of me in awed voice.

"Here," said I, "is an island of serenity in an ocean of strife."

With Beatrice walking sedately ahead, we came to the curving road which I had trod once before, and we climbed it until we came to the knoll. There, robed all in white as before, stood the man with birds perched upon his shoulders. Never upon

And this he carried to Betsy's feet bling at the string that closed it.

"See," he said with childish gl have been faithful to thee. For the I preserved and hidden it, wracked by torture. For thee, m and my mistress."

And then, the pouch being c he poured upon the ground before gleaming, sparkling stream of wh red and yellow and green until it a heap upon the grass giving b rays of the bright sun.

I HEARD the monk grunt as if I been smitten in the stomach. "lives," he said in a whisper, "the of the Albizzi!"

Betsy, unheeding the wondro of jewels, was bending over t lamite. "Niccolo! Niccolo!" sl and heartbreak was in her voice find thee thus!"

"I have been faithful, dear m have been true to my trust. The not tear the secret from me."

"Better had they done so, N She turned brimming eyes to n doth think I am my mother,"

human face have I seen such calm nor such goodness nor such kindness.

"Welcome all," he said in his deep, rich voice of music. "Even thou, my brother," he said gently to the monk. "Rest here in peace, for no harm can reach thee in this sanctuary." He stretched out a slender hand toward Betsy and his lips bent in a rare smile. "I have long awaited thee," he said.

"Thou hast awaited me, Father?" Betsy exclaimed.

"Aye, child, waited yearningly for thy vexed and driven spirit to rest here and to be refreshed."

THEN a strange thing happened, a startling, bewildering interruption. From the door of the little house darted a ragged, twisted and crippled figure of a man in evil rags, and this creature threw himself at the feet of Betsy and clutched her skirt and bore it to his lips.

"Madonna! Oh, Madonna! My sweet, beloved mistress. Thou has come to me at last. My sweet mistress that I love."

I knew not what to think, for here, when he should have been in Trebbio, was the bedlamite Niccolo Gozzoli, not mumbling like a madman, but speaking in that strange, harmonious voice which my ears remembered well.

Then, suddenly as he came, he darted away upon his bent and broken legs, into the house, and then out again, clutching in his gnarled fingers a pouch of leather.

"Am I then, my father, to forgive these Medici?" she asked stubbornly.

"Thou art not divine but human," he said, "and such forgiveness is above the powers of mortal man. But let not sin begot sin. Remember thy wrongs, for thou canst not forget them, but leave the imposing of retribution to God."

I heard a babbling sound and looked down upon the monk, and so foul an expression of lust and greed have I never seen upon a human face as he played with the gems, letting them slip through his fingers greedily and picking them up again to feel them with his flesh. The face of the hermit was stern.

"Man," he said, "rather would I be thief and murderer than thou, for thou hast been false to thy vows and recreant to thy holy calling."

The monk looked up slyly. "Give me but these," he said, "and thou canst have thy bliss in an uncertain hereafter."

A spasm of pain crossed the lofty face of the hermit, as though he felt in his own flesh some pang, and he sighed. "My daughter," he said, "come apart with me."

He took her by the hand and led her across the sward and into the green wood, and I remained, standing over the monk to see to it he filched none of the jewels—for I be a practical man and cannot abide to see good property lost by foolishness.

"What is all this mystery?" I said to him, because I understood none of it nor what it signified.

"Thou dolt," he said harshly. "Thou simpleton. Thou half-witted son of a wild ass of the hills! Thou wouldst not listen to me, nor be partner to me, and now we have lost all. During all the days and nights thou hast spent with her hast asked no questions, nor sought to learn her secrets?"

"Nay," I responded. "Her secrets were her own."

"Then I will tell thee."

"I wish not to learn from thy lips. If there be anything she wishes me to know, she will disclose it."

"Fool!" he said. "This maid thou dost in thy rusticity call Betsy is heir to a great family—the last of the Albizzi. Named Clarice after the wife of the Magnificent Lorenzo. Aye, and should the wheel of fortune turn in Tuscany, wide lands and houses in Florence and wealth would be restored to her. And thou, dolt, doth love her and desire her as some herdsman of sheep desires the maid of a village! She is as far above thee as any star in the heavens which thou might hope to clutch and wear in thy cap."

TO THIS I made no reply, being, to my sorrow, in agreement with it. I thrust him aside, gathered up the treasure and poured the glittering baubles into the leather pouch, and thrust it under my belt. He watched me with avid eyes.

Tasso, who was standing at a distance, growled and stepped forward a pace. "It were best, Ser Englishman," he said, "were I to search about in his liver with my knife. It will avert future troubles."

"It may come to that," I said for the monk's discomfort, "but not here in this place of peace."

I walked away from them and sat me down on the sward and brooded. I was conscious of the weight of the pouch of jewels dangling from my belt and it added sorely to my heaviness of heart. Now that I have reached respectable age I can look back upon my youth and understand many things that then were hidden from me, and one of them is that in a young man abides a great supply of that thing called vanity, though he is not aware of it. It is this vanity that enables him to hope in hopeless situations. He believes wonders can happen to him, and that he has been especially singled out by Providence for favor. He cannot down the belief that whatever he desires will somehow come to him no matter

how impossible it may be. So it had been with me and my love for Betsy. Always there had been some remote hope.

But now I despaired. It is one thing to love a homeless, nameless, mysterious maid. It is another thing to raise your eyes to one of illustrious birth. And now, added to the nobility of her lineage was what seemed to me enormous wealth. Also there was my pride. Now, with her treasure in jewels at my belt it did seem to me that my wooing might seem to her to partake of self-seeking and the desire to participate in that richness. Gloom beset me and self-pity.

As I sat thus miserable I saw the white robes of the hermit and Betsy's blue gown come forth from the circling trees. The hermit left her and went into his dwelling and she stood there looking about her uncertainly, as if troubled in mind. The sun was behind her, glorifying her hair, and turning her rags into rich embellishments.

IN SPITE of myself I was drawn toward her as by some magic power of attraction, and I stood before her, awkward and unsure.

"Madonna degli Albizzi," I said, and that was the end of it because no other words would come.

"The monk told thee," she said.

I nodded.

"Then, Pietro," she said to me, "perhaps thou will understand much. Mayhap thou will understand why I have not been like other women, and why, driven as I have been, and hating as I have hated, I have been under compulsion. From my babyhood I have been taught to hate and not to love. I have been educated, not as other women, to be soft and alluring, but in other, darker arts which would aid me in the mission which was mine. To be the enemy and to seek the downfall of any bearing the name of Medici. I have engaged in plots. I have sold my wits and my beauty to those, who for any reason, were their enemies. I have plotted for them, spied for them, stolen for them. I was well taught and I have accomplished more than a man could accomplish."

"It is not for me to censure thee," I said dumbly.

"I have used thee to thy disadvantage and danger."

"I would have served thee in anything," I said, "hadst thou but asked." I hesitated after this and stared at her beauty which in this moment seemed more wondrous than ever before. "Because I loved thee beyond all else, and cared not if thou wert worthy of it."

"The loneliness of mountain fastnesses, and the still, starry heavens at night, and the remoteness of the world," she said, "are wiser to instruct than all the great teachers of the world."

"I know not your meaning," I said.

"I learned another thing, Pietro," she said, "and that is that in all women resides a force stronger than will because it comes from nature and not from thinking. I discovered that all plans and all intentions must give way to it, because it hath been implanted in women by the law of God. There is a reason, Pietro, why women are created women."

I was bewildered. "And what is this reason?" I asked in my simplicity.

"They are created women," she said patiently and sweetly, "in order that they may love and attract the love of a man, because only by this can one generation follow another, and the evils of one generation be amended by the next."

"That I understand in some measure," I said, "but all this thou hast forsworn."

"Look thee, Pietro. A pope lives but for a span of years. A family lives but for a few generations. Who is alive today who may claim the great Alexander as his ancestor, or Caesar? What great family is there that carries on forever? Even the Medici will die out."

"Nothing is eternal save God," I said. "God," she said, "and the love of man

Who will try to "lift the mug"?

1851 America's Cup, "the old mug," has had millions spent in its defense and challenge, though it's worth under \$100. Won by the schooner *America*, racing against the cream of English yachts, it came to the U.S. seven years before the name Corby's came to Canada.

1899 A great name in yachting and a great challenger, *Shamrock I* was soundly trounced by *Columbia*, the U.S. defender. As the name Corby's went into its 41st year in Canada, international sailing supremacy was firmly established here. But there were more thrills ahead.

1937 Most recent bid was made by the yacht *Endeavour* off Providence. It fared no better than its predecessors. stayed in the U.S.—*Ranger* won four straight races the year the name Corby's reached anniversary in Canada.

1947 You, like many others, may hope for a Cup challenger soon. Who'll build a costly racer is the question, but someone will succumb to the greatest sail racing challenge in the world. So raise a toast to *America*—the grand ship that first won "the mug" and make it a toast with Corby's. This sociable whiskey with a "grand old Canadian name" has a special knack in favorites from the bar.

man and of woman for man, thus by Heaven. What, Pietro, did God's occupation if there were no human bodies holding souls to Paradise?"

"He be deep thoughts and beyond comprehension," I told her.

"I must e'en be simple and plain understanding," she said. "Canst thou say this: That it is vastly more important that a woman love a man than destroy an empire?" She paused and looked up into my eyes so that all inside me quivered with yearning. "And wondrously more so," she said.

Yet I stood, a dumb dolt, knowing not what to think nor what to say. Then, patiently she prompted me so plainly that even my slow mind caught something of her meaning. "she said, 'thou hast declared thyself to love me. Was it but words, or was it more than words. The voice of my heart.'"

"I desire thee, Pietro, as a man desires a woman may become his own," she said.

"I said, 'that is the way of it, remember,' she said, 'the words be few and easy to remember. They be only three. To thee.'"

"I insisted."

"I said obediently. 'a little step closer to me, and something that had been in her heart deeper and stronger and I was blinded by the sight of thee.'"

"I said softly, 'doth that not seem a request?'"

"I said, 'to another step, not so high above me in wealth.'"

"I said some other—say the maid in thy English garden thou didst succor and turn to thy request?"

"I answered, 'right heartily. I love thee, maid. Wilt thou be mine forever?'"

"I said more softly, 'I said.'"

"I said simpleton that I was, I said what she was about with so many arguments, but even yet I believe it. But thank God for the within me that caused me to my clumsy arms toward her, and into them and was close to her. I could feel the supple response of her body; and, I think I must have cried out, for she looked at me and smiled gaily as if at enjoyment of some rare humor. My happiness was complete at what she had done—for, by letting her hair loose about her as she knelt to take the marriage vows before the altar, she averred that she came to the marriage state a virgin."

"I said, 'thou hast done even against my will, and that is in thee, and the loyalty and the most discretion. But it did require high-sounding words and bring thee to the point.'"

"I said, 'Dost thou ask, still incredulous, to stoop to wed with the'"

"I said, 'an thou wilt have me,' I said, 'king me as I am with all my love or suspect of my con-'"

"I said, 'I would forget thee.'"

"I said, 'by the hand, she led me to the hermitage, and the hermit, white, came and stood in the'"

"I said, 'smiled and said to Betsy, 'th the twain of ye?'"

"I said, 'But I was hard on him bid me.'"

"That stands in his favor," said the hermit kindly. "And now what is thy will?" He looked at me as he spoke this question, and I was mute, for I did not know what I wished him to do.

"Must I ever be the forward one?" Betsy asked. "Then so I will be. Father, this backward man desireth to wed with me."

"What day and what hour?" he asked, his eyes alight.

"Too many days and hours have passed, and all too few remain," she said with downcast eyes. "I be impatient and desirous. What is thy wish, Pietro?"

"Father," I said, bedazzled by all that had happened to me, "wilt wed us now?"

"Right gladly, my son," he said and led us within where was a little altar and candles alighted. Behind us came Christoforo and the maid Beatrice, who wore a strange, unreadable expression. But Tasso stood in the door that he might keep an eye on the monk.

Then Betsy and I knelt before the altar and the hermit, and I saw her hands

lodging of King Francis. They must I take to Venice. After that, my Pietro, I am thine forever to do with as thou wilt."

"To take to England?" I asked, for she was a great one of this land, and that was a point that troubled me, seeing would be but a simple merchant's wife in England, and I put that thought into hesitant words.

"No simple merchant," she said, "but a knight at the hands of the Most Christian King. Aye, I will to England with thee or to Cathay or the Islands of the Sea."

Then, carried clearly on that serene air, came to my ears the sound of voices lifted in song—the voice of men who sang an air with beat and lilt to it. Faintly it came to me from the westward—the marching song of the Black Bands.

Then did I seize her hand and we ran together like children down that slope to the barrier of white crosses and so to the road that led toward Trebbio. And in a moment, rounding the bend came a company of My Lord Giovanni's men riding

drawbridge and into the courtyard John Peter the manikin, who had escaped from Riario's castle and made his way to Trebbio, capered about us as though he had gone mad in his delight at seeing us again.

Once more I saw my sweet mistress, and she kissed Betsy upon her cheeks and gave her welcome. She gave us news of Lord Giovanni, how he was much restored and was on his way to Venice. "But he will decline the offer of the Doge," she said. "Venice be no fit employer for him, for Venice will never fight when plotting or negotiation will serve. It is his intent to go to Fano and there fit out ships to harry the Turk."

That day came her brother, the Cardinal Salviati, and he was right courteous and kind to me so that I dared speak to him of my personal concerns, namely the mission upon which I had come to Italy, and the funds due my father from Florentine merchants.

"For thee, Pietro," he said, "it will not be safe to go to Florence. Thou hast enemies. The Cardinal Passerini will do thee harm. But this other, this matter of business, is a small thing, and I will direct my secretary to have it strictly in hand."

I thanked him humbly. "Your Eminence," I said, "there is yet one other thing. We have for prisoner a monk, an evil man, the hunting hound of the Pope, who, so long as he lives, will be snapping at our heels."

"He hath been a thorn in the flesh of many," said the Cardinal sternly. "The bishop in Milan hath a prison with right sturdy walls and a cell that he will lend to me cheerfully. Give thou this monk to me, Pietro, and I certify that he will trouble neither thee nor any other until his spirit hath been chastened and his body mortified. As for thee, my friend, my advice is that thou betake thyself out of this Italy speedily. For there is no safety here for thee or thy wife. There is peace for a time, but the time will be short, and then, I fear me, troubles will fall upon Italy such as we never have seen."

NEXT day we bade farewell to My Lady, whom I never was to see again, but who was to write the sorrows of her heart to me in the tragic days that followed. I took Tasso by the hand and thanked him, and bent to kiss the maid Beatrice upon cold lips. And Betsy kissed her and spoke gentle words to her.

The last I saw of Trebbio was this maid standing straight, arms close to her sides gazing after us.

"That maid," I said to Betsy, "sorrows to see us depart."

"Aye, simple one," said Betsy.

So we rode northward with our escort and came to Venice where My Lord was sumptuously lodged at the expense of the state, and his name was in all men's mouths and when he went forth he was the hero of the people. He did not walk with his old-time vigor, but this limp, his physicians told him, would soon depart, and he would be as sound as ever in his life.

As was always the way with him, he was in trouble because of the behavior of the Black Bands when there was no fighting for them to do, and claims for damages because of their marauding and looting, which kept him ever in a state of poverty. But his determination and his hunger for glory flamed as brightly as ever. It was his plan now, while no other employment offered, to become an admiral and take to the sea, using Fano as a base, and to prey upon Turkish and Saracen pirates who harried the sea.

The boyishness in him, and the lust for life and pleasures, was as strong in him as before his wound. He was reluctant to part with me.

"Tarry here with me, Pietro, and I will make a soldier of thee," he said, clapping me on the shoulder.

"I have no joy in war," I said to him,

"But if you aren't a little girl, why are you dressed like a little girl?"

COLLIER'S

GARDNER REA

busied with the fastenings of her hair which she loosened so that it fell down in a glorious mantle to her waist. Whereat I think I must have cried out, for she looked at me and smiled gaily as if at enjoyment of some rare humor. My happiness was complete at what she had done—for, by letting her hair loose about her as she knelt to take the marriage vows before the altar, she averred that she came to the marriage state a virgin."

Then there was reverend silence as the hermit spoke the words and touched our heads with blessing palm, so that when again we stood upon our feet we were no longer two, but one. And all the glory of the world flooded through the window, riding upon sunbeams, and I could not speak for the joy that choked me.

IT WAS midmorning of the next day. Betsy and I were walking hand in hand in that serene oasis. We were as one at last. She was the Betsy of our forest—simple, tender, eyes misty with love.

"Is it true, my darling?" I asked.

"All true," she said softly.

"Hast left all this turmoil and plotting behind thee forever?"

She looked at me, and her face was suddenly grave. "Save for one last obligation," she said. "There are the letters of the Pope that I filched from the

on horseback, led by one of his chosen captains, a certain Neapolitan named Galeazzo. I called his name urgently, and he recognized me and waved his hand and called his men to halt.

In quick words I told him what had befallen and of our need and how the retainers of the Riarios were betwixt us and Trebbio. He smiled thinly.

"I am ordered thither," he said, "and then to Fano, on the coast. My Lord hath gone to the baths and will journey thence to Venice to consult with the Doge who hath offered him full command of all Venice's armies."

"How doth his leg mend?" I asked.

"Sweetly," he answered. "Another month and he will be fit to lead men in battle."

"Wilt pause," I asked, "until we can be ready to travel in thy company to Trebbio?"

To this he consented and bade his men be at ease. Betsy and I climbed the slope again and in the little room knelt to receive the blessing of the hermit. Then, with Christoforo and Tasso and Beatrice—and with the monk for prisoner—we said farewell to that fair spot and to him who made it so, and joined the companions. Spare horses carried us on our way, so that we reached Trebbio with no mishap, and as we rode across the

"and England and my father and mother call to me."

He laughed gaily. "And thy woolen cloths," he said jeeringly. "Thou a knight! Nay, merchanthood is not thy fate, Pietro. Thou shalt see. An thy King Henry be half the man I take him for he will roust thee out of thy shop and set thee to man's work. For though there be thin peace this day, it will not long continue, and thy king will have need of such men as thou hast shown thyself to be."

"I be a man of peace," I said, but he only laughed at me, and he was a better prophet than I.

The end of it was that through his influence Betsy and Christoforo, who vowed he would never leave me, and John-Peter and I were granted passage on a swift galley carrying orators to Naples for some high negotiation. Thence we took ship to Livorno, and these days upon the sea were happy days for Betsy and me, during which we grew closer together and learned each other so that neither had secrets from the other, and our love increased with the days.

An English ship was in that port, owned by a friend of my father's, and we were taken aboard her to sail southward again, past Sicily and through the Pillars of Hercules. At last we sailed past the white cliffs and into home waters and came to anchor in our own Thames River.

NOW there is the end of my adventures in Italy, all foisted upon me against my will and by circumstances. But I did not regret them, because they had given me the friendship of the greatest warrior of the age, and the sweetest wife man ever had.

We landed shortly after dawn and were driven through London streets to the house of my father, where I was received with joy, and Betsy with wonder. Nor to my mother's practicality did it decrease my wife's charms that she brought such wealth with her.

Cardinal Wolsey, who knew all things, heard of my coming, and sent for me and questioned me upon this and that, and seemed darkly pleased with the things I told him. Also the King himself admitted me to his presence and nothing would do but I should relate to him my adventures and how I had been knighted by the Most Christian King.

"Now, great yokel," he said jovially, "thou hast a noble wife. Thou art a knight, made for valor upon the field of battle. Thou hast studied war under the tutelage of the greatest general now alive. Let common men sell woolens. England hath need of such as thou."

"But, Your Majesty—" I started to protest.

He frowned and I was afraid of his anger. "Art a knight," he said. "An I give thee a coat of arms and ennoble thee, hast thou wealth to support it?"

"My father's business is profitable," I said, "and My Lady wife, being heiress to the Albizzis, hath great wealth in jewels."

"Most excellent," he said. "Leave thy father to his woolens. Thou shalt serve me. I create thee baronet, and when thou hast earned it thou shalt climb even higher." He grinned at me broadly as is sometimes his way when he is genial and harmless. "I have liked thee, Sir Peter, since that day when thou didst confront me and shoot thy arrows with such skill."

So, willy-nilly, I took service with my king, and truth is I never have regretted it, save that it cost me many days of the company of Betsy.

At her wish we bore the treasure in jewels to that street where merchants deal in such baubles; and, being well advised, we sold them for a great sum, so that we were rich as many barons and earls. And with a part of these moneys we bought lands surrounding our farm and built upon them a handsome house

over which Betsy presided wondrously.

News reached us from Italy and the Continent. In May of the next year, 1526, the Holy League of Cognac was made and war descended again upon Italy. My Lord Giovanni was recalled to the service of the Pope and speedily added to his glory and his reputation for rash valor.

Then, in December of that year came dire news: My Lord was dead. In the very moment of victory, as he turned his great charger Sultan, he was struck again in the same leg that had received his former wound, but in much more terrible way, and of it he died in great pain. With rare courage he endured the agony of the saw when his leg was cut from him.

Then, a confessor being called to him, he said, "Father, being a professor of arms, I have lived with the habits of soldiers as I should have lived like monks had I put on the dress you wear. Were it allowed, I would confess before everyone, for I have never done anything unworthy of myself."

In dying he was in no manner changed from the sort of man he was while life lay before him gloriously. He died with courage, fortitude, and as his confession

whcedled. "Wife, fetch out thy ball, so I may gaze into it as I gaze it in times past."

"Nay," she said, "the crystal ball behind me in Italy with all that went with it. Never again shall I or thou traffic with it."

I had never dared to ask about now I ventured. "By what art didst bring it about that I saw picture the crystal?" I asked.

She laughed at me then, gaily. "I see pictures," she said, "I thou wert and art a great, simple creature that I could command to do my commanded thee to see and the obey."

"Is that all there be to it?" "All," she said, "that is fit ears."

Then, for I was very pleased with self that I had begotten a child, and considered it a wonderful feat for a perform, I questioned her as I had a hundred times before. For the hearing her tell it to me.

"When," I begged of her, "d love me, sweet?"

"I think it was in your forest fled from the fair," she said.

"Wait'll you hear this record, Daddy! It's by a new singer named Al"
COLLIER'S

showeth, a childlike belief in his own rightness.

So in a miserable skirmish died my master and my friend, and the noblest heart and greatest general of his time. And I donned mourning for him as though he had been my relative.

Thoughtful and knowing men have told me since that had Giovanni de' Medici lived, there had been no sack of Rome, nor imprisonment of the Pope in Hadrian's tower. And that the evils which rained upon Italy and the church would not have come to pass had his genius been there to lead her armies. . .

A score or more of years have passed since that day, but I remember him now as I last saw him in battle, and ever so shall do.

The little Cosimo who used to play about my knees hath become Duke of Florence, which no other Medici ever was; but he resembleth not his father, so they say, for generosity is not in him, but coldness and stealthiness.

To my great rejoicing, somewhat after Yuletide, I learned that Betsy was with child, whereat she was as glad as I.

"Wife," said I, for the matter seemed of import to me then, "I am hungry to know if it is to be a son."

"It will be," she said, "what God wills, and I care not which, because it is thine and mine conceived in love."

"I desire a son," said I. And then I

"That is when I loved thee. . . Then she laughed at me as I do almost every day, and said it is not so important to know loved thee first as to know cease to love thee."

"And when," I asked qual that day be?"

"That," she said, "doth d thy good behavior."

So I have always endeavored have toward her in such I should not lose her love, and have been successful, for thinks, the affection is strong now that our two sons and full grown, than at the very Which, or so it seems to me Heavenly Father intended t should be.

The years have slipped a traveled far and seen much, there, in various lands and v I meet with men who, in manhood, were enrolled Giovanni's Black Bands. matter what wealth or honor to them, that fact is their cl it is with me. For to str been known to boast, and B about my vanity.

ambition is corrupted by customer authority. Beginning today I try to fulfill. These pages will

Rufus Nutter did the unforgivable. He unpunished Theoda's world view, the same as tearing down Barlow. He suggested that she drop the candy-striped cover and the carbide burner and reconsider the part of the movies.

Why don't you go back in and you look as though you'd be off?"

"We aren't friends any more,"

that's the most deliberate and understatement I ever heard. do you hear?"

NT, and for a while Theoda pondered whether to put him in the way he belonged, but just concluded she would stretch the method a little and ignore the duration of the study she did his company.

ed some of the flavor went

as scientifically as pos- whet up Barlow's West-

ern appetite a little, Theoda thought.

He did not appear the first week end as she had hoped, but a brief note said he would surely arrive the following Saturday and would bring Dr. Clifton whom he had mentioned in his talks with her. Dr. Clifton, it seemed, was most interested in the project. Theoda had no memory of ever having heard about the doctor.

At the appointed time she drove to the station to meet Barlow's train, and was startled to see him assisting an attractive if somewhat aloof female to the platform. The female was certainly not over twenty-eight, and she had a lot of shining brown hair under a feathered beret, an apple-green suit, and eyes which said they knew all about this sex business and dared you to make anything of it. Such was Theoda's first impression, but on second thought it occurred to her that they dared you to make anything of it, which was quite different, especially if the eyes were turned toward a male. Theoda herself was all the other way, and she felt inferior.

DOING ALL RIGHT

The child today lags far behind,
He's lazy and he's dumb,
You rant;
But can you make a yo-yo wind,
Can you blow bubble gum?
I can't!

—Richard Armour

"Oh, Theoda," said Barlow. "Here's Dr. Clifton. Isn't it splendid she could come?"

"It's scientifically perfect," said Theoda, meaning every word and not an iota more.

"I've heard so much from Barlow about this whole plan," said Dr. Clifton, "and I can't wait to see your notes."

"Oh, yes," said Theoda, "my notes."

It wasn't that she hadn't been scientific. The trouble was, she had been scientific in a special way. She would have given a lot for the chance to do some last-minute editing, but no sooner were the crisply mannered doctor and Barlow Crane appropriately registered in rooms on different floors at the inn, than the subject of the journal came up again in a pressing manner.

Establishing the visitors on the southerly side of the Bearse house but not in the hammock, Theoda produced the goods. Barlow, to her regret, read the first entry aloud.

"Saw an albino robin at sunrise this morning."

It had seemed, at the time, like an arresting and romantic opening, besides suggesting an agreeable tendency on the part of the young female to rise early. Everyone in the West, she figured, rose before dawn.

"Environment," Theoda ventured apologetically. "The relation of the individual to the environment."

"But why an albino robin?" asked Dr. Clifton, still puzzled.

"I don't know," said Theoda. "It just was."

Barlow read on and the dope got better. He was presently in the midst of a lot of intensive New England housewifery which went big. Theoda felt a little shy when it seemed to be going so big, thinking that maybe she had overreached. But no, Dr. Clifton was enthusiastic about the authentic delineation of the function of the female in the New England home. Theoda didn't care for

her tone of voice, but she had no kick coming. The New England home was secondary or even tertiary in her present calculations.

When the reading of the journal was concluded, and Dr. Clifton had offered some concise and unwelcome suggestions, Theoda was allowed to guide the pair around the village. It wasn't good, but it wasn't really bad, because Barlow kept firing questions at Theoda, which made her the main attraction.

The village was small, however, the tour was soon over, and Dr. Clifton was saying, "We've taken too much of your time, my dear. You must run along or you'll never catch up with your domestic tasks."

"What domestic tasks?" asked Theoda.

"The ones you put in the book," said Barlow.

"Oh," said Theoda. "Those."

So there wasn't anything for her to do but go home, and darned if her mother wasn't beating rugs. Mrs. Bearse owned a vacuum cleaner but lacked complete faith in it—which meant that Theoda had to whang the daylights out of a heavy nine-by-twelve while she caught glimpses of Barlow and Dr. Clifton picking their way along the rippling edges of the harbor below the Nutter place.

She did not see Barlow or Dr. Clifton again until they came to call at the Bearse home that evening. The conversation was mainly between her father and Dr. Clifton, and it ran to Captain John Smith, arrowheads, and Captain John Smith. Judge Bearse didn't need any priming. One word and he was off. Theoda left herself open to Barlow's attention, had he been so minded, but he was concentrating on the patriarchal peculiarities, and also on Dr. Clifton.

When the time came to adjourn, Theoda insisted on walking back to the inn with the visitors. It was a moony night, swimming with the raw material of the soul, but she derived no kind of benefit. She fretted about Barlow. I can't figure him, she said to herself. He's evidently afraid of pursuit by females, but this doctor gal has him looped in a slow walk. Wonder if by chance he thinks he's pursuing her? Something should be done for that kind of ignorance.

ONLY once did Theoda and Dr. Clifton have a direct exchange of words, this being when a fishing boat throbbed into the moon-dappled harbor.

"What's that?" the doctor inquired.

"A Nutter," said Theoda shortly.

"Another what?"

"Just a Nutter," said Theoda irritably, and Barlow had to break it up.

When Theoda reached home again, the judge was expressing laudatory opinions of Dr. Clifton who was, he declared, a well-informed woman. At that, he didn't half know how well informed she was, or by whom. The following day, Sunday, wasn't much so far as Theoda was concerned. She took Barlow and the doctor to church, after which they left her to practice her New England customs while they occupied themselves in ways she was left to imagine. She was glad when they took the evening train. . . .

Beginning at sunrise Monday morning, the young female discontinued the performance of all domestic tasks. Mrs. Bearse remarked that she had known it was too good to last. Theoda missed this practical philosophy, however, for she was deep in thought, with nothing coming of it until nightfall. In the dusk Rufus Nutter appeared. It had been his fishing boat returning from the grounds the previous evening.

"Hello, sweet," he said.

"If you come within hitting distance

get hit," said Theoda. "Have you seen how we parted?"

Doesn't pay to remember every-

...be it doesn't, at that," said Theoda. Her mind illumined by a sudden thought, the reward of diligent thinking, she leaned against an apple tree, her fingers inside of her slacks.

...s a peachy sweater you've got Theoda."

...more of a fuchsia."

...ess I shouldn't have said what I said about you being the right size for a man. You'd be swell anywhere. I wouldn't go big out West."

...s nice of you, Nutter," said Theoda. "Although there can never be a friendship between us, and a limited edition of that, I am willing to make up and let you kiss me. This is a general rule, but after all, engaged once."

...ner than that," said Nutter, almost to her in the shadows of the tree.

...t his arms around her with gentleness and kissed her softly and contently, but she was in no doubt, less, that she had been kissed.

...night, Nutter," she said, for he served the purpose of her intention.

...We had better call it a day and start fighting again."

...didn't wait to see him go, for she wanted to get to her Anthropological and put down something warm about the sex life of the young female—

...it to knock Dr. Clifton's eye give Barlow Crane a shot in the head.

...If he needed awakening, and thought he did, this ought to do it.

...As in most matters requiring discretion, she resorted to the back porch and a convenient light. The trouble was Nutter had not gone. She saw him there in a posture of suggestion.

...She did not care for his suggestion.

...," she said, "you must take a look on yourself. Maybe this isn't the best thing it is."

...n't say anything.

...go home," she said. "Go on. Don't you dare!"

...S point Theoda concluded that it was unwise to remain where she was, closed her journal and departed.

...was not disposed to confront her own parents with the journal, but she was inclined toward her present mood, she chose the path through the woods.

...she was reluctant to look back, but she did look back at her footprints. She broke into a run. Then she did look back at what she had expected. Nutter was a good clip. She increased her speed. When the path turned, she found a tree while Nutter went on and came back.

...he could not hope to outdistance her on the straightaway. Theoda ran. She leaped for an overhanging branch, caught it, and swung.

...She had not been in a tree for so long and never after dusk, but she was to handle herself. She went on until most of the treetops were level with her vision or below.

...darkening night was beginning to be marked by the twinkling stars. She was silent.

...," she called.

...are you?"

...down here on a seat of moss."

...n't you go home or some-

...er.

...you might climb up a tree of some kind and look at the view. I bet you can see the roof of the forest un-

...s."

...You may think of me as being eternally here," said Nutter, "waiting faithfully by the path. There is no way you can get me to budge."

...Blast you, Nutter. I despise you."

...How are the stars holding out?" he inquired.

...After a while she went lower in the tree in order to converse with him more easily. She was afraid that verbal negotiation would come to nothing, which was exactly what it did. Meantime the limbs were increasingly uncomfortable. She had tried all the large ones. The moon rose, proving the hour to be later than she had hoped. There might be search parties soon. The thought disturbed her.

...Nutter," she said, "I'm coming down. I warn you that the future of our friendship depends on how you conduct yourself, and I must ask you particularly to remember your upbringing and your sacred repressions."

...She hesitated on the overhanging

...branch, then leaped. He caught her, and they fell to the ground and rolled over together among the leaves.

...As soon as they were upright again, he was kissing her, and the execution was more earnest and intense than anything in her experience or fancy.

...For a lean guy, she acknowledged unintentionally, he could make himself remarkably snug in the clinches. Golly!

...But ultimately the pause came during which she could assure him of her utter detestation, and after that, they walked home, Indian file, along the path. . . .

...As Theoda lay in bed, she fumed. If Nutter thought he could get away with that sort of thing—and then she forgot about Nutter for a minute. She sat up in bed. She grabbed her journal, which she had retrieved in the woods, and switched on the light. Smiling demurely, she wrote. She wrote with enthusiasm. It wasn't so much a case of making Barlow jealous as it was of teaching him the facts of life in New England, drawing him out of himself, and avenging those signs of over-indifference she had been compelled to notice in him lately.

...On Saturday, Barlow and Dr. Clifton arrived as planned, and Theoda walked with them to the inn and hung around while the doctor made allusions to various provincial matters, including Captain John Smith.

...You may think of me as being eternally here," said Nutter, "waiting faithfully by the path. There is no way you can get me to budge."

...Blast you, Nutter. I despise you."

...How are the stars holding out?" he inquired.

It wasn't so much a case of making Barlow jealous as it was of teaching him the facts of life in New England, drawing him out of himself, and avenging those signs of over-indifference she had been compelled to notice in him lately.

...On Saturday, Barlow and Dr. Clifton arrived as planned, and Theoda walked with them to the inn and hung around while the doctor made allusions to various provincial matters, including Captain John Smith.

...Shall we look at the notes?" suggested Barlow.

...I brought 'em along," said Theoda, producing the journal.

...Even in the prosaic domestic passages," said Dr. Clifton, "there is a pastoral quality which I find refreshing."

...But Barlow was way ahead of her, his

...eyes fixed on the journal. "Zingo!" he said. "Wow!"

...Evidently these remarks were involuntary. He did not smile as he uttered them. Next thing, while Barlow held on to his chair, Dr. Clifton was reading; a subtle change seeped into her expression. Theoda judged that things were, indeed, roused up; she retired to await developments.

...Developments were not long in coming. A little before noon, Barlow appeared at the Barse house, alone. He seemed agitated.

...Where's the Doc?" asked Theoda.

...I don't know. Now please don't ask me to sit in the hammock."

...I wasn't going to," said Theoda falsely.

...I'm worried about Ruth, I mean Dr. Clifton. She was disturbed. We finished reading the journal, and after that she thought we should take a look at this Nutter person. And then I lost her."

...Her or them?"

...I lost them," said Barlow.

...Well, I'm snagged," said Theoda. "So now she's chasing Nutter."

...I'm sure Dr. Clifton is doing no such thing."

...Theoda regarded him severely. None of this was as she had anticipated.

...I don't hold with your scientific observation, brother," she said. "Come on, you and I are organizing a search."

...BUT it wasn't much fun being with Barlow. After a while they saw Dr. Clifton walk across a street two or three blocks away, and Theoda wanted Barlow to run after her. He said he couldn't because it wouldn't be dignified.

...Let's get this straight," said Theoda. "For the past twenty minutes or so you've been forcing me to conclude that you are really stuck on the Doc."

...I am," said Barlow stiffly.

...How can you or anyone tell?"

...I don't know. How can you tell when you're stuck on somebody?"

...That's right," she stopped short. "How can I?"

...What's the matter now?"

...I'm taking soundings of my inner nature," said Theoda. "It seems I've shoaled all of a sudden and I'm trying to account for it."

...Of course," said Barlow, "when I said I was stuck on Dr. Clifton, I didn't mean I wasn't fond of you. You're a very wonderful girl and I'd like to know you better."

...Thanks," said Theoda, and then it seemed to her she saw it all, the blue sky and the Pacific, the broad horizons and the way home again.

...She excused herself, and as soon as lunch was over set out to hunt for Nutter. But it was he who found her. He was waiting in the shrubbery at the edge of the wood path. When she managed a good view of him she was interested to observe that he didn't look like just anybody. He was sun-brown, gray-eyed and alertly handsome. She did not think she would like Dr. Clifton to catch him.

...Theoda," he said earnestly, "let's you and me square up quick. That doctor woman has been studying me since the middle of the forenoon, and she's got ideas that never came out of a book."

...Maybe they did, at that," said Theoda.

...I'm sorry about what happened," said Nutter.

...Forget it," said Theoda. "Did I ever adore you? No, skip it. I never did, and that's good, because I find that adoring can wear pretty thin."

...She conceded inwardly, however, that she had always been kind of stuck on him, even when under the impression that he was left out of the great design.

...Then she called out to her mother, "If Barlow Crane and Dr. Clifton come looking for Nutter and me, they'll find us in the hammock."

Continued from page 23

knives and other implements, he discarded the conventional barrel shape which has been in use for thousands of years, and devised a handle which actually fits the contours of all hands, left and right. With the conventional handle, Lamb discovered, nearly 50 per cent of the hand was not used. With his new grip, you can lift and hold nearly twice the weight—in a suitcase, a cleaver or a welding tool.

Before Ben Nash designed a new butcher-shop refrigerator, the wooden doors of the old models nearly always split, from the water that condensed on them. Nash added vertical grooves to the door to allow the water to drip off to the floor—and the door-splitting problem is no more.

While all this was going on, a couple of industrial designers in Detroit named Sundberg and Ferar came up with the kitchen scale that can be used interchangeably to weigh lamb chops and infants; Harold Van Doren designed a store scale which was light enough to be carried around and demonstrated by a salesman, instead of being lugged in a truck like its predecessor; Brooks Stevens in Milwaukee weaned road-paving equipment away from ancient Roman traditions; Egmont Arens fooled around with complete, one-piece kitchen units; and Russel Wright designed a cheap, beautiful dish which was strong enough to be heated on a stove or stored in a deep-freeze unit without cracking.

Dreyfuss, meanwhile, did some effective things on trains for the New York Central and Santa Fe railroads. "Every railroad passenger car," he says, "looked as if old Mr. Pullman walked down the center aisle and sprinkled seeds which grew up into straight rows of seats." Dreyfuss introduced varied furniture in club cars, with the chairs facing the windows, for the first time. "Another thing," says Dreyfuss, "is that every railroad car is really a long corridor, and man is not designed to live in a corridor."

Modern Art Effects on Trains

To counteract this, Dreyfuss broke up his dining and club cars into three or more sections, each decorated like a separate room. He used mirrored walls along extensive sections of the car to give the appearance of extra width, and he hung reproductions of great modern paintings in every New York Central car that fell into his clutches. On the Santa Fe, which goes through the desert, he used desert colors and beautiful reproductions of Indian jewelry which he borrowed from the Metropolitan Museum of Art. All this unaccustomed splendor so confused one inebriated gentleman recently, that he rode all the way to Albuquerque, when he had intended merely to see a friend off at Los Angeles. "I thought," he said, "that this was the lobby of my hotel."

Dreyfuss made a still greater contribution in 1938 when he designed the Twentieth Century Limited—from the locomotive down to the tickets and the attendants' uniforms. On that occasion, he finished his blueprints and drawings, and showed them to the top officials of the New York Central. Three vice-presidents took one look at the plan for the lounge car and pointed to the forward half of the car. "What," they yelled, "is that?"

"That," said Dreyfuss, "is a dormitory and shower baths for the porters, cooks and waiters on the train."

Up until that time, porters traditionally slept in washrooms; and cooks and waiters in hammocks in the dining car. They washed wherever they could. Dreyfuss' proposal, accordingly, was in the nature

of a social revolution, but it finally was accepted by the railroad. A few days later, Dreyfuss was visited by a representative of the train's crew. "You have done more for us," he said, "than any man in the last twenty-five years."

During the war, Dreyfuss designed the secret war room for the Joint Chiefs of Staff in Washington, and huge globes for the offices of President Roosevelt and Winston Churchill. Teague, at the same time, was laboring for the Navy's Bureau of Ordnance at the California Institute of Technology, where he assisted in designing the entire series of Navy rocket launchers, used so effectively in the Pacific.

His work also resulted in improvements on the Navy's basic gun, the 5-inch 38; plus new developments in Navy blinker lights; plus a civilian medal for Teague. Locwy's outfit spent the war years working on camouflage suits, insignia, gliders and efficient new medical kits and flight equipment for the Army. Early in the war he handled the huge camouflage job on the Glenn Martin aircraft plant near Baltimore.

In order to carry out all these changes in our civilization, the Big Three and the other industrial designers have swank offices, reminiscent of high-class beauty salons, generally in New York, Chicago and Los Angeles. To these the industrialists come with their crying towels whenever they have a product on their hands which isn't selling so well. When the designer takes on an industrialist as a client, his first task is to smooth the ruffled feelings of the client's engineers, until they are sufficiently pacified to refrain from knocking his brains out on sight.

When this is accomplished, the designer puts his own staff to work on the problem. In the case of the most affluent designers like the Big Three, the staff consists of a small army of draftsmen, engineers, architects, renderers, artists, color experts, model carvers, assorted technicians and stenographers, the last-named of whom would look good in the chorus line of a Betty Grable movie.

The architects are included in this array because their technical knowledge

is needed when designers plan for their clients—and the industrial designers of late are nosing into such as city planning and prefabricating. (Loewy, for instance, is designing modern towns for the country of Brazil.) Dreyfuss maintains a woman doctor fulltime, him in matters relating to the body.

Once the staff is organized on its own, it launches into a series of tests to find out what is wrong with the model and what should go into the final design. Since one of the top designers described his profession as "40 per cent salesmanship, 30 per cent business, and only 30 per cent design," many tests are conducted mainly with a view toward the amount of space the design will take in the newspapers. But other tests turned up some very practical ideas and suggestions.

Truck Cabs Needed Improvement

The lot of the long-distance truck driver, for instance, always has been an uncomfortable one. He drove thousands of miles in cramped quarters, and many a driver has dropped asleep for a few seconds and wakened in the ditch—or not at all.

When Walter Dorwin Teague was asked to design a new truck, he sent assistants on jaunts of 4,000 miles around the country in the cab of a truck. They talked to the drivers, ate with the drivers, and slept where the drivers slept. They noted down every detail, and then came back to New York and redrew the truck. The result is a cab that is big and roomy, with seats designed, body-conforming to prevent fatigue, and other devices to keep the drivers from getting overworked. Teague estimates that the new cab will save dozens of lives this year.

In the same way, Teague designed nationwide surveys, and the standardized filling station which is used all over the country by the major gasoline companies. He revised everything for the convenience

gers of the Swedish Airlines the feeling of warmth as they fly up near the North Pole. The exact same plane decorated in blue, gray and cream cools the passengers of the American Overseas Airlines down near the equator. On one Santa Fe dining car, Dreyfuss had the problem of preventing passengers sitting at a counter from feeling inferior to other passengers eating at tables in the same car. He accomplished this by decorating the counter, and all the gadgets thereof, with the most luxurious colors he could find.

All this results, as already has been stated, in large quantities of U.S. currency for the designers. It is surprising, therefore, that the profession should be torn with dissension—as it apparently is. The rank and file is sore at the big boys, claiming that they go too heavy on selling their own personalities, and not heavy enough on design.

This, of course, may or may not be sour grapes.

The entire profession, moreover, is split into two irreconcilable factions: the Society of Industrial Designers, Inc. (with 78 members, including Dreyfuss, Loewy and Teague), and the American Designers' Institute (numbering 350, and including Alexander Kostellow, Ruth Gerth, Alfons Bach, John Vassos and Robert Gruen).

The Society of Industrial Designers claims that the American Designers' Institute is loaded with fabric and furniture designers who don't qualify for the profession at all. And the older American Designers' Institute feels that the Society of Industrial Designers is blocking attempts to make industrial design a full-fledged profession in order to keep the field to themselves.

This feuding probably is less serious than it sounds, since the boys know that with the American craze for constant new models there will be plenty of work to go around for years to come. In fact, many industrial designers thank the Deity every day that it is the American public, and not, say, the British that they are designing for. In England, automobile models are changed maybe once in five years, and one of Loewy's best British accounts is an office-equipment manufacturer whose duplicating machine he redesigned in 1934 and hasn't had to touch since.

This manufacturer holds onto Loewy by paying him an annual fee not to design for anyone else.

It is when they are haunted by this specter of possible poverty that the industrial designers tend to admit that their own vendettas aren't too serious. "It is just that everyone else feuds in black and white," says one of the designers. "Our feuds have to be in Technicolor."

ONE CURE FOR LYNCHING

THOUGH it can be emphasized that lynching has been on the wane in this country for years, nevertheless one lynching anywhere is one too many. Are there any further sound measures to be taken to speed this old custom into oblivion?

The town of Hurtsboro, Alabama, took a sound measure a while ago, as things turned out, though the citizens may not have realized it at the time. They elected as mayor a man named Hugh Vann.

One day, after Mr. Vann had been mayor for some time, an eighteen-year-old Negro attempted an assault on a white woman. A crowd gathered speedily, and a rope was knotted around the Negro's neck. Somebody telephoned Mayor Vann, who arrived hurriedly in his car.

As reported by the New York Times, Vann addressed the crowd as follows: "You boys are doing wrong, and you'll be ashamed of it. You let me have him, and I'll guarantee you justice'll be done. Now I've known every one of you since you were little, and I don't aim to let you go against your conscience and lynch a man."

While so speaking, Mayor Vann was taking the rope off the Negro and shoving him into the mayoral automobile. The crowd fell back, angry though it still was.

Vann rushed the colored boy to the county sheriff 18 miles from Hurtsboro, and the sheriff inserted him in the state prison at Montgomery to await due process of law.

So one cure for lynching, obviously, is to have

public officials who don't approve lynching who have the courage to stand up to lynch mobs and talk to them in friendly but firm fashion. Mayor Vann's speech could serve as for such harangues.

All of which is another way of saying community, in the South or elsewhere, when citizens frown openly on lynching and mob violence, is more than likely not to have these unhappy experiences.

It is in communities where the leaders are either too timid or too unenlightened to themselves clearly and unmistakably of mob rule that mobs are most likely to seize from time to time. Anyway, here's to H. Mayor Vann. He's a man.

WHEN DO WE GET AN MVA?

THE spring floods along the Mississippi and Missouri rivers arrived a bit behind schedule this year, but they brought the same old damage and misery with them when they did arrive.

We should think the victims of these river convulsions would be getting pretty tired by now of hearing about how such things don't happen any more in the region served by the Tennessee Valley Authority, the famous TVA. There, the story is one of successful flood control, more and cheaper electric power, rising living standards, arrested soil erosion and so on.

So we'd like to put in another plug for a Missouri Valley Authority—a government agency to take charge of the 2,500-mile Missouri and its many tributaries, regardless of state lines, and get them under TVA-like control in 10 years or so.

Plans have long since been mapped out—several sets of them, indeed. Without claiming to be experts, we'd be inclined to favor the plans of the brilliant and efficient Army Engineers as most likely to be aimed at solving the problem for the benefit of all concerned instead of at justifying somebody's ideology.

Rivalries among states, and among up-down-river people, have blocked MVA in Congress to date. All the while, the M has been washing 550,000,000 tons of soil every year, and has been doing tens of millions of flood damage. A lot of potential electric just stayed potential; and so has a lot of. And the Missouri has gone on doing its in making the Mississippi floods a major disaster from St. Louis down to New Orleans. When do we get going on an MVA plan?

heart of New York. Weekends often find "model" mother Titia and Bryan at a ranch. Every day finds them "duded up" with a sparkling smile. For the Cornells

use Ipana—the tooth paste that's specially designed to help keep teeth sparkling bright. Get started toward a "model" smile yourself—get Ipana Tooth Paste.

It's fun to have a Model for a Mother

Bryan Cornell's whoops and hollers reveal a smile as sparkling as his "model" mother's

6-year-old Bryan, 6 years old, rides the range by day, learns how to help gums at night. If your gums flash a warning tinge of "pink" on a brush—see your dentist. Let him decide whether yours is simply "the helpful stimulation of Ipana and gentle massage."

ISN'T Bryan Cornell of New York City a lucky boy? Those are gen-n-wine Texas boots and spurs he has. And Oh, boy, look at that six-shooter!

Lucky for Bryan, too, that his mother is a successful model. This means he's almost bound to have a smile that'll lasso the lassies. For knowing the importance of a sparkling smile (that's the first thing models learn!) Mrs. Titia Cornell teaches her son to safe-

guard his smile by following her own dental routine: *Regular brushing with Ipana, then gentle gum massage.*

Well-known as a Television actress, too, green-eyed, titian-haired Titia makes it her business to know what thousands of schools stress—that a radiant smile depends largely on sparkling teeth. And firm, healthy gums are important to sparkling teeth. So get a tube of Ipana Tooth Paste today!

IPANA TOOTH PASTE
for your Smile of Beauty

Eleven years from now, Bryan will be the World's Greatest Pilot (he insists). Long before then, however, his smile will show the results of his "model" mother's care. For the Cornells use Ipana, the tooth paste that dentists prefer 2 to 1 for their own personal use, a recent national survey shows!

Follow your dentist's advice about gum massage. So important is correct massage to sound teeth and a sparkling smile that 9 out of 10 dentists recommend it regularly or in specific cases, a recent national survey shows. Follow your dentist's instructions carefully—help him guard your smile of beauty.

THE WEEK'S MAIL

MR. ICKES DISSENTS

MY DEAR MR. DAVENPORT: In (June 28th) James A. Farley quoted President Roosevelt as remarking that by eliminating all other men the Cabinet, I remained as the only one suspected of leaking stories out net meetings; leaking them specifically the well-known columnist, Drew

Assuming that President Roosevelt said anything of this sort to the Postmaster General, I would like to see that gentleman, and anyone else who would be interested, that I never leaked stories to Mr. Pearson or to anyone else. I do not do business that way. have. . .

Newspaper attacks on me throughout my official years, savage and almost continuous as they were, bear witness to the fact that there was no pay-off by me to me for tips.

Mr. Farley's articles are unfortunate. Mr. Farley. He does not write a rounded story of his relationship with President Roosevelt. To me, it is a perspective. When he quotes his chief, it seems to me that his intention is to put the President in a bad light in contrast with himself. The second article, especially, is studded with quotations calculated to make men who are supposed to see red. And, of course, a dead man's position to deny or explain. The quotation from Mrs. Roosevelt in the first article is particularly bad, even if Mr. Farley sought and obtained her consent to its inclusion. Even so, I believe that it requires a carefully documented investigation to prove that there was anything sinister about President Roosevelt.

Mr. Farley's friend, the late Arthur Hays Sulzberger, once took a notable walk, but he did so with dignity on a straight and narrow path. HAROLD L. ICKES, Washington

HISTORY LESSON

DEAR EDITOR: According to The Virginia Dare (June 28th), Jim Farley and his wife may have been rabid stamp collectors, but they were certainly not historians. The Virginia Dare F.D.R. designed commemorated a not a fact. She was, possibly, the first white child born on American soil. The first white child born on this continent.

Snorri, son of the Icelander Thorvald Karlsefni and his wife, Gudrid, was here in about the year 1007 A.D. where in the vicinity of Cape Cod. He was closely related to Ari the Learned, the first historian of Iceland, and was the first

Childhood Diseases,

once considered

inavoidable, now can usually be prevented by immuni-

ation.

When they *do* occur they are apt to be

far less dangerous than formerly. In one generation

medical science

has lowered the death rates from

measles and whooping cough by about 80%. Diphtheria

mortality is down 95%

since 1900. Few now die

from scarlet fever, and smallpox is almost wiped out.

But only through constant vigilance

can these

gains be held. Recently, when diphtheria immunization

was neglected in some parts of the country, cases and

deaths in those sections began increasing. *It's up to you*

to help keep your children safe!

Have your children
been immunized?

for the control of whooping cough have achieved wide use even more recently. As for measles, there are substances which, if used after exposure to this disease, may give temporary immunity or result in a lighter case. Furthermore, injections for diphtheria, tetanus (lockjaw), and whooping cough today are often combined.

Your doctor can tell you how to guard your children's health by the latest means known to medical science, including immunization. You may also find helpful Metropolitan's free Child Health Packet . . . it includes informative leaflets on immunization, and on the most important communicable diseases of childhood. For copies just mail the coupon at right.

KEEP UP WITH THE WORLD

BY FRELING FOSTER

A recent bullfight in Madrid was unexpectedly turned into a comedy by a dog sent into the ring to arouse the anger of a bull that refused to fight. Shortly, both animals were in such a belligerent mood that they started a real battle which was climaxed by the dog when he sank his teeth in the bull's tail and held on, until rescued several minutes later, despite the desperate efforts of his astonished and enraged antagonist to shake him off.

Of the 55 countries that now broadcast short-wave programs totaling 4,275 hours a week, England ranks first, its international transmissions in 46 languages consuming 708 hours a week—with as many as 12 different programs on the air at one time.

Some 50 scale models of structures have been made with picks and cement by a New York artist, Dr. M. Russell Stein. In their delicate appearance, they are amazingly strong, an example of an arch railroad bridge, 53 inches high and containing 31,000 toothpicks, can sustain a load 50 times weight.

In intercollegiate football, the record for playing the largest number of consecutive games without a loss was held by the University of Washington in Seattle. Between 1907 and 1923, the team won or tied their 63 games, with a total score of 1,940 to 123.

The first Sunday schools, started in 1780, in the town of Gloucester, England, gave children a chance in reading and receiving names because they were obliged to attend their classes Sunday as it was the only day the poor were free from work and able to attend. The church took no part in educating the children and many groups long ago changed it as a menace to the sanctity of the Sabbath.

Paraguay today has 18 men for every 100 women, a sex ratio from which it has suffered since 1870 after waging a five-year war in which the country lost 89 per cent of its men.—By E. C. Schulze, East Cleveland, Ohio.

At the premiere of the film *Trilby* in New York in 1923, the press agent employed an actress to sit in the audience and feign a trance, at the end of the first showing, in which he found her and called several physicians. Not knowing the girl had run around the block a few minutes before, the doctors were baffled by her pulse and respiration, making the case more mysterious. So for weeks, the press published interviews with psychologists on the possibility of a person in the audience being hypnotized by a screen character such as *Trilby's* Svengali, and the curious packed the theater to see what effect he might have on them.

India's most impressive dances are those performed by a group of ladies in the royal palace in Lucknow. Seated on a large carpet, with crossed and hands clasped, "dancers" interpret—solely by automatic movements of their eyes, nostrils and lips—whole stories of love, hate, jealousy and despair.

In German denazification recently, most of the members of the cast of Oberammergau's Passion Play (1934) were found guilty of Nazi activity, the only one completely exonerated being Hans who played the part of Judas.

MAKES CARS STAY BEAUTIFUL

Greer Williams demonstrates the old writing adage

WHEN interviewing Charles Baugh for his *I Am a Spastic* (Collier's, May 18, 1946) Greer Williams ran into Eugene Homes, working as secretary of the District Speech Clinic in Washington, D. C. Mr. Homes was answering the phone and talking to people right and left in a deep baritone voice, the kind that is pleasant to listen to. "I was surprised to learn that he had come into the clinic a few months before, stammering at a furious rate," says Mr. Williams.

"When I learned that about one per cent of the population stammers, it was evident Homes had found an answer to a personality problem of interest to a lot of people. So I wrote *I Stopped Stammering*, p. 52."

Mr. Williams has fooled around considerably with the human mind. He was a "medicine" man for many newspapers before enlisting with the ski troops in '43. Later he wrote the training manual *Your Body in Flight*, of which 500,000 copies went to the AAF air crews. Right now he's Consultant in Education for the Neuropsychiatric Service of the Veterans Administration.

WHEN he does an assignment for Collier's, the pink-and-white John Groth likes to get in there and fight, fight, fight. Last September, Groth was run over by a fullback and two halfbacks while sketching in the midst of a Notre Dame scrimmage at South Bend. In February, in Havana with the Dodgers, he was felled by a line drive to the hip off the bat of Cookie Lavagetto down the third-base line. It was only in character that when at Churchill Downs a friendly horse should crowd Groth against a stable wall while he sketched away for *Little Man on a Horse*, p. 23.

While the horse succeeded only in breaking Groth's drawing pad and no ribs, he did scare our athletes' Da Vinci out of a year's Groth. "Fortunately, however," says Groth, "he didn't lose next time out. If a horse kicks you, then loses, the stable people blame it on you. *You broke the horse's ankle.*"

Hazardous as his jockeyings were on the body, Mr. Groth reports even worse effects on the pocket. Since he was on a race-track story, Mr. Groth felt it imperative to get the feel of the financial end of the so-called sport, betting \$2 each time he went out to sketch. "I was out 24 times, and bet 24 times," he totes up. "I tried everything—eeny, meeny, miney, mo, tips from stable hands, owners, selectors and the horses. I tried horses' names, how the horses looked: I had the woman I love pick, I even tried nu-

merology. I won once, get back for my \$2 because in business I asked for the wrong at the ticket window."

The feeling about horses be pari-mutuel because Mr. Young, Collier's most venerable editor, also paid a visit to horse-fleshpots recently. In on the rose-bowery M. Park (New Jersey) plant, the sage counsel of the wiseacres, Mr. Young and made 8 bets, lost 8 bets. "I been told the track had to make 1000 to break even," he says nice to think we'd done on

THE day Willard H. Temple's *Lady Was a Tramp*, p. 10, what he calls his first big sale, the refuse men of Summit, New Jersey, where he resides with two daughters and a Labrador retriever named Muffin, went to the track. "There may be some signal in this," he declares.

Prior to attaining the *Collier's* and *Summit*, Mr. Temple attended Michigan and Virginia universities (he's from St. Paul, Minnesota, is thirty-five), and served time as batch maker with a company, for whom he was also a writer. The latter he describes in a fancy title for "Hey, Temple, hell happened to the ore Dubbs & Hornblower?"

But chiefly Mr. Temple's writer largely of sports stories, which the hero never failed home run in the ninth inning the game. "Wish I could take a couple of them to the Polo Grounds," he proposes Mr. Temple, who and forgetting a clubber name

This week's cover: Boy at the painting. "The painting was done in my studio in New York," writes James Chapin. "It is of my son, Elliott, age four. The wistful look out of windows into a city was one of the main reasons for painting New York and trying to capture it here at Glen Gardner, in the beautiful New Jersey hills, in an old house and studio barn."

Mr. Chapin attained the art the hard way. He left public school at sixteen to work in a bank and night at New York's Cooper Union, finishing at the Royal Academy, Antwerp, Belgium, where he won the First Award and Gold Medal. Then Mr. Chapin's work has been decorated frequently, and is in many museums and private collections. He's snagged the Temple Medal for the "best painting of an American artist." . . . TED

Admiral

-AM RADIO-PHONOGRAPH WITH MIRACLE TONE ARM

ARTIME SECRET FORMULA
MAKES POSSIBLE NEW

record playing sensation

It brings a new thrill to your record listening pleasure. Serving as an ultra-sensitive energy converter, this remarkable secret formula has made possible the greatest advance in high fidelity reproduction since the invention of the phonograph. Banishes needle scratch, "talk-back" or other disturbing noises. New static-free Admiral FM (frequency modulation) radio is an engineering triumph! Hear the sensational model "73" Admiral FM Radio-Phonograph at your dealer, today. Choice of beautiful walnut, mahogany or blond cabinet with compartment to hold 144 records in albums, only **\$289⁹⁵** (slightly higher in far west and south).

UNITED STATES RUBBER COMPANY

Serving Through Science

Welcome to a new world of driving!

Nowhere in the world will you find the kind of driving you enjoy on the U. S. Royal Air Ride.

This great tire is the first completely new development in tire design since the war. It gives you an entirely new kind of tire performance—brings new smoothness to your riding, new ease to your driving, far greater comfort to your car.

The dramatic new Air Ride principle puts up to 14% more air volume at new, lower air pressure under your wheels. Your ride is actually cradled

on bigger, softer cushions of air that smother every bump, smooth every mile.

And with its unique design and magnificent balance, the Air Ride achieves a new high in swift, effortless car control. Its narrow tread is more nimble and fleet on the turns, quick to respond to your lightest steering touch.

So take the wheel on the new U. S. Royal Air Ride. Discover a new and thrilling kind of driving on this better, finer kind of tire.

Ride on more air—Ride in more comfort!

is for August 9, 1947

condition (he is past sixty) is, of course, silly. Sometimes I feel that if only he had not failed the algebra paper in the Dartmouth entrance examination and so denied the British navy a chance to bring him up properly, our lives today would be so much, much easier.

But there it is. An inevitable day comes every so often when he complains bitterly that his pension is not enough to keep him in shoelaces for one shoe, and by nightfall his active brain will have evolved yet another dangerous plan to triple his capital by Saturday.

Such a day had recently befallen us. I argued, I pleaded and I lost. I climbed a ladder because he could not, and—committed to a course of action I heartily deplored—went one day soon afterward to see a Mr. K. Zimmer in London.

But for this I would not have met Jonathan, nor taken upon myself the thankless task of saving him in the teeth of his resistance, and almost against his better judgment, from the hangman. . . .

JONATHAN'S daydream about Charlotte Inwood that same evening was improbable enough to be embellished by any miracle, for he was making it up as he went along; but the last thing he would have dared include in it was the sound of her hurrying heels on the cobbles below the open window of his sitting room. But when the heels stopped at his door and the bell rang with the three short rings she had used at about the same time two nights ago, he realized it could be no one else.

He was out of his armchair and making for the stairs in a matter of seconds. He could not deny the thrill of knowing she might be in his arms in a moment, but before he reached the door he was already preparing himself for a measure of disappointment. She was not the sort of woman to give way to impulse, particularly a romantic one. She would have telephoned, or done something to give him, and herself, a time for anticipation. She was the kind of person who savored her experiences.

Jonathan was thinking like this when he opened the door, more than ready to hear the worst had happened, that her husband had found out about them.

He saw her face, as white as her long white-velvet evening coat, which was unfastened and showed the white satin frock beneath.

Then he saw something on the frock itself. Down the front of it. From just below the breasts and almost to her knees was a stain: a dreadful, sullyng smear of blood.

The dreadful shock of fear that she was hurt passed; it was not her blood, thank God. She held on to his arm, and leaned against the white wall of the narrow passage clutching a small gold handbag; a white figure with a red pattern on it.

"Joseph's dead," she said. "Joseph's dead—d'you hear, Johnnie? Dead—"

Her voice was not her own.

As he closed the door quickly on the darkness of the news and caught her in his arms, she began to shake with a nervous quivering of her whole body. She stared at him with eyes in which beauty had fled before horror; she muttered her husband's name again, and to it added the words which were to change Jonathan's life.

"I didn't mean to kill him—" she whispered. "I didn't *mean* it. He just fell down—and there he was, dead.

Oh, Jonathan!—*the side of his head!*"

There was no weight in her thin body as he lifted her, but his heart was pumping as with great exertion when he reached the sitting room upstairs and put her on the couch. His mind was very numb; he took a curious interest in the fact that the red flowers on the chintz were only a little lighter in shade than that red, uneven pattern on her frock.

He touched it with his forefinger, gingerly; it was sticky, and recent. Pattern of death, of murder.

He jerked her by the shoulders, saying, "Charlotte!" urgently for he knew she must tell him at once what had happened in that ten thousand pounds' worth of chromium and mirrors in which Joseph Inwood kept his possessions and his wife and which he affected to call his home.

Jonathan's mind came to life, and he began to shake Joseph Inwood's widow violently, loving her with a fury of possessive, protective love which, until this moment, he had not dared to admit even to himself.

She uttered a sound between a sigh and a choke and he stopped the shaking in favor of comforting arms. She struggled in them, crying out again that Joseph was dead.

"You've said that before—you also said you killed him or some such nonsense." He made his tone sharp.

"I've got to get away—they'll say I killed him on purpose—but I didn't! He could have stopped me—he was stronger, wasn't he—? He didn't even put up his hands to stop me. He just looked at me and laughed and thought I wouldn't—"

"For God's sake," said Jonathan, "pull yourself together and tell me what you've done."

"I hit him—hit him and he fell down."

"People get hit and fall down every day without dying of it—" he began, and stopped. There was, after all, a lot of blood on her frock.

He caught her panic suddenly in the tumbling rush of her pouring words—Candlestick, candlestick on the table.

"I hit him to stop him talking, to stop him looking at me like that—he said filthy things. Oh, Johnnie! I couldn't stand it—darling! You *will* make them understand that! They *must*! It was like a red mist in my eyes. Hitting him was the only way to get rid of it. But I didn't mean to kill him—I swear it."

SHE was sobbing now, clinging with extraordinary strength to him; he had to pull her arms from around his neck to breathe. Words still tumbled forth, but more slowly.

He had realized she had been unhappy with Inwood; that had been his first impression when they had met casually at that tea party short weeks ago. But she had not talked about it. He had felt at once her loyal nature.

But he had not dreamed that Inwood was as bad as that. He listened now in horror which a sense of precious time hurrying them into danger did not lessen.

How foul a man! His constant, crawling suspicion poisoning her life; ugly accusations about other men, a

Jonathan almost collided with the man and girl as he approached the corner. He swerved to avoid actual contact with them, but for one split second they were face to face

beastly curiosity about her imaginary infidelities. And in the midst of his own lust he would talk like that.

Jonathan swore softly. She went on with it:

"But tonight he began about you—he must have followed me here yesterday afternoon. I went in to say good night to him just now—he was working, staying up late. He—he suddenly started asking the usual sort of disgusting questions. I couldn't bear it this time. The things he was talking about were real things—sacred things—our love on those fat, wet lips—" She shuddered, fighting hysteria.

While she talked Jonathan continued to struggle against the pity and rage clouding his mind. There was need, tremendous and vital need, for action *now*, before it was too late; if it was not indeed already that.

It was obvious she had injured him, perhaps badly, but if he could be taken to a hospital quickly—

"Charlotte! You *must* pull yourself together. I'll come with you. We'll see how things are. He's not dead. D'you hear? You may have landed him a wallop, knocked him out—but it takes a lot to kill a man."

"He's dead!" she said, her voice strengthened with a sudden urgency. "You'll do something, Johnnie—you'll get me out of this? That's all I could think about when I tried to make him speak and his head fell horribly *loose*—and dead—on my lap." She straightened her back and took a deep breath. . . . "I'm all right now. Sorry to give way. You—you go and look for yourself. Here's the key; I pulled the door to after me."

SHE picked up her handbag from the floor, gave him the key. Her eyes were large, piteous with appeal.

"Johnnie, I can't go back there—yet. I know I shall have to—but in a little while. The servants are in bed at the top of the house. They won't have heard anything."

"What can I or anyone do if he's dead?" he said more to himself than to her. "God Almighty, it can't be true," he added loudly. "You *can't* have killed him!"

Her eyes did not move from his face.

He stood up, gripping the key so tightly in his fist that it almost cut his palm.

"All right. You stay here. But get that dress off."

She seemed to realize then the state it was in and cried out in horror. "The blood! It's evidence, isn't it? They'll prove I did it. Oh, Johnnie, if they could be made to think a burglar did it—" Her eyes were suddenly alive with hope as she slipped off the long coat and unzipped her dress.

"A burglar—?"

"Why not? No one can have heard us arguing, or even known I was in the house. The library is downstairs at the back and there are only the gardens. The Pilkingtons next door are away and Number 5 is empty! The servants go up at half past ten and I didn't come in until a quarter past eleven. "Freddy wanted me to go on to a night club—"

Jonathan was pleased to notice that his mind was beginning to function almost normally again. He understood the significance of what she was saying. His watch told him it was twenty-five minutes to midnight.

"Do something, Johnnie, *please!* I'll wait here for you—but hurry, darling, won't you? And you won't fail me—?"

THE KIDS GET A NIGHT CLUB

BY L. RICHARD GUY

A Saturday night at the Barn (above). The dance floor is crowded but larger than in most night clubs. No stags are allowed and cutting in is against the rules. Adults are not admitted. This means that Rochester's younger set has a place that is exclusively its own, for its social activities. Below, a lone couple dances in a tavern. Such spots formerly used to be full of youngsters

PHOTOGRAPHS FOR COLLIER'S BY HANS KNOFF

Rochester shows how any community can give its teen-agers a hop-and-pop spot, and let them run it too

WHEN 15-year-old Stephanie Packard of Broken Bow, Nebraska, wrote Collier's a few months ago (May 10th) for suggestions on what teen-agers can do to entertain themselves, she started the editors thinking. (Well, anyway, wondering.) The complaint of nothing to do was a familiar one from bobby-soxers in thousands of communities. But right under their noses, in the medium-sized city of Rochester, New York, the editors found one answer. "The Barn" is a teen-age center that the kids really enjoy.

But the Barn is more than just a gathering place. It's a night club where a boy can take a girl for a full evening of fun. Furthermore it is exclusively the teen-agers' own.

Rochester's hop-and-pop spot was prompted by another letter—this one from a boy and his sister to the publisher of the local newspaper, Frank Gannett. The letter expressed the hope

for a night club devoted exclusively to young people.

Rochester had tried the usual community center and the milk parlors, but they had failed. As one high senior put it, "We're not delinquents and we don't want to feel we are being saved."

The newspaper asked hundreds of youngsters what kind of place they would like. Their answers were varied. First of all they wanted a place outside of town—a place to hang out. Secondly, they wanted a comfortable night-club and country-club atmosphere. Finally, and perhaps most important, they wanted plenty of music and good entertainment.

Armed with the results of the survey, Mr. Gannett agreed to write the cost, and the project was on its way.

A site five and a half miles outside of Rochester was donated.

(Continued on page 81)

Collier's for August

motif of the club's interior lends itself to various sentimental pastimes, the time-hallowed one of carving initials. Here, one of the young fellows is himself and his dreamboat by nicking at the low cedar fence rail

When they're not dancing or eating or romancing, the kids ward off the horrid prospect of inaction by playing games. Sometimes, as shown above, they mimic musicians in a hilarious affair known as the "orchestra game"

entertainment is all right, but the youngsters seem to enjoy their own talent. Above, Dave Lisk, chairman of the entertainment committee, entertains the crowd with some magic tricks he calls "corny." Below, an all-male team from Rochester's John Marshall High School does some pretty fancy step-

The Barn is popular with the boys because it is the least expensive place for a date. The admission is fifty cents; soft drinks are a dime, and hot dogs cost fifteen cents. Even a B.T.O. (Big-Time Operator) spends only a couple of dollars for an evening's entertainment. Below, tired but happy teen-agers are waiting for the station wagon to take them back to town

At the beginning we were broke most of the time, spending
our free evenings on the roof talking—talking about us

WE KNOW SOMETHING THE OTHERS DON'T

BY W. L. KNICKMEYER

—The something was in his first wife's eyes

IT WAS my goodbye party. The apartment was jammed with people I didn't know, and I stood against the wall, watching. It wasn't just a party, it was a symbol.

I was cutting off the loose ends.

Tomorrow I'd be married again, only this time to Nora, and this time everything would be different. I looked at Nora dancing with Harry Wynne, and thought how it would be up there in the woods, with Nora. I looked at Sam Lake being confidential and fatherly with a babe in yellow, and thought about the four hundred dollars that was all I had left. Sam I would have to talk to.

And I kept looking for Sylvia. . . .

After a while Ed Hanson came and stood by me.

"Pete," he said, "you're a lucky guy."

He'd never know how lucky. Nora wasn't an actress and she knew it, and so this time it was going to be different.

"Yeah," I said.

"She's a lovely girl."

Did he think I was going to argue?

Then his face got solemn. He was getting ready to make a crack.

"Too lovely, Pete. Too lovely to feed to the bears."

He was a witty guy.

"Okay," I said. "Okay." That was the kind of stuff I'd listened to for ten years. That was what I was giving up. It broke my heart.

I thought how it would be. There was the cabin, set down under a hill, and the Maine woods deep and thick and quiet all around, and I could smell the clean air and see the lake, blue and ruffled with the wind.

It was going to be tough, trading the Ed Hansons for that.

Ed was looking at me, blinking and grinning.

"They tell me you're going to write a play," he said.

"That's right."

He cleared his throat.

"Ladies by Request ran a full two years," he said.

"And Marriage for Three went over a year. But they tell me you're not satisfied. They were so frothy. So—ah—shallow."

He put his head on one side, looking at me.

"They tell me you're going to write a masterpiece."

It overwhelmed him. "A genius," he whispered. "Like O'Neill, maybe."

"Yeah," I said. "Maybe."

It was the play I'd wanted to write ten years ago, only better. The play I might have written if I hadn't married Sylvia. There were things that needed to be said and it was going to be solid and new and beautiful and I didn't want to talk about it. Not to Ed Hanson.

It meant too much.

He slapped my shoulder, grinning. "Don't be downhearted, Pete. We're all pulling for you."

Like Brooklyn pulls for the Cards.

Ed gave my shoulder another slap and went away, circulating from blonde to blonde. I watched him for a while and I was beginning to get sore but what was the use? It was just Ed Hanson.

I lighted a cigarette and looked at the party. It was doing all right. Nora was dancing now with a smooth, curly-haired lad I didn't know. She smiled at me over his shoulder, and I grinned and waved.

Then Sam Lake came by, waddling. He still had the babe in yellow and when he saw me he took the cigar out of his mouth.

I remembered my four hundred.

"Sam," I said, "I'd like to talk to you, if you have time."

He wiggled the cigar, and winked.

"Later, Pete my boy. Later, when we are not so busy."

He patted the girl's hand and winked again and they went on. Old Sam. The friends I had at that party I could count on one finger, but Sam was all right. He'd produced four plays for me, before the war; we'd been friends for a long time. I could depend on Sam.

I looked at my watch: twelve thirty. Sylvia ought to be coming any minute. I put my hand in my pocket and touched the box.

A square box, with sharp corners, wrapped in tissue paper. One way to say goodbye. . . . For a minute I stood there, remembering Sylvia: the way her hair was when she was brushing it, a thick black cloud all around her head; the little frown between her eyes when she was tired. And I still didn't quite see how it had happened.

She'd been a nice kid, playing walk-on parts, picking up a dollar here and a dollar there. That was at the beginning, and we were broke most of the time, spending our free evenings on the roof of our tenement close to each other, talking—talking about us. I was writing and carrying bricks and shoveling concrete and writing, and we were happy.

Then I wrote Ladies by Request, and everything went to pieces. . . .

Not all at once. It took a while. But Sylvia began getting better parts, and we were going up together, and then it was over. She was just another glitter-happy Broadway babe.

She had said, "Pete, we can't go on like this. It isn't working out. We're just—not good for each other."

She'd done it nicely. I had to give her that. Her voice broke in the right places and everything.

Well, that was Sylvia, and that was a long time ago. In '41. A lot of things had happened since then. And, anyway, Nora was different.

But my throat felt dry and the palms of my hands were moist and cold. I jabbed out my cigarette in an ash tray. I had to be sure.

She was still with Curly-hair. I walked out and touched his elbow, and then we were dancing together. I didn't waste any time.

"Listen, baby," I said. "Are you sure about this? Do you know what you're doing?"

Her head went back and her eyes got wide. With her gold hair smooth and slick, and that green dress, and the pale skin of her shoulders, she didn't look much like Maine. She looked like Broadway.

"Darling, I don't know what you mean. Am I sure about what?"

(Continued on page 75)

ILLUSTRATED BY A. HALLMAN

This rat received flash burns on his ears during the first Bikini test. He may also have received much more lethal radioactivity "burns" which wouldn't show

This rat was much more severely burned in the overwater atomic explosion at Bikini. Test animals are pampered in Navy's magnificent hospital in

OFFICIAL PHOTOGRAPH

THE A-BOMB'S INVISIBLE OFFSPRING

BY EDWARD P. MORGAN

What we have really learned about the results of atomic explosion and what it means to you

THERE have been a lot of guesses, some sober, some wild, about what is going to happen to this planet if nations start breaking one another's skulls again. How perilous is living in the Atomic Age going to be? Here, two years after Hiroshima, one after Operation Crossroads, are some of the salient facts, the guarded conclusions, the troubled theories of military men, doctors and scientists—the people who know the atom best:

1. Radioactivity equivalent to the energy emitted by more than 1,000 tons of radium was released in Test Baker at Bikini, the first underwater explosion of the atomic bomb.

2. More than a year afterward, some 50 of the 65 ships in the target array are still so contaminated with radioactivity that under accepted safety standards they cannot be manned.

3. No way has been found to decontaminate a ship or any other object polluted with radioactivity.

4. Bikini Atoll and lagoon still have "warm spots" of radiation and are classed as unsafe for habitation.

5. Fish and algae retrieved after Test Baker had soaked up so much radioactivity they could take their own X-ray pictures.

6. All the pigs and 75 per cent of the rats in Test Baker perished.

7. Radiation has changed the shape and color of some plant life.

8. Changes in the color of human skin, and formation of massive, ugly

scar tissue called keloids, some of which didn't stop growing until nearly a year after the bombings, were numerous noted on burned survivors at Hiroshima and Nagasaki.

9. Intensive radiation may spread cancer.

10. Temporary sterility was caused in many survivors, male and female, in Japan.

11. Some scientists fear that strong radiation might dangerously alter human cell structure and ultimately produce freaks.

12. Radioactive particles from the five bombs that were exploded are still floating around—harmlessly—in the upper air. But scientists are seriously debating what is the *X* number of bombs (500? 10,000? a million?) it would take to overload the stratosphere and threaten the habitable areas of the globe.

13. Whatever *X* may be, no real defense against atomic warfare is even in sight.

Scare you? The radiation Test Baker released was a billion times as potent as a gram of radium. Much of it quickly "died" as fission products from the blast decayed into stabler substances but a powerful amount of it still exists. In 1940 there were approximately 1,000 grams (about two pounds) of known separated radium in the world. One microgram (a millionth of a gram) of it could, under certain circumstances, kill a person.

Some of the Bikini ships are still so "hot" that men can't work aboard

them for more than an hour or so at a time, even with masks, special clothing and shielding devices. (The radioactivity of a substance is commonly measured in terms of a roentgens and the maximum safety level is 1/10 of a roentgen a day. This is generally more radiation than is emitted by the luminous dials on the instrument panel of an ordinary transport plane.)

Several of these ships were washed, scrubbed and hosed with fresh water, sea water and chemicals. Their decks were scoured and scraped; their paint chipped. Applying fresh paint—which contains lead, which is a shield against radioactivity—didn't work. Cleansing experiments continue. So far, nothing has had any material effect. Two weeks after the explosion the washed vessels registered relatively the same radioactivity as the unwashed. Radioactivity is indestructible and cannot be neutralized. The only answer is to let it peter out of its own accord.

Duration of a "Half Life"

This may be a long process: Radio sodium, produced in enormous abundance when the Baker blast acted on sea salt, loses half its potency in 14.8 hours. Scientists call this a "half life." Radio phosphorus has a half life of two weeks; radium 1,600 years; plutonium 24,000 years.

These ships are valuable as atomic laboratories but, although they are 300 to 400 times less radioactive today than they were on July 25, 1946, as far

as normal naval uses are concerned they might as well have been. They couldn't even be safely scrubbed; the radioactivity might emerge from somebody's rebuilt yacht, a steamer or a skyscraper's girder!

The clouds of radioactive which soaked the ships missed Atoll proper, and practically none of the intensely "hot" particles were deposited on dry land, but the marine plants, coral reefs, even the bottom of the lagoon, were radioactive.

The secret of the self-photographing fish is simply that when the fish is placed on X-ray plates, their bodies give out enough radiation to expose the films. It probably would have been fatal to eat the fish there. Professor Lauren R. Donaldson, a radiobiologist at the University of Washington School of Fisheries, "guesses" it "would be unwise to eat fish or other products from inside the atoll, now."

No lush forests of vegetation sprang up in Hiroshima and Nagasaki but a few curiously formed weeds and a variety of plants with albino leaves have been found around the explosion centers. In Nagasaki after the attack, an agriculturist named Takeo Furuno planted two vegetable gardens from seeds brought from the mainland. One plot was 150 meters from the explosion ground center, the other 500 meters. He got some abnormal looking plants from both plots and

JACOB LOFMAN

SIGNAL CORPS, U.S. ARMY

It, like all other Bikini survivors, is being bled to see whether it has developed Radiation kills white corpuscles in the blood of both animals and men

Keloids, heavy scar tissue, cover the healed wounds of a Nagasaki boy, burned as he leaned on a shovel 1½ miles from the blast

more from the one nearer the but the changes are not con- representative.

duction of the pigment by in- traviolet light from the bomb apparently explained some of the changes in the skin of survivors. Thick and elevated above the keloids, as the scar tissue was, were pink, brown or white. Some felt warmer than the surrounding skin. The Atomic Bomb Commission observed that scar formations may present problems in surgical treatment and that in some rare cases the possibility of cancer might have to be considered.

In experiments, some long pre- the Atomic Age, indicate that radiation induces cancer; studies of effects on humans are incon- clusive. Two strains of mice, one pre- tended to have cancer, the other to be healthy, underwent Test Able, the first explosion at Bikini. None showed any unusual effects so far. The ships were exposed to in- less radiation than in Baker.) Sterility in survivors in Japan named on radiation; the sex of the survivors among the most sensitive to radiation. A large number of women exposed to radiation from the blasts showed definite menstrual disturb- ances. Several authorities, including Dr. R. Harold Draeger, who is at the naval medical-research station at Bikini, believe however that radiation dose strong enough to cause permanent sterility would also kill the person.

"Monsters" have been detected among the offspring of Japanese survivors. Specific genetic changes observed but it might take several generations for irregularities to show. Animals and plants already have been exposed to produce malformed offspring. Exposure of their sexual cells to radioactive energy. Fruit flies pelted with gamma rays, for instance, have produced radically deformed descendants.

After similar exposure of their an- cestors, rats have been born with claws on the ends of their noses.

Many bomb victims lost their hair. It's coming in again, in coarser strands, some of it gray and curly in- stead of straight and black. Beta rays in dust particles fell on the backs of some Hereford cows grazing at Alamogordo, New Mexico, after the first atomic-bomb explosion and turned patches of their hair white. Their regular red hair is returning and no abnormalities have been noted in the cows or the calves they've had since.

Pigs are supposed to have about the same resistance to radiation as man; rats have more. Six pigs of a total of 20 succumbed in Test Baker before the ships had cooled enough to be boarded. The other 14 died within 14 days. Of the 199 rats placed on four ships, 70 were dead when recovered; 80 more died later. Virtually all the fatalities were attributed to radiation; the blast broke the water bottles of a few rats and they died of thirst. All the animals used were shielded from the blast by at least one deck or bulk- head. Rear Admiral William Sterling Parsons, Navy atomic-defense chief, said later the area within a half-mile radius of the explosion center would be considered an "intolerable zone" for both men and ships.

Dr. Paul S. Henshaw, until recently radiobiologist at Oak Ridge and now scientific consultant to General Mac- Arthur, is particularly worried about the possibility of an atomic war spreading cancer and also upsetting the normal heredity progression of human cells. "Animals receiving heavy acute exposure of high energy radiation (X rays, gamma rays, beta rays, neutrons) died prematurely, usually in a condition of advanced age, emaciation or some form of cancer," Dr. Henshaw said. "We know that early X-ray workers who received burns on their hands later developed cancer, and that physicians and dentists who have had their hands

in X-ray beams too frequently have developed skin lesions which later turned to cancer."

When it comes to genes, the mole- cules in human cells which determine hereditary characteristics, including sex, Dr. Henshaw said there seems to be no level below which effects are positively harmless. "When the bullet- like particles of radiation act on a cell the intricate organization is disrupted, and if the cell is able to sustain life, some of the modifications may bring about a change that may be passed through succeeding generations. What the frequency for these (changes) is for any dose level is not yet known for human beings."

Survivors Face Grim Future

The Atomic Bomb Casualty Com- mission report, which Dr. Henshaw coauthored with Dr. Austin M. Brues, observed regarding survivors in Japan that: "from previous irradiation ex- periences with both animals and human beings, there is good reason to believe that reproductive disturb- ances, malignancies of one form or another, shortened life-span, altered genetic pattern, etc., will in time ap- pear in greater or lesser degrees."

But in the whole history of the Man- hattan Project there were only two deaths from radiation and in Oper- ation Crossroads there weren't even any atomic injuries.

Out at Brookhaven, in the middle of Long Island, 75 miles east of New York, the U. S. government is build- ing one of its biggest atomic-research laboratories. Experts consider it a safer place to work than an airplane factory. Satisfied with safety meas- ures, underwriters asked for no extra premiums on employees' group insur- ance policies.

But many atomic experts agree that, theoretically, the whole green areas of the earth would be threatened by radioactivity from the explosion of an X number of bombs, and man might be driven to live on the icecaps over

the North and South Poles, the only places on earth that the wind currents would keep relatively free of contami- nation. But they disagree sharply over that unknown X. A few argue that if 500 bombs were set off in a short time we would be stepping on danger's doorstep; others say it would take from 10,000 to a million.

Many military men, however, stoutly maintain it's fairy-tale stuff to figure that radioactivity would be used in such strength as to threaten a hemisphere, a continent or even a strategic city for any length of time, on two grounds: First, it isn't easy to deliver an atomic bomb—guided missiles of supersonic speeds have a restricted range, and a certain number of other carriers, like bombers, sub- marines, etc., would be destroyed be- fore their bombs could be exploded —and second, even if an enemy could make a successful "saturation" attack with radioactivity, he wouldn't want to, because it would render the target area as useless for the victor as for the vanquished.

Scientists would like to believe this, but they see modern warfare follow- ing no rules; atomic weapons would blast the conflict quickly out of con- trol.

"One bomb fired in anger would be the beginning of the end," one physi- cist said.

Dr. Edward Teller, Hungarian- born professor at the University of Chicago, a Manhattan Project scien- tist and one of the world's leading physicists, calculated that if the activ- ity liberated at Bikini were multiplied by, say, 100,000 bombs or a mil- lion and released off our Pacific Coast, the whole of the U.S.A. would be en- dangered. He admits that it has by no means been proved that such enor- mous amounts of energy could be so released. But, he wrote in the *Bulletin of Atomic Scientists*, "... it is much more than a fantastic possibility. If such great quantities of activity should become available, an enemy

(Continued on page 61)

THE LADY WAS A TRAMP

THE great dog crisis in our family began when Lady escaped from the house for a few minutes one crucial afternoon.

"I'm not sure anything happened," Mother said hopefully to Father when he came home.

Lady, a sleek Irish setter, looked up at Father with a wicked grin, her pink tongue lolling out and her tail thumping the floor. Father had given her to us but he had trained her and she was his dog. He was always talking about breeding her but had never found a potential sire in our locality he considered fit to associate with Lady.

"You didn't see another dog when you found her?" Father said.

"Well," Mother admitted, "there was a dog furiously slipping away around the hedge."

"What sort of a dog?"

"I don't know," Mother said doubtfully. "A sort of shaggy, nondescript dog—about the size of a pony."

Father winced. Frances, the youngest member of the family, toddled up and tugged at his hand. "Puppies," she said. "Frannie want a puppy."

"I'm sorry, honey," Father said. He had it all worked out. If and when Lady's time came, he would take her to the vet and no one but the vet

would ever see the pups. But the best-laid plans can go astray, and Lady did turn out to be in an interesting condition. When the time neared, Father said, "We'd better take her over to Doc Kinsey."

"You know how lonely and unhappy she is away from us," Mother said. "Let's wait a day or two."

Lady looked pleadingly at Father and he gave in. The trip was postponed a day, then another two days, and on the third night Father was roused from bed by Mother.

Half asleep, Father instantly assumed the house was full of burglars. "Phone the police," he whispered hoarsely, and picking up a number-twelve shoe, he started for the stairs.

"Lady's having her puppies," Mother said.

"Hell and blast!" said Father. "Call the vet. Where is she, in the kitchen?"

"In your study," Mother said, and Father groaned. . . .

A few hours later we all stood in a circle around Lady, Doc Kinsey drinking a cup of coffee.

"Eight healthy pups," he said and looked dubiously at their muddy color. "Not thoroughbreds, are they, Hooper?"

"No," said Father, "and we don't want them."

"Best if I take them away now then," the vet said.

"Take them away from Lady just after she has them?" Mother cried, looking at kindly old Kinsey as though he were a fiend. In vain he tried to explain that Lady would mourn her puppies for a very short time. "She's had them," Mother said, "and she deserves a chance to raise them. We can sell them."

Father came home that night with the back of the car filled with lumber, and that evening he worked in the cellar constructing a pen for the dog. He talked to himself as he worked and his face came clearly up through the hot-air register.

"I have things to do," he said plaintively, "a busy man"—*crash* went the hammer—"I have a brief case filled with urgent work and I spend my evenings"—*crash*—"building a blasted dog pen"—*crash*—"for a lot of mongrels."

Mother smiled at us, looking up from the pile of socks in her lap. "Your father is really a warm-hearted man," she explained. . . .

The situation became acute when Lady ran downstairs, crouched in the pen, feeding the puppies from a little rubber-nipped doll's bottle.

"That's the last straw," Father cried, frowning angrily at Lady, who came joyfully up to greet

and rigged up a complicated leash for the
so he could take them all walking at once

BY WILLARD H. TEMPLE

won't even take care of her own puppies." "Her fault," Mother said. "Besides, they'll be weaned in another week. Then we can get rid of them. I'll run an ad in the paper."

"You won't," Father said. "There's an Annie in town and I'm turning those pups over to the Animal League that night."

It was a sagging, dilapidated old house. An Irishman with chin whiskers opened the door. She was prepared to find a kindly old lady with dogs with a love that passeth all understanding.

"I'm going to give you eight of the cutest little puppies I ever saw."

"I said the old crone. Father reddened and said his message."

"I'm giving them to you." "Eight puppies?" Father shouted angrily at her. "Eight puppies?"

"Miz Rand, she's sick, she can't tend to no more dogs," and the door closed in Father's furious face.

He came home disconsolate. "We're stuck

with those dogs," he said. "I have four kids that run me ragged, and now I have nine dogs. Who ever heard of a man with four children and nine dogs? I'll be a raving lunatic."

"Don't get excited, Norman," Mother said. "I'm sure there are lots of people who would love to have those dogs. I've put an ad in the paper and I'll have the children inquire among their little friends."

Father brightened up and the next night when he came in he looked cheerful. "Well, children," he said, beaming, "I know it will be hard for you to part with the little pups, but that's life. How many did we get rid of today?" and he patted Frances on the head.

"Don't wanna give the puppies away," Frances said. Her big brown eyes filled with tears. "Mean old Daddy," she said, and ran out of the room.

The cheerfulness vanished from Father's face. He muttered to himself, then looked heavily at the rest of us.

"We found three kids," I acted as spokesman. "But their mothers won't let them have mongrels."

Father got red. "What is this," he shouted, "a town full of snobs? I had one mongrel after another when I was a kid. Fine dogs. Aren't people mongrels? Aren't Americans mongrels? Who's a

thoroughbred in this country except maybe an Indian? And look what happened to the Indians."

Father was getting worked up. Mother said, "Supper's on the table, Norman. I'm sure we'll have some results from the ad in the paper today."

She was right. About nine o'clock the doorbell rang and a man came in and asked to see the pups. Father and Mother took him downstairs. He looked at the eight pups leaping back and forth in the pen, and then turned a hard eye on Lady. Lady had a pedigree and Father was very proud of her.

"Pretty coarse type of Irish setter, isn't she?" the man said chattily.

"What makes you think so?" Father demanded belligerently. Mother made warning signs that Father ignored.

"Bigger than most," the man said. "Not as streamlined as she should be."

"Oh, no?" Father said dangerously. "What do you want, a dog, or a toy to put in your pocket?"

"These pups," the man laughed, "are going to be young elephants."

Father was still smarting over the insult to Lady. "If you want a canary," Father said, "I can direct you to a bird store."

And that ended any (Continued on page 49)

The Croatian Cabinet parades at a public function in Split, Yugoslavia. In this Russian-dominated country Americans are received as unwelcome.

THE BALKAN FOLLIES

BY W. B. COURTNEY

"The Beautiful Red Danube" is the setting for a tragicomic show in which our G.I.s and diplomats often are pushed around and our planes, flying on official missions, are treated like enemies. After an extended inspection tour, our correspondent reviews the farce

FOUR hundred million dollars of your money and mine (the recent grant to Greece and Turkey), plus a lot of other things you ought to know about, are now going down the Balkan drainpipe: the popularity and prestige of the United States; the safety of our occupation forces in Europe; and the faith that many of the "little people" in this patch of earth reposed in us.

The Balkans are now a stage for what is currently the Greatest Show on Earth: complete with bands, parades, ringmasters, star performers and clowns. And we are in it. As clowns. Yanks over here have named this show "The Balkan Follies."

The Balkans—Albania, Greece, Yugoslavia, Rumania, Bulgaria and Turkey-in-Europe—are named after

the mountain range which runs lengthwise across Bulgaria and forms that country's only backbone. Altogether they are slightly larger than Texas, have a population of less than 50,000,000, with an illiteracy average of 40 per cent—100 per cent among the peasants. Albania is the size of Maryland. Albania is famous in medical circles for judging its children's health by the louse test. Have got?—then Allah be praised! Greece is smaller than North Carolina. Greece is famous for in-again, on-again, gone-again kings; and bureaucrats who get fine new cars every time the nation receives foreign aid for its starving.

Turkey-in-Europe is smaller than New Hampshire. Turkey is not famous for anything since Ataturk made

it give up harems. Yugoslavia is smaller than Oregon. Yugoslavia is famous for biting the hand that feeds it; a habit arising from the table manners of its peasants who hit anyone slow to pass the borsht, over the head with jugs, hence their nickname—"Jugheads." Bulgaria and Rumania are roughly the size of Tennessee and Utah respectively. Bulgaria and Rumania are jointly famous as the "Jumping Allies"; it's a poor war that doesn't find them on each side half a dozen times, often on both sides at once.

It surprised certain Western Foreign Offices, after the war, to learn that Balkanese are really people—and people, moreover, tired of being a museum remnant of the feudal age; tired of being pushed around by rich land-

owners, mauled by cops and living in disease, filth, unspeakable poverty and blackest ignorance.

The stage setting of the Farce is the Danube, a 1,750-mile river that draws a 1,750-mile across the Balkans. Originally named after the name made famous by Strauss waltz: The Beautiful Danube. Hitler's Shirts re-named it The Beautiful Brown Danube. The Danube is being revised to The Beautiful Danube. The Danube is the and best inland water highway of Europe. It rises in Germany, France, bisects Austria, forms a partial boundary for Czechoslovakia, Hungary, laves northeast Yugoslavia and is the frontier between Yugoslavia and Rumania.

Collier's for August

LITTLE MAN ON A HORSE

BY JOHN GROTH

The life and times of a jockey, as told
and painted by one of Collier's artists

Little men in the bright colors are big men around the track, and they've become big because they're pint-sized. As at Churchill Downs put it, as a kid they used to push because I was so small. Big guys are asking for my

it usually starts is this: a kid hangs around the track for no other reason than he likes horses. He gets to know the jockeys in their flashy silks or later someone spots him and marks casually, "You're a jockey." Why don't you ride?" Under the encouragement the kid

gets a job as exercise boy and takes care of the half-ton nags about. He develops big arms and shoulders. He is careful not to develop elsewhere, to be a jock he must remain under 115 to 125 pounds. After a couple years, the kid applies for a jockey license and, well, in time he develops into a fledgling jockey, equipped

with an agent who solicits mounts for him and cuts himself in for 10 per cent.

Now the kid is eligible to don the bright silks. It may be the watermelon pink and gray of the John Hay Whitney stable, Alfred Gwynn Vanderbilt's cerise and white, or the cyclamen and blue of the Main Chance. More likely it'll be the equally brilliant hues of a smaller stable.

The silks are in all sorts of designs—polka dots, stripes, bars, stars, diamonds and squares. And whatever silks the jock wears, his mount's equipment is in the same color scheme. So is everything about the stable. The horse's blinkers and blankets, the sweaters worn by the stable boys, even the appurtenances—pails, benches, medicine chests—all carry the owner's colors.

Some jockeys ride exclusively for one stable, some free-lance, and others give first call to one stable, reserving the right to ride other horses when not called.

The pay varies. A contract rider usually starts with base pay of \$50 to \$100 a month plus a bonus for each ride. On purses over \$5,000 he cus-

Most of the riders' silks and other equipment come from the little old-fashioned shop of Leon Meyer in Brooklyn, which the artist shows above. Below, he paints the morning workout at the Alfred Gwynn Vanderbilt stables, with the Chilean jockey Ruperto Donoso in the saddle

Between races, the jocks play gin rummy or lounge about in the jockey room under the high racks of silks

The locker room is a bustling place, as the valets rush about helping the jockeys change between races

tomarily gets 10 per cent. The lancing jock ordinarily gets \$5 per mount with a bonus of \$35 if he comes in second. A notch rider may make \$600 a week the year round.

That sounds fine, but it's not profit. The jockey has to provide his own saddle and saddle girths, crash helmet, breeches, boots, lead pads, whips, goggles, rubber shirts and a lot more. In fact, he supplies everything except the colorful blouse and cap made in the stable colors. These the stable provides, cut in the fine custom of the G.I. uniform—usually one size big. The jock binds the cap to his head with rubber bands and the cuffs to keep the blouse from hanging to his knees.

He and the other jocks make a brilliant rainbow picture as they stand in their silks at the start of the race, but they're just bedraggled when they come back to the

Collier's for August

Above, the jockeys parade their mounts in the walking ring before the race. Below, a mud-caked jock heads back to the locker room from a heavy track

the track has been heavy, covered with mud. The valets with water and towels and clean. The silks for the have been laid out, and the as the jocks dress.

is one valet for every four or five. These big fellows, who Primo Carneras compared to tiny bosses, bustle about the room like wardrobe mistresses and chorus change. They take the jocks' racing things and shoes, light their cigarettes and so. It's an odd job for the big but it pays well.

It's a jock work only for the times he's in a race, but his life is busy. Often he's up at six in the morning exercising horses. He's at the track an hour before the race even if he doesn't ride until seventh. He may pilot six or eight mounts in an afternoon.

means, of course, as many
of silks. For instance, at Bel-

mont one typical day, Eddie Arcaro rode Mary Tudor in the first race, attired in the yellow and blue of Lester Manor Stables; he went out in the second in sapphire blue and gold fox on Gallacha for the Foxcatcher Farms; the fourth race he piloted Stage Mother in Walter P. Chrysler's white and red; the sixth in the green and white of W. M. Jeffords, on Uncle Remus, and the eighth riding Jeep for C. V. Whitney in light blue and brown—the silks of five stables in one day's riding, which is not unusual.

Weight is a major problem for the jockey. A lucky few don't add pounds no matter what they do, but the majority do their daily roadwork as religiously as a fighter training for the main bout. They pound around the track well swathed in rubber undershirts covered with sweat shirts. If that doesn't get rid of excess poundage, they boil out in the hot box.

There's nothing easy about riding, particularly on a heavy track. The

jockey who's riding well back in the pack gets mud shot into his face with the impact of stones. His goggles cake up and accidents are frequent. His horse may bolt and drag him, and only luck and his crash helmet will save him from serious injury. The ambulance isn't at the track for nothing.

When a jockey hits the top, like Longden, Arcaro or Atkinson, he'll make more each year than the President of the United States. But it's a long road up. And whether he gets anywhere or not, he'll always be a wanderer. This month it's Santa Anita, next month Hialeah, then Churchill Downs or Belmont. Or maybe a fast flight to Baltimore for a ride in the Preakness.

So there's little opportunity for home life. Some jocks marry and acquire houses, automobiles and babies. But under racing commission rules, there's one thing they can't own.

A jockey isn't allowed to own a race horse. ★★★

THE WITCH

BY WILLIAM MORIARTY

With the lamp in my hand I ran up the steps. The Witch stood there at the corner of the alley!

A story of cruelty punished but scarcely redeemed by remorse

SHE lived in the cellar under the Greek's. The Greek had a store in a red-brick building near Saint Patrick's School on Market Street. The store was painted bright grass green. On one window, the one on the left-hand side of the door, lettered in red and blue were some words in Greek and on the right window the same words except in English. It was one of those funny kinds of Greek stores you see around. The Greek sold olive oil and spices and Greek coffee and different things like that. In the windows he had on display a lot of cans of all sizes printed on in Greek, and hanging behind the cans were long strings of dried figs. And in back of one of the windows was a big red coffee grinder.

What the store looked like inside I don't really know. I don't think I was ever in there. He didn't seem to have much of a trade and only for an occasional Greek dressed up in a shiny black suit you would never see anybody going in or coming out.

As for the Greek himself, I don't

remember him much either—except that he was small and kind of fat and had one of those big curving Greek mustaches. He looked like what I'd guess you'd say was a typical old-time Greek who had come over to this country from Greece not too many years before. We used to pull his door open and yell in, then slam it again and run. But he never chased us. So after a while we let him alone.

People used to say that he was mixed up in rumrunning and that he had a room in the back of his store where he'd sell you moonshine if he knew you. But if he did I never saw anybody going there buying it, and besides he seemed like an inoffensive-enough man.

They used to say, too, that she was his mother and that he made her live in the cellar. But this was all just gossip and mean lies, because in the first place you could tell that she wasn't even a Greek.

I guess he must have been all right, since he let her live in the cellar under the store when all those that did the

gossiping wouldn't let her within fifty yards of them.

This was all when I was a kid and still going to Saint Pat's. She was old even then, and so thin and brittle-looking that you'd be afraid she'd break in half if she tried to bend over. Her face was yellowed and she was as wrinkled and ugly as sin. She used to wear—winter and summer, it didn't make any difference—a long black dress that came down over her shoes and dragged along the ground behind her as she walked. The top part of the dress was shiny satin and she kept it pinned together at the front of her scrawny neck with a great big tarnished brooch that you could see when she was thirty yards away. Over her narrow, bent, little shoulders she wore, thrown across, a ragged black-lace shawl that used to keep slipping off. What her name was I didn't know. Everybody just used to call her the Witch.

Sometimes, when I was by myself, I used to think of the things that people said about her and I'd think of her

having to live in the cellar a sorry for her. I'd even make around her to myself. That married to a millionaire's when he died his family h her out. Or that she used to tiful heiress who had married young fellow for love and family had cut her off, and husband died and she was to go back to them. Crazy a kid with a romantic in would think up.

But no matter what I'd about her, whenever I'd see ing along Market Street wi bag over her back, the sa would always happen. Som side me would choke and afraid. For a minute, I'd sta watching her. And then— was wrong but I couldn't b cross the street without takin off her and I'd try to keep fr ing into a run. . . .

She was a scavenger, I g call it. You'd see her with h

Products of INTERNATIONAL HARVESTER

What the International Harvester symbol means:

Products to save labor, increase production and provide better living.

A business begun 116 years ago with an important service to mankind—the invention of the mechanical reaper by Cyrus Hall McCormick.

A company operated fairly in the interest of customers, employees and stockholders.

Twenty-one plants to manufacture International Harvester farm tractors, farm machines, motor trucks, crawler tractors, industrial tractors, gasoline engines, diesel engines and home and farm refrigeration.

Two hundred and twelve branches and company-owned outlets, and more than 9,000 dealers, to distribute International Harvester products and to supply after-sale service.

Excellence of product now, with greater excellence always in preparation.

INTERNATIONAL HARVESTER COMPANY
180 North Michigan Avenue Chicago 1, Illinois

every Sunday! NBC Network.*

most complete line built . . . 21 basic models that
more than 1,000 different types of trucks.

EQUIPMENT — Farm mechanization, including the new Farmall
and implements for small farms. Farmall M illustrated.

INDUSTRIAL POWER — Crawler tractors, wheel tractors and engines
of proved performance and operating economy.

REFRIGERATION — Beautifully designed, efficient . . . bringing new
leisure and convenience to the homemakers of America.

MAN RUNNING

Continued from page 13

He smiled at her, took her hand and held it while he reached into the desk for a flashlight. He found it, satisfied himself that the battery had life in it, and went quickly to the door. She watched him, a shining gratitude in her eyes.

He carried the memory of it, and her white, gleaming body into the quiet, concealing night. . . .

To reach Cary Gardens he had only to leave the Cary Mews by the north exit, turn right along Brompton Road for sixty or seventy yards and then right again. Number 4 was the fourth house from the corner of Cary Gardens, a matter of another fifty yards. Thus he was standing on the high stone porch within a matter of minutes after leaving the mews flat.

HE WAITED a moment before putting the key in the lock. The street was empty, the house dark and silent.

He stepped inside onto the thick carpet and closed the door softly behind him, easing the spring of the latch into its staple so that it made no sound. He listened, and heard nothing except the wooden ticking of a large clock somewhere close to him. He pressed the button of his torch and swept its beam up and down the square hallway. He knew the library was at the end of the wide corridor facing him on the right.

He put out the torch lest the narrow, stained-glass windows on either side of the front door betray him to a patrolling constable outside, and made for the library.

The door of it was open. He stood by it peering into the complete darkness of the room. He strained his ears, remembering that the breathing of a man with a head wound is likely to be stertorous breathing. But there was none of any kind—just a flat, unbroken silence.

He stepped over the threshold and shut the door before aiming his torch toward the middle of the room. He pressed the button, and the beam cut into the darkness, a bright sword of revelation.

There was no doubt about the deadness of Joseph Inwood. The angle of the left arm, the twist of the legs—and in the left temple was a mortal wound.

A heavy silver candlestick lay gleaming on the creamy carpet a yard away from the body while its fellow stood on the wide, black table desk beyond, like a watchman of the dead.

The scene was unreal; the thought came to him that this was ridiculously like the traditional death of fiction: a millionaire found dead in his library, murdered by his wife. And that brought the unreality to immediate, tragic and dangerous actuality.

Joseph Inwood had been murdered by his wife. They would say that, however justifiable, however accidental a homicide it might have been.

He noticed that he was not as alarmed as he had expected to be; there was less fear than the circumstances might have made reasonable. The sight of the body, the blood a dark patch on the light carpet, the candlestick—these things were dangerous; but there was comfort in the secrecy of them. No one except Charlotte and he knew what was in this room.

He moved into it now, avoiding the immediate area in which Inwood lay, and reached the far side of the desk. He switched on the table lamp.

Papers, documents were spread out on the red leather blotter; an open account book, was propped up against the big silver inkstand. The safe in the paneling behind the desk chair was half open as Inwood had left it after taking out the papers on which he had been working. Jonathan looked these over quickly, touching them only by the extreme edges

with his fingernail when he needed to turn a page. There was much correspondence with the Office of Works about a bridge; the figures were mouth-watering. Inwood, Limited, of course, would not be building it if they weren't, but nevertheless as an upstruggling architect himself, Jonathan appreciated the handsome profit involved.

He went around the table and looked more closely at the body. The face was even more porcine than in life; the thick fleshy cheeks seemed still blown out with the conceit of its living expression. Swine to look at, swine to know. . . .

The thought of fingerprints continued to occupy Jonathan's mind. The candlestick for instance had a perfect surface for them. He took out his handkerchief and thoroughly wiped the column and the edges of the candle socket. The corner of the square base was dark with blood; he left that as it was and put the thing carefully down again, fitting it once more into the small but definite impression it

In one of the safe drawers which he pulled open, with his handkerchief guarding his fingers, he found a three-inch-thick bundle of pound notes clamped tightly with an elastic band, and a small leather bag containing quite a number of cut but unmounted stones which looked very much like diamonds. He put it at the bottom of his hip pocket and wadded it down with the bundled notes. He pulled the drawer right out of the safe and put it on the floor.

The other things in the safe, papers and account books, he stirred with the haphazard hand of a burglar in a hurry.

Then he had his brightest idea.

He picked up the fatal candlestick again, still using the protecting handkerchief, smoothed out the impression of its base in the pile of the carpet. He opened the door cautiously, listened a moment to the quiet house, and leaving the door wide and the lights burning, went toward the front door.

Five feet from it he paused with an-

from the open door of the lit steadily. He went out of the into the pillared portico and that the street was empty turned and with his elbow br against the small side window at a with the lock. The crack was as he had feared it might be tinkle of the glass as it fell satisfactorily muted by the he He put his hand through the found he could reach the kn lock with several inches to sp had the burglar broken in—

He spent another ten seconds rapid review of the situation pretty sure that so far everything right, but the next stage would be easy. There would be no walls and closed doors.

But the time element in the crime must be clearly established having been now—neither earlier nor later. He could think of no other way of doing it but this. He put out the torch, grasped the candlestick and took a deep breath. Then he stepped forward wide behind him and down the step, with a clatter that echoed down the quiet street. He stumbled, recovered himself.

Then he set off along the path as hard as he could go, pounding his feet in a flight of noticeable flight of a man in headlong escape.

THIRTY yards from Number twenty from the corner of Brompton Road he threw the silver candlestick from him as might a panicking man who realizes suddenly that he is carrying the incriminating weapon. It bounced into the roadway and he stood still there, glittering, a strangely unusual object in such a place.

He rushed on, his ears straining for any sound above the noise of running to indicate an interest in him. He needed only one person lying down somewhere near this stretch of road to hear him and remember it. His inquiry began.

As he approached the corner of the street he collided with a man and a girl just coming out of the shade of the railings near the gate of a house. He swerved and avoided actual contact with them, but for a split second they were face to face. The man was startled, he said something which Jonathan could not distinguish; they were lost as he hurried around the corner of the railings into Brompton Road.

His satisfaction with this establishment of a witness—of a fact, for there had been a girl and the chap had been saying a long time ago, and who would be able to tell her boy friend's story of a man running away from Number 4, was marred by an uneasy feeling that he had seen the young man before somewhere. In the ordinary way of things it would not have mattered, but this was not the ordinary way of things; if he had seen a young man somewhere, there was a danger that the experience would be mutual; but it did not follow that he remembered it or, if he did, that he recognized him; the moment was brief and the light no stronger than of the summer stars.

Jonathan hurried on. He had noticed the man months ago in a train, seen him crossing a road, bought a ticket in a cinema—anywhere. Nothing to worry about, and only to be thought about as an interesting phenomenon, a glimpse of the difficulties a real criminal would face in the course of his crime if he was a man of nervous imagination. Jonathan ended his pace a little and looked

"Why, George! You did notice my new bathing suit!"

had marked in the pile of the carpet.

He switched on the main lights of the room and began dealing with footprints, particularly the sharp, circular indentations of Charlotte's high heels. He erased them with his fingers.

He looked for traces of blood fingerprints on Inwood's face and clothing, for when Charlotte held the head in her lap she might have got some on her hands. But he was reassured, and stood up to face Charlotte's portrait above the fireplace: the Elmhurst portrait The Actress at a thousand guineas the square foot which had hung on the line in last year's summer show.

IT WAS an exquisite piece of work, more real than life; a glorified Charlotte, the skin even more delicately translucent than her own, the eyes deeper and more hyacinth. They looked straight into his, her love and passion reaching forth to him. "You'll get me out of this. . . ."

A burglar had done this thing—that was the best way.

He set to work methodically.

He pocketed Inwood's gold watch. He found the wallet and scattered its contents on the floor, but kept the three five-pound notes it contained. Having rubbed it clean of fingerprints he dropped it in the wastepaper basket.

other thought for the future mechanics of the evidence he was creating.

He turned about and went up the stairs, using the torch to guide him. He knew Charlotte's room to be one of the two big rooms overlooking the gardens at the back, but which he could not be sure. But there was not much risk attached to going into the wrong one, since there were still two floors between him and the servants' bedrooms.

However, he picked on the correct one by choosing the door with a small silver knocker which glimmered in the beam of the torch. He put the candlestick under his arm to free his other hand, and, switching off the torch, turned the knob slowly and opened the door a few inches. The familiar aroma of her perfume reassured him; he stepped inside.

The long windows were open, with the curtains only partly drawn and he could not risk turning on the lights. He went across to the sliding doors of a large built-in wardrobe and, with shaded torch, found a white evening frock. He rolled it up and put it inside his jacket.

He shut the door after him and went down the stairs again. He waited a few moments, listening through the sound of the big clock for any noise to suggest movement within the house. All remained quiet; the yellow shaft of light

Ford's out Front WITH A FAMILY AFFAIR!

Do you know why more people have picked Ford station wagons than any other make? Here's one reason: Ford pioneered the station wagon . . . introduced this smart utility model to an appreciative public. Yes, Ford has produced more cars of this body type than all other makers put together.

Ford Continues

its own station wagon bodies
Mountain, Michigan . . . selects the finest
hardwoods for them . . . fashions them with
metemaker craftsmanship. "It's the best looking, longest lasting
wagon on the road today," say owners . . . "Way out front in popularity!"

There's a *Ford* in your future

Really two cars in one!

Eight people can travel comfortably in the Ford station wagon . . . and in real style! And for light hauling, both rear seats are easily, quickly removable. It's the handiest carry-all ever . . . a real family affair!

You'll be in clover

Here's a quick, easy way to make dull traffic film and grime vanish—use No. 7 Polish. If you want to restore the original color and glowing lustre, get a can today.

shoulder twice before he turned into Cary Mews. He was safe enough, of course; even if anyone hearing his dramatic departure from the Inwood house had thought of pursuing him, there had not been time to do so.

He dropped to a walk as soon as he was in the mews, keeping on his toes and making his return to the flat as quiet as his exit from Number 4 had been noisy. The two must not be connected.

CHARLOTTE was waiting for him at the top of the stairs, her white coat fastened to the throat, her eyes dark with anxiety.

"He was dead," he said.

He knew that she had had no hope on that point. Her anxiety lay in wanting to know what he had been able to do. She hurried into the sitting room ahead of him, turned and clung to him.

He gave her an account of what he had done with a minimum of detail. When he handed her the frock, she said he had been very clever to think of it, and more, to have picked the right kind of one—the half smile which lightened her face was the first bright thing of the evening. He knew from it that her courage would not fail her.

"I think the burglar theory will work," he said, "and if I guess right, someone will very soon find the candlestick in the road and connect it with the open front door—if they haven't already. There was a chap near the corner. I think he would see it and yell for a policeman."

"Darling," she said, and was almost tranquil in his arms. There was no doubt of her relief and gratitude.

"While you were gone I tried to work out the time part of it. Freddy and I came out of the theater just before eleven. It's ten past twelve now—"

"What time did you get home?"

"A few minutes past eleven."

"By taxi?"

"No. Freddy drove me."

"Freddy. Then someone knows the time you—"

"Don't worry about that. Freddy will back up any story we decide on."

She sounded very positive. He did not know who Freddy was, but he had to believe her faith in the man.

"You let yourself in, of course?"

"Yes."

That reminded him of her key, and he gave it back to her. "How long were you with your husband?"

"I don't know—not long. It's all such a muddle."

"You were here at a quarter to twelve."

He got on to the next point, the most difficult of them all.

"There'll be a gap of nearly three quarters of an hour between the time you left the theater and your arrival home—even if you get back there as fast as you can now and this Freddy chap keeps his mouth shut, or is ready to say he drove you around the town before taking you home—or nearly home—because you'll have to arrive on foot."

She nodded.

"I know. I've been working it out, and it's all arranged. I didn't see why you should have to hold all the baby. You know I said Freddy had wanted me to go on to the Paradise—well, I've just rung him up and said I'd changed my mind. He's waiting for me at his flat."

Jonathan's alarm was immediate and violent.

"Charlotte!"

"But it's perfectly safe, darling. I thought it all out. I shall tell him I went straight up to my room when he dropped me at the house, got ready for bed, and not having a book to read, went down to get one. And found Joe."

"But—"

"I know, Johnnie. You're going to say that the natural thing would have been to faint, scream, rouse the household, phone the police—yes, darling. But

I can easily persuade Freddy that I am not that sort of person, that it's much more like me to run away from awfulness and horror—and then realize that I shouldn't have, and begin to look for someone to help me put it right."

She stopped his protest before he could utter it.

"After all, isn't that exactly what I did do—and came rushing to you?"

He told himself that his real objection lay in the thought that she was now calling on someone else to carry her flag, on another man. He struggled against it.

"Suppose the police start asking questions, checking up with everyone in the routine way they do in these things? You're asking this Freddy chap to perjure himself in a murder case—?" He used the word on purpose.

"He'd do that for me," she said.

"You know him pretty well?" The thought gnawed.

"Not as well as all that, sweetest; you

do pick on the funniest moments to be jealous."

"And you to be silly, darling. You really think he'd stand by you if it came to the point? If the police doubted the burglar evidence?"

"I do—but I know they won't."

Jonathan had to believe her. She had arranged, it seemed, to pick up Freddy at his flat in about twenty minutes, and to go on to the Paradise from there. "Freddy who?" he asked.

"Freddy Williams. I must have told you about him. I've known him for simply years. Oh, darling, I know I can trust him, and you mustn't think 'the worst' so easily."

It was, as she had said, the wrong time to argue about things like that. And when he stopped to think a moment, there must be a number of men who would do anything to protect her.

"All right," he said. "That covers everything. By the time you get home in the early hours the worst will be over. You'll be met by a sympathetic police inspector, or maybe even a superintend-

ent, who will ask you to pre news—if the policeman hasn't already said the same either case, the best thing you have hysterics, or something have to say anything lucid matter so much then what y

"I've never had hysterics sounded doubtful."

It was on the tip of his tongue that she had never before been kind, even by accident. He had been kind, even in an things back to a normal level

"The police are clever but also busy," he said instead. He be glad that the burglary more case into a routine type, to be by the routine organization into it. Nothing subtle."

"That's all true," she agreed, "but they would be frightened of them."

She went into the bedroom and the dress he had brought turned with combed hair and make-up, and he wondered at her return to outward composure after all, she was the one person in the world he would back to hold any situation; that she had panicked in those first awful moments of the accident—and it was as was to the final degree inhuman being of her fineness and mind could have done so

She was warm in his arms, her throat, the softness of her hair.

"Now we go," he said.

He rolled up the bloodstained cloth and took it with him when he went down to the garage, using the hall passage. He put her without turning on the garage slid back the folding door, oiled wheels and, a moment later, in third gear and, taking advantage of a slight incline to help him clutch, effected an almost silent exit into the mews.

After a moment he was a car off down Church Street, and he was toward King's Road, Chelsea.

"Where is his flat?"

"North Audley Street. Opposite the big chemist place. But stop it. He will expect me to come

HER voice was cool; she was aloof, fascinating—the woman for whom he had fallen so hard, aware now of achievement; that awful as it was, had forged between them which must surely be the strongest bonds which had ever held two people together. The immediate future, was grim but if she kept her head, and the slightest doubt that she would heal the rawness of the wound would become gradually a bad dream fading, and they would together for the rest of their lives. Inwood had died by she brought on by his own fault. Charlotte's hand had been the hand not that of a woman freeing herself to another man. And loss by such a comparative thing; it depended on who died, and who

He was almost cheerful by the time he reached North Audley Street, proached the church. The clock pointed to twenty-five minutes past midnight; he drew her attention

"We've done well."

"You have, darling."

"I'll ring you in the morning. The neighborhood will be in an uproar and I shall have the excuse to know that you are all right. I shall be able to tell me the police will be quite natural to tell me a burglar and so on—"

"And if they think it wasn't

"You can say they think it

"And I shall see you very soon

He glowed secretly, but firmly

"Shut yourself up and see

American Originals

Steamboat racing's golden age, an original American tradition, symbolized by the epic duel between the "Robert E. Lee" and "Natchez" in an original painting by Dean Cornwell.

The art of distilling gin has reached its "golden age" in Seagram's Ancient Bottle Gin, an American original, a different gin — a Seagram original!

Ancient Bottle offers you the first basic improvement in gin in over 300 years; result of Seagram's leisurely, time-honored method — an *exclusive* method.

You can *see* the difference in its natural color of fine vintage champagne.

You can *taste* the difference in its marvelously dry yet mellow flavor — flavor that rivals that of the finest imported spirits.

Look for Seagram's Ancient Bottle Gin at your favorite bar or liquor store. Let that distinctive color guide your eye to the perfect cooling Collins.

three or four days. I'll ring up tomorrow evening, but you'll have told the servants not to put through any calls."

"But, darling—I shall want so badly to talk to you."

He acknowledged to himself the pleasure that thought gave him.

"See you soon," he said as lightly as he knew how.

She pressed herself against his side when he leaned over her to open the door; her hair touched his face. He found he wanted her very much. Then he was watching her as she crossed the road to enter the glass-paneled door of a small block of expensive flats.

How often in this life did you get a chance to prove your love, to stand forth like this and turn aside from your beloved's head such a very dangerous thrust?

And he *had* turned it. He was morally sure of that.

HIS thoughts ran smoothly with the car's rhythm, driving homeward through the thinning traffic; each impression fitted into the pattern of all he had seen and done since she had arrived at his door. The blood on her frock, the pity of her fear, the hurried, wretched story of Inwood's brutality of mind. He saw again the slender beauty of her body as she freed it of the bloodstained frock.

Frock. It was in the car pocket by his leg. Drop it in the Thames now? No; two or three reasons, best of them that there was no great hurry, and people seen throwing things in the Thames late at night were unfavorably regarded by police and passers-by. Safe enough where it was. No one ever had anything to do with the car but himself.

His mind went back again to the Inwood house. The candlestick . . . the jewels, money . . . smashing the front-door side window with his elbow . . . down the steps, the door gaping behind him, and along the pavement toward the main road . . . chucking away the candlestick . . . a crash and tinkle of bright silver on the surface of uneventful Cary Gardens, and on toward the corner . . . then, the convenient witness. . .

Jonathan, who had just swung the car smoothly into the mews in an accustomed arc, suddenly remembered where he had seen the young man before.

He was the counter clerk at Hargood's, the wine merchants in Brompton Road who sent him a bottle of whisky and two of gin once in a while; the same young man who had apologized only yesterday for being short on his quota.

"So sorry, Mr. Penrose, but we haven't a bottle left."

So sorry, Mr. Penrose, Mr. Jonathan Penrose, of 21 Cary Mews . . . just around the corner from the shop—drives a black coupé. Oh, yes, sir, I could swear it was him. I said, 'Oh, Mr. Penrose, we nearly collided,' but he just ran on as if the devil were after him. And then I saw the candlestick in the road—I heard it fall in the road when he threw it away. . . .

You didn't need much imagination. . . . Jonathan Penrose drove the black coupé straight past the door of 21 and the open garage next to it, drove past the police sergeant and the constable who were standing there waiting for him, and out of the mews at the other end. He drove hard, with a weakness in his wrists which made the car sway untidily.

Out of the corner of his eye as he passed the lower entrance to Cary Gardens he saw a white ambulance and two, or perhaps there were three, police cars at the curb by the Inwood house. But the two dark blue figures outside his own flat were more vivid in his mind.

Keep cool—keep cool—if only this damned panicky feeling would stop. How many times had one heard it. "If only he hadn't taken fright and tried to get away—he only made it worse for himself—"

But this was not one of those instances.

Stay, and tell the truth! He could say to them:

"All those signs of disorder, the papers strewn, the money and the diamond and the broken window and stick in the roadway and the down the street—I did all your eyes off Mrs. Inwood, is the money and the diamonds—"

"Oh, off Mrs. Inwood? Well, He would have to say:

"Yes, you see, Inspector him—not on purpose, you. It was quite an accident. I was accusing her of sleeping. Yes, it was true, of course, it happened, but all the same mean to kill him when she was on the head with that candle."

Jonathan did not take his accelerator until he reached Corner. At about that point the police had just about to get out for a black Talbot, number 7023. So he stopped the car and got out.

He had walked several yards remembered the frock in the he went back for it, leaning while he put it under his coat, quieting down a little. He took the small suitcase in the dicky and kept extra tools.

He found and emptied it; event and by no means small, several months as a tool bag, it some semblance of luggage to establish his bona fides in a hotel; as long as he chose a He wished he had a hat.

He transferred the frock case, hiding the action by backing back to the pavement, and set off toward Piccadilly Circus, averting as he passed people, unduly troubled by the fact were still plenty of them about there were the less likelihood one would notice him.

CHARLOTTE was upper mind. He loved her. Charlotte was safe as long as suspicion the burglar, as long, in fact, remained on himself. No one were acquainted.

As he walked quickly away from the incriminating car, he began to feel other danger. Charlotte would be delayed by now, with Freddy, delaying her return home until he had thoroughly absorbed the planation.

But would she keep her head? was told that someone called Penrose had done the murder she hold her tongue and let the Or would she, in order to save out the truth?

She must not do that. Must would she be able in that moment to see it would do no good was as liable as if he had really thing himself, that at best he charged as an accessory after the inevitably the police would spiracy between the two of the tried to clear him she would worse—fatal for herself—and nothing.

He found himself praying would be untrue to all that was her, strong-minded enough to temporary sacrifice, for that need be if he could get away ahead to the future when, after for him had died down and he lished himself in a new name, find a life together somewhere largeness of the world. Jonathan rose, who had not been long of the army to have made career for himself, would v John Any-name-you-like would into existence. There were pri

"But who could have told the newspapers?"

CRIED ELSIE, THE BORDEN COW

"ALL I KNOW," thundered Elmer, the bull, "is that you and I were the only ones in the world who knew about it."

"That's right, dear," agreed Elsie.

"Then," exploded Elmer, "how come these newspaper columnists keep asking *who* is saying *what* about *which* bovine glamour girl?"

"It's real nice of the col- all me a glamour girl,"

"frowned Elmer, "with now and what I know, you going to stop being girl?"

p being such a worry- hed Elsie. "Think how ll be of us at Borden's nounce our exciting news."

p Borden's out of this!" snapped Elmer

Elmer. "Let's think about *us*, and *our* big news."

"But Lady Borden Ice Cream is big news already," said Elsie. "It's already a great favorite wherever people appreciate truly excellent ice cream. At dinner tables, grand parties—"

"Did you say *party*?" brightened Elmer. "Woman, there'll be no party to touch the one I'll throw when our big story gets out!"

"When you throw that party," said Elsie, "don't forget to serve the very newest of Borden's Fine Cheeses—I'm referring to Borden's Cheese'n Bacon Cocktail Spread!"

"She talks about cheese," moaned Elmer, "when our wonderful secret is about to be spilled to the world. Woman, are you daffy?"

"I certainly am daffy," chirped Elsie, "about that new'n wonderful Cheese'n Bacon Spread. It's such a

thrilling combination of aged Cheddar cheese and bits of crisp, broiled bacon. Makes the tastiest sandwiches ever. And it's perfectly grand spread on crackers."

"Aw," grumped Elmer, "the way you yap about

Borden's, it's no wonder those newspaper fellows got wind of things."

"But dear, I *never* breathed a word," protested Elsie. "I promised I wouldn't *even hint* until you gave the word."

"And when Daddy gives the word," drawled Beulah, "you'll hear it—everybody'll hear it—it'll be loud but good."

"Of course it'll be good," said Elsie. "Daddy's one of the Borden family, too—and you know, *if it's Borden's, it's GOT to be good!*"

"This is *our* news. And tell Borden's not to cross us up by bringing out some doggoned new product just when our news breaks!"

"Don't worry about that, sweet," calmed Elsie. "Borden's just brought out new *Lady Borden Ice Cream*. And folks are going mad about it. It really *is* fit for a golden spoon. Smooth as a dream, and rich and luscious golden cream."

hinking about ice cream," commanded

LUCKY STRIKE means fine tobacco

So Round, So Firm, So Fully Packed—So Free and Easy on the

course, but not insurmountable. The initial escape succeeded, the hunt had been outwitted. Then they would be safe. Charlotte keep silent now? Have that little extra strength arise and horror when they knew who had dropped that in the road?

A wave of panic came over him, of instincts demanding extreme must save Charlotte and time, himself. But how? Even as impossible; all his papers mews flat: passport, check-thing. No passport, no how far and how long could a without one or the other, or, though! There was the key in his pocket. He would not. Lucky to have it at all, and in Charlotte not to pull chest-fire; must make it plain to the first place it can't be done, second there isn't any need to get to Charlotte.

Confusion went as suddenly as it leaving his mind clear again. At first; find Charlotte at the end contrive to let her know happened. Make quite sure that situation develop in its own will work for us. Make her

Paradise was in Swallow Street. He quickened his pace. The suitcase began to worry him. He deigned it in the cloakroom at Piccadilly, hoping that the clerk would take particular notice of him. At the Station. He noticed with surprise the cloakroom clerk did not show the least interest in him. He put it in his waistcoat pocket and later was looking at the clock from the opposite side of the street, seeing with satisfaction that there was movement in and out of the cloakroom, mostly of people arriving at parties or couples.

There, waiting for a good opportunity to cross the road and merge himself into these influxes.

"You in," said a girl's voice. "I'm a member. It'll set me free quid for a bottle of gin—get from me, naturally."

He was in a black suit with a long skirt and a small hat. She had long shoulders, long legs and very high heels; her wedge heels were the most. She seemed to be in the light of the neon strips over the entrance.

"Not?" he said. "On then, ducks. I'll see you in good time. The name's Sally."

Only a slight variant on the old enough rather more digestible. From that, she would have a strong influence on his entry. And it forgotten about membership; of it would present no great obstacle to getting in if he were it would inevitably draw a certain amount of attention to himself.

He did it for him. She put a hand on his arm and urged him across the

Lighting in the dance room was less than that promised by the reception hall; it was discreet, dim of darkness. The alcoved walls and out in the open lit only by small lamps. The floor was busy, the floor crowded, and the ceiling held down the noise and the smoke so that neither could you hear nor see. You knew this was the Paradise, the golden angels with sprouting heads who hovered, their backs to the wall, in the four corners of the

He could not see Charlotte anywhere. He was anxious again. Something might have gone wrong with her plan. He wanted to tour

the room from table to table, to waylay the dancing couples as they circled the floor. Time passing pressed on the heels of his patience.

The girl Sally was chattering at him, a waiter was filling all the view, a throbbing drum beat with his pulse. . . . He wrote the word *gin*, scrawled indecipherable initials under it and got rid of the waiter. The girl wanted a cigarette and attention. He could give her the former, but, of the latter, very little.

Then with infinite relief he saw Charlotte. She was dancing with a dark-haired man with a heavy, good-looking face who would be "Freddy." They were at the edge of the floor quite close to him now. Her eyes were closed, and she seemed to be allowing her partner to carry all her weight. And no wonder. Jonathan marveled again at her strength of mind, her sustaining courage. It was so much easier for him, who had movement, initiative, things to do.

How to get close to her without causing her to give something away to her partner in the surprise of seeing him here?

"Come on, darling," the girl said. "My toes are itching."

He got up, seeing it as good a way as any to let Charlotte know he was here.

The girl wrapped herself professionally around him and began singing the words of the tune, which dealt exclusively with what love could do for you if you would only let it. That was true enough, in several senses of the phrase.

Charlotte's eyes were closed. It was tantalizing to be within two feet of her and not be seen by her. Freddy seemed to be holding her very affectionately, or else it was that if he didn't she would slip to the floor. Her white fingers rested loosely

near the collar of the man's dinner jacket. Jonathan looked at those fingers possessively; they were his, to love as he loved the rest of her lovely body.

Then suddenly she opened her eyes and looked straight into his, as if, he thought, her spirit aware of him, had summoned her.

Her mouth parted slightly and her hand on the man's shoulder moved convulsively, then slackened again. But that was all.

JONATHAN managed to convey his need to see her alone by a slight backward movement of his head toward the foyer. He thought she responded by the smallest of nods, but he repeated the gesture to make sure she understood.

"Excuse me," said Jonathan, when they had got back to the table. "I shan't be a moment."

Sally's eyes hardened suspiciously. He managed a grin to reassure her that he was not walking out on her and made for the small lobby between the main room and the entrance foyer. He was not many seconds ahead of Charlotte as she came into it. He stood facing the dance floor, watching it crowd again as the band started up. She came level with him and paused within whispering distance. And she had the sense not to look at him.

"I was seen leaving the house," he said under his breath. "Police were in the mews when I got back. I'm disappearing."

Her eyes flickered toward him in alarm and then away.

People passed between them, and for a moment they were separated.

"This makes no difference," he went on quickly. "Don't try to get me out of

it—only make things worse—I insist that you don't. Promise—"

Again her eyes, infinitely troubled, met his, but they gave him the promise he wanted.

She moved away, either to the ladies' room or the dance floor, he did not see because he turned away at once to shut her out of his view. He knew it might be weeks before he could be with her again. It was a thought which swept out of his mind even the relief at having been able to warn her successfully.

He took a chance; the instinct to get away out of here was too strong to resist. There was a page boy in the foyer. He gave him four pound notes from his wallet to take immediately to the lady at the fourth table on the left. And half a crown for himself.

"You see her?"

"You mean Sally? Sure."

"She's waiting for it," he said, to make surer that the boy delivered it, and went straight out of the place. He turned up Swallow Street and through the archway into Regent Street toward the Circus again.

Ducking out like that wouldn't matter unless they found Charlotte had been there, and their possible contact with each other established by the girl recognizing him as the "wanted" man from his picture in the papers. So many "ifs" were too many. Fear, more than any other emotion, was the fulcrum of imagination.

But his picture in the papers; that would add more difficulty to the task of escape. . . .

This brought an extremely satisfactory thought. His picture would not be in the papers for the good reason that no photographer had ever taken one of him. The need had never arisen. No girl insisting, no publicity requiring his likeness for support. Snapshots? One or two, widely scattered, and poor likenesses at that. George Wilmot had taken one last summer—and George was not at all the sort of man who would assist in the hue and cry; in fact, he would probably look on the destruction of a man like Inwood with approval.

HE FELT a rising of misery as he thought of George and Sybil Wilmot and the fifty or so men and women in the world who were his friends and whom he might never see again. He could bear that; but could he bear the constant knowledge that, puzzled though they might be at first by the inconsistency between what they knew of him and the news he had robbed and murdered, they would not find, however hard they searched and reasoned, any evidence on which to doubt the truth of it?

He had built up far too strong a case against himself for anyone to doubt his guilt, and that was the full truth of it.

He caught himself up with fierce accusation for having forgotten Charlotte. To be united to her by such unbreakable bonds, to be able to look forward to a life with her, albeit not immediately possible, far outweighed the loss of a few good opinions.

Then he saw the police patrol car. It was drawing into the curb twenty yards away. Its interior was dark, but there was a glimmer of silver buttons, and a brief shadowy profile against the side window of a man with earphones.

It may have been unreasonable to think that they had noticed him, that they had recognized him from a police broadcast of the wine clerk's description, but he had perhaps gone through too much too rapidly and recently to take a calm view of an alarming possibility.

He turned around and crossed the wide expanse of Regent Street toward the opposite pavement with a tingling discomfort between his shoulder blades. He knew they were watching him. He began to run, hoping that they would regard it as a normal thing to do in view of the traffic. He thought he heard the slam

HANK KETCHAM

SPORTING ODDS

In a game with the Cleveland Indians several years ago, the Boston Red Sox had runners on first and second when Joe Cronin, Boston's playing manager, came to bat. Sammy Hale, Indian third baseman, anticipated a bunt and inched cautiously toward the plate—but Cronin sent a line drive directly at the third baseman. Hale had no time to get his glove up, and the ball struck his head with a resounding whack. As both base runners started off with the crack of the bat the Cleveland shortstop headed instinctively toward third. The ball bounded from Hale's head and landed in the surprised shortstop's outstretched glove. One out! The toss to second was made in plenty of time. Two outs! And the relay to first was easy. Three outs and a triple play!

And when the dazed Hale came to, he discovered himself credited with an assist.

of a car door. He wanted to look around but dared not. Why had he let himself begin running like this? Easier to begin than to stop. Were they running in pursuit of him or had the car crossed the road after him? Wheels whirled down the slight slope and shut out other sounds. He turned north, away from the Circus, and dived helter-skelter into the short alley leading into Kingley Street. As he took the corner he saw, fifty yards behind him, two of them in pursuit; the dark peaked caps of mobile police were unmistakable.

But Kingley Street was dark, deserted, and although he feared at any moment to meet a patrolling constable, he had a more sheltered feeling in the narrow street. He heard a whistle, sharp, urgent, summoning all who upheld the law. Pelted up Argyle Street, he made for the more crowded area of Oxford Street and the tube station. Faces turned toward him as he passed them but the lethargy of uncertainty was in their expressions. He might be a man running to catch the last tube train; it gave him the few moments he needed to get ahead of them before they joined the police chase.

His mouth was dry with the sucking of air into laboring lungs.

ONE can imagine how Charlotte Inwood came out of the ladies' room at the Paradise and went back slowly to her table. She would have renewed her make-up and taken another aspirin or so; Jonathan had been gone about four minutes. The conversation in the foyer between Jonathan and herself was safely past. The shock of seeing him there when she opened her eyes on the dance floor had been too awful, one of the worst moments of the whole thing.

Freddy Williams was reclining comfortably on the red plush seat, his handsome face as composed as a stone; he seemed to be enjoying his cigar. He moved but did not get up when she reached his side. He looked at her rather like a doctor analyzing a patient's reaction to a hypodermic, and said "Well?" as if nothing particularly exciting had happened.

"Anyone would think," said Charlotte with a sudden anger, "you had done

things like this so often that mean anything to you any more."

He grinned at her; the look of a still woman in movement, the most attractive things he had ever seen.

"It's true!" she said with a smile. "You're so confident, and so a man who's eaten a good deal knows it won't disagree with you!"

Freddy Williams considered. He looked at the end of his cigar. He looked at Charlotte Inwood.

"However often I have or things like this," he said, "quite honestly, I have never been beautiful, desirable, clever, or able to rescue me from the predicament which my impulsive nature has got me into."

"I deserve every word of it," he said. "And why I'm not a better man after what I've had to cope with, I don't know. I'm frightened, Freddy. Why am I behaving like this—and calmly—and cleverly?"

"Because you are in a situation which has sufficient of the fund of life to arouse you to the actualities of life. You're alive, as a woman, thing to fight for, to run risk of the first time in your artificial life that it's happened to you. So surprised and tell me what Dr. Quixote required of you when you were so nicely settled."

"Someone saw him running out of the house, someone who knew the police are looking for him."

Freddy Williams laughed and nodded.

"I thought it was something. And he came to tell you not to let him out of the muck?"

"You're very sure of everything, Freddy? Suppose he came and he wasn't going to be left in the muck—which is a beastly word, wouldn't it go on with it—that go on saving me?"

"No."

"But how can you be so positive?"

"Darling, you don't know anything in spite of the number of men you don't know them either. It's than is behaving according to

with no advantages whatsoever. Don't forget I've seen him twice. Both times he was looking at you and didn't see me. And I remember thinking that if I ever caught myself looking at a woman the way he was looking at you, I would take a gun and shoot myself. You own him, body and soul."

"But if they catch him—and surely they will—he'll tell the truth."

"He doesn't know it."

"I mean, what he thinks is the truth: that I did it—accidentally."

"If he told them that—which is the truth as he thinks he knows it, who on God's earth will believe him? After this spectacular run-out he's done! Suppose he tries to implicate you, where will *that* get him? My dear windy little goose, I am your alibi. Let them try to break *my* story."

He laughed again, and she shivered at the sound with an intensity of pleasure.

"Tonight wasn't the first time you've—killed," she heard herself whisper. He lifted the loose skin of the back of her hand and pinched it between the nails of his thumb and second finger.

"But never before because I wanted a man's wife," he said, "as badly as I want you."

She looked at the livid blue mark on the white skin of her hand and shivered again, aware of another uprush of the same queer pleasure which this man was able to evoke whenever he spoke, or touched, or hurt, or merely *was*, and she near him.

The band played a Strauss waltz and the smoke of Freddy Williams' cigar eddied caressingly about the breasts of the golden maiden above their heads.

"And never before," added Freddy in faint repugnance, "have I killed a man with a candlestick."

THIS, then, is where Jonathan arrived in my life, at a time when there was plenty to occupy us. Things, in fact, were what even Father called "difficult," a word I could not remember him using before. K. Zimmer was the trouble.

I had just finished a two-hour session with K. Zimmer, trying to deal with him in accordance with Father's instructions, and I had done very badly. It might have been worse but I had left his small, dirty office on the first floor, and was down the stairs and out of the front door before Jonathan came through the archway from the street with the police at his heels. For it would not have been at all suitable if K. Zimmer, who would have seized any additional weapon to use against us, had seen the manner in which Jonathan came into my life. But the door of 52 was safely shut.

That archway may have had a door to it before the war, but the six feet or so of stone passage between the street and the actual front door was more a jutting-in of the pavement than a part of the house. It also formed a convenient dark corner for couples without parlor sofas; there had been such a couple in it when I arrived three quarters of an hour ago. It was from this small memory that I had the idea a moment or so later which I think saved Jonathan.

At first he was no more than a dark, swaying figure—a tall man whose face I could not see, breathing heavily, a hand against the wall to support him.

He spoke. He asked if this passage led into the next street. I said no, it was only the entrance to a house and what was the matter? Nothing, he said, was the matter.

To this day I am not sure whether it was something in his voice, some deep and subtle contact between us, a pre-ordained coming together of two people, or merely the effect on me of a sudden blast of a police whistle not far away. Perhaps the sound acted as the stimulus to a kind of reflex instinct in me, conditioned as I was by association with Father, which without conscious thought

demanding that I protect this man from the hated police who were our enemies as well as his.

Wherever it came from, I moved at its dictation.

I joined my hands behind his neck, pressing myself against him, and told him urgently to pretend to be kissing me.

He pretended to be kissing me, and I thought: How satisfactory of him to understand my plan so quickly.

He held me tightly, further to support the picture of a loving couple. He was very exhausted and his heart hammered against me. I moved a little so that his back was to the pavement.

Then, a moment later, a torch flashed on us, held a moment and was gone. That was all.

"They fell for it," I said at last, and his arms loosened, dropped to his sides. He leaned against the wall, and tried to control his breathing so that he could speak. Instead of asking why I had helped him without question, which ninety-nine other men would have done (and reasonably) he said, "Thank you" and left it at that. Then he began trying to size me up, and I laughed at what he was thinking, so

"Apart from that," I told him, "I was very silly to be an accessory after some fact not know about. You'll have as soon as there's a bit of tweek you and them."

"Of course—and I am very sorry." "If I drop you off at H station?"

"That would suit me very well," said in a voice which clearly meant that Timbuktu would have been involved in whatever trouble I had to remember what I was doing in the back of the car, stopped and searched. . . .

"Look," I said sharply, "nothing whatever to do with me." He was startled. "Of course."

"I'm sorry. I didn't mean you like that. After all, you want me to get you out of that, to lift, or anything."

"It was a terrific thing to do, stranger. If you'll stop the manager all right."

"Where will you go? somewhere—safe? Someone

"It's not going to be easy. They've never seen a bird or a bee or a f

clearly could I see it. "I'm afraid I'm not the easy lady who rescues the hero and dies of t.b. in the last chapter so he can marry the good girl. It's only that instinctively I rather shy at policemen—that whistle and everything. I had to do something—"

I was not sure what "everything" added up to. But I was realizing where we were and that K. Zimmer was too closely upstairs behind me. I went out onto the pavement and made sure the chase had really gone past us. I was thinking "us," I noticed, and felt the first twinges of alarm at what I had done.

I said goodbye and good luck, and another time he should remember that men are animals too—when one of them starts running, so will all the others. Or hadn't it happened like that?

"I think if I had had the nerve to take no notice of them, they wouldn't have noticed me. As you say, I ran and they ran after me. I think it was an ordinary patrol car, not looking particularly for me—it was too soon."

Then, to prove myself the wise disciple of the zoologists, I was dragging him by the arm into the car, because two men who looked like plain-clothes men were coming toward us from the direction in which the chase had gone.

I started up, drove into Oxford Street and turned east.

"Yes, of course."

He hadn't. I felt angry. He shouldn't have done what he had done without making a few arrangements.

"This will do—this corner," he said.

HE STOPPED in the middle of the sentence because he noticed too, that I was driving instead of slowing down to let the car.

"I'm not asking questions," was that a—well, a local hue.

"I think it was, but it could be evidence of a—well, calling-a-of thing on a national basis."

Oh, dear, I thought, and asked he would be safer in London or here. He hesitated.

"I'm being practical," I said as easily for me. I'm going a good way the east coast between now and fast time."

The tires hummed, the car moved sweetly, and I was trying to assure myself that it really was "just as easy" as the contents of the Austin's boot though it was, were worrying me being a complete fool.

"The country," said my passenger. "A small place—"

"Any small place in mind?"

*That toe, that finger, and that little fish
 Made as neat a three rings as one could wish.
 So the gentleman cried, "I have a hunch
 The water'll be warmer after lunch."
 And the lady said, "That suits me fine!
 Let me pass you a bottle of Ballantine."*

Great favorite since 1840...
 it's America's largest selling Ale

Back in 1840, when his ale was ripe and ready, Peter Ballantine took one drink to judge its PURITY, a second for BODY, a third for FLAVOR, and chose for his trade mark the three moisture rings left by his glass on the table.

Your first glass of Ballantine Ale is more than a drink; it's a discovery. You wouldn't believe ale could be so light and so satisfying. And the flavor! Ballantine tastes like no other ale you've ever tried. "Wonderful!" Look for the 3 rings, call for Ballantine Ale... today.

"Well—no, I haven't," he admitted. "A stranger rather shows in a small place."

"I hadn't thought of that—I'd be more noticed."

"You would."

"This is ridiculous," his voice was stronger. "I can't let you in for this—taking advantage of your kindness, unthinking kindness. I'm a fugitive. Anyone who helps me will be in trouble. I—I'm a criminal."

"Well," I said, "suppose I haven't much to lose by helping you?" This was not altogether accurate; for no reason whatsoever that I could name I was trying to keep him with me. At the same time my rational mind was nagging at me to refrain from any further acts of self-destruction.

A criminal? He was no more a criminal than I was; I told myself so, and did not ask myself how I knew. Perhaps I realized that to be a criminal was quite possible without feeling like one; or that motives and circumstances as viewed in your own eyes are what make you feel a criminal, not your acts as seen by others.

THIS one was not feeling like a man who has committed a crime, even though he was behaving like one.

If the police had a general search out for him, it must be for something very serious. . . . "What have you done?"

"Murder," he said so quietly I scarcely heard the word. I realized I had asked that question aloud. It was the one question I had not wanted to ask.

I said, "Oh," rather blankly, and he went on speaking in the same low voice, looking straight in front of him.

"I tried to make what they will call a murder look like a burglar's killing, and it came off too well."

"Murder," I said meaninglessly, "is a bit of a thing."

"—So you see why I'm not a healthy contact."

My mind should have made itself up once and for all. "You get out," is what I should have said. Instead, I said, "Now you've started, it won't hurt to tell me a little more."

He drew his breath.

"This is not the police version, but the true one. I didn't kill anyone, but someone else did, and I believe honestly it was by accident. It was not murder—I used the word to put the thing at its worst, as the world will see it."

I was immediately aware that my curiosity about him had been violent and personal.

"If you didn't kill anyone I don't see why on earth you are running away."

I was driving steadily through the wide east city streets, which were by now almost free of traffic; the dashboard clock showed twenty minutes past one.

"You must drop me," he said earnestly. "I'm a danger to you or anyone who helps me. I told you I tried to make an accidental killing by someone else appear the work of a panicky burglar. Unfortunately I was seen leaving the house by a man who recognized me and who was apparently in touch with the police immediately afterward."

All this was difficult to understand straight off, but it seemed to me he should have stayed and explained; he would have got into trouble for interfering with evidence in a crime, but to have run away was about as mad a thing as one could imagine.

Again my line should have been to shrug my shoulders, tell him he knew best, stop the car, and wish him the luck he obviously did not deserve and get rid of him.

"Who is the 'she'?" I said instead. "Your wife?"

He shook his head, and I could feel him thrusting hard against the floor boards. His eyes were intent on the road, fearing the sight of a flashing torch.

"Not my wife—she was *his* wife."

"The man who was killed. The rights and the wrongs beyond me; the essence of however, was clear. He was a woman very much indeed."

I suppose one is always intrigued by the sight of a man to a woman other than her necessarily quite so much as be now. It was out of all the realities. And worse nothing to curb my curiosity aged it. Obviously, I told I could get him to tell me about in the middle of the night rather confused—I should I after him for a little longer, or me better he might feel like me.

Thus I was able to give a ridiculous reason for what I was doing.

But first I must ask him to make them short and snappy. How recent was this killing? Good was the police description likely to be? He told me he believed about there being no of him in existence. A verbal bit muddled.

A clever fugitive would hide in places and lie low in them unobtrusively, with the careful mannerisms of a new identity the old. . . .

Had this unguilty murderer doubt was planning such a capacity of character to succeed had not seen much of his profile was good. A straight and chin, a high forehead. . . . began to see the light of an idea.

"I can make you a proposition."

"No proposition you could make would be anything but so unwise you that it's not—" he stopped not convinced that I knew what proposition meant.

"It depends," I went on. "You've got any money?"

That shook him a little. He cautiously that he had fortune by some in the course of his burglar.

"You see," I explained, "at I'm not on the right side of the street. We could make a deal."

"Not on the right side of the street?" He was puzzled. "A girl like you paused to ponder how nice a girl I might be. I held my tongue; one day perhaps I would to explain to him in simple terms there are no longer nice girls; girls, whatever he had been believed, but merely girls—a more that even they are worse."

"What have you got yourself in?" he asked. I wondered what I would say to any answer in this sort of question from a man.

There was a pause and he said anything, he added, "I'm going to do with me, of course."

I LET it go at that. I liked it. It would simplify things if he saw me as a young woman to solving her own problems, and most others. Given to arrive at this conclusion I should ever we decide, it's a business won't be getting something for nothing.

He nodded finally, and with relief in his voice said he would.

I was progressing. He was to accept my toughness and was looking after myself; that I him and would do so on a business I summed it up for him:

"Like you, I need help. I can keep you safely hidden for you begin to build up a new identity what we—what I shall want may put you in the law's clutches something besides a murder commit."

very ready to accept that hope cynically. "I believe I have to—and after all did or didn't kill the man is an affair. From the practical the police believe you did. to be my problem as well said shortly. "You appear, just me to a certain extent." home. "I'll have the whip way." you would have more to about me than I would you?" did in a nice, hard, clipped ly what I mean." nt. We were on the out- city now and leaving the last. I felt it was the at my cards generously on ne who closes a deal. So I you've read the papers the

notice quite a story about a painting called The Old Shawl?" had. He remembered some len last week from Lady's country house—I mean the not-unusual method of e first floor." ryone was at dinner," I re-

unusual for them to take picture; there were plenty able ones. But it was the "Mirror worked it out at d pounds the square inch— and pounds." Daily Mirror," he said.

at they had reproduced a of it, as also had the Times, Guardian, Daily Telegraph, s and nearly every other ountry.

not too easy for the people he commented.

aid, taking a deep breath, "is ief reasons why it is still in his car." forward suddenly, as if to ween him and it.

e said, settling in the seat Old Woman in a Shawl."

Then he laughed, and I was suddenly tingling with the most remarkable sub- dued happiness of heart I had ever felt in my life. I knew then, in the sound of his laugh, that he had indeed told me the truth when he said he had not done a murder and that equally would he believe me when I told him, as soon I would, that I had not stolen the Rembrandt, even if I had climbed that ladder into Aunt Florence's gallery and taken it away—not stolen it, that is, in Father's view.

THE steel gray of our estuary was tinged with the first green of summer dawn when I reached my bedroom. It was good to get out of my clothes. The air was warm and still, like silk on my body.

From the open window I could see the masthead of the Peacock in the back- water beyond the elms two hundred yards away; I thought of my new re- sponsibility, this man Jonathan Penrose, sleeping in the small cabin a few feet from where the butt of that mast passed through the main cabin.

I suppose the various good women, who had done their best to bring me up properly after my mother died, would have said that these new pleasurable feel- ings in me were not nice feelings. But somehow they gave me confidence. Even the inevitable interview with my father, the Commodore, when I would have to tell him how K. Zimmer had reacted, did not cause me the dread it should have.

I felt so good I took out my only new nightgown and let its satin slide down me deliciously. It was satisfactory to have put the car in the stable garage, Jonathan in the ketch, and myself in my room, all without waking Father, whose trick of sleeping like an underfed cat at a hole where a mouse may come makes noc- turnal movement precarious.

How in the world I was going to play Jonathan into our domestic scene I had not as yet the ghost of an idea, but in this all-conquering mood, I was sure I would get one. In the meantime he was safe on the ketch, near at hand, but not too near. The house could not see the ship, except her masthead.

If I told Charlie, our man-of-all-re- sponsibility, that I was keeping an eye on the boat, he would be grateful that that part of his routine was being taken care of. The sheets were cool. . . .

New Tire!... 34% AND AT NEW

NEW!... 34% MORE MILEAGE—AND HERE'S THE PROOF!

In millions of miles of road tests, tires were driven until the treads wore smooth.

The new Goodyear De Luxe averaged 34% more mileage than the famous Goodyear tire it replaces. Yes, 34% more mileage!

If the new Goodyear De Luxe can make a record like this under test conditions tougher on tires than ordinary driving, isn't it reasonable to believe that it will do at least as well on the wheels of your car?

NEW!... SHARP CUT IN PRICES!

This increased mileage actually costs you less. You not only get a new and better tire, you get it at a sharp cut in price!

Your choice of two famous treads:
The De Luxe Rib
The De Luxe All-Weather

THE NEW

GOODYEAR

MORE MILEAGE LOW PRICES!

NEW!... STRONGER CORD, STRONGER BODY!

The cord in the tough new De Luxe is stronger. This means a stronger body, means the tread can be made heavier for longer wear.

NEW!... BETTER TRACTION!

The sure-footed new De Luxe has a wider, flatter tread. This puts more rubber on the road. It gives you more traction when you need it most. It means quicker stops.

NEW!... IMPROVED SHOULDER DESIGN!

An improved shoulder design makes the shoulder huskier, yet more flexible. It makes the long-lived new Goodyear De Luxe wear more evenly. The more evenly a tire wears, the longer it lasts.

This new Goodyear De Luxe is typical of the year-in, year-out improvements that have kept Goodyear America's first-choice tire for 32 consecutive years.

GOODYEAR DE LUXE

THE WITCH

Continued from page 26

bag down by the bridge poking stuff out of the dump and at night going around picking things up out of ash barrels that she might get a few cents on from Red Cohen, the junkman. One time she used to go around to people's back doors looking for any trash they might have. But she was so ugly and hideous-looking that people were more or less afraid of her and they'd send her away with gruff words without giving her anything. They might mumble to themselves afterward that she was rich, and that she had a hoard buried in the Greek's cellar. But the truth was that they just couldn't bear looking at her. I guess she knew it, because after a while she gave it up.

I remember one time, I must have been about eleven, she came to our house. She stood out at the bottom of the back steps and my mother talked to her through the screen door. I was behind my mother peeking out, scared to death. She had on that same old long black dress that dragged along the ground behind her as she walked, and she was so old and ugly that I was afraid to keep looking at her. But, for some reason, I couldn't keep myself from looking at her either. It was part of that same double feeling I always had toward her. When I didn't see her, I'd think of her as a pathetic, even a tragic figure, and I'd feel full of pity for her. But when I saw her, something inside me would always choke and I'd feel afraid.

She just stood there at the bottom of the back steps with her head bent, mumbling something to herself. She didn't ask for anything. But there wasn't any need of her asking, since everybody knew who she was and what she was after.

My mother was a fine woman, one of those bighearted Irishwomen, as sympathetic almost as God Himself. She couldn't bear to see even a bird hurt without taking it in and caring for it until it was well again.

"Ah, the poor thing," she said. And she asked the Witch to come in.

I was terrified. I turned and ran through the kitchen and into the dining room. I closed the door halfway, and from behind it I watched what went on.

MY MOTHER had her sit down at the table and she made her a cup of tea. Then she sat down with her and talked to her in that hearty, good-natured way of hers, trying to make her feel at ease. The Witch didn't say anything. She just kept looking up at my mother as if she couldn't help being half afraid.

When she had finished her tea, she put down her cup and stood up awkwardly. "Now, now, don't be running off with you," my mother said, pushing back her chair. And before the Witch could go, she went to the cupboard and took her pocketbook down from the shelf. She gave her a quarter.

The Witch began to look around the kitchen with the quarter in her hand, mumbling confusedly to herself, and not knowing what to say. "Aah!" my mother said with a snort, turning away from her. She was as embarrassed as the Witch was grateful.

It was then the Witch saw me! As she looked around the kitchen with the quarter in her hand, trying to find something to say, she caught me peeking out from behind the dining-room door. For half a minute I stood there looking at her, unable to move. I scarcely dared even to breathe. And then, before I could pull back behind the door in fright, she smiled at me. That was the only time I ever saw her smile. And it was an awful, toothless smile.

"That's a fine boy," she said to my mother in a cracked old voice. And you could tell that it was her way of thank-

ing her for the cup of tea and her eyes were filled with gratitude.

But it was too much for that it was a shameful thing suddenly I just couldn't help turned and ran. My mother have a chance to call after me door slammed behind me a

Afterward, I felt rotten. I'd imagine my mother's embarrassment with the Witch run and I'd fill with shame, think of the poor old creature she must have felt, it'd make bad inside that I'd have to about something else. So though my mother never told me about it, I was always it before her.

But the Witch never came again, and that was a long she stopped coming around houses.

WE USED to plague fully when we were young. Pat's. Running after her, making faces and calling her from a safe distance, throwing her even—not to hit her but her. I never really had much had a feeling of shame inside it even while I did it. But of the kids did it, so I did it.

She never chased us. She let on she even noticed us, trudging along with her head the rag bag she always had her shoulder to the Greek's through a bulkhead in the

But she was afraid of us, tell from the way she'd knock down and try to slink along buildings when she'd see us sensed that she was afraid only made us plague her all

One day (this was during and we had just gotten out the day) we spied her coming along Market Street with over her shoulder as usual. there was something different. She had an overcoat on—a most fantastic overcoat. There she came, trudging.

Street in an old Army overcoat green with age, and so big and bulky that it was a wonder she walk under the load.

"Hey, the Witch!" one shouted in surprise as he saw her. "Hey, look at the Witch!"

There she came, with her head over her shoulder and in that big coat that reached down to the ground. In a way, she was this was the first time that there been anything different about she was such a fantastic creature kids could hardly contain with the cruel joy of a new plague her.

"Hey, the Witch!" the rest took up the shout. "Look at And then suddenly, one after we began to run.

We circled around the poor creature, hooting and making noises, with some of the kids and out by her, and all of them. "The Witch! The Witch! rich! Hey, Witch! Where's overcoat?"

She kept on her way, cringing the buildings and trying not to. But she kept watching us, looking out of the corners of her eyes she tried to go a little faster.

Then Joe Riley, to show up behind her and made her rag bag. She shied away from a sudden start of fright. But her rag bag fell off her shoulder

I had done to Joe Riley—he had it com-
ing. But when I thought of the Witch
and the thing we had done to her, I could
feel the shame still deeper inside me.

Joe Riley didn't come back to school
for a couple of days after that, and that
night his father was over to my house
raising hell. From upstairs in bed I
could hear him.

"If you don't take care of him, I will!"
he kept shouting at my father.

My father said he would, sure he
would. He came upstairs after Mr. Riley
had gone and came into my room. I lay
in bed without moving, hoping he would
think that I was asleep. But then when I
thought he might go away he said, "Now,
what was it all about?"

I didn't say anything. I didn't know
how to explain it to him, and I felt guilty
and confused, so I kept silent. But,
finally, as he kept waiting there in the
dark for me to answer, I said, "Joe Riley
hit the Witch with a chunk of ice and I
gave him a licking."

My father didn't say anything. I
waited, but he just came over, patted me
on the head a couple of times and went
back downstairs.

I listened to his steps going down the
stairs and it made me feel rotten the way
he had patted me on the head, because
what I had told him and what he thought
wasn't the way it was at all.

THEY started to ride me in school
after that, saying I was in cahoots
with the Witch and that I went down the
Greek's cellar with her nights and did
things with her you couldn't repeat. I
thrashed some of them, but they only
thought up still worse things to say.

A gang of them would get together in
the schoolyard at recess and point at me
and whisper. When I'd come after them,
they'd just laugh and start to scatter.
Or, because they knew they could make
me mad, they'd follow me home after
school at night hooting at me and mak-
ing fun of me all the way. And all I
could do was fume and run around try-
ing to catch them.

So that, finally, in a fury because I
couldn't catch all of them at once and
thrash them to make them see what was
right, I turned and I began to run after
the Witch again with the rest of the kids.
And, in fact, I began to plague her worse
than any of them. I knew it was wrong,
but I was determined that if the rest of
the kids wouldn't let me alone to do what
was right, I would really show them how

es twelve poses. Now would you care to take one with the groom?"

Can You Stop in Time?

For Safety's Sake..

have your automobile brake system
checked regularly - - and when
service is required, insist upon

WAGNER LOCKHEED BRAKE PARTS and FLUID

Situations arise in everyday driving that leave no time to think about your brakes—they just have to "be there!" Now is the time to make sure that your brake system is ready for these emergencies.

The level of fluid in your brake system should be checked regularly—at least twice a year. If fluid is required to bring it up to the proper level—it pays to specify WAGNER LOCKHEED NO. 21 BRAKE FLUID. NO. 21 is an all-season fluid that functions perfectly under all driving temperatures. It is used by automobile manufacturers and recommended for all hydraulic brakes.

In addition to taking care of the fluid level, ask your serviceman to check your brake system. If any parts need replacement, specify genuine WAGNER LOCKHEED HYDRAULIC BRAKE PARTS. Minor repairs today may save you a major service expense tomorrow. Wagner Electric Corporation, 6400 Plymouth Ave., St. Louis 14, Mo., U. S. A. In Canada: Wagner Brake Co. Limited, Toronto.

What's the lowdown on tall drinks?

Here are three right answers to that question . . . first and second, the popular twins: Tom Collins and Gin Buck; third, a new contender for the summer drink championship: the Singapore Sling.

Try all three, because no one drink can please all tastes. But *one gin* . . . Kinsey Gin . . . can and does give better taste to every summer cooler. Here's why:

Kinsey is the *genial* gin . . . superbly smooth.
The *dry* gin . . . yes, dry as fine champagne.
And *94.4 proof* . . . brimming with flavor!

Make your tall drinks with Kinsey Gin . . . and you can look forward to pleasure all summer long!

TOM COLLINS

2-oz. Kinsey Gin
juice ½ lemon
1 teaspoon sugar
serve with ice, soda,
decorate with lemon,
orange, cherry.

SINGAPORE SLING

2-oz. Kinsey Gin
¾-oz. cherry liqueur
juice of lemon
serve in tall glass
with ice, soda, slice of
orange, sprig of mint.

KINSEY GIN

IT'S 94.4

GIN BUCK

2-oz. Kinsey
juice of
2 cubes
serve in
with gin
